There was but little animation in the home-grown wheat market; the attendance was restricted both of farmers and merchants, who were deterred by the prospect of an almost useless journey, in face of the apathy ruling in the trade. Offers of wheat, which had lately been on an ordinary scale, were a little more important to-day, but holders very firmly maintained the currencies of this day week. Supplies are almost exclusively in the hands of the large farmers, who, not being in any pecuniary need, can more easily await the advent of better prices, which they are confidently hoping for. Prices note a nominal advance of 6d. to 1s. per quarter on the week. Quotations are as follows:—Choice red, 37s 5d to 37s 10d; ordinary, 37s 5d to 37s 6d; and white, 37s 10½d to 38s 3d per 480lb. The flour market opened weak, but closed with a slight improvement at the following prices: —March, 26s 8d to 26s 10½d; April, 26s 10½d to 27s 1½d; May-June, 27s 8d to 27s 11d; May-Aug., 27s 11d to 28s 2d; July-Aug., 28s 2d; and Sept.-Dec., 27s 1½d to 27s 5d per 280lb. Trade is still quiet, and prices are with difficulty supported in spite of most restricted offers. Good descriptions are still worth 26s 1d, but buyers only at 25s 8d per 480lb. Although the oat season is advanced, some demand for seed has been experienced, and certainly contributed to maintain the firm position. However, higher prices are not generally believed in, as the weather is favourable to the progress of the crop, and it must not be overlooked that the sowings this year will be of more magnitude than usual, and that should be taken into account. A small trade is still passing in barley, but only in the best descriptions. Beauce still quotes at 24s 3d to 24s 8d, and Champagne asks 23s 11d to 23s 4d. Here the tendency was supported for grinding and feeding corn, and unaltered for malting sorts, prices being quoted as follows:—17f.50 (25s 4d) for choice, 17f.25 (25s) for good malting, grinding 16f.75 to 17f. (24s 3d to 24s 8d), and feeding 14f.75 to 15f.25 per 100 kilos (21s 5d to 22s 2d per 400lb). There is still a rather good demand for buck wheat, and prices remain well supported at 27s 10d per 480lb.—*Dornbusch.*

Oats	11,496⅔ qrs.	20s.	6d.

SEEDS

London, Monday.—John Shaw and sons, seed merchants, of Great Maze Pond, Borough, London, S.E., report a continued absence of any great activity in the demand for farm seeds. The larger houses have already secured their early supplies, whilst the general run of country seedsmen have as yet hardly begun to operate. Meantime, the abundance in so many districts this season of home-grown red cloverseed limits both the number and size of the orders for this article, which usually come to London. As regards values generally, no important change can be noted; but scarcely any description can be written dearer, whilst the dullness which overshadows red naturally communicates itself to some extent to alsyke, white, and trefoil, and likewise to Italian and perennial ryegrass. Tares have also of late proved a disappointing business. Very little attention is just now given to either mustard or rapeseed; but linseed finds buyers at full prices. As regards canary seed, the tendency is upwards, but other kinds of bird seeds are neglected. Scarlet-runner beans are still obtainable at very low rates. Blue peas and haricot beans move off slowly.

HAY AND STRAW.

Whitechapel, Saturday.—Although supplies light, demand was quiet, and business slow. Prices unaltered. Best clover, 95s to 110s; inferior, 80s to 90s; specially picked hay, 115s; good, 108s; inferior 80s to 90s; mixture and sainfoin, 90s to 100s; straw, 28s to 40s per load.

POTATOES.

Borough, Saturday.—Good supply again received, but demand very quiet, and only small business put through. Scotch Maincrops (Dunbars), 80s to 85s; Reading Giants Blacklands, 40s; Blackland Up-to-Dates, 55s; Lincoln ditto (Silts), 55s; Kent Up-to-Dates, 50s per ton.

Goole, Wednesday.—Trade dull; plenty of potatoes offering. Prices: 5s 3d to 5s 6d per load; best quality, 52s 6d per ton.

Great Northern, Saturday.—A good supply, but slow demand. Scotch Maincrops, 90s; Imperators, 40s; Blacklands, 40s to 42s 6d; Lincoln Maincrops, 75s to 80s; Up-to-Dates, 60s to 65s per ton.

Spitalfields, Saturday.—Very good supplies to hand, but trade dull, at about late prices. Best Lincoln Up-to-Dates, 55s to 65s; Blackland, 40s to 45s; Wisbech ditto, 50s to 55s; Scotch, 50s to 60s; Scotch Maincrops (grey soil), 60s; Lincoln Maincrops, 75s to 85s; Reading Giants, 35s to 40s; Blackland Gartons, 35s to 40s per ton.

MANURES.

Liverpool, Friday.—Nitrate of soda is in increased request, and late rates are well maintained. Sulphate of ammonia is in seasonable demand, likewise East India bone meal and kainit, whilst of superphosphate of lime agriculturists are purchasing very freely, considering the early part of the season. Feeding stuffs, however, are only in quiet demand, and in some instances prices favour buyers. At auction and otherwise some 4,500 bags American decorticated cotton cake meal sold at £6 2s 6d per ton. Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £10 10s per ton; East India Bone Meal, fair to prime, in bags, £4 1s 3d to £4 6s 3d per ton; Kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s per ton; Palm Nut Cake, prime, in bags, £5 15s per ton; Linseed Cake, American thin oblong, prime, in bags, £7 7s 6d to £7 11s 3d per ton; Linseed Cake, English, prime, in bulk, £8 12s 6d to £8 18s 9d per ton; Linseed Cake, foreign, thin oblong, prime, soft and oily, in bags, £8 5s to £8 7s 6d per ton; Cottonseed Cake, N.A. decorticated, in bags, £7 to £7 5s per ton; Cottonseed Cake, English, decorticated, prime, soft, in bags, £7 10s per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 10s to £4 15s per ton; Cottonseed Cake (crushed), 20/25 per cent. oil, prime, in bags, £7 3s 9d per ton; Maize Germ Meal, prime, in bags, £5 17s 6d to £6 per ton; Rice Meal, Rangoon, as imported, in bags, £5 5s to £5 7s 6d per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 12s 9d to 13s per 240lb; Linseed, fine bold feeding, in bags, £3 1s to £3s 4s per qr, 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton; D.N.S. Brand Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s per ton; Superphosphate of Lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton at depot; Basic Slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, nominal; Basic Slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, nominal; Basic Slag, finest quality, guaranteed, 38 to 45 per cent. phos., in bags, nominal.—H. Jones Langar and Co.

BUTTER.

Tuesday.—Bedale: 1s 6d to 1s 7d per roll of 24oz. Gainsborough: 1s 3d per lb. Leeds: York lump, 15s to 15s 6d per stone; long rolls, 1½lb, 1s 10d to 2s; fresh, 1s 2d to 1s 3d per lb. Settle: 1s 1½d to 1s 2½d per lb. Spalding: 1s per lb. Stone: 1s 2d to 1s 3d per lb.

Wednesday.—Barnsley: 1s 2d to 1s 3d per lb. Boston: 1s to 1s 1d per lb. Colne: 1s 2½d per lb. Goole: 1s 2d per lb. Keighley: Wholesale, 1s 2d; retail, 1s 3d per lb. Kirbymoorside: 1s 2d to 1s 3d per lb. Knaresborough: Wholesale, 1s 9d; retail, 1s 10d to 1s 11d per roll of 24oz. Louth: 1s 1d per lb. Market Weighton: 1s per lb. Masham: 1s 8d to 1s 9d per roll of 24oz. Northallerton: 1s 7d to 1s 9d per roll of 24oz. Worksop: 1s 2d to 1s 3d per lb. Worcester: 1s to 1s 2d per lb. Market Drayton: Best, 1s 1d to 1s 2d per lb; seconds, 1s to 1s 1d per lb. Ipswich: 1s 2d to 1s 3d per lb.

Thursday.—Brigg: 1s 1d to 1s 2d per lb. Penistone: 1s 2d per lb. Ripon: 1s 8d to 2s 1d per roll of 24oz. Scarborough: 1s 3d per lb. Wetherby: 1s 3d to 1s 4d per lb.

Friday.—Easingwold: 1s 1d to 1s 2d per lb. Leyburn: 1s 6d to 1s 7d per 24 oz roll. Helmsley: 1s to 1s 2d per lb. Lincoln: 1s 2d per lb. Otley: 1s 8d to 1s 10d per 24 oz roll. Leeds: York lump, 15s to 15s 6d per stone; long rolls, 1½ lb., 1s 10d to 2s; fresh, 1s 2d to 1s 3d per lb.

Saturday.—Appleby: 1s to 1s 2d per lb. Berwick: 10d per lb. Carlisle: 1s 2d to 1s 3 per lb. Doncaster: 1s 3d to 1s 4d per lb. Grantham: 1s 2d to 1s 3d per lb. Howden: 1s 2d per lb. Lancaster: 1s 3d to 1s 4d per lb. Malton: 1s 1d to 1s 2d per lb. Pontefract: 1s 3d to 1s 4d per lb. Retford: 1s 2d to 1s 3d per lb. Richmond: 1s to 1s 2d per lb. Skipton: 1s 1d to 1s 3d per lb. Stokesley: 1s 2d to 1s 3d per lb. Whitby: 1s 2d to 1s 3d per lb. York: 1s 3d per lb.

EGGS.

Tuesday.—Bedale: 14 for 1. Gainsborough: 12 for 1s. Leeds: Yorkshire, 10s to 11s per 120. Settle: 13 to 15 for 1s. Spalding: 15 for 1s. Stone: 14 to 15 for 1s.

Wednesday.—Barnsley: 11 and 12 for 1s. Boston: 16 for 1s. Colne: 2s per score. Goole: 14 for 1s. Keighley: Wholesale, 13; retail, 12 for 1s. Kirbymoorside: 14 and 15 for 1s. Knaresborough: 13 and 14 for 1s. Louth: 16 for 1s. Market Weighton: 1s per lb. Masham: 15 and 16 for 1s. Northallerton: 13 and 14 for 1s. Worksop: 1s 6d per score. Market Drayton: 15 to 16 for 1s. Dorchester: 8d to 11d per doz. Ipswich: 12 to 14 for 1s.

Thursday.—Brigg: 16 to 17 for 1s. Penistone: 10 for 1s. Ripon: 14 to 15 for 1s. Scarborough: 14 for 1s. Wetherby 13 to 15 for 1s

Friday.—Easingwold: 12 to 14 for 1s. Helmsley: 15 to 16 for 1s. Leyburn: 17 to 18 for 1s. Lincoln: 15 or 16 for 1s. Otley: 13 or 15 for 1s.

Saturday.—Appleby: 15 to 17 for 1s. Berwick: 8d to 9d per dozen. Carlisle: 14 to 15 for 1s. Doncaster: 14 to 15 for 1s. Grantham: 14 to 17 for 1s. Howden: 16 for 1s. Lancaster: 12 to 14 for 1s. Malton: 16 to 17 for 1s. Pontefract: 14 for 1s. Retford: 1s 8d to 1s 10d per score. Richmond: 14 to 16 for 1s. Skipton: 12 or 13 for 1s. Stokesley: 13 or 14 for 1s. Whitby: 12 and 13 for 1s. York: 14 for 1s.

CHEESE.

Dorchester, Wednesday.—Best, 50s to 60s; seconds, 30s to 46s.

Glasgow, Wednesday.—Smaller arrivals this week. Cheese, both in town and country, is getting into small compass; values keep firm. Cheddars and Dunlops are quoted 56s to 62s per cwt. There is a fair turnover in New Zealand and Canadian parcels at previous prices.

Leeds, Friday.—Finest Cheshire, 58s, 60s, to 85s; lump, 60s to 65s; American finests, 51s to 56s; and medium, 40s to 44s per 112 lb.

GAME AND POULTRY.

Smithfield, Saturday.—Although supplies limited, demand very slow. Fowls: Yorkshire, 2s 6d to 3s; Essex, 2s 9d to 3s 6d; Boston, 2s 6d to 2s 9d; Surrey, 3s 9d to 4s 6d; Sussex, 3s 6d to 4s; Welsh, 2s to 2s 6d; Irish, 2s to 2s 4d; turkeys, cocks, 6s to 7s 6d; hens, 4s to 5s; country ducks, 3s 6d to 4s; goslings, 6s to 7s 6d; pigeons, 7d to 1s; quail, 9d to 1s; wild rabbits, 6d to 8d; tame, 9d to 1s each; Australian rabbits, 8s to 10s 6d per dozen; wild duck, 1s 6d to 2s; widgeon, 1s to 1s 2d; pintail, 1s 1d to 1s 4d; teal, 10d to 1s; golden plover, 2d; black, 6d to 7d; Russan game: Capercailzie, 10d to 1s; black, 6d to 7d; hen, 1s 6d to 1s 9d; blackgame, 1s; cock, 2s to 2s 6d; hen, 1s 6d to 1s 9d; ptarmigan, 10d to 1s; brown partridges, 1s to 1s 2d; partridges, 1s to 1s 2d each. hares, 1s 6d to 1s 8d; white, 1s to 1s 2d each.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather has been very mild and open. There have been frequent showers, but the total rainfall in the country is small. There has been little interruption to spring sowings, and we hear of a larger area than formerly being devoted to oats, both in Great Britain and in France. The snow is melting in Russia; prematurely as many think. Reports of the winter wheat in the United States are more encouraging, but from Australasia the cable advises a poor yield of barley and oats where grown. New Zealand has 700,000 qrs. less oats than last year, and can apparently ship but little in 1902. India expects a fair yield of peas and small cereals, but the wheat is put at 20 per cent. below the average in the three chief provinces, and as much as 40 per cent. short in parts of the Punjab.

The American Bureau report of the 11th inst. represents stocks in farmers' hands to be about as follows, in millions of bushels:—

	Wheat.	Oats.	Maize.
March 11, 1902	156	198	394
,, 1901	128	293	776
,, 1900	159	291	774
,, 1899	158	283	860
,, 1898	121	272	783
,, 1897	88	242	1164
,, 1896	123	212	1072

It will be seen that farmers' reserves of oats and maize are the smallest within the seven years, but that the reserves of wheat on the farm are rather good.

The Argentine wheat crop, reaped in January, proves smaller than looked for, and the visible supply, cabled on Saturday, was as follows:—

	Qrs.
March 15, 1902	375,000
March 15, 1901	470,000
March 15, 1900	850,000

The following are the average arrivals weekly into the Metropolis since January 1st, 1900:—

Weekly rate of London arrivals.

Qrs.	1902 First ten weeks.	1901 year.	1900 year.
Wheat	26,100	46,490	41,380
Barley	22,000	18,222	13,075
Malt	21,850	19,408	20,300
Oats	63,430	94,897	86,220
Beans	1,390	1,024	1,010
Peas	1,820	1,903	2,320
Maize	45,750	33,213	33,520
Tares	1,217	428	440
Linseed, no returns		11,843	11,210
Rapeseed, no returns		402	590
Cottonseed, no returns		8,000	6,000
Farmseeds	3,527	3,301	2,657
Sacks.			
Flour	74,700	63,995	57,180

Oilseed returns are received monthly, and the figures for March are, of course, not complete. The small imports of foreign wheat and the large imports of foreign flour are a feature of this year's trade thus far which millers cannot be expected to welcome. The maize imports, principally from Russia and Roumania, have been extremely large.

The quantities of grain, etc., on passage to the United Kingdom on March 15th thus compare with the mid-month last year.

	1902.	1901.
Wheat, qrs.	3,820,000	3,400 000
Flour, sacks	265,000	420,000
Barley, qrs.	480,000	325,000
Beans, qrs.	8,000	11,000
Linseed, qrs.	340,000	315,000
Rapeseed qrs.	28,000	3,000
Cottonseed, qrs.	88,000	61,000

Maize figures will receive special consideration a little later on.

The wheat total is thus made up:—

	Qrs.
Californian	2,400,000
American	250.000
Argentine	250,000
Russian	60,000
Indian	100 000
Australasian	700,000
Other countries	50,000
Total	3,820,000

Imports of the United Kingdom last week were as follows:—

Wheat, 313,000qrs; a large supply.
Flour, 78,200sks; a small supply.
Barley, 140,000qrs; a fair average.
Oats, 51,000qrs; a meagre arrival.
Maize, 166,000qrs; below requirements.
Beans, 1,181qrs; a most scanty supply.
Peas, 8,100qrs; a moderate supply.

The demand for wheat has been poor of late, but English has sold better than imported descriptions. Flour is depressed; the great American firms are extremely ready to sell whenever the least upward movement occurs here, and this naturally puts a drag on the market. Barley sells well for seeding purposes, but the bigger trades for malt and grinding are inert. Oats are offered at a reduction on 304lb. sorts, but heavy oats maintain value. The Government have recently bought 3,000qrs. of U.S.A. oats at 21s. per qr.

The usable supply of maize in the U.S.A. is much smaller than at this time in 1901 and 1900, actual quantities being as follows:—

	Qrs.
March 15, 1902	1,206,000
,, 1901	2,306,000
,, 1900	2,295,000

Shipments from January 1st to March 15th were as follows for this year and last:—

	1902 Qrs.	1901 Qrs.
America	237,000	4,450,000
Argentina	120,000	130,000
Russia	1,600,000	189,000
Roumania	1,400,000	400,000
Turkey	295,000	50,000
Total	3,652,000	5,219,000

These figures are usual, as dissipating the very prevalent idea that the extraordinary efforts of Russia, Roumania, and even Turkey, and have made up for America's failure to ship. The efforts of the Old World shippers have been really surprising, but they have not merely made up the deficiency. On eleven weeks' business we are a net 1,567,000 qrs to the bad, which is equivalent to a rate of 7,385,000 qrs. for the year. These returns should have consideration from holders who, having lost heart for the moment, are inclined to press maize on sale. The quantity of maize on passage is now 440,000 qrs., against 630,000 qrs. in 1901, and 735,000 qrs. in 1900. The present expectations include 390,000 qrs. of round corn.

The markets for some minor staples may be briefly glanced at. Sorghum, which is a variety of millet, is offered as low as 19s. per 416lb., and at that price is a very cheap and nutritious ingredient in any ration for animals or birds. Rari is also cheap at 22s. to 24s., for of this staple a quarter weighs 480lb. Some extremely fine white millet on Friday made 52s., but the ordinary prices are as given in our quotations.

Farmseeds go into use at 65s. to 115s. for fine white clover seed; 50s. to £0s. for red. Canadian red clover seed is offered at 46s. to 56s. per cwt. English giant sainfoin is now in request at 70s. to 32s; English late red trifolium, at 38s. to 39s., and French early trifolium at 18s. to 21s. per cwt. Fine Luderne from Province touched on Friday 65s. per cwt.

Some split lentils from Egypt have recently made 14s. to 14s. 6d. per cwt., and some fenugreek from Morocco has been placed at £7 10s. per ton. Chi-Chi peas are held for 34s per qr., and locust beans are sold at 90s. to 110s per ton, according to quality.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	March. s. d.	June. s. d.	Aug't. s. d.
March 10 11 a.m.	6 1 ... 6	2 ... 6	2
4 p.m.	6 2 ... 6	3 . 6	3
March 11 11 a.m.	6 2 ... 6	3 ... 6	4
4 p.m.	6 2 ... 6	3 ... 6	4
March 12 11 a.m.	6 2 ... 6	2 ... 6	3
4 p.m.	6 2 ... 6	2 ... 6	3
March 13 11 a.m.	6 2 ... 6	1 ... 6	3
4 p.m.	6 2 ... 6	1 ... 6	2
March 14 11 a.m.	6 2 ... 6	2 ... 6	2
4 p.m.	6 2 ... 6	2 ... 6	2
March 15 11 a.m.	6 2 ... 6	2 ... 6	2
To-day noon	6 2 ... 6	1 ... 6	2

Maize was not on offer for delivery before April. From after Easter to the end of June, 4s 6d per cental was quoted.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

THIS DAY'S MARKETS

MARK LANE, MONDAY.

[FIRST REPORT.]

There were few changes in British produce at the market to-day; in fact, wheat, barley, and oats of all types may be quoted at the currencies of a week ago. Old tares (English Winter) were in request at a good price, and 78s to 82s per qr was paid for fine Scotch tares. Foreign wheat was a trifle lower for Canadian and Duluth, and also for Californian, but Australian sorts were a little firmer. Indian wheat was scarcely on offer, but some Indian white peas were in evidence at 35s to 37s per qr. Maize was 1s lower on the week for some samples of round corn, but the usual decline was 9d, being 3d recovery from the very depressed markets of the 12th and 14th. Oats were 6d lower for South Russian and Turkish, but for the Konigsberg and Swedish offerings full prices were current. Linseed was 1s cheaper on the week. Barley was steady for all imported descriptions, but the enquiry was not good, either for malting or for feeding purposes. Foreign beans and peas were without appreciable change.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A BETTER FEELING FOR SOUND MAIZE. THE CARGOES RECENTLY PUT ON SALE AT A SACRIFICE HAVING NOW BEEN WORKED OFF IN RETAIL. OTHER STAPLES WERE DULL, BUT THE FINAL FEELING OF THE DAY WAS LESS DESPONDENT THAN THE TONE AT THE OPENING.

THE FLOUR TRADE.

MARK LANE Monday

The market to-day was steady for the four London sorts, but the five principal country descriptions all favoured buyers. Recent arrivals from Norfolk and Suffolk have considerably exceeded the average. Foreign flour showed little change, but the tone was weak. Country bran is 4s. to 6s. per ton cheaper on the fortnight. Some decline must also be recorded on bisouit and other middlings. We are able now to give a closer quotation for maize germ meal, which in February was irregular. Oatmeal previously quoted 230s. to 290s. per ton may now be divided into Scotch at 260s. to 230s., and Canadian at 200s. to 260s. About 5s. per ton decline on rice meal has also to be chronicled. Whole meal and wheat germ meal are firm.

1901	55,073⅜	25	9	36,968	25	1	14,010	17	0

FOREIGN CORN.

Hamburg, Saturday.—Trade quiet, prices tending in buyers' favour. The imports during the week amounted to 6,550 tons wheat, 1,933 tons rye, 3,061 tons barley, 9,959 tons maize. There is but little demand for wheat, millers in the interior complaining of a slow sale of flour. Spot parcels, being scarce, are still held at last week's prices: 23s to 23s 3d per 480lb for Hard Winter 2, and River Plate. 39s 6d per 500lb for Walla Walla, while later deliveries are cheaper, Manitoba No. 2 April-May being offered at 27s 9d, No. 2 Northern Spring at 28s, Hard Winter 2 at 28s 9d per 480lb, Walla Walla April-June 29s 6d per 500.b. Rye unaltered. 9 15-20 South Russian March-April is held at 23s 3d per 480lb. Good Bohemian barley is taken by our brewers at 30s 6d to 33s; Pomeranian at 27s to 28s; Mecklenburg at 27s 6d to 28s 6d per 448lb f.o.b. Good Saale, to arrive per barge, is offering at 29s 3d to 31s; fine Saale at 32s to 34s 6d per 448lb f.o.b. Danubian and Russian feeding barley, 18s to 18s 6d per 400lb c.i.f. A steady trade is doing in European maize, Danubian and Odessa selling at 20s 9d to 21s 1d, Turkish at 21s 9d per 480lb c.i.f. Hamburg. River Plate April-May at 21s 6d, and Mixed American at 25s meet less attention.—JOHN TATLOCK.

HOPS.

London, Monday.—W. H. and H. Le May report:—A quiet tone prevails, caused chiefly by the scarceness of stocks. All descriptions are now in an exceedingly small compass.

GRAIN AND FLOUR FACTORS REPORTS.

The wheat market is somewhat steadier in tone, prices remaining generally unaltered on the week. Maize is dearer, the quantity on passage having greatly decreased. Round descriptions have improved 9d. from last Monday.—WOOD AND CO.

Flour.—There has been a quiet trade to-day, at prices unaltered since this day week.—T. S. MEDILL AND SONS.

We have liberal arrivals of wheat and flour. Trade is firm and prices are unchanged. Maize has recovered from the late depreciation, and is 9d. and 1s. per qr. dearer. Barley is 3d. per qr. lower for grinding qualities. Oats are unchanged. —COVENTRY (Mark Lane).

The demand for milling offals is slow, at last Monday's prices.—JOHN BAWCOMB AND CO.

Offals.—There is no new feature to report in the bran trade. The demand continues much below what is usual at this season of the year.—GREENHILL BROTHERS (Belfast).

Flour.—The dulness of the past few weeks still continues. Quotations nominally the same; buyers, however, less eager to purchase than sellers to make sales. Values on spot are as follows:—First spring patents, 24s. 9d. to 25s. 3d.; second spring patents, 23s. 9d. to 24s. 3d.; American winter patents, 24s. 9d. to 25s. 3d.; extra fancies, 23s. to 23s. 6d.—GREENHILL BROTHERS (Belfast).

Flour.—The trade continues without change, buyers only purchasing from hand to mouth. Grain.—Flat corn meets a small demand at firm prices. Round corn is 3d. per boll lower. Beans are in few hands, and very firm. Canadian pease continue scarce, but Calcutta white pease fill the feeding demand. Mill Stuffs.—Bran for immediate delivery is scarce; thirds, however, are dull.—MCKINNON AND MCDONALD (Glasgow).

FEEDING STUFFS.

London, Monday.—Linseed cake: Market dull, prices unchanged. Decorticated cottoncake and meal steady. Undecorticated are a poor sale at last prices. Linseed: Calcutta has fallen again 6d to 1s per qr.; other sorts unchanged.

English Linseed Cake	ex mill	8	5	0 to 8	7	6
American Calcutta Linseed Cake	ex quay					
American Western ,,	ex quay	7	2	6 to 7	10	0
,, ,, ,,	ex quay	7	0	0 to 7	2	6

Russian Linseed in bulk, per 416 lbs.	ex warehouse	2	14	0 to 2	18	0

ROBERT AND JOHN HEWETSON.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 1,728 bales bacon, and from foreign ports 10,364 bales bacon. Bacon.—With a considerably improved demand for all descriptions of bacon the market was very firm all the week, and on Friday prices of Irish and Danish were advanced 2s all round. Canadian was unchanged. Current quotations were as follows:—Irish, 54s to 60s, up to 63s; Danish, 52s to 56s, up to 57s; Canadian, 48s to 52, up to 54s. Butter.—Butter was very quiet indeed, and prices were again lower for every description. Danish, 108s to 110s, exceptionally 112s; Colonial, 102 to 106s, up to 108s. Lard.—Lard quite unchanged. Market steady.

THE BALTIC, 1 p.m.

STATE OF TRADE.

The market for wheat cargoes is not brisk, and there are some weak holders willing to accept 3d. less money. Barley is steady for malting and feeding sorts alike, but there are not many offers. Oats are firmer for New Zealand cargoes, and also for Turkish, but Russian are flat. Maize is weak, and the offers of Argentine for May and June shipment tell upon the trade generally. Linseed is firmer for Indian cargoes, and the cottonseed trade is once more in holders' favour.

BUSINESS DONE.

WHEAT.—Californian, 29s 3d, April shipment; Walla Walla, 29s, April shipment; Victorian, 30s, April shipment; Argentine, 29s 6d, April shipment; No. 1 Northern, 29s 3d, on passage; No. 1 Northern, 29s, April shipment; No. 2 Hard Winter, 28s 6d, April shipment; Red Kurrachee, 29s, April shipment.

MAIZE.—Roumanian, 21s 6d, June shipment; Galatz, 22s, on passage; Galatz, 21s 9d, April shipment; Argentine, 21s 6d, May shipment; Argentine, 21s 3d, June shipment; American, 25s 6d, April shipment.

BARLEY.—Kustenje, 18s 3d, April shipment; Californian, f.a.q., 23s 9d, on passage.

OATS.—Odessa, 18s 6d, on passage; Vologda, 18s, June shipment.

LINSEED.—Argentine, 48s 9d, arrived; Bombay, 54s, April shipment; Calcutta, 51s 6d, May shipment.

COTTONSEED.—Egyptian, £6 13s 9d, arrived; Egyptian, £6 15s, on passage; Egyptian, £6 12s 6d, June shipment; Egyptian, £6 5s, November shipment (new crop).

CATTLE.

Metropolitan Market, Islington.

Monday, March 17th, 1902.

	British.	Total. Mar. 18, 1901.
Beasts	1,110	900
Sheep and lambs	8,990	9,720
Calves	10	—
Pigs	20	—
Milch cows	40	60

Quotations per 8lb (sinking the offal).

	Inferior. s. d.	Second. s. d.	First. s. d.
ENGLISH.			
Beasts	2 6	3 10	4 8
Sheep	3 10	5 0	5 8
Lambs	6 0	7 2	8 0

Milch cows, per head, £15 to £22 10s.

British arrivals include as follows:—Scotland, 10; Eastern counties, 677; Midland, home and Western counties, 227; Devon, 20; Ireland, 176.

In the beast market to-day, compared with Monday last, showed a slight decrease, due to smaller arrivals from Scotland and Norfolk. Trade was of a weaker nature, both for prime and second quality, but the slight decline in value scarcely altered late rates; fat cows and bulls being in light supply met with a steadier trade. Amongst the Irish arrivals were 58 stores, which were quoted at from £11 10s to £13 10s per head.

The following are top quotations per 8 lbs. (sinking the offal):—

	To-day.	Monday, Mar. 18, 1901.
Scotch	4s. 7d to 4s 8d	..
Devons	4s 6d to 4s 8d	.. 4s 4d to 4s 6d
Lincolns	4s 4d to 4s 6d	.. 4s 0d to 4s 3d
Irish	4s 3d to 4s 4d	.. 4s 2d to 4s 3d
Fat cows	3s 10d to 4s 0d	.. 3s 6d to 3s 8d
Norfolks	4s 6d to 4s 8d	.. 4s 4d to 4s 6d

In the Sheep Market to-day, compared with Monday last, there was also a decrease, though the number penned showed a larger proportion of lambs, which were in steady request, the best making late rates; a slight decline for second quality, as also for ewes. Wether sheep were slow of sale, but steady in regard to value; the supply included 390 Scotch and 4,540 from the Eastern counties.

Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	To-day.	March 18, 1901
7½ to 8 st. Downs	5s 6d to 5s 8d	.. 5s 10d to 6s 0d
9 st. Downs	5s 4d to 5s 6d	.. 5s 8d to 5s 10d
10 st. half-breds	5s 0d to 5s 2d	.. 5s 4d to 5s 6d
12 st. Lincolns	4s 8d to 4s 10d	.. 5s 2d to 5s 4d
10 st. Down ewes	4s 4d to 4s 6d	.. 5s 0d to 5s 2d
11 st. half-bred do.	4s 0d to 4s 2d	.. 4s 10d to 5s 0d
5 st. Down lambs	7s 10d to 8s 0d	.. 7s 10d to 8s 0d
6 st. half-bred do.	7s 2d to 7s 4d	.. 7s 4d to 7s 6d

London (Central), Monday.—Large supplies; trade very slow. Beef carcases, 3s 10d to 3s 11d; hindquarters, 4s 4d to 4s 6d; roastings, 5s 4d to 5s 8d. Sheep: Ewe, 3s to 3s 4d; wether, 4s to 4s 4d; hindquarters, ewe, 4s to 4s 4d; wether, 5s to 5s 4d. Pigs: Large, 3s 8d to 4s; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 502; sheep, 1,189; pigs, 285. Beef, 7s 6d to 8s 3d; mutton, 7s 7d to 9s 4d; pork, 6s 6d to 7s 6d; sows, 5s 6d to 6s 6d. Fat cattle sharp trade; stores fair. Fat and store sheep better trade. Fat and store pigs good demand; dearer. Milch cows fair trade; prices, £14 to £23.

FOREIGN CATTLE.

Deptford, Monday.—Beasts, 509. To-day's supply compared with Monday last showed a decrease of 541, and consisted entirely of shipments from the United States, trade for which was of a rather slow nature, at a slight decline in value, a decrease being forced. The best on offer to dress about 680lbs. made 4s 4d per 8lbs, offal given in. Second quality were quoted at 4s 2d No sheep on the market. On Saturday 1,747 beasts from the United States and 303 sheep were on the market, both meeting with a slow trade, the former at from 4s 3d to 4s 5d per 8lbs., whilst best pens of sheep were quoted at 4s 4d. The following were the numbers on offer on the corresponding day last year, with the current top rates:—Beasts, 946, 4s 2d to 4s 3d per 8lbs. to dress about 720lbs. No sheep on the market.

Liverpool, Monday.—There was a smaller supply of cattle in market to-day. Demand fair and prices unchanged. Sheep supply larger; demand good, and prices again in favour of sellers; a good clearance effected. Beef, 6½d to 5d per lb.; mutton, 8½d to 6d per lb. At market 1,001 cattle and 4,831 sheep.

Irish Live Weight Quotations.

(Department of Agriculture and General Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed either before or after sale, for the week ending March 15th, 1902.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Market during the week, with a rather larger supply, mostly consisting of consignments from Norfolk, Polled Aberdeens being conspicuous by their absence, trade on both days was again of a very dragging nature with, for both prime and second quality, a marked downward tendency in value, especially towards the close of Monday's business, a few beasts being turned out unsold; on the other hand, fat butchering cows and bulls were steady in price owing to a steady demand and a shorter supply, most of the former being bought by country buyers. Very few rough cattle were on offer, sales of which were most difficult to make, so many having lately been seized on account of tuberculosis. At Deptford trade on the three market days, viz., Monday, Wednesday, and Saturday, was fairly steady, both in regard to tone and value. The total number on offer at both markets was 5,087, as against 3,897 during the previous week; the supply consisted of 1,390 British (increase 230) and 3,697 foreign (increase 960); the latter comprised 3,475 from the United States and 222 from Canada. The following were the top rates paid per 8lb., sinking the offal:—90-stone Scotch 4s. 8d., 90-stone polled Norfolks 4s. 8d., 100-stone Shorthorn ditto 4s. 6d. to 4s. 7d., 100-stone Lincolns 4s. 6d., 95-stone Irish 4s. 4d., 85-stone States 4s. 5d., 90-stone Canadians 4s. 2d., 100-stone fat cows 3s. 10d. to 4s., 100-stone fat bulls 3s. 4d. to 3s. 6d. The trade for sheep, both wethers and ewes, was of a firmer and steadier nature, even at an advance on Monday of 2d. per 8lb., but proved extremely dull on Thursday, on which day very few sales were recorded. For lambs there was a good inquiry, but Dorsets ruled lower in price on account of the larger number on sale; choice Downs, to weight from 36 to 40lb., sold readily at higher rates. At Deptford trade ruled slower, there being less competition. The total number penned at both markets was 12,587 (previous week 10,847), consisting of 10,600 British and 1,987 from the United States. Best pens made per 8lb. as follows, sinking the offal:—7½ to 8 stone Downs 5s. 8d., 9-stone ditto 5s. 4d., 10-stone ditto 5s. 2d., 8-stone Scotch 5s. 6d. to 5s. 8d., 10-stone halfbreds 4s. 10d. to 5s., 12-stone Lincolns 4s. 8d. to 4s. 10d., 10-stone Down ewes 4s. 6d. to 4s. 8d., 8½-stone States 4s. 4d., 5-stone fat Down lambs 8s., 5-stone Dorset ditto 6s. 6d. to 6s. 8d. Only 25 calves on the market; trade slow; best quoted at 6s. per 8lb. The pig trade, with a light supply (55), was very dull; top value, best small breeds, 4s. 6d. per 8lb.

Trade in the West.

With a continuance of exceptionally fine weather, which is highly favourable for late sowings, though rain is badly wanted, trade keeps unusually buoyant, especially for store things, for which there is a very brisk demand all through the country. Great difficulty is experienced in meeting the inquiry for milch beasts, especially heavy-milking heifers, which buyers are much bent on acquiring for town dairies, the high price demanded—from £18 to £22 each—seemingly having but little effect in checking sales. Other heifers of a useful class are equally sought after, at from £16 15s. to £17 15s., whilst cows are also very saleable at from £12 to £16 or £17. In-calf beasts, especially the earlier class, are also selling well; in fact, the trade is very dear for anything where milk is concerned. Barroners are likewise much wanted, for those speedily turning in, and, although prices keep fairly firm, ranging for the best from £21 to £27 10s. per pair. Fat bullocks keep up very well in value, the tendency being, if anything, rather towards higher prices than otherwise; good class heifers sell from £16 to £22, and steers £19 to £26 10s. (or 11s. 6d. to 12s. per score for the best, and 11s. for anything not too ripe or well finished; fat cows, £15 to £17 (or 10s. to 10s. 6d.); and bulls, £14 10s. to £19 15s. (or about 9s. to 9s. 6d.). The veal trade also keeps very firm, with every prospect of a good trade for Easter. The best may be quoted as making £4 10s. to £6 15s. (or over 8d. if well finished); seconds, 56s. to 83s. (or 7½d.); and rearers, 30s. to 45s. Mutton shows no sign of recovery in price, though evidence is not wanting of undoubted scarcity in the country; yet, in spite of this, wethers, which range from 48s. to 54s., rarely exceed 7½d. per lb., and plenty of the rougher grades sell for less money; and ewes from 40s. to 50s. (or 6½d. to 7d.). Lambs are meeting a trifle better sale, some of the best having this week touched 42s. a piece (or 9d. to 9½d. per lb), though a more average price is 32s. to 38s. (or 8½d. to 9d.). The inquiry for a better grade of fat pigs (baconers and porkers) keeps very active, good class porkers of the best weights selling at 10s. 6d. to 11s., and baconers about 10s.; heavier pigs are scarcely so saleable, but prices keep fairly steady, but very little is doing as yet in store sheep, a few couples finding buyers at local markets at from 48s. to 57s. 6d. Most of the other sheep now coming out are either fat or a very little way from it.

Trade in Scotland.

John Swan and Sons, Limited, give the following as their report on above for the current week:—The supplies of fat cattle on offer this week have been rather larger. The best class of bullocks met a good trade, and prices have been quite as high, and in some cases a little higher, than those currant last week. Fat cows and bulls have been a large show, and continue to make good prices. There have been also large supplies of fat sheep coming forward. With the better returns from the London markets, trade has been steady, and prices for sheep adapted for the South have been better to the extent of fully 2s. a head, while shop sheep have also met a good demand at rather higher prices. Fat lambs, if of good quality, are easily sold, but fat calves have been a small show, and met a dear trade, while pigs have made exceedingly high prices. In the store markets the number of sheep offered has been, although small for the time of year, considerably in excess of last week. There has been a fairly good demand, and prices have been better all over, an easy clearance being effected. Store cattle have been an average show, but the quality has generally been indifferent. There has been a fair demand for a few well-conditioned bullocks and nice stocks, but the general run of the cattle on offer met a stiff trade, and a considerable number have been left unsold. A large and good show of milch cows met a stiffer trade, at prices from 10s. to 20s. a head, in buyers' favour. Quotations: Top price of cattle per live cwt., 37s. to 39s.; current, 35s. to 37s.; mutton, from 7d. to 8d. per lb.

Trade in Ireland.

Last Thursday's Dublin Market was pretty nearly on a par with that of the previous week so far as supplies were concerned, there being 1,595, or an increase of 46 cattle; and 3,836 sheep, a decrease of 62. The attendance of buyers, too, was much the same, but there was a decided improvement in the tone of business for home requirements, and good second-class beeves moved off more readily at last week's rates. The shipping trade, however, was very slow, and it was very hard to get rid of coarse unfinished stock, which formed a big percentage of those on offer. The numbers of cattle and sheep penned were very much below those of the corresponding ones of 1901, there being 285 head of cattle and 388 sheep less, and yet a clearance could not be effected in either department, clearly proving that the arrivals of foreign beef and mutton must be largely on the increase. Best ox and heifer beef was worth from 54s. to 57s. 6d. per cwt., and a few extra choice lots made up to 60s., and one small lot touched 63s. per cwt.; good, second class, from 48s. to 52s. 6d.; and other descriptions from 42s. to 52s. 6d. per cwt. There was a slight revival in the sheep department, the inquiry being brisker, and last day's rates were well maintained; aged wethers, choice ewes, and mountain sheep going extremely well. Best wethers made from 6¾d. to 7¼d., and cheviots ¼d. per lb. more; ewes, from 5¼d. to 6½d.; and inferior sheep from 4½d. per lb. upwards. The shipping inquiry was still very limited, but a fair number of hoggets were shipped for Liverpool and Manchester markets. While there was no difficulty in placing choice sheep, the common descriptions were hard to dispose of at irregular prices, and a large proportion of the rougher sorts failed to clear. Lamb is coming in plentifully, but owing to the variability in size and condition it was hard to quote prices. The best home lambs sold for about 36s. each, and grass lambs made a little more, the extreme figure being about 40s. For small, thin lambs very up-and-down prices were paid. Best veal in brisk demand at from 8d to 9d. per lb., but coarse calves were very hard to dispose of at from 4½d. upwards. Milch cows in limited supply, and with not much demand; best springers made the reduced rates of last week, but middling and inferior sorts were very hard to turn into cash. The store cattle trade is showing a little more animation, and some very large sales were held during the week, when a fairly good business was done.

There was a full average supply of pigs, and the usual attendance of buyers, but trade ruled very tame, and after opening at last week's rates closed about from 1s. to 2s. per cwt. worse for the ordinary run. Choice small-weight hogs made from 46s. to 48s. per cwt., and coarse and inferior from 35s. upwards.

LONDON.

Islington, Thursday.—Beast supplies fair, the bulk consisting of fat bulls and rough cattle. The demand was of a quiet character, but prices were unchanged. Fat bulls, 3s 2d to 3s 4d. Supplies of sheep were good, but experienced very slow support, prices being generally easier. 7½-stone to 8-stone Down wethers, 5s 4d to 5s 6d; 9-stone ditto, 5s 2d; 10-stone half-breds, 4s 10d to 5s; 10-stone Down ewes, 4s 2d to 4s 6d; and 11-stone half-bred ditto, 4s to 4s 4d. Lambs dull and lower. 5-stone Downs, 6s 4d to 6s 8d. Calves firm and dearer, the best on offer, making 5s 8d to 6s per 8 lbs., to sink the offal. Pig trade and supply nominal. Total supplies: Beasts, 90; sheep, 1,260; calves, 20; cows, 5; and pigs, 10.

COUNTRY.

Basingstoke, Wednesday.—At Raynbird and Sons' Sale Yard there was a fair attendance of buyers to meet a supply of 34 fat beasts, 52 calves, 333 fat sheep and lambs, and 50 head of dairy and store cattle, for which the following prices were realised:—Prime Devon beasts, up to £23 10s; shorthorns, up to £22 10s; well-fed Welsh run up to £21 10s; heifers realised £17 10s; and bulls up to £19 10s. Prime quality fat sheep realised from 48s to 53s 6d; 13 months old ditto, 36s to 48s; fat sucking lambs, 33s 6d to 38s; fat ewes, 41s to 56s 6d; fat calves, 65s to £5 13s; small, 20s to 45s; dairy cows, up to £20 5s. A clearance made of the short supply of fat beasts at full prices. A short supply and a better show of fat sheep and lambs, with a good attendance of buyers, met a better trade all round. For the best class dairy cows and heifers, prices ruled higher than last week; secondary sorts met a slow trade. Fat calves are very dear, the supply being unequal to the demand. An easy clearance was made. Ruling values:—Prime Devon beasts, 7d to 7¼d; ditto shorthorn, 6½d to 6¾d; bulls, cows, and inferior beasts, 5d to 6d per lb.; best quality fat sheep, 7¼d to 8¼d; second ditto, 6d to 7d.; fat sucking lambs, 9d to 10d; old ewes, rams, and inferior sheep, 5d to 6d per lb.; fat calves, 7d to 8¾d per lb.

Boston, Wednesday.—Strong stores, £14 to £16; drapes, £12 to £14; in-calvers, £19 to £21 5s.; heifers, £17 to £19; calves, 55s to 60s; hogs, 36s to 41s each; best beef, 7s 6d; cow beef, 6s 6d to 7s per stone; fine wether mutton, 7d to 7½d; ewe, 5½d to 6d per lb.

Braintree, Wednesday.—A satisfactory improvement in trade at Messrs Ball's auction mart. Prices for fat stock well up to the average.

Bristol, Thursday.—Beef in large supply to-day, mostly secondary quality. Trade steady for best animals, at 60s. per cwt., 62s being paid in a few cases; secondary qualities, 56s. Mutton: Short supply; trade quiet. Light wethers, 7½d to 7¾d per lb; heavy wethers, 7d; ewes, 5½d. High prices asked for store cattle; restricted trade.

Bury, Wednesday.—There was about an average number of fat beasts. With a full attendance of buyers from distant counties and local purchasers, a good trade prevailed, at late rates. Rather more store cattle, including several lots of good quality, all of which found ready buyers. Very short supply of fat sheep. Trade in consequence ruled sharp, the supply being insufficient for the demand. Several lots of store sheep were penned, and these met a better trade, at more money for all descriptions. Fair average show of pigs, and a sharp trade prevailed, at fully late rates for both fat and store pigs.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9	6
Under 10 sc.	Not exceeding 2½ in. ...	9	0
Under 11 sc. 10 lb.	... Not exceeding 2¾ in. ...	8	6
Under 12 sc.	... Not exceeding 3 in. ...		

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts, 251; sheep, 506; horses, 5. Beef, 7s to 8s 6d; mutton, 4s 4d to 5s 4d. A few lots of store beasts, and trade slow. Fat beasts: A fair number to hand; prices better. Fat sheep: A better trade all round. Stores: Only a few lots shown, and trade fair. Market closed for pigs. Hay, straw, and roots: Short supplies.

Canterbury, Saturday.—Working tegs ranged from 22s 6d to 30s, and better-class lots from 30s to 36s; while the pick of some strong flocks made from 1s to 2s more money. Ewes and lambs made about 45s. Hardly any inquiry for horned stock.

Carlisle, Saturday.—The trade in Irish store cattle is again looking up, and for some weeks to come the market will be well filled. The number on offer to-day exceeded 600 stripping cows and heifers, the latter including a few black polled specimens. Buyers were present from all parts of the country, and a good trade was done at £8 10s to £11 10s for stripping cows, £5 10s to £8 for small and inferior heifers, £12 to £13 for black polled heifers, and £12 10s to £14 10s for heifers for grass.

Dorchester, Wednesday.—Large supplies of all kinds were again on offer at to-day's cattle market, sales at which were held by Messrs. Duke and Son and by Mr. Sampson, and there was a full attendance of buyers. On the whole a good trade was experienced, though the rates ruling for lamb scarcely came up to buyers' expectations. In other respects prices generally were of a very satisfactory character. Fat bullocks were a good trade, the best selling up to 11s 6d per score, and others 10s 6d to 11s, the tone of the trade being good. Mutton scarcely sold so well, comparatively speaking, as beef, though a few good wethers made 7½d per lb. and over, and ewes 6½d to 7d. Lambs ranged from about 28s to 38s (or 8½d to 9d). The veal trade was quite as good, if not better, than at previous markets, best calves selling from £4 to £6 10s, and seconds 50s to 78s (or 7½d to 8d for best and 6½d to 7d for seconds). Pigs ruled very firm, especially all the lighter weights, which sold at 10s to 11s per score; heavy pigs quieter of sale at 8s to 9s.

Dublin, Thursday.—Numbers in market: Beasts, 1,595, increase 49; sheep, 3,836, decrease, 62; calves, 45, increase, 10. Buyers were more cheerfully disposed, and prime finished cattle sold easily at low rates, other qualities being in better demand. More life in the sheep trade. Anything very choice made a shade more money; other sorts easier sold. Cattle, live weight (best) 32s to 35s per cwt; other sorts, 27s to 31s per cwt; mutton (dead weight), 6½d to 7¼d per lb.—GANLY, SONS, AND CO.

Hereford, Wednesday.—Bullocks and cows, 718; calves, 119; sheep and lambs, 768; pigs (fat and sows), 64; sucking pigs, 12; pigs (stores, not more than ten), 210; pigs (stores, not more than ten), 110; horses, 1. Prices in cattle market:—Best beef, 6d to 7d per lb.; wether sheep, 6½d to 8d per lb.; ewes, 5½d to 7d per lb.; veal, 5½d per lb.; pork, 5½d to 6d per lb.; bacon, 4d to 5d per lb.; lambs (not sold by the lb.), 30s to 35s each.

Ipswich, Tuesday.—Messrs Robert Bond and Sons report a somewhat larger supply of fat cattle, which sold freely without alteration in value; buyers were present from Leicestershire, Warwickshire, Northampton, and Bournemouth. A good entry of fat sheep, for which

prices were firm. Prices ranged from 55s to 33s. Grazing hoggets were fairly represented from 33s 6d to 30s. Fat swine were not so numerous, and notwithstanding a large attendance of buyers, values were slightly lower. Stores in good demand. Forty cows and heifers were penned; those fresh-calved sold well. Secondary descriptions were dull. Prices ranged from £22 to £14. Several lots of grazing cattle were disposed of. Those forward in condition sold well. 155 horses were offered at the Drill Hall. A good trade was experienced for cart horses, but hacknevs were dull. Numbers at sales and market:—Cattle, 692; calves, 77; sheep, 2,041; swine, 1,225; horses, 155.

Leicester, Wednesday.—Full consignments of Lincolnshire and Norfolk fed bullocks. Buyers and dealers were well represented. Trade ruled brisker at a further advance of 10s each. Choice bullocks, 6¾d to 7d; secondary, 6¼d to 6½d; cows, 5 to 6d; heifers, 6d to 6¾d per lb. Sheep were a full delivery, and sold freely at firmer rates; choice qualities, 7¾d to 8d; large sheep, 6¾d to 7¼d; ewes, 5¾d to 6d per lb. Lambs in request at 1s per lb.; calves firm at 8½d to 9d per lb.

Newport, Wednesday.—There was a good supply of both cattle and sheep, and, the trade being brisk, there was a general advance of about ½d per lb. in cattle and sheep. Good attendance of buyers. The quotations were:—Beef, best, 6½d to 6¾d per lb.; secondary, 6d to 6¼d; cows, 5½d to 6d; mutton, best wether, 8d to 8½d; ewes, 6½ to 7d; veal, 8d to 9d; pigs, porkers, 10s 9d to 11s per score; bacon, 9s to 9s 6d.

Norwich, Saturday.—Store beasts were in rather short supply here to-day, but keep not being particularly plentiful, although some rain fell last evening, sales proceeded slowly, and a complete clearance was by no means effected. Fat beasts were the turn in favour of the buyer at 7s to 7s 6d and 8s per 14lb. Store sheep were in pretty good supply. Hoggets were in slow demand at from 30s to 45s per head. Fat sheep showed little change at 8s to 8s 6d and 9s per 14lb.

Romford, Wednesday.—About an average supply of fat beasts; trade slow. Best animals, 4s 3d to 4s 8d; middlings, 4s to 4s 2d per stone. Calves in short supply; trade dear, at 5s 6d to 5s 8d per stone. Sheep in average supply; trade a little better. Best sheep, 5s 4d to 5s 6d; and middlings, 5s to 5s 2d per stone. A few lambs on offer, at 7s 4d to 7s 8d per stone. Few store beasts on offer; fair demand. Pig market still closed.

Salford, Tuesday.—There was another decrease in the number of cattle on offer, with the result that a good trade was experienced, and late prices were fully maintained. The supply of sheep was larger, and included a good proportion of shorn sheep. There was a good demand for all kinds at late rates. The supply of calves was an average one. Nice fat calves were not so plentiful, and met with a good demand at prices in favour of the seller, other kinds changing hands at late rates. Quotations: Cattle, 4½d to 6½d; clipped sheep, 6d to 7½d; ditto (in wool), 7d to 8½d; calves, 5½d to 8½d per lb. At market: Cattle, 2,348; sheep, 9,763; calves, 184; pigs, 76.

Sheffield. Tuesday.—Small show of beasts and sheep, small, but the demand for best lots was fair, and such animals made £19 to £22; other sorts, £12 to £16.

Spalding, Tuesday.—Small show of beasts and sheep. Fat beef, 7s 6d per stone. Stores were a large show, with a fair trade. Cows were in demand, and made good prices. Sheep a short supply, and an improved trade. For hoggs there was a fair trade.

Stockton, Wednesday.—The stock offered numbered 145 cattle, 30 calves, 289 sheep, 2 lambs, and 243 pigs. Only a small show of best cattle, which made 7s 6d to 8s, rougher kinds, 6s 6d to 7s. Calves met a good trade at 7d to 8½d; young sheep, 7½d to 8d; ewes, 6d; tups, 5d per lb; lambs about £2 each.

Thame, Wednesday.—There was a much better supply of stock at market, and the quality was excellent, particularly the beef. Mutton showed a great improvement in trade, and the first consignment of fat lambs from Mr. Reynardson came in first rate condition, and averaging over 40s each, with a large attendance of buyers. Trade was brisk throughout, nearly every head changing hands. Mr. Bond's sale comprised 50 fat beasts, 165 fat sheep, 69 fat and weaning calves, 113 fat and store pigs, and 3 horses. Fat bullocks made £17 to £24 10s; fat heifers, £14 to £21; fat tegs, 43s to 60s 6d; fat ewes, 37s to 56s; fat lambs, 37s to 43s; store tegs, 26s to 34s 6d; fat calves, £3 to £4 13s; cow calves, 22s to 59s; bull calves, 17s to 53s; fat pigs, 10s per score. Stores a fair trade.

Wakefield. Wednesday.—There was a slight decrease in all departments, with the exception of sheep. A good number of buyers were present, and a steady trade was done. Fat beasts comprised Scotch, Irish, Lincolnshire, and home-fed beasts, and the quality was of an average character. A good demand was made for young heifers and bullocks, and dealers with some difficulty succeeded in obtaining 6¾d; first-class beef, 6½d, and this was the general price paid; secondary and inferior, 5d to 6¼d per lb. A large number of dairy cattle, but not many buyers, and trade was of a somewhat dragging character. First-class animals, £16 to £20; other sorts, £14 upwards; store cattle met a poor sale at £8 to £12; calving cows, £12 to £21. The few fat calves on offer were cleared out; best 8½d, others 6d to 8d per lb. A fairly good business was done in sheep, and last week's prices were fully maintained. Choice small young sheep were the best to sell, and 8d per lb. was readily paid; medium animals, 7d to 7¾d; heavy sheep, 6¾d to 6¾d; ewes and tups, 5½d to 6¼d. A number of clipped sheep were offered, but only a moderate business was done, prices quoted being 6¾d per lb. A fairly good number of lambs were on offer, small ones making 1s per lb., while big ones were sold at about 10½d. An average trade was done in pigs; stores, 25s to 55s; suckers, 15s to 21s each; porkers, 6s 6d to 7s 3d per stone of 14 lb.

Wolverhampton. Wednesday.—Beasts and sheep a moderate supply; fair trade. Calves small supply; fair demand. Beef, 5¾d to 7d per lb; mutton, 6¾d to 8¼d per lb; veal, 7¼d to 9d per lb; pigs, bacon, 10s per score; porkers, 10s to 10s 6d per score; sows, 8s per score.

Worksop, Wednesday.—Fair attendance, and good supply of stock; best qualities of beef made up to 7s 6d, and secondary qualities 6s 3d to 6s 9d per stone; best wether mutton, clipped and in the wool, 6¾d to 7¼d, and ewes and other sorts 5d to 6d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies denoted decrease of 420 head as compared with last Wednesday's figures, and consisted of shipments from United States. Trade firm, at 4s. 2d to 4s 5d per 8 lb., to sink the offal. 475 United States beasts not shown. No sheep to hand.

Yorkhill, Monday.—The usual weekly sale of United States and Canadian cattle was held to-day, when there were penned in the sheds 17 cattle, ex Norwegian, from Portland; 200 by the Tritonia, from Newport News; and 160 by the Concordia, from St. John, N.B. Taken all round, the animals were somewhat similar to those exposed last week, but, if anything, the bullocks were of finer quality, all being shown in good condition. There was the usual large attendance of buyers. Good-class cattle met a firmer demand, and were easier cashed. The number of bulls on offer was scarcely sufficient for the requirements of the market, and in consequence they met a good trade, selling dear. Cows and heifers met a fair selling trade. The deadweight quotations may be given as follow: States bullocks, best class, up to 58s, and for a few really choice up to 60s per cwt; secondary and heavier, 56s; heifers, best class, to 58s; secondary sorts, 54s to 56s; cows, 52s to 54s, according to quality and finish; bulls, best class, handy sorts, to 50s; and secondary and heavier, 46s to 48s. Canadian bullocks, best-class light-weights, 56s per cwt, and a few really choice up to 58s per cwt; secondary and heavier, 52s to 54s; and bulls made similar prices to those ruling above.

Yorkhill, Tuesday.—A sale of American cattle was held to-day, the animals offered numbering 250, landed by the Corean (s) from Boston. Bullocks formed the greater proportion of the total number, and many of them were prime beasts, and although they were only landed a few hours prior to the sale, they all showed well. The attendance of buyers was rather small, but trade was somewhat similar to that ruling at Monday's sale. The dead weight quotations may be given as follows:—Bullocks, best quality, medium weight, 56s per cwt., and for really choice up to 58s.; heavy prime, 54s; secondary and heavier, 52s; bulls, best class, to 50s; and secondary and heavier, 46s to 48s.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 1,077qrs Bombay, 7,761qrs Buenos Ayres, 13,869qrs Rosario, 5,289qrs San Nicholas, 3,820qrs San Pedro, 9,146qrs Villa Constitution; total, 40,962qrs. Quiet, but steady. Calcutta, April-June 52s 3d. River Plate, spot 49s 9d, February-March 50s 6d. Cottonseed: There was a slight set-back in values during last week, spot and passage selling at £6 12s 6d, whereat April-June also done, but the market has since firmed up again in near positions, owing to no steamer on passage to this port, and £6 13s 9d to £6 15s paid; March sold at £6 13s 9d, but offers to-day at £6 12s 6d; November-January has been dealt in to a small extent at £6 3s 9d. Oils: Exports for the week ending March 4, 1902:—Linseed oil: 3 Austria, 2 Denmark, 4 Holland, 5 Norway; total, 14 tons. Cotton oil: 179 Austria, 103 Belgium, 29 Denmark, 105 Germany, 177 Holland, 1 Norway, 12 Sweden; total, 606 tons. The market is quiet. Linseed oil: 29s 6d, spot; 29s 4½d, March-April; 29s 4½d, May-August. Cotton oil: 22s 7½d spot; 22s 9d March-April; 23s 1½d May-August. Crude: 21s 6d, spot; 21s 7½d, March-April; 21s 9d, May-August. Rape oil: Jamba naked, 24s 3d spot. First quality naked, 25s 3d spot.—KEIGHLEY, MAXSTED, AND CO.

London, Thursday.—Linseed: Free arrivals and weakness in Calcutta have caused prices to decline. Spot Calcutta to London nominally 54s, passage 54s to 53s, March 51s 3d, April 51s, April-June 51s. La Plata, near 51s 3d, passage 51s. Hull is also lower. Calcutta, April-June 51s 6d. La Plata, spot 48s 9d, March-April 50s. To the Continent, Bombay March-May 54s 6d, March-April 54s, June-July 54s 1½d. Calcutta, April-June 51s 6d. La Plata, February March 50s 3d. Linseed oil continues inactive, and prices are again easier. We quote spot in pipes £30 10s to £30 15s, barrels £30 15s, May-August £30 5s, September-December £23. Hull, spot, naked, £29 7s 6d, March-April £29 5s, May-August £29 5s. Linseed cakes are steady. We to-day quote London made £8 5s to £8 7s 6d ex mill, American Western £7 7s 6d to £7 10s, Russian £7 12s 6d to £8 2s 6d. Cotton cakes quiet; London made £4 6s 3d to £4 7s 6d. Rapeseed: Dull, little doing. Brown Cawnpore, March-May 38s. To the Continent, we quote Yellow Cawnpore March-May 41s 9d, Brown Cawnpore March-May 38s 3d, Brown Calcutta April-June 38s 3d. Ferozepore February-March 38s 6d. Jamba, March-May to Hull 31s 3d. Cottonseed: Alexandria has been very firm, but at present there is such a divergence in prices there and here that business has been much restricted. Spot, London £6 10s, February £6 8s 9d, March £6 11s 3d, April-May £6 12s 6d, Hull, spot £6 13s 9d, February-March £6 12s 6d, April-June £6 12s 6d.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—There has been a good business passing in foreign descriptions for near and forward positions, values having declined to a sufficiently low basis to attract buyers, while stocks continue exceedingly small. Russians find a more ready sale at last Monday's prices. Americans are in good request at £7 to £7 2s 6d per ton, ex ship to arrive. Calcutta made in bags offer at unchanged quotations, as is also the case with London made. Cotton Cakes:—The trade rules dull and inactive, and with a considerable quantity of foreign available in warehouse, quotations are again the turn against sellers. Egyptian are obtainable at unchanged prices on spot, and £4 2s 6d for equal monthly deliveries April to August next. English remain quiet and unchanged. Decorticated move off slowly at 2s 6d per ton less money, and meal at last week's prices. Rape Cakes: —Unchanged. Maize Germ Meal:—Some arrived parcels of American still offer at £5 18s 9d to £6, but for prompt despatch from the mills there are sellers at £5 7s 6d to £5 10s c.i.f. English is without change. Rice Meal:—A steamer cargo of Rangoon due the end of the month is quoted at £4 15s ex ship, while for later shipment £4 7s 6d ex ship would be accepted.

COLONIAL DAIRY PRODUCE.

London, Friday.—The demand for New Zealand butter has improved during the last two or three days, and more business is passing. It looks as if the wholesale houses were rapidly exhausting their stocks and would have to come on the market immediately to replenish their supplies. Values have fallen about 2s. during the week, mainly owing to a few holders having become nervous. At the end, however, there is a better tone, and before the "Tokomaru's" butter is available there will be considerable scarcity. "Choicest" brands are now selling at 108s to 110s per cwt., and "Finest" remains unchanged at 104s to 108s. The demand for a shilling retail butter has not slackened in the least. The Copenhagen Committee has decided to leave the official quotation unchanged. The market in Copenhagen is reported firm, and it is evient that the struggle between the wholesale buyers in the North of England and the Danish committee has ended in favour of the Danes. The statistical position is so good at present that buyers will be wise not to attempt to force down prices until supplies come forward sufficient to meet current requirements. Russian butter in Siberia is dearer than it was last year, and recent telegrams from there speak of 98s, being the lowest figure for "Choicest" brands landed in London. There is a very strong demand, and more business is passing in Canadian cheese. "Choicest" goods are making 54s, with an occasional 55s, while "Finest" is bringing 51s to 53s. New Zealand cheese is selling at about 2s per cwt. under the above figures, and prices are expected to make a further advance before long. C.i.f. cables from Montreal quote 56s. for best goods, and 53s 6d for June make. New York is practically without stock, and c.i.f. quotations are equal to 61s for best goods.—W. WEDDEL AND CO.

WOOL

Canterbury, Saturday.—Most of the business is being done at 5½d for Kent fleeces and 4d for lamb wool, but a fractional advance is occasionally obtainable for well-known lots.

London, Wednesday.—The second series of London sales of Colonial wool commenced to-day, with catalogues comprising 10,206 bales out of an available total of 163,000 bales. There was a large attendance of both home and foreign buyers and animated competition. Prices, as compared with February closing rates, ruled for Australian merino wools at from par to 5 per cent. higher, and for crossbreds 5 to 7½ per cent. higher. The few Capes offered showed also some advance. As at present arranged, the sales will last until the 27th inst.—HELMUTH SCHWARTZE AND CO.

London, Friday.—English, per pk. of 240b: Fleeces, Southdown hoggs, £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6; Southdown ewes and wethers, £7 to £8 10s; Leicester wethers, £5 to £5 10s. Colonial, per lb: Victoria, fleece super, 1s 5d to 1s 7d; scoured, good, 1s 7½d to 1s 8½d; scoured, average, 1s 6d to 1s 7d; greasy, average to fair, 10½d to 11½d; New South Wales, scoured, average, 1s 3½d to 1s 4d; greasy, average, 8d to 9d; South Australia, greasy, average, 6½d to 7d; New Zealand, scoured, average, 1s 4d to 1s 5d; grease, average, 8d to 9d. Cape: Scoured, super, 1s 5d to 1s 6d; fleece, average, 7d to 7½d; greasy, average, 5½d to 6½d; Natal, scoured, 1s to 1s 1d; greasy, average, 6½d to 7d. Crossbreds, grs.: Victoria, good to superior, 10½d to 11½d; New Zealand, fine, 8d to 9d; ditto, medium, 4½d to 5½d; ditto, coarse, 4d to 4½d.

FRUIT AND VEGETABLES.

Covent Garden. Saturday.—Fruit supplies fair and met with fair support; good supply of greenstuffs experienced better demand. Potato trade very slow. English grapes, 1s 6d to 3s; Belgian, 1s 3d to 1s 9d per lb; Nova Scotian apples, 20s to 26s per barrel; Californian, 8s 6d to 12s 6d per case; pineapples, 2s to 4s 6d each; bananas, 7s to 12s 6d per bunch; Denia oranges, 10s to 25s; Murcia, 7s 6d to 10s per case; dates, 11s to 12s per cwt; Messina lemons, 8s to 20s per case; savoys, 8s to 10s per tally; cauliflower, 2s to 2s 6d per dozen; Brussel sprout, 1s 6d to 2s 6d per half-sieve; parsnips, 2s 6d to 3s per bag; carrots, 2s to 2s 6d; turnips, 2s to 3s; leeks, 2s to 2s 6d per dozen bunches; celery, 12s to 14s per dozen rolls; horseradish, 1s 3d per bundle; forced rhubarb, 1s 3d to 1s 6d per dozen bundles; English onions, 7s to 8s per cwt; Valencia, 7s 6d to 9s per case; Dutch, 5s to 5s 6d per bag; potatoes, 35s to 80s per ton; New Canary, 16s; Teneriffe, 15s per cwt.

HOPS.

Canterbury, Saturday.—Quiet business in medium-class hops, at 30s to 40s per cwt. Stocks are shrinking rapidly, and the market looks like being cleared before the next crop arrives.

Worcester, Saturday.—Our market continues quiet, with only occasional sales taking place, principally of the best qualities left, and when holders are willing to accept current rates; low qualities are not enquired for.—PIERCY AND CO.

THE BALTIC.

Wheat cargoes are the turn in buyers' favour. Sales include Californian at 30s., Walla Walla at 29s. 6d., Blue Stem at 29s. 6d., Fine Oregon at 29s. 9d., Argentine at 29s. 3d., No. 1 Northern at 29s., No. 2 Hard Winter at 28s. 9d., Victorian at 29s., and Russian Azima at 31s. per qr. Blue Stem and Oregon are specially cheap just now.

Maize cargoes are neglected, but Galatz has been placed at 21s. 9d., Caucasian at 22s. 6d., Argentine at 21s. 6d., and Turkish at 21s. 9d. per qr.

Barley is steady. A cargo of Californian has made 25s. 6d., and two Roumanian cargoes have found purchasers at 18s. 6d. per qr.

Oats are held at 19s. 3d. for Canadian, 17s. 9d. for South Russian, 20s. for Konigsberg, 17s. 9d. for White Libau, and 27s. per 384lb. New Zealand.

A cargo of Egyptian beans for May shipment was sold on Friday for 29s. 6d. per qr.

Linseed makes 49s. for Argentine, and 51s. 9d. for Calcutta rapeseed, 37s. 9d. for Brown Cawnpore and poppyseed, 47s. 3d. for Bombay; all per qr.

The week's arrivals at ports of call were four wheat cargoes and one cargo of barley.

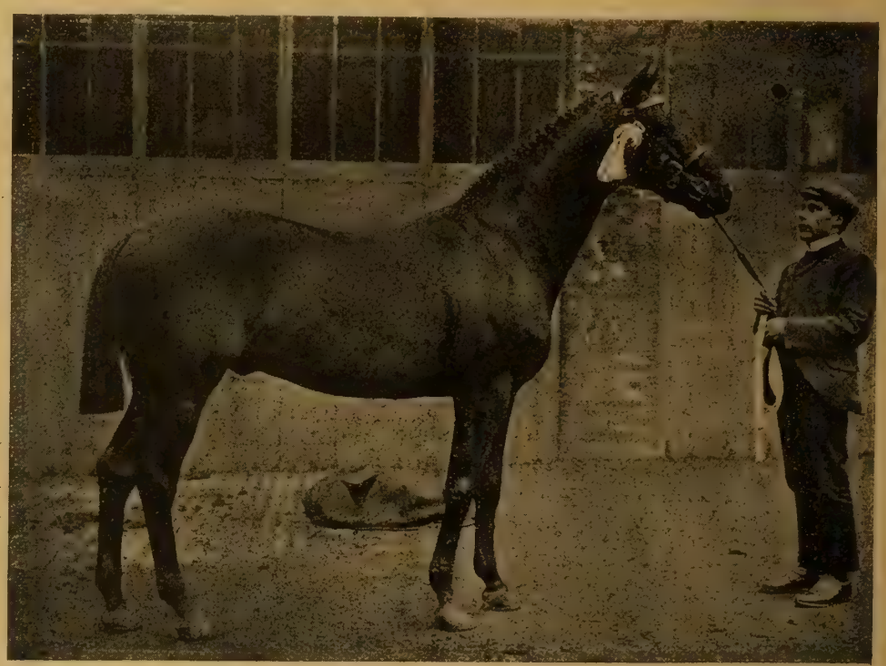
STOCK AND SHOW NOTES.

By Herdsman.



H.R.H. the Prince of Wales, who has for many years had a herd of Red Polled cattle at Sandringham, has graciously consented to be nominated patron of the Red Polled Society.

Sir Walter Gilbey entertained the President and Council of the Hunters' Improvement Society and the members of the Royal Commission on Horse Breeding at dinner, at Cambridge House, Regent's Park, on Tuesday evening. Amongst those present were Colonel Sir Nigel Kingscote (President), the Earl of Coventry, Lord Ribblesdale, Lord Middleton, Lord Wenlock, Captain H. Heywood-Lonsdale, Sir John Gilmour, Sir R. Green-Price, and Sir Jacob Wilson.

Dr. Louis Cobbett and Dr. E. S. St. Barbe Sladen have, says the "British Medical Journal," been appointed by the Royal Commission on Tuberculosis to assist in the experimental work of the Commission to be carried out at Stansted. They will reside at the farms, and devote the whole of their time to the investigations of the Commission.

On the first Thursday in April Messrs. John Thornton and Co., will hold their annual sale of shorthorns in the wool sheds adjoining the Cattle Market at York, at which they will offer a cup, named "The York Gold Challenge Cup," and valued 100 guineas, to be awarded to the exhibitor, being the breeder, of the best three pure-bred shorthorn bulls, eligible for entry in Coates' Herd Book, calved in the years 1900 or 1901; or for a bull of any age, which need not be bred by the exhibitor, and his two sons, calved in 1900 or 1901, bred by the exhibitor; the cup to be won three times, either successively or at intervals, before becoming the absolute property of the exhibitor. No entry fees are charged. The following gentlemen have agreed to act as judges:—Mr. George Harrison, Gainford, Darlington; Mr. W. J. Hosken, Pulsack, Hayle, Cornwall; and Mr. William Taylor, Lowfield, West House, Kirkby Lonsdale; whilst Mr. Henry Dudding, Riby Grove, Stallingboro', Lincs., will be the umpire.

The catalogue of the sale comprises 130 pure-bred bulls and 30 young cows and heifers, the animals being from the herds of various well-known breeders in the Northern counties. Included in the sale is the small select herd bred by the late Mr. Edward Tindall, of Knapton Hall, Ridlington, which is descended from those fine old strains so long bred by the late Mr. Samuel Wiley, Brandsby, and has latterly been crossed with bulls of Booth blood. The sales at York have hitherto been without reserve, sellers not adopting the mart practice of making one bid at their own option and it is still desired to retain the open and unreserved character of the sales. If, however, a breeder wishes to enter among his three bulls one that he desires to use in his own herd, or to exhibit at the summer shows, he may place the word "reserve" at the end of the pedigree, and name the reserve or withdraw it at the time of sale. The judging will commence at 10 a.m., and the sale at 11 o'clock.

THE THOROUGHBRED STALLION, RAMPION, which we show above, is the property of Capt. H. Hopkins, Marchington Hall, Marchington, Staffs and was bred by the late Duke of Devonshire. At the show of thoroughbreds last week, Rampion was winner of a King's Premium in District Class F, serving in Gloucestershire, Herefordshire, Monmouthshire, Shropshire, Staffordshire, Warwickshire, Worcestershire, and South Wales. He is a chestnut, foaled 1893, his sire being Amphion, dam Rydal by Bend Or.

Messrs. John Thornton and Co. have received instruction from Captain W. H. O. Duncombe to sell on April 11th a number of his well-known shorthorns at Waresley Park, Huntingdonshire. As is well known, Captain Duncombe's shorthorns, like his stud of Shire horses, have, during the last decade, taken a very high position at the principal shows throughout the kingdom. At the Royal Show at Manchester, 1897, the first and second prizes for heifers as well as the champion were awarded to the Waresley exhibits. These fine animals were sold with a large portion of the herd the following year at remarkable prices, Sea Gem, the first prize two-year-old, selling for 410gs., and Ruby Princess, the second prize yearling, for 210gs. At the Royal Show at Cardiff last year Warrior's Queen, lot 10, was placed at the head of the fine class of cows, and repeated her victory at the Yorkshire at Bradford, where Ruby Queen and her family were placed third in the family class, as at the same society's meeting at Doncaster the year previously. The Waresley Park herd contains several descendants of the Sea Gem family which have been bred on the estate since about the year 1846, and of the Rubys, tracing from the old Booth Farewell tribe, which were obtained from the late Mr. Pawlett. These tribes have been very prolific and good breeders, the best evidence of which has been the success that has distinguished the exhibits in the family class at the great Yorkshire shows. Many of these animals—in fact, all the show winners—are included in the sale, viz., Warrior Queen, Ruby Rose, Red Robe, War Queen, and Belle of Waresley, whilst many of the younger animals are well adapted for showing during the forthcoming season. They are mostly by Manor Victory 77189, bred by Mr. Hiscock, who keeps a large dairy herd in Dorsetshire. The sale will commence after half-past twelve luncheon. Catalogues, etc., can be had of the auctioneers or Mr. Paisley, Waresley, Sandy, Hunts.

A special sale of pedigree Hackneys and harness horses will be held at Peterborough Repository by Messrs. Sexton, Grimwade, and Beck on Saturday next, the 22nd inst. (the day of the Peterborough Stallion Show). The catalogue includes seven yearling fillies and three yearling colts from His Majesty the King's stud at Wolferton, eight animals from the well-known stud of Mr. J. T. C. Eadie, Barrow-on-Trent, and four from the Marquis of Winchester. All these are to be sold without reserve, whilst there are other entries from various breeders, which make the number to be sold total forty-five. The sale will commence at one o'clock.

At a meeting of the Council of the Durham County Agricultural Society held on Saturday it was reported that the prize-money for this year's show, to be held at Barnard Castle on August 8th, is £133 less than last year. The meeting granted £500 as prize-money for horses, cattle, sheep, and implements, and £100 for dogs and poultry.

Canadian Ham Sold as English.—At the Oxford Police Court on Friday, Edward Radbone, grocer, and an assistant named Souche were summoned for a breach of the Merchandise Marks Act by selling on November 6th a Canadian ham and representing it to be English, and were fined respectively £25 and 40s. and costs, or one month's imprisonment, this being Radbone's second conviction. The prosecution was directed by the Treasury.

The Sulphate of Ammonia Committee, of 4, Fenchurch Avenue, London, E.C., have issued in pamphlet form, a report upon experiments with sulphate of ammonia during the season 1900. There is also given a list of the winners of the numerous prizes offered by the committee in 1900, together with details of the crop grown, yield per acre, quality, amount of manures used per acre, and some remarks on the keeping properties, etc., of the crops.

The Hunter Show.

Royal Commission on Horse Breeding.

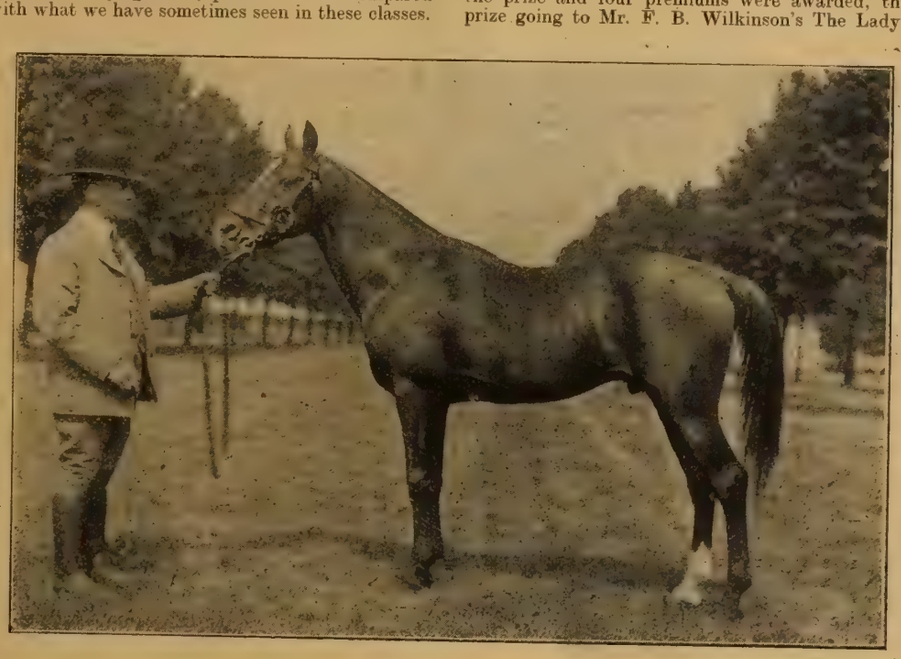
The annual show (18th) of this Society commenced in the Agricultural Hall, at Islington, on Tuesday morning last, the first day's business consisting of the selection, vetting, and awarding of King's Premiums to the Thoroughbred stallions. The entry of these year after year remains almost stationary, and the quality of the animals about on a par from time to time—indeed, the same animals often return to the hall for a number of years, some of them having received the same distinction for from seven to ten or more years. This is a matter for much congratulation, as proving the soundness of these sires to begin with, and also their ability to continue sound for so many years, a circumstance that must have a beneficial effect upon the light horse stock of this country, as, were it not for these stallions having to be submitted to a veterinary examination each year, breeders would probably continue using an unsound stallion for a long time. It is the more important at the present time that great attention should be paid to this question, as the remount business will for some time to come no doubt occupy the attention of many of our countrymen interested in horse-breeding; and whatever the kind of horse selected or desired to be bred, there can be little doubt thoroughbred blood will have to constitute the chief ingredient in the mixture, this both on account of the speed, good wind, and endurance of blood horses, and also from the fact that a horse with pretty much of this blood in his veins gives a much more comfortable seat to his rider than do those of a more mongrel breed. When long days or long journeys have to be performed on horseback this question is a most important one.

The general quality of the stallions shown this year did not present any greatly-altered features from past years; indeed, as already indicated, many—or perhaps we may say the majority—of the stallions competing had appeared in the hall upon previous occasions, and as they again succeeded in passing the veterinary ordeal, must be considered in this respect the right animals of this breed to scatter about the country. One thing may be here mentioned as a counteraction to the complaints we sometimes hear as to many of these horses not benefiting the horse-breeding business, namely, that at many of the summer shows in all parts of the country the prize-winners in the young stock have proved to be the progeny of Queen's Premium stallions, and another very important matter is that in the young hunter classes that followed the judging of these stallions at Islington presented a vast improvement upon past years. A great number of these horses possessed more bone than we often see, and were of a class and type that would either suit well under the saddle or make harness horses of a big and very valuable class. The number of premium stallions sent out is none too large, considering the extent of the districts in which they are located.

We may here mention a few of the stallions selected to serve in the various districts. Three stallions were allotted to the district Class A, comprising a very extensive one in the large centres of Bedford, Bucks, etc., as well as Norfolk and Suffolk. The animals to serve here are his Majesty the King's Adrian, Mr. Leopold de Rothschild's Chosen, and Mr. John Bell's Prince Charles II. Then for the extreme Northern counties are selected Mr. Relph's General Gordon, Dr. Haslewood's famous sire Imprever, and Mr. G. L. Abbot's Toboggan—horses that will make their mark.

The Central Midlands also have three very good horses, which is as it should be, for this rather important hunter-breeding district—(hunter-breeding to-day, bear in mind, means harness horses and chargers as well). These are Mr. Leigh Abbot's Abbot's Leigh, a rare good son of that fine getter Marioni; Mr. Jeffrey's Blakelaw, another capital horse; and Mr. Hawkes' Old Coin, who is also doing capital work.

Down in the West and South are to be sent four good stallions, comprising Mr. Shirley's Alvin; Mr. W. Wilson's Chibiabis, a fine-built beautiful mare; Mr. Grantham's Irish Wake, another very good one; and then General Jago-Trelawny's Springald. Yorkshire is allotted three—Mr. Westoby's Burgomaster, Mr. Ling's Cardonald, and Dr. Haslewood's Four Poster, who is getting some first-class stock.



In the Central of England, over a rather large district, are to be located four horses, namely, Mr. Mumford's Faute de Mieux, by Torpedo; Mr. Brassy's Pontifex; Mr. Hopkins' Rampins; and Mr. A. C. Philipp's Sterling Bank.

North Wales, Lancashire, etc., also take three stallions. These are to be Mr. Ralph Rimmer's Active Hampton, Mr. Young's Curley, and Dr. Haslewood's Woodstock. To go into Scotland are selected Mr. Richmond's General Magerins, for Roxborough, etc.; Dr. Haslewood's Commint, for Fife district; Mr. Hutchinson's Swillington, for Ayrshire district; Mr. Danell's well-known and good horse Withernham for Moray, Nairn, and Banff; and Mr. Hutchinson's Whittlebury for Ross-shire.

This concluded the lrst day's judging.

Hunters Improvement Society.

The second day commenced with the judging of the young hunter stock, of which there was certainly a very good show. The majority of the classes were well filled, and the bulk of the animals showed more of what we want to see—good backs, and shoulders, with excellent legs, joints, and feet. In this latter respect, to the writer, there appeared very great improvement as compared with what we have sometimes seen in these classes.

THE POLO PONY, THE BEY shown above, is an Arab of the Tahowi breed and the property of Mr. G. Norris Midwood, The Hut, Tabley, Knutsford. At the Polo Pony Show last week The Bey was winner of the Silver Cup for the best Eastern Sire, also winning first prize in the class for Eastern Sires not exceeding 14.2. In the similar class at the previous year's show, The Bey only succeeded in winning a second prize.

The first class in this department to be adjudicated upon was that for colts (Thoroughbred) three years old, suitable to get hunters. As there were but three entries made in the class, only two out of the three premiums were awarded. These were allotted to the Hon. Miss Dillon's Afrasiab, by Zal, bred by exhibitor; and to Mr. John Barker's Bright Grey, got by Grey Leg, out of Fair Alice, by Cambuscan.

Class II., for colts, yearlings, two and three-year-olds, bred as follows:—Thoroughbred or registered hunter sire, dams sire, and g. dams sire; the dam a mare registered or entered for registration in the Hunter Stud Book. Being divided into three sections, this made rather a large class. Section (a) yearlings were awarded two premiums going to Mr. Hodgson's Royalty, by Xury, and Mr. F. J. Gibbs' Verax, by Veracity, a bay and brown, and very useful colts all round. In Section (b), two years old, two premiums were also awarded to Mr. J. A. Brown's Wexford, by Great Britain, and bred in Ireland; and to a big, powerful-looking colt of Mr. Drage's, by Bay Ronald, his dam in the Hunter Stud Book, a very good class of colt in many respects, yet lacking a little some of the points that go to make up a stallion. Of the three-year-olds (c) section Sir Walter Gilbey's Merry Matchmaker, by Matchmaker, carried off the only premium awarded, as there were but three entries.

Class III. commenced the hunter young stock proper, of which, in some of the classes, there was a very large entry. Nineteen yearling colts or geldings were catalogued, and amongst them were some very promising colts. The prize went to Mr. Hodgson's Kildare, bred by Major Burrowes in Ireland, and sired by Red Prince II., and premiums were awarded to two capital colts got by Pantomime that always show strength, and one by Foscamo.

Two-year-old colts or geldings ran up to forty-two entries, and were, we considered, a very good class of colts, especially when the drafts had been taken out. A good number of these displayed both size and quality, and looked likely to make very valuable horses. The prize was awarded to Mr. Hodgson's Coronation, a chesnut gelding by Hindly, a very good colt all round in bone, build, and quality. A fine outlook made him take the eye much. Some of the premium colts were also very satisfactory, including Mr. Pyke's Notts, by Rosens, Mr. Atkinson's by Active Hampton, Mr. John Letts' Woodcock, by Touchwood, a colt with very good back and plenty of substance about him, and Mr. Wilkinson's Havre, a stylish, nice-moving colt, named after his sire.

There were twenty-eight entries of three-year-olds, amongst which were several big, good, and practically matured-looking colts. The prize in this class was awarded to Mr. A. J. Brown's Hollymount, an Irish-bred colt, by Bottler, with fine top and fore-end, and a capital set of legs and feet. The whole of the five premiums were also awarded, shared by first-class colts, amongst which were Mr. Hodgson's Toreador, an Irish-bred colt, by Matador; Mr. Kelway-Bamber's Lord Marmion, by Curley; and a very good colt of Mr. John Reave's, by Yard Arm.

Yearling fillies totalled sixteen entries, to which the prize and four premiums were awarded, the prize going to Mr. F. B. Wilkinson's The Lady, by Havre, out of the great prize-winning mare Lady Grosvenor, a filly that won a great many prizes as a foal last year, and has continued to hold herself well together in quality and style. Other very good fillies were Mr. Nickisson's, by Yard Arm, and Mr. Wakely's Ballet Girl, by Pantomime.

Two years old fillies were also found in good strength; indeed, these must be written a class of great size and quality. Nineteen were entered, the prize being awarded to Mr. W. B. Swallow's Tugela, by Anklebiter, a filly with good lookout and hock, plenty before the saddle and plenty under it, and with a lot of power and muscle about her. Three premiums were awarded, which went to Mr. Nickisson's Arthur, by Pantomime, who has gone on well since last year; Major Jago Trelawny's Speranza, by Springold, and Mr. Clive's Birdie Bright, by Grand National.

There were but twelve entries of three years olds, a useful lot, though not perhaps strikingly outstanding. The first prize in these was awarded to Mr. John Lett's Waterglass, by Waterton, a very nice bay, and three premiums were awarded. The Produce Class was next in the catalogue, and several sires were represented in the entries, Chibrabos, Four Poster, Pantomime, Swallowfield, Toscano, Withernham, and Yard Arm, all having good families. Pantomime's lot were so good, however, that the prize was eventually awarded to them, with Yard Arm's group as reserve.

The riding classes were rather numerous and entries good, several very high-class horses being shown in them. As is often the case, the heavy-weight classes were not proportionately as good as the light-weight, and a great feature in the question of awards was the fact that a great many

of the best animals were very nearly full blood. The chief winners in these classes were Mr. Herbert B. Cory, Mr. J. H. Stokes, who exhibited the champion and reserve in the section, Mr. Topham, and Mr. John Drage, a good number of them including some of the West and Irish-bred horses.

Mr. Stokes's champions included Opal, winner of first in the five or six years old mares, of whose breeding nothing is said, but of whose quality, style and correct points no praise is too loud. She was best mare in classes 10 and 11, and in the Challenge Cup and Gold Medal of the Society was reserved to her stable companion Tennis Ball, first prize in the mare and gelding class between 13st. 7lb. and 15st., who was also awarded the championship of classes 12 to 15, and ultimately of the hunter riding classes. He was bred by Mr. David Farrell, Kells, Co. Meath, sired by Court Ball, out of Empress, by Delight, and both in style, movement, manners, and general contour, as well as muscle, is one of the best hunters out for a long time.

The classes for chargers followed the hunter riding classes, and owing to the greater interest taken in the remount business a much greater entry was catalogued than used to be the case. Many of the animals were entered in other classes as well. A great number of them were bred in Ireland, and were the get of thoroughbred sires. Amongst the chief winners were Mr. A. J. Brown's Tipperary, by Drumree, bred in Ireland and first in the class of three year olds up to 15st. 7lb. and over; Mr. Kelway Banter's Lord Marmion, first in three years olds lighter weights, and sired by Curley; Mr. G. L. Peasse's Boniface, by Capuchin, first in four or five years olds, 13st. 7lb. and upwards, and Mr. J. S. Darrell's Heygate, by Sherbrooke, and first prize winner in the four and five years olds under 15st. 7lbs. Altogether the amount of interest taken in these classes during this year's show gives very much brighter prospects to the breeders of light horses, many of which, especially in the hunter section, are either bred or grown by farmers.

Polo Pony Society.

On the afternoon of the third day the judging of the Polo Ponies was commenced, and perhaps during the whole time of the show it is safe to say no livelier aspect had been given to the proceedings. As the judging of these classes commenced (the riding classes being judged first) every one seemed to prick up their ears, for these ponies appear as though they know they are a source of attraction, and their playful ways their activity, and cat-like movements, as well as the ease with which they run about under heavy weights, are the wonder and delight of all, strangers telling you, "Yes, those Polo Ponies last evening were quite a display, a really enlivening equine entertainment," and so the interest in these classes continued until the bending competition concluded the programme of the show.

The catalogue of this portion of the show commences with the stallions, the first class being for stallions not exceeding 14.2 hands. Pride of place in these was once m ore accorded to the old favourite sire, Rosewater, who has wonderfully preserved his polish, and comes out remarkably fresh and as stylish as ever—a credit to Sir Walter Gilbey's stud. Next was placed the Keynsham Stud Company's Gownboy, by Montezuma, who has capital back and loin, but is, perhaps, a little short of the scope and fine shoulders that characterise Rosewater. The Basuto pony, De Wet, was placed next. He has improved wonderfully with a year's sojourn in England, and with capital shoulders and good movement, looks like making a first-rate sire. Several other very nice stallions were shown.

Stallions not exceeding 13.2 followed, with seven entries. Sir Walter Gilbey's stud again furnished the winner this time in the shape of Lord Polo, a son of Rosewater, but in the way of shoulders not by any means as good as his sire, though in body he is well-ribbed and stout. A very stylish pony in this class was Mr. Wilson's Hermit, just about as smart as they are made, and with forms, back and hind legs. Mr. Goodson's Polo King, by The Rey, and the Rev. D. B. Montefiore's Hurlingham, by Rosewater, were also very beautiful ponies.

Class 22 was in Eastern sires. Of that there were ten entries not exceeding 14.2. There were two or three certainly charming stallions in these, at the head of the class being placed Mr. G. Norris Midwood's The Bey, an Arab of the Tahowi breed, full of quality and with the most elastic movement. Next to him was placed Mr. L. W. Bailing's Parahk, a chest with power about him, and a good mover. The third place was filled by a fine Barb, shown by Captain Bridgeman, and bred by Mohammed Ben Mohammond, from Algeria, a pony with famous quarters and push, together with all-round strength in small compass, and not coarse. One or two other good ones were placed 4th in line.

The Polo Society's class came next for what may be termed society-bred or polo-bred ponies. There were but four entries of these, first and second prizes going to two full brothers, Birmingham Royal and Maidstone Royal, both the get of Mortrub, out of Sally, and shown by the Keynsham Stud Company. These colts possessed great power and fine limits. At present they scarcely seem as smart as a polo sire should be.

Brood mares came forward in rather considerable numbers, for breeders of this class appear to have come to the conclusion that the polo pony is to be the light horse par excellence in the future. There were 25 entries of mares between 13.2 and 14.2 hands, which were soon reduced to a much smaller lot, the winners eventually being Mr. Jon Barker's Lightning, a charming pony, with quality and the formation of a good brood mare, and a winner upon many previous occasions. The next was Mr. Iresham Gilbey's Early Dawn, by Rosewater, a good mare, a little bigger than the winner, and upon a capital set of legs and feet . Mr. Barker's Lady Polo, another of the Grange Stud, was also placed third.

Brood mares not exceeding 13.2 were but nine in number. Mr. Barker, Mr. Wilkinson, and the Rev. D. B. Montefiore were the chief winners, Rosewater being the sire of the first prize one.

Of Arab brood mares only seven were entered. These were a moderate class. The young stock classes were very well filled, yearlings (all sexes) having 16 entries not exceeding 13.2, and amongst them several of very puny form. Mr. Barker's stallion Sandway once more stood out very conspicuously, being the sire of the first prize one, and also of the first, second and fourth winners in the two years old class of 21 entries. These youngsters, so far, are growing up in very good form, having strength and yet displaying any amount of quality. There were nine entries of the three year olds, and again some very good Sandiways were entered.

In the riding classes, as previously intimated, some exceedingly smart performers came into the ring, and carried their riders, whether exhibitors or judges, in very good style. Amongst the best of them were Mr. Rawlinson's Seltzer, Mr. John Barker's Celia, a charming mare; Mr. James Farmer's Larky, Mr. Astor's Colonel Ashton, Compte Jean de Madres, Mademoiselle; Mr. Astor's Roulette, Mr. Williams's Shaving, Mr. Goldsmith's Schoolboy, and others. The Remount and Mountain Pony Classes were not of any especial quality.

Royal Commission on Horse Breeding.

Judges.

The Earl of Coventry, Croome Court, Severn Stoke, Worcester.
Mr. Percy La Touche, Newberry, Kilcullen, Ireland.
Mr. Anthony Marshall, Annstead, Chathill, Northumberland.

Premiums.

THOROUGHBRED STALLIONS.

DISTRICT CLASS A (Bedfordshire, Buckinghamshire, Cambridgeshire, Essex, Hertfordshire, Huntingdonshire, Middlesex, Norfolk, Oxfordshire, and Suffolk).—Three King's premiums of £150 each: P., His Majesty the King, Royal Mews, Buckingham Palace, London, S.W. (Adrian); Leopold de Rothschild, Southcort Stud, Leighton Buzzard, Buckinghamshire (Choson); John Bell, Upend, Newmarket, Cambridgeshire (Prince Charles II.).

DISTRICT CLASS B (Cumberland, Durham, Northumberland and Westmoreland).—Three King's premiums of £150 each. P., J. Relph, Stainton, Penrith, Cumberland (General Gordon); Albert Octavius Hasle-Wood, Fairfield Stud, Buxton, Derbyshire (Imprévu); Gilbert Leigh, Abbots Leigh, Somersetshire (Toboggan).

DISTRICT CLASS C (Derbyshire, Leicestershire, Lincolnshire, Northamptonshire, Nottinghamshire, and Rutlandshire).—Three King's premiums of £150 each: P., Gilbert Leigh Abbot (Abbots Leigh); Frederick Jeffery, Manor Hotel, Dousland, Yelverton, Devonshire (Blakelaw); Edwin Hawkes, Brampton, Huntingdon (Old Coin).

DISTRICT CLASS D (Berkshire, Cornwall, Devonshire, Dorsetshire, Hampshire, Kent, Somersetshire, Surrey, Sussex, and Wiltshire).—Four King's premiums of £150 each: P., Lewis Jas. Shirley, 51, Cathedral Road, Cardiff, Glamorganshire (Alvin); William Wilson, The Borough, Sanderstead, Croydon, Surrey (Chibiabos); Thomas Child Grantham, Cowfold, Sussex (Irish Wake); Major-General John Jago-Trelawny,- Coldrenic, Menheniot, Cornwall (Springald).

DISTRICT CLASS E (Yorkshire).—Three King's premiums of £150 each: P., Fred Westoby, Routh, Beverley, Yorkshire (Burgomaster); William Leng, The Paddocks, Copmanthorpe, Yorkshire (Cardonald); Albert Octavius Haslewood (Four Poster).

DISTRICT CLASS F (Gloucestershire, Herefordshire, Monmouthshire, Shropshire, Staffordshire, Warwickshire, Worcestershire, and South Wales.—Four King's premiums of £150 each: P., Stephen Mumford, Stud Farm, Moreton Morrel, Warwick (Faute-de-Mieux); Harold Ernest Brassey, Copse Hill, Bourton-on-the-Water, Gloucestershire (Pontifex); Captain Herbert Frederick Northey Hopkins, Marchington Hall, Marchington, Staffordshire (Rampion); Owen Cosby Phillips,- Amroth Castle, Begelly, R.S.O., Pembrokeshire (Sterling Bank).

DISTRICT CLASS G (Cheshire, Lancashire, and North Wales).—Three King's premiums of £150 each: P., Ralph Rimmer, 52, Stramongate, Kendal, Westmoreland (Active Hampton); Solomon Young, Roxwell, Chelmsford, Essex (Curley); Albert Octavius Haslewood (Woodstock); r., Edward Charles Winter, Jonesboro' Stud Farm, Limerick, Ireland (Narellan).

DISTRICT CLASS H (Roxburghshire, Berwickshire, and district).—One King's premium of £150: P., William Richmond (General Magenis); r., Eustace Barlow (Anklebiter).

premium of £150: Albert Octavius Haslewood (Cornmint).

Messrs. Henry Richardson and Co., of Skeldergate Bridge, York, agricultural merchants and manure manufacturers, have issued the 1902 edition of their annual circular, which, in addition to price, etc., contains some interesting items concerning the various manures.

Saffron Walden November Horse Fair.—Following the Saffron Walden Town Council's resolution to abandon the November horse and pleasure fair, one of the oldest in the country, and the subsequent petition to the Home Secretary not to consent to the same, a communication was read at the council meeting on Friday from the Home Secretary to the effect that "considering all circumstances, and the representations made to him, he considered that sufficient grounds had not been shown for the proposed abolition."

Bad Meat: Farmer Fined £80.—At the Guildhall Police Court, on Tuesday, Samuel Egar, a farmer, of Thorney, near Peterborough, appeared in answer to a summons charging him, as owner, with sending four quarters of diseased beef to the Central London Market, intending the same for sale as human food. Sanitary Inspector Leeson having given evidence as to the seizure of the meat, Dr. William Collingridge (Medical Officer of Health) informed the Court that the four quarters in question had formed the carcase of a large, well-nourished cow, which, however, was affected with tuberculosis, as shown by the most extensive tuberculous deposits over the whole of the chest walls on both sides. The nodules varied in size from a pea to about 1½in. in circumference, and these were in considerable masses. It was so far diseased as to be unfit for human food. The eating of such food would unquestionably be attended with serious results. In answer to the charge, the defendant said that he was a farmer in a large way of business, farming over 1,000 acres. He, however, did not give it any personal attention, leaving it all to his men and his agent. He had no wish to injure anyone by sending bad meat to London. Sir Horatio Davies, in giving judgment, said:—"I have made up my mind to put this kind of thing down. You farmers in the country—well, some of you—keep the best to sell to the neighbouring butchers, and send the bad to London. It is not right. This meat coming up to London is mostly distributed among the poor, who do not know what they are buying, and buy because it is cheap. I shall not be doing my duty unless I fine you the full penalty of £20 for each piece—£80—and 4 guineas costs, or two months' imprisonment. The money was paid.

English Aberdeen-Angus Association's Show and Sale.

The second show and sale of Aberdeen-Angus cattle at Bingley Hall, Birmingham, under the auspices of the English Aberdeen-Angus Association, was held on Tuesday, when upwards of a hundred animals were forward, and they included some excellent specimens of the breed, which realised fair prices. The judge was Mr. G. J. Walker, of Portlethen, and Messrs. Lythall and Walters were the auctioneers. In the strong class for bulls calved after the date named Mr. J. H. Bridges's Millett was awarded the first prize, and sold to Messrs. Casswell for 52 gns., the highest sum paid during the sale. The next best price was the 38 gns. given by the Duke of Portland for Conquest of Malden, shown by Mr. G. F. Gush. Mr. Vaughan-Williams purchased Potiphar for 34 gns. from Mr. Bridges, whilst the reserve animal, Mr. Schroeter's Senekal, was bought by Mr. Sandford for 33 gns.; Mr. Bridges's Magendie passed into Mr. Faulkner's hands for 32 gns.; Mr. C. Bolden sold St. Martin of Preston to Mr. T. B. Grand; and for the same amount the Rev. C. Bolden sold St. Martin of Preston to Mr. Turner. Other animals in this class went at prices ranging from 28 gns. downwards. The first prize in the class for yearling bulls was won by Mr. T. H. Bainbridge with Elibendor, of which Mr. Ratcliffe became the owner for 33 gns.; Prince Ben, the second prize animal, belonging to the same exhibitor, sold for 26 gns., to Mr. W. Warner; whilst Mr. R. W. Hudson, who had taken the remaining prize with King of Danesfield, disposed of the bull for 28 gns. to Major Hargreave. Messrs. Casswell's Fluster of Skegby went to Mr. J. Hague for 26 gns., and at 25 gns. Mr. J. McIntyre's Theakston Duke passed into Messrs. Turnbull's hands.

Mr. Hudson's Danesfield Lass carried off the premier award in the class for heifers calved between December 1st, 1899, and December 1st, 1900, and sold for 25 gns. to Mr. Anderson; whilst thesecond prize winner, Messrs. Casswell's Queen Mona 5th of Skegby, made 29 gns., being purchased by Mr. Catley. Phyllis of Ranksborough, also exhibited by Messrs. Casswell, took the third prize, and passed into Mr. Warner's possession for 21 gns.; whilst Dingle 2nd of Skegby and Stumpie 13th of Skegby made 26 gns. and 21 gns. respectively, and left Messrs. Casswell for Mr. Bridges and Sir Edgar Vincent. Lady Ba Rae 7th of Skegby won for Messrs. Casswell the first prize in the class for heifers calved since December 1st, 1900, and was purchased by Mr. Schroeter for 23 gns.; whilst her rival, Alice 5th of Skegby, from the same herd, realised 24 gns., Mr. G. Stanford being the purchaser. The best price of the class, however, was made by the reserve animal, Water[illegible] of Skegby, being bought by Mr. Hudson for 36 gns.

The best averages obtained by individual breeders were as follow:—

Birmingham Jersey and Dairy Cattle Show and Sale.

The show and sale of Jersey and other dairy cattle which takes place annually at Bingley Hall was held on Thursday last. The number of entries, most of which were Jerseys, totalled up to about 115. The quality of the stock generally was better than last year, thuogh there were still too many of a class not calculated to commend their breed or to do good to their purchasers. The island-bred classes as usual displayed most quality, and that for heifers, calved in or after January 1st, 1900, was very uniformly good. The chief exhibitors in the Channel Island-bred classes were Captain A. B. S. Fraser, Mr. A. C. McMullen, Mr. Edward Smith, and Messrs. Fowler and De la Perille, the two last-named exhibitors being first and second in the older class with very good heifers. In the younger class these same exhibitors changed places, and again the quality and milk appearance were very good. There was a somewhat strong entry in the older class of English-bred animals, and though several of them were very indifferent and coarse, as well as wanting in dairy appearance, there were several very good quality cows that looked as though they would do well at the pail. Lord Windsor and the Marquis of Winchester won the prizes in this class. In the younger class of English-bred heifers the Marquis of Winchester came in first with a strong, useful-looking one, bred by Mr. Tremaine in Cornwall, Mr. McMullen, Mr. Edward Smith, and Captain Fraser were the prize-winners as named. The bull classes were very moderately filled. A few very nice yearlings, however, were entered by Mr. McMullen, who carried off three prizes, Col. T. B. Rawkillies one first prize, and Messrs. Fowler and De la Perille, as well as Mr. W. J. M. Towneley.

Under the hammer there appeared to be a good inquiry for cows or heifers of quality, and with milk about them, but for the indifferent sort there was no demand. Prices for the former were from 20 to 26 guineas. Bulls of the best stand went from 15 or 16 up to 24 guineas.

Kerries and Dexters made a very poor display. The Model Dairy Company, from Sheffield, had one or two useful cows and heifers. Prices for these were not very high.

Birmingham Shorthorn Show and Sale.

Below we give a list of the leading averages obtained at the recent show and sale of Shorthorns at Bingley Hall, Birmingham. These averages include the value of the prizes won:—

Sale of the Crystalbrook Jerseys.

A choice selection from the Crystalbrook herd of pure-bred Jersey cattle belonging to Mr. J. Carson, comprising a few cows, the yearling heifers, and some young bulls, was sold by auction on Friday at Crystalbrook Farm, Theydon Bois, Essex, by Messrs. Thornton and Co. These beautiful cattle, bred from some of the finest strains in the island, brought a good company together, several of the best breeders being present, or represented at the sale. The herd was in capital condition, one nice young cow, Theydon Rose, going for 40 guineas to Mr. Clarke. Among the other purchasers may be mentioned the Duke of Marlborough, Lord Rothschild, Messrs. R. Barclay, G. Buxton, E. Cooper, and A. Miller Hallet. The average of nearly £20 was not considered unsatisfactory, considering that the herd had only been established about six years. We give a list of the prices realised by the principal lots, together with purchasers' names:—

Bull Show and Saleat Stirling.

Messrs. Macdonald, Fraser, and Co.'s annual show and sale of Shorthorn, Aberdeen-Angus, Ayrshire, and West Highland yearling bulls at Stirling was held on Friday, when there was one of the best and largest displays ever seen at Stirling. The Shorthorns numbered 48, Aberdeen-Angus 42, Ayrshire 13, and West Highland 3—making a total of 106. As to quality the display was a decided advance on former years. The prizes were awarded as follows:—Best Short

Bull—1, Mr. Ferguson, Dalcapon, sold at 30 guineas; 2, Mr. Dow, Ballinluig, sold at 25 guineas; 3, Mr. Ferguson, Dalcapon, sold at 22½ guineas; others made from 10 to 21 guineas. Aberdeen-Angus Bull—1, Mr. Murray, Munniestton, sold at 23 guineas; 2, Messrs. Meiklem, Begg, sold at 24 guineas; 3, Mr. Sharp, Bardrill, sold at 20 guineas; others made from 13 to 21 guineas. Ayshires—1, Mr. Macfarlane, Oxhill, sold at 16 guineas; 2, Mr. More, Gartahoil, sold at 12 guineas.

The Chesterton Aberdeen-Angus Herd.

Mr. T. Dick, of Lodge Farm, Chesterton, Leamington, having decided to give up farming, his entire herd of pedigree Aberdeen-Angus cattle, and 80 Aberdeen-Angus cross and Galloway cattle were disposed of by auction on Wednesday, Messrs. Macdonald, Fraser, and Co., Ltd., of Perth, being the auctioneers. The herd of pedigree Aberdeen-Angus cattle was founded in 1896 by purchases made at Preston Bisset sale and by subsequent purchases from several well-known herds in Scotland. The cattle were in healthy breeding condition, and had been reared on high, sound land. The stock bulls used in the herd were Lawyer II. (11,000), bred by the Rev. C. Bolden, and Primy (14,826), bred by Mr. Geddes, Blairmore, Huntly.

There was a large company present at the sale, and the bidding, being of a spirited character, the animals were sold in a remarkably short time. Twelve three-year-old Aberdeen-Angus bullocks made from 20 to 25 guineas, and Galloways made up to 16 guineas. Nineteen Angus and Aberdeen-Angus cross bullocks made up to £14 7s. 6d.; six heifers up to £14 5s.; 14 one-year-old bullocks up to £10, and 10 heifers up to £9 12s. 6d. each. The top price obtained for the pedigree Aberdeen-Angus cows was 21 guineas, realised twice. Several sold at 20 guineas, and others fetched prices ranging down to 14½ guineas.

Shrewsbury Store Stock Sale.

Messrs. Mansell's March sale of store cattle and sheep took place in the Shrewsbury Cattle Market on the 7th inst. No less than 1,147 cattle entered the ring, and, as usual, the sale opened with the sheep, for which there was an improved trade. At one o'clock Mr. Alfred Mansell mounted the rostrum, and although the company was not so large as on some occasions, nevertheless it was a very representative one, and included many of the best graziers in the Eastern, Southern, and Midland counties. The cattle comprised some splendid Hereford bullocks, for which there was spirited bidding, whilst the Irish contingent included some very useful Shorthorn heifers and Polled Angus crosses, and fetched good prices. Some of the prices realised are as follows:—

Hereford Bullocks—£17 17s. 6d., £16 5s., £15 15s., £15 5s., £14 7s. 6d., £13 15s., £13 12s. 6d., £11 17s. 6d. Hereford Heifers—£10 15s., £10 7s. 6d., £10 5s., £9 5s. Shorthorn Bullocks—£17 2s. 6d., £15 7s. 6d, £15 5s., £14 12s. 6d., £14 2s. 6d., £13 15s., £13 10s. Shorthorn Heifers—£11. £10 15s., £10 10s., £10, £9 10s., £8 15s. Polled Angus Bullocks—£14 10s., £14, £13 17s. 6d., £12 10s., £11 5s. Polled Angus Heifers—£12, £11 15s., £11 2s. 6d., £10 15s., £10. Cross-bred Bullocks—£14 10s., £14 2s. 6d., £13 10s., £13 2s. 6d., £10 15s., £10 10s., £9 12s. 6d. Cross-bred Heifers—£11 15s., £11 2s. 6d.; £10 12s. 6d., £10, £9 15s., £9 7s. 6d., £9 2s. 6d. Welsh Runts—£9 15s., £9 5s., £8 12s. 6d., £7 12s. 6d., £7 5s.

Anthrax Dangers: Farmer and His Man Infected.

A striking instance of the contagious character of anthrax has occurred at Kelbrook, near Skipton. Mr. W. A. Thursby, farmer, found one of his cows out of condition, and the animal subsequently became seriously ill. A veterinary surgeon was sent for, but in the meantime the cow appeared to be in such extreme pain that it was considered advisable to put an end to its misery. Mr. Thursby's man, Parker, according despatched it with the knife. When the veterinary surgeon arrived the animal was declared to have been suffering from anthrax, and subsequently this opinion was confirmed by Mr. W. Anderton, of Skipton, the police veterinary surgeon of the district. The usual precautions were taken, and no further outbreak has occurred among the farm stock.

Strange to say, however, both Mr. Thursby and his man have been attacked with the disease. The former was the first to develop symptoms, and the affected parts were cut out by Dr. Falconer, of Earby. The man Parker was stricken later, but far more seriously, and he has been removed to the hospital at Burnley, where he lies in a precarious condition. It appears that both men, being unaware of the contagious character of the disease, took no precautions during the slaying of the cow, and Parker was actually found holding the knife in his mouth on the arrival of the veterinary surgeon.

Particulars of Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.

The fair at Tipperary on Monday was a small one, composed chiefly of young cattle, for which there was fair demand all round. There were very few springers, which met a moderate demand. Very small supply of sheep, the demand for which was slow, and only a few lots sold. Prices:—Calves, 1st class, £5 5s. to £6; 2nd class, £4 to £5; yearlings, 1st class, £9 to £9 10s.; 2nd class, £7 to £8 15s.; two-year-olds, 1st class, £12 5s. to £12 15s.; 2nd class, £10 to £11 10s.; springers, 1st class, £15 to £16; 2nd class, £11 10s. to £14. Sheep, over 12 and under 24 months old, 2nd class, £1 5s. to £1 10s.

Drogheda Fair (Co. Louth), held on Wednesday, was not by any means a large one, and was composed chiefly of first and second class one and two year old cattle in poor condition, for which demand was slow, and a lot were left unsold. There was a slow demand for springers, except choice animals. Prices:—Calves, 1st class, £5 to £5 10s.; 2nd class, £4 15s.; yearlings, 1st class, £7 15s. to £8 10s.; 2nd class, £6 10s. to £7 10s.; two-year-olds, 1st class, £11 5s. to £12 10s.; 2nd class, £9 to £10 10s.; three-year-olds, 2nd class, £11 10s. to £13; springers, 1st class, £15 15s. to £17 15s.; 2nd class, £11 to £13 10s.; young pigs, 8 to 10 weeks old, sold at from 18s. to 30s. each.

At the fair held at Longford on Wednesday there was a much improved demand for all classes of cattle, but a good many yearlings failed to find purchasers. Springers met a slow sale. Prices:—Calves, 1st class, £5 to £5 5s.; 2nd class, £4 to £4 10s.; yearlings, 1st class, £7 10s. to £8; 2nd class, £5 7s. 6d. to £6 5s.; two-year-olds, 1st class, £10 10s. to £11 10s.; 2nd class, £8 to £10; three-year-olds, 1st class, £13 15s. to £14 7s. 6d.; 2nd class, £11 to £13; springers, 1st class, £17 10s. to £19; 2nd class, £11 10s. to £14 8s.

There was an average-sized fair at Elphin, county Roscommon, on Wednesday, composed of second and third-class cattle, for which there was a local demand, springers not selling so well as in recent fairs. Prices:—Calves, second-class, £3 15s. to £4 10s. Yearlings, second-class, £6 to £7; third-class, £4 12s. 6d. to £5 10s. Two-year-olds, second class, £8 to £10; third-class, £6 to £7. Springers, second class, £13 5s. to £15 10s.; third-class, £9 10s. to £11.

SHEEP.

Sheep Breeding Experiments.

The experiments commenced in 1899 by the University College of North Wales in order to test the suitability of various crosses with large or medium-sized ewes for the production of fat lambs were repeated at Lledwigan in the autumn of 1900. Cross-bred ewes of the Leicester-Shropshire type, such as are commonly found in the district, were employed. In addition to the four varieties represented in the previous year a Wiltshire ram was used. The ewes were divided into lots as follows:—Lot I., consisting of 15 ewes, ran with a Border-Leicester ram. Lot II., consisting of 15 ewes, ran with a Shropshire ram. Lot III., consisting of 15 ewes, ran with an Oxford ram. Lot IV., consisting of 21 ewes, ran with a Suffolk ram. Lot V., consisting of 15 ewes, ran with a Wiltshire ram.

The rams were turned in on September 5th, and after their removal at the end of October the ewes were all grazed on the same pasture and received the same treatment until the lambs were sold. They commenced to drop their lambs during the second week in February, but the bulk of the lambs were dropped in March. There was very little difference in point of age between the lambs in the various lots.

Full particulars of the births and deaths are given in the following table:—

TABLE 1.

Lot.	Ewes at commencement.	Ewes Bar'n.	Ewes died.	Lambs dr'p'd.	Lambs rear'd.
1. (Border-Leicester cross)	15	2	1	21	20
2. (Shropshire cross)	15	—	—	28	25
3. (Oxford cross)	15	1	2	19	16
4. (Suffolk cross)	21	1	3	30	26
5. (Wiltshire cross)	15	2	—	20	18

In determining the suitability of these crosses for the purpose in view the results must be considered from various standpoints.

In this part of North Wales lambs of the best class from large or medium-sized ewes are usually sold for from 30s. to 35s. per head when ready for the butcher in the months of April and May, or in the beginning of June; from that time until September the prices range from 23s. to 28s. per head, 30s. per head being an exceptional price. In the early part of the season ripeness of condition is a more potent factor in fixing the price than size or weight, lambs in their first bloom and really fat being much more saleable than those which, though larger in size, are more backward. It is at this stage that natural aptitude for fattening counts for so much, great difficulty being experienced in bringing slow-fattening lambs to the required pitch of condition at this period of the year. Where it is desired to feed the ewes for the butcher it is of particular importance to get the lambs off early, in order to get the ewes ready for sale before the market is glutted.

In 1899-1900 the Suffolk and Border-Leicester crosses gave much the best results, the Suffolk in particular giving great satisfaction. About 80 per cent. of the lambs in each case were sold before the end of May, and those which remained after that date attained a good size—an important feature in late lambs. The Shropshire-cross was disappointing. The lambs did not fatten early, and those which were kept until the latter part of the season failed to reach the weights obtained in the other lots. The Oxford-cross were what may be termed growing lambs, more suitable for keeping over year than for slaughtering as lambs.

In 1900-01 the lambs were sold to a dealer as soon as they were ready for slaughter. Particulars of the sales are given below:—

TABLE 2.—EARLY SALES.

Description of lambs.	Percentage of lambs sold.	Date sale.	Hgst. live wt.	Lwst. live wt.	Av. live wt.
		On or before	Lb.	Lb.	Lb.
Border-Leicester cross	50	June 10.	86	57	67
Shropshire cross	40	,,	77	58	65
Oxford cross	50	,,	75	59	63
Suffolk cross	81	,,	83	49	68
Wiltshire cross	66	,,	80	51	67

TABLE 3.—LATE SALES.

Description of lambs.	Percentage of lambs sold.	Date sale.	Hgst. live wt.	Lwst. live wt.	Av. live wt.
		Between	Lb.	Lb.	Lb.
Border-Leicester cross	50	July 8-Sep. 4.	117	66	89
Shropshire cross	60	,,	90	68	76
Oxford cross	50	,,	83	67	76
Suffolk cross	19	,,	85	69	76
Wiltshire cross	34	,,	82	66	75

The tables show that the Suffolk-cross produced the best results. The lambs of this cross fattened quickly, four-fifths of them being sold by the beginning of June. They not only handled well, but had also the appearance which is so characteristic of fat lambs of the highest quality. In point of weight they compared favourably with the other lots. The Wiltshire-cross took second place, followed by the Border-Leicester cross, which was less successful than in the previous year. It will

be noted, however, that the lambs of this cross which were held over until the later sales, reached a much higher weight than those of any other cross. The positions occupied by the Oxford and Shropshire-crosses were much the same as last year. In a further series of experiments which are now in progress, the Oxford ram has been omitted, and Hampshire and Lincoln rams have been introduced.

Production and Consumption of Wool.

The total quantity of raw wool available for consumption in 1901 was 2,252 million lb., against 2,025 million lbs. in the preceding year, or calculated in clean wool about 1,236 million lb. against 1,125 million lb., thus showing an increase of 10 per cent. on the exceedingly small figure in 1900. The receipts from the Colonies and the River Plate comprised a considerable quantity of wool of the previous season as well as retarded shipments, and amounted for the calendar year to 1,725,000 bales Australasian, 214,000 bales Cape and 560,000 bales River Plate, while the actual clips were only 1,641,000, 167,000 and 487,000 bales respectively. The Engilsh production was slightly less, but the North American clip somewhat larger. The imports of "other sorts" were the smallest since 1885, and the decrease affected most descriptions, particularly Mediterannean, East India, and China; but also Peruvian, Alpaca, and Camels' hair, only Mohair and Punta Arenas showing an increase. This falling off was partly due to the delay in the shipment of China produce, but principally to the excessively low prices ruling for coarse wools. The average value, fine and coarse wools taken together, was the lowest on record.

It may be roughly stated that of the 1,236 million lb. clean wool available last year only one-third was merino wool, while about one-sixth was composed of qualities corresponding to what we may term fine and good medium crossbreds, more immediately competing with merino wools for clothing purposes. Probably one half of the supply consisted of various kinds of long and coarse wools. In our annual report we gave particulars showing the great falling off in the production of Colonial and River Plate merino wool since 1895; we may add that the quantity of fine and fairly fine crossbreds has in our opinion remained about the same as in 1895 if it has not slightly decreased, and that the whole increase in crossbreds is represented by medium and coarse qualities.

The quantity of clean wool at the disposal of the industry (not the quantity actually consumed in the form of manufactures) was on the average of periods as follows per head of population:—

	lb. & decimals.	Increse on previous period.
1861—70 ...	2.26	...
1871—80 ...	2.43	... plus 7½ per cent.
1881—90 ...	2.57	... ,, 6 ,,
1891—1900 ...	2.76	... ,, 7½ ,,

Last year's figure of 2.69 lb. per head is consequently 2½ per cent. below the average of the previous 10 years, but the actual consumption was larger, as considerable quantities were held over from the previous year, and stocks in European ports were reduced by about 56 million lb. raw wool, and those in bond in the United States by about 23 million lbs. The quantity available in the United Kingdom, including old stocks, was the largest on record, while that left at the disposal of the Continent was just a little more than the average of the six years 1895-1900. North America took about the same quantity as in the preceding year, but the actual quantity worked up in the States was very much larger.

The great development of production from 1885-95 had increased the supplies in 1895-97 to figures beyond the capacity of consumption; the speculative demand in the United States in 1895 and again in 1897 before the introduction of the tariff cleared the European markets of surplus stocks, but accumulated stocks of enormous magnitude in the States which have ever since been weighing on the market, particularly as the real consumption owing to high prices had fallen off. These stocks were considerably reduced last year and are now again nearly normal.

This year's supply for the calendar year will probably be somewhat less than last year's figure. No increase is expected on the production of the Colonies and the River Plate, and as last year's receipts exceeded the actual clips, this year's imports must necessarily be smaller. On the other hand there may be a fresh addition to the United States production, and it may reasonably be expected that the imports of "other sorts" will experience some increase, though much will depend on the course of prices of coarse wools.—HELMUTH SCHWARTZE AND CO.

On Tuesday an outbreak of anthrax was found to exist on the premises of Mr. G. Warburton, Middle Farm, West Burton, North Notts. Two pigs were dead, and one pig and a dog affected.

Sale of the London County Council's 'Bus Horses.

The London County Council having had to withdraw their omnibus service over the London bridges, they promptly decided to dispose of the horses, which numbered about 500, used in those 'buses, and also the vehicles, etc., and the sale took place last week at the Camberwell Depôt, the auctioneers being Messrs. Larkinson, of Wolverhampton. The sale, which extended over four days, was well attended, and fair prices were obtained, the average on the various days being as follows:—First day, 130 horses, £34 18s. per head; second day, 130, £35 7s.; third day, 130, £37 6s.; fourth day, the remainder averaged £33 per horse.

West Staffordshire Shire Horse Parade.

The West Staffordshire Shire Horse Society's fourth annual parade was held at Stafford on the 8th inst., at which two premier stallions to travel the West Staffordshire Parliamentary Division were chosen. The weather being favourable, there was a large company present, including Mr. Alexander Henderson, M.P. (President of the Society), the High Sheriff (Mr. R. P. Cooper), Capt. the Hon. G. A. Anson, Mr. W. C. T. Mynors (chairman of the general committee), Mr. T. Carrington Smith, and other prominent agriculturists. Two premiums of £75 each are offered by the society, of which Mr. Henderson gives £100 besides a sum to enable the society to return half the serving fee to those members whose mares do not prove to be in foal to the premium stallions. Local gentlemen were again chosen as the judges, the trio selected being the same as last year—viz., Messrs. S. Dodd, R. G. Patterson, and T. Wibberley. The latter, however, was at the last moment prevented from attending, and his place was filled by Mr. J. Brandon, of Aston. Mr. W. Carless, of Stafford, again kindly officiated as hon. veterinary surgeon, and he passed all the horses as sound.

Of the 11 premium horses, two failed to put in an appearance, leaving nine to go before the judges, which was one more than last year. The two premium stallions selected by the judges were Wood Eaton Hatherton and Watnall Merry Lad. The former was purchased by the Cannock Agricultural Company last year from Mr. C. E. Morris, by whom it was exhibited at last year's parade. He is a big, powerful horse, and, considering that he is nine years old, he looked remarkably well and in very different condition from last year. He is well known in the neighbourhood as a successful breeder, and seems capable of getting some good geldings. Mr. Muntz's Watnall Merry Lad is a good all-round horse, showing plenty of substance and Shire characteristics, and is an excellent walker and trotter. Both reserve rosettes were awarded to the Cannock Agricultural Company's horses, Bentley Jubilee being placed first reserve and King Carl second reserve. The draw for districts took place after the parade, Mr. Henderson officiating. The result of the ballot was that Watnall Merry Lad was allotted to the north of the division and Wood Eaton Hatherton to the south.

High Prices for Show Ponies.

Messrs. Frank Lloyd and Sons completed their first week's sale at Wrexham on Friday, when over 300 show cobs and ponies were offered, of which about 20 were purchased to go to North America. The following were a few of the many high prices realised: Mr. John Jones, a pair, 290 guineas, Mr. Woosnam, three, 180, 110, and 90 guineas; Mr. Evans, 170 guineas; Mr. Gibson, 160 guineas; Messrs. Jno. Jones and Sons, 100 guineas; Mr. Foster, 110 and 85 guineas; Mr. Taylor, 100 guineas; Mrs. Fletcher, 100 guineas; and Mr. Shaw, 90 guineas. The sales will be continued to-morrow (Tuesday).

SOCIETIES.

Royal Commission on Horse Breeding.

A meeting of the Royal Commission on Horse Breeding was held at the Royal Agricultural Hall, on Wednesday, when there were present: The Duke of Portland, K.G. (Master of the Horse) in the chair, the Earl of Coventry, Rt. Hon. Henry Chaplin, M.P., Sir John Gilmour, Bart., Sir Jacob Wilson, and Mr. J. Herbert Taylor (secretary). Regrets at being unable to attend the meeting were received from Lord Ribblesdale and Mr. J. Bowen-Jones.

The report of the judges upon the stallions they had recently adjudicated for King's Premiums was received as follows:—"The judges are of opinion that the stallions exhibited were of a good average quality, while several horses among them appeared to possess great merit, combining quality and strength, thus rendering them particularly suitable for begetting good general-purpose horses."

The locations of the premium-winning stallions were submitted and approved. After transacting other business the Commissioners adjourned.

Shorthorn.

Meetings of the Committees and Council of the Shorthorn Society were held at the Society's rooms, 12, Hanover Square, W., on the 4th inst, Colonel Sir Nigel Kingscote, K.C.B., President, in the chair.

The minutes of the previous meeting were read and confirmed.

A communication was received from Mr. George Taylor acknowledging his election as a member of the Council, and thirteen new members were elected.

Lord Moreton reported that the Editing Committee had examined and passed the list of pedigree exportation certificates issued by the Secretary since the last meeting of the Committee, viz., fourteen, for South America, as follows:—Good Friday, Milroy 72777, Romance and Victor Chief, bred by Messrs. R. and W. Wright; Dowsby Czar 76514, bred by Messrs S. E. Dean and Sons; Dowsby Prince Royal 76517, bred by Mr. C. Munro; Woodland Prince 80295, bred by Mr. H. Verner; Gipsy King 76761, and Lord FitzHerbert 77058, bred by Mr. D. C. Bruce; Medallion, bred by Mr. J. Wilson; British Tar, bred by Mr. A. M. Gordon; Marengo's Mario 77201, and Scottish Thorndale Duke 77832, bred by Mr. P. L. Mills; and Strowan Butterfly 10th 80065, bred by Mr. C. H. Graham Stirling.

A number of new and other pedigrees had been submitted to the Committee with certificates and other information in support of their correctness, some of which the Committee had accepted, and referred others back for further inquiry.

The Committee had also considered a number of applications for registered names, and they recommended that the following names be registered, and that the applicants be allowed the exclusive use of such registered name either as a prefix or affix in the naming of their cattle.

Registered Name.	Owner.
Adcote	Alfred Darby.
Alnwick	Duke of Northumberland.
Bartlow	Rev. C. H. Brocklebank.
Collynie	W. Duthie.
Golden Grove	Earl Cawdor.
Grove	W. Graham.
Huntingtower	Messrs. Lumsden and Mackenzie.
Knapton	W. Snowball.
Langford	Sidney Hill.
Nordley	E. M. Wakeman.
Remenham	Hon. W. F. D. Smith.
Ringdale	J. Thorley.
Shankill	H. J. C. Toler-Aylward.
Soughton	J. E. Bankes.
Yewden	Hon. W. F. D. Smith.

This report was adopted.

Sir Jacob Wilson reported that the accounts for the past month had been examined by Messrs. Welton, Jones and Co., and the Committee, and were found to be correct, that the receipts for the same period had been £635 16s., the balance of the Society's current account at the bankers' being £802 3s. 7d., and that the Committee recommended that cheques be drawn for various accounts, prizes, and salaries amounting to £220 10s., and that a new plate for combined cheque and receipt be prepared.

The Committee also reported that the annual audit of the Society's accounts had been held, and the cash account and balance-sheet were laid on the table.

The following additional societies had acknowledged and accepted with thanks the Society's offer of district prizes for bulls, viz.:—Border Union Agricultural Society, Oxfordshire Agricultural Society, Stirlingshire Agricultural Society.

Applications from various agricultural societies for the Society's prizes, and communications respecting the conditions for the same, were considered, and the secretary instructed thereon.

This report was adopted.

The next meeting of the Council was fixed for Tuesday, May 6th.

Smithfield Club.

A meeting of the Council was held at the Royal Agricultural Hall on the 5th inst., the Right Hon. Earl Winterton, Vice-President, in the chair.

The minutes of the last meeting were approved and signed.

Mr. Clare Sewell Read, as Chairman, submitted the report of the Finance Committee, recommending the allocation of a sum not exceeding £3,600 for prizes at the ensuing show, and the payment of various accounts and bills; also that Mr. Arthur Chisholm Moore, of Messrs. Kingsford, Dorman, and Company, Essex Street, Strand, be appointed solicitor to the club for the current year, and that he be consulted on the question of closing the club's accounts for the purpose of a balance-sheet on December 31st, instead of October 31st, as at present. That the Committee had considered the list of arrears of subscriptions, and had given instructions thereon. That the Committee also recommended an alteration in the lettering of the obverse of the club's medal.

Mr. J. Cridlan thought it unwise to appoint as solicitor a gentleman connected with the firm which also acted for the Hall Company, and moved that it be reconsidered.

Sir Walter Gilbey said it had been stated at the club's meetings that the present arrangements between the Royal Agricultural Hall Company and the club were not to the advantage of the club. He could assure them that the Hall Company made little out of the club in these times, and that if they went into the question with the Hall Company they would, he felt sure, be quite satisfied with the existing arrangement.

Mr. J. Bowen-Jones supported the appointment of Mr. Moore as solicitor, and was of opinion that the present arrangement with the Hall Company was the best possible one for the club, which took no risk whatever.

After some further discussion the report of the Finance Committee was adopted.

The following report of the Stock Prize Committee, as amended, was adopted:—

That the special regulations A and B (certificate of health and veterinary examination), page 18 in Prize Sheet, be also in force for the coming show, with the addition of the special regulation C., as follows:—C.—"No pigs will be received from swine fever infected areas." The Finance Committee having reported that a sum not exceeding £3,600 might be offered in prizes, the Committee proceeded to consider the prize list for the ensuing show. It was resolved to recommended. That the cattle classes and prizes, with the exception of the two classes for small cross-bred cattle, which are abolished, remain as last year. That the classes and prizes for sheep, pigs, and table pureling remain as last year. That an exhibitor shall be allowed to make two entries of pigs in each class, and that the carcase competition classes and class prizes remain as last year, but that the champion prizes for the best carcase of beef and the best carcase of mutton be increased to £10 each.

Other suggestions were also considered, but the Committee could not recommend their adoption.

The Stock Prize Committee recommended the retention of the two classes for small cross-bred cattle, but as the abolition of these classes for the 1902 show had twice been decided upon by the Council, it was pointed out that these could not be reinstated without a motion to rescind the previous resolution, and consequently the Council's previous decision was upheld and the classes eliminated

Mr. R. Stratton moved that a class be instituted for South Devon cattle. It was a breed of cattle quite dissimilar from the North Devon breed, and was worthy of a place in the club's show, and an increasing breed of cattle much liked by the butchers.

Mr. W. Cooper thought the introduction of fresh breeds into the prize list should be very carefully considered, as it was a difficult matter to remove them afterwards.

Mr. J. J. Cridlan said the question of classes for these cattle was fully considered by the Committee, and he could not support the giving of separate classes, as these cattle could be shown in the Devon classes.

The motion, on being put to the meeting, was declared to be lost.

Mr. R. Stratton, in moving that the classes for sheep should be uniform with prizes of £10, £5, £3, in each class, pointed out that some breeds had prizes of £15, £10, £5, whereas others had only £10 and £5 in each class. He thought this should be remedied.

Mr. G. Adams seconded the motion.

The noble Chairman said this question had been considered from time to time by the Stock Prize Committee, and in those breeds where few entries had been made for some years they had reduced the prize money, and on the motion being put to the meeting, it was declared to be lost.

Mr. Sanders Spencer regretted that the Stock Prize Committee had not recommended the slaughter classes for pigs suggested. If it was a question of funds, he would move that a single pig classes be abolished, and the money devoted to a carcase competition for pigs, viz., three classes for pigs under 100lbs. for pigs above 100lbs., and under 200lbs., and for pigs above 200lbs. He thought these classes would be interesting and instructive.

Mr. J. Lindsey said the pig was an important animal in providing food for the people, and anything that would be done to improve the breeding of pigs was worthy of support. He would second Mr. Spencer's motion.

Sir Walter Gilbey, Mr. Cooper, Mr. Newton, and Mr. R. Stratton also supported the motion.

The voting on the motion being equal, the noble Chairman said he felt he must support the recommendation of the Committee, and the motion was, therefore, lost.

Mr. R. Stratton gave notice that at a future meeting he would bring forward a motion for the reinstitution of the small cross-bred classes at the 1903 show.

Sir Jacob Wilson reported that Sir Walter Gilbey had been elected Chairman of the Selection Committee, and that the Committee recommended that Mr. J. P. Case and Mr. A. C. Skinner be elected Stewards of Live Stock for their term of office on the Council, and that Mr. J. J. Cridlan be elected Steward of the Carcase Competition and Table Poultry for the same period.

This report was adopted.

Mr. Alfred Crosskill reported his election as Chairman of the Implement Committee, and that the consideration of various letters applying for space and positions was deferred until the entries for the forthcoming show had been received.

This report was adopted.

Mr. W. S. Ferguson reported that Mr. F. Redman had been elected Chairman of the Carcase Committee, and that the Committee recommended that the conditions and regulations for the Carcase Competition be the same as published in the prize sheet of last year, except that the sale by auction be held on the Wednesday at 2 p.m., and not on the Thursday, and that the breeder's certificate of the age of every animal (Scotch, Welsh, and mountain breeds of sheep alone excepted) must be furnished with the exhibitor's certificate.

That the conditions and regulations for the Table Poultry Show be the same as published in the prize sheet of last year, except that the sale by auction be held on the Wednesday at the conclusion of the carcase sale, and not on the Thursday.

This report was adopted.

The next meeting of the Council was fixed for Wednesday, July 30th.

British Dairy Farmers.

A meeting of the council of the British Dairy Farmers' Association was held at 12, Hanover Square, London, W., a few days ago, Mr. G. F. Roumieu, J.P., in the chair, when one new member was selected, viz., Mr. Philip Arthur Wilson, Great Henny, Essex.

Mr. Willcox, on behalf af the Finance and General Purposes Committee, reported having examined the accounts of the Association, the available balance at bank on February 28th being £274 18s. 4d., against which accounts amounting to £40 2s. were passed for payment.

A letter was read from the Gloucestershire County Council, asking for the appointment of an examiner of two candidates for elementary teachers' certificates at the County Dairy School. On the motion of Mr. Tisdall, seconded by Prof. Long, it was resolved to ask the candidates to attend the examination to be held at Reading in May next.

A statement showing the imports of milk and cream into the United Kingdom during February was presented, from which it appeared that in the four weeks ended March 1st the imports were 2,042cwt. of fresh milk, 226cwt. of preserved milk, and 776cwt. of cream, making a total of 3,044cwt. compared with 3,774cwt. in the corresponding period of 1901. Of condensed milk the imports totalled 76,125, against 88,851cwt. last year.

Professor Long read a letter which had been received from the Butter Association, dealing with the sale of "milk-blended" or "highly-watered" butter, and after a discussion, participated in by the chairman, Mr. Willcox, Mr. Stone, Lieut-Col. Curtis Hayward, and Mr. A. L. Alexander, it was resolved, on the motion of Prof. Long, seconded by Mr. Ernest Mathews, "that, in the event of a deputation being arranged by the Central Chamber of Agriculture to address the Minister of Agriculture, with regard to the recommendations of the Water-in-Butter Committee, it is desirable that this Association be represented." Col. Curtis Hayward, Mr. Ernest Mathews, and Mr. S. P. Page were appointed to represent the Association on the deputation.

A resolution passed by the Blackpool and District Dairy Farmers' Association, viz., "that, in the opinion of this Association, it is expedient that a general Act be passed by Parliament, dealing with tuberculosis in animals, and providing for payment of compensation for animals condemned, and that such compensation be paid by the local authorities condemning the same, and that a copy of this resolution be forwarded to the President of the Board of Agriculture, the member for this Division, the Central Chamber of Agriculture, and the British Dairy Farmers' Association, asking for their support," was read and discussed.

The general meeting of members subsequently took place. Mr. G. F. Roumieu, who was voted to the chair, said that great gratification was felt by the council that his Majesty the King had been graciously pleased to accede to the request that he should continue his patronage to the Association. He then presented the lengthy report of the council, in which was reviewed the past year's work of the Association. As to membership, it was stated to consist of 843 annual and 87 life members, making a total of 930, compared with 933 of the same period of 1901. Two kindred Societies are affiliated to the Association.

Mr. F. J. Lloyd rose to move the adoption of the resolution passed by the council, "That this council is of opinion that the prohibition of the use of preservatives in milk would prove a serious drawback to dairy farmers, and that a minimum quantity of boric acid should be allowed."

Capt. Bellasis and Mr. Martin J. Sutton opposed the motion, as did also Mr. H. S. Daine, who asked where the adding of preservatives was likely to end, if farmers, the wholesale buyers, and the retail vendors were allowed to put preservatives in the milk?

In the opinion of Mr. J. T. Horner, the recommendations made by the Departmental Committee were contrary to the weight of evidence tendered by the witnesses. Mr. Grant thought that it would seriously injure the dairy farmers of England if the prohibition of the use of preservatives in milk become law. In Monmouthshire the scarcity of water was such as to prevent farmers from cooling milk properly during the summer months, and he supported the resolution of the council.

Letters opposing the resolution were received from the following:—The Aylesbury Dairy Company, Limited, Bayswater, W.; Capt. H. Durrell Terry, Ripley, Surrey; Mr. T. Firbank King, Leyburn R.S.O., Yorks; Col. Godman, Smeaton, Yorks; Lieut.-Col. Curtis Hayward, Quedgeley, Gloucester; Mrs. Edith Cornish, Orford House, Chiswick; and the Warwickshire Farmers' Association.

Mr. Leppard said the use of preservatives in milk was necessary to keep it sweet. Mr. Hattersley, of the Aylesbury Dairy Company, stated that during the whole time his Company had been established, now nearly forty years, they had never once used any preservatives in the milk supplied by them, notwithstanding that some of the supplies are drawn from districts 200 miles distant from London. If one firm could do without preservatives, so ought all.

Mr. G. T. Hill supported the views put forward by Mr. Hattersley.

Mr. Alexander said the resolution of the council was only passed by nine votes to six.

On the amendment moved by Capt. Bellasis, and seconded by Mr. Martin J. Sutton, being put to the meeting, it was defeated by 21 votes to 12.

Mr. Lloyd moved that the resolution of the council be adopted. This was seconded by Mr. A. Stapleton, and carried. Copies of the resolution were ordered to be sent to the Minister of Agriculture, the Central Chamber of Agriculture, and the Local Government Board.

The twenty-sixth annual report of the council was then carried, on the motion of Mr. Grant, seconded by Mr. Page.

Mr. Lloyd called attention to Clause 56 in the Bill now before Parliament in regard to milk-supply regulations. The clause referred to provided for the infliction of a penalty not exceeding £10 in respect of every day in which a cow suffering from tuberculosis or tuberculous disease is kept in any field, shed, or other premises along with other cows in milk, after the owner becomes aware of the disease.

On the suggestion of Capt. Smith Neill, it was decided to request the Council to watch the Bills in the interest of the dairy industry, and to take such steps as may be thought necessary.

A letter was read from Mr. T. H. Stretch, of Quaskirk, asking that dubbed and undubbed [illegible] fowl be allowed to be exhibited at the future [illegible] shows. This was referred to the Poultry and Pigeon Committee for consideration and report.

The proceedings then terminated.

Farmers' Club.

At the meeting of the Farmers' Club, held at the Salisbury Square Hotel, Fleet Street, E.C., on the 3rd inst., Mr. Rouse Orlebar read a somewhat lengthy paper entitled "How Can County and Local Agricultural Societies Best Assist Agriculture?" in the course of which he said that, at a time when the Royal Agricultural Society of

England had determined to discontinue its policy of holding its meetings in different parts of the country, it might be well to consider what opportunities were available for the development of those county and other societies which were the chief representatives of local agriculture. For some years past a feeling had undoubtedly been growing up that if British agriculture was to compete successfully with its rivals from abroad, or even to hold its own in this land, it must endeavour by every means in its power to perfect its organisation and to open paths in new directions.

To take the county society as the basis, the first matter of importance was the question of area. Probably all the county societies at present existing were founded before the days of County Councils, and, therefore, had no special reasons for making the areas covered by the two bodies coterminous; but nowadays, when the County Council had so many opportunities of assisting agriculture, it was almost a necessity, in order to secure perfect accord in the methods adopted and simplicity in organisation, that the society should be strictly limited to its own county. At the present time there was a temptation to some societies to overstep the boundaries of a county in order to obtain possible and perhaps valuable subscriptions; but however greatly the question of subscriptions might enter into the work of a society he could not but think that there were in almost every county sources that were either untapped or not fully developed. From every point of view a large number of small subscriptions were of greater practical value than a few large ones, for they carried with them a far wider-reaching interest in the work that was being done, and laid the foundation-stones of organisation in every village. A subscription of 5s. would ensure more universal representation.

Another essential point on which a good membership depended was that the programme of the society must be attractive and practically useful to each member. The chief features of that programme resolved themselves into three heads: the maintenance of a county show; the support of local shows and societies; the general organisation of agricultural interests. There could not be the slightest doubt of the great value of the county show to stockbreeders and exhibitors; but due prominence should also be given to features which made them attractive. In addition to spectacular competitions—such as jumping and driving competitions, parades of carthorses, sheep-dog trials—milking trials, butter making, horse-shoeing competitions, lectures on bees and hives, the cramming, killing, plucking, and trussing of poultry, the packing of eggs—all these would be interesting to the public. The advancing importance of fruit growing should secure it a place at agricultural shows. Such subjects as farriery, sheep-shearing, hedging, ploughing, thatching, etc., would be of value to labourers and artisans. Anything that tended to keep the labourer on the land and enabled his family to add their share to the weekly earnings was worthy of consideration.

After treating of agricultural education, cattle breeding, adulteration of food, and analyses of seed, cake, and manure, the lecturer referred to the connection between county societies and Government departments, and finally suggested that steps should be taken to federate all the agricultural societies and chambers of agriculture in the kingdom by creating, for separate groups of counties, provincial councils, which should be formed of elected representatives from those societies within its area. Each of those councils would then become representative of the particular branches of agriculture followed in its locality. From those provincial councils representatives could again be elected to form part of such a committee as Mr. Hanbury spoke of in his speech at the annual banquet of the Farmers' Club in December last, the other part being nominated by the President of the Board of Agriculture.

A discussion followed, and the lecturer was thanked for his paper.

Highland.

Sir Ralph Anstruther, Bart, presided at a meeting of the directors of the Highland and Ayr Society, held recently at Edinburgh.

A letter was read from Mr. J. H. M. Mackenzie intimating that the Polo Pony Society agreed to their prize of ten guineas for Highland ponies at this year's show at Aberdeen being offered as two prizes—the one for the best stallion and the other for the best mare. It was agreed that the showyard be open on the evenings of Wednesday and Thursday from five to eight o'clock, closing at nine o'clock, and that jumping competitions should be arranged for.

With reference to his prize for blackface wool, Sir Robert Menzies said he had been informed by a Glasgow salesman that the reason why blackface wool was so cheap was that it was much more hairy than the wool of other breeds, and there were a great many purposes for which it could not be used. He therefore proposed that his premiums should be for wool and not for hair.

The Secretary (Mr Macdonald) intimated that according to the usual arrangement the Dumfries Show of 1903 would fall to be held on 21st to 24th July, and this was agreed to. The secretary was instructed to communicate with Perth County Council with regard to the local show fund for 1904, and to ask Perth Town Council to grant the South Inch as formerly as the site for the show. A discussion took place on a letter from Mr. A. Barns Graham, jun., suggesting that at the shows of the society butter should be judged by points, and a detailed statement of the points given to each sample published for the information of exhibitors and others. Sir James Gibson Craig, Bart., moved the previous question, and mentioned that in the shoeing competition a judge was once incautious enough to give the points, and they would remember the results. Such a proposal, he considered, would only open the door to endless wrangling. The motion was defeated by 10 votes to 4.

The Secretary reported for the committee on plough trials that they were disappointed somewhat, and that the details afforded did not enable them to draw any reliable conclusions. In most of the cases there was practically no difference between the produce of the different lots. In one or two cases the differences were somewhat of an accidental character. The committee considered it was not desirable that a detailed report of the trials should be published in the "Transactions." Sir James Gibson Craig was of opinion that they must try for several years on the same ground to see what the real effect of the different ploughs was. Mr. John M. Martin, Edinburgh, said that looking to the infinitesimal expense to the society, and as the farmers who kindly undertook these trials in the past would almost to a man be able to do it again, it was well that the trials should be repeated for this year at least. The committee should also have powers, he thought, to take into account the draught of the ploughs. It was agreed to remit the whole question to the committee.

The report of the Science Committee was also submitted by the secretary, the most important feature of which was a record of the work being conducted by the Aberdeen University Agricultural Research Department, towards the expenses of which the society was a contributor. One of the investigations referred to the length of time after cows had been inoculated with tuberculin they should show whether or not they were tuberculus by the rise of temperature. It was thought that in this country they had not tested the rise in the temperature by a long enough interval, and the Aberdeen Committee undertook to make experiments, and the results would be published shortly. Another investigation had reference to the milk from cows that were tested with tuberculin with the object of finding whether any of the tubercules found their way into the milk. This investigation would not be completed for two months.

The other investigation was to test the soundness of Koch's statement as to the transmissibility of tubercular bacili from animals to man. They had been experimenting with a number of calves, and had obtained a number of results which were very suggestive. These experiments would be completed within a week or so, and a full report was promised.

National Pig Breeders.

A meeting of the council of the National Pig Breeders' Association was held in Bingley Hall, Birmingham, on the 5th inst., Mr. Barron in the chair. The minutes of the last meeting were read and confirmed, and four new members elected.

The Finance Committee reported the balance in the bank to be £207 12s. 5d. Two members are still in arrear with their subscriptions for 1901, and one for 1900. The audited balance-sheet was examined and ordered to be printed.

The Editing Committee reported that they had granted Messrs. Broom's, Gilbert's, Knowle's, and Rippon's applications for prefixes. About 900 entries had been received for Vol. XVIII. They recommended that the conditions of entry for Vol. XIX. be the same as for Vol. XVIII. Both reports were adopted.

Arrangements were made for holding the annual general meeting at the R.A.S.E. Show at Carlisle, and also for drawing up the report of council.

Mr. Manners was nominated as the president, Mr. C. Howard Taylor, president elect, and Mr. Henry Smith auditor for the coming year. Ten names were selected for election to seats on the Council, in place of those retiring in rotation, and scrutineers were appointed.

Acceptances of silver medals had been received from the Leicestershire, Lincolnshire, Norfolk, and Warwickshire Societies.

The next meeting of the council was arranged to take place at the conclusion of the general meeting.

IN PARLIAMENT.

HOUSE OF LORDS.

English Horse-Breeding and Army Remounts.

On Thursday the Earl of Dunraven called attention to the condition of the industry of horse-breeding in the United Kingdom, and moved: "That in view of the difficulty that has been experienced in finding horses suitable for military purposes, it is desirable that the Royal Commission on Horse Breeding should report on the steps which should be taken to encourage horse breeding in the United Kingdom; and, in particular, as to (a) the establishment of a register of stallions, and as to the desirability of licensing stallions; (b) encouragement to farmers to keep sound young mares to breed from; (c) the amount of money required for the purpose." In the course of the present war in South Africa horses had been brought from all parts of the world, but the English horse had been far superior to all comers. The very excellence of the English horse had been the undoing of the country, because the country had been searched times out of number by foreign buyers purchasing horses for breeding purposes. As a result there was likely to be a great deterioration of the home breed. In times of peace some 1,050 to 3,000 horses had been required, but the requirements of the future would be very much larger. Not less than 7,000 animals would be wanted annually, and he was convinced that great difficulties would be experienced in getting them. The country ought to have a large reserve of horses, but unfortunately with an increasing demand they had a decreasing supply. He thought the Government ought to take steps to look into the matter. He was not inclined to favour large breeding establishments, for he felt they had but to offer some encouragement to the farmers to supply all the demands which they could make. It was anticipated that the colonies might help in the matter, but he was convinced that in the end they would have to depend largely upon the home-bred animal. Money would be required, but not a particularly large sum. France spent £86,000 a year in this matter, Russia £192,000, and Austria-Hungary £303,000, whereas England spent only £5,100 in Great Britain, and £8,000 in Ireland, a ridiculously small sum. The country was waking up to its military dangers, and he thought would be prepared to sanction a much larger expenditure to provide a more adequate supply of horses.

Lord Lonsdale, as one deeply interested in the subject, said the Royal Commission in 1890 did make a number of suggestions to the Government, but nothing had been done by them. He hoped they would now take action. Foreign nations had deprived this country of much of its best stock. The Government should purchase the best stock to be obtained. Until some such step as that was taken little good would result from these discussions.

Lord Ribblesdale said the key of the situation was with the Chancellor of the Exchequer. It was useless to invite the Royal Commission to repeat advice which had been given over and over again unless the Government were prepared to vote a sum of money to give effect to their recommendations.

The Duke of Devonshire was afraid he could say very little beyond recognising the importance of the subject. It was alleged that there had been a deterioration in the breed of horses in consequence of the drain upon our best animals by the action of foreign Governments. He could not help thinking if this was an evil it had a tendency to work its own cure, because the demands of foreign Governments must necessarily tend to improving the breed of the general field of supply. He should think probably that it would be found the most effectual means of improving our horses to increase the prices paid for our remounts. He promised to consult those members of the Government most interested, the Secretary for War and the Chancellor of the Exchequer, with a view of considering whether it would be again expedient to call the attention once more of the Royal Commission to it, and whether any funds could be set aside for the purpose.

Lord Ribblesdale said that if the Government would guarantee the expenditure of a further sum of money the Royal Commission would probably have no objection to further considering the subject.

The motion was then withdrawn.

HOUSE OF COMMONS.

Milk-blended Butter.

Sir J. Kennaway asked the President of the Board of Agriculture on Tuesday whether his attention had been called to a recent judgment in the High Court on the subject of blended butter, by which it was decided that butter containing the utmost quantity of water which it could be made to hold could be still sold as a genuine article if an announce-

ment which might never catch his eye, was made to the purchaser of the percentage of water contained in it; whether he would consider the propriety of making a regulation, under Section 4 of the Sale of Food and Drugs Act, 1899, which should define the proportion of water in butter which should raise the presumption that the article was not genuine, and protect ignorant purchasers from an inferior article.

Mr. Hanbury: I do not think that the decision went quite so far as my right hon. friend's question supposes. But the decision appears to imply that, on due notice being given, almost any mixture of butter can be sold under that name. I shall fix a butter standard as soon as those most concerned have had an opportunity of seeing the evidence submitted to the Butter Committee, which evidence, I hope, will be issued in a few days.

On Thursday Sir E. Strachey said that the recommendations of a Government Departmental Committee had led to butter being blended with 30 and 40 per cent. of milk or water. He asked for a pledge from the Government that the matter would be dealt with by legislation.

Mr. Hanbury said he could not express an opinion on this subject until he had had an opportunity of reading the evidence given before the Committee. He admitted, however, that the Committee had gone beyond the terms of its reference in the recommendations it had made, and that, if carried out, those recommendations would have the effect of defeating the standard altogether. Prima facie he was very much in accord with what the hon. baronet had said.

Remount Purchases in the United Kingdom.

Mr. Thomas Bayley asked the Secretary for War on Thursday, if he could state the number of horses bought for military purposes in the United Kingdom and shipped to South Africa during the last two years; and had the horse sales and fairs in the United Kingdom been regularly attended by representatives of the Remount Department with a view of buying British horses.

Lord Stanley stated that the total number of horses purchased in the United Kingdom in 1900 and 1901 was 60,059, of which about 85 per cent. were shipped to South Africa. Remount officers had instructions to attend horse fairs and sales whenever it was considered desirable.

The Frosts in February.

The frost last month, as we are informed in the new number of "Symons's Meteorological Magazine," was the longest and severest, with the exception of that in 1895, which has been experienced for half a century. In the February of that year both the mean and the minimum temperature in London were seven or eight degrees below those recently registerd. Reckoning by the consecutive nights on which the thermometer went down below 32 deg., the frost lasted for about three weeks in the greater part of England, but its duration was shortened on the coast, especially, as might be expected, towards the south and west. Torquay escaped with nine days, Steyning with eleven, Lynmouth, Haverford West, and Eastbourne with twelve, while, for the other extreme, the frost held at some places in Suffolk, Yorkshire, and Peebles-shire for even 24 days.

The frost lasted for at least 20 days over two inland areas which between them cover the greater part of England and a good piece of Wales, but are separated by a kind of strait extending from the Wash to the estuaries of the Dee and Mersey, in which the number of cold nights became less than 15. The Lower Thames Valley ran like a gulf into the coldest area. This, on the Western side, thrust a long promontory through Central Devon, but receded from the Bristol Channel and the lower Severn Valley till it swept round the warm inlet near where that river and the Dee issue from Wales; once across it took possession of much of the southern part of the principality, though repelled from the western coasts. North of the warm "strait," a long enclosure with a rather undulating outline extends up and beyond the Pennine range to the middle part of the Southern Uplands of Scotland.

The central valley of that country experienced less than 15 frosty nights, and so did the North-West Highlands; the central Highlands having from that to 20. The same conditions prevailed in Ireland over an oval area lying from east of north to west of south; the most favoured parts, where the frost lasted under ten days, being on the western side from Donegal to Cork and a strip of coast about Wexford. The lowest temperature registered at Camden-square, in the Metropolis, was 15.8 deg., but readings between 5 deg. and 10 deg. were not very uncommon in various parts of the country, though by no means on the same night, the coldest times in most places being about the 13th day of the month. At Braemar, the thermometer touched zero, and at Lairg, in Sutherland, went 2 deg. below it, both being on the night of the 14th.

The Largest Manufacturer of Incubators in the World.

Commonsense Rearing.

On estates where large bags of pheasants are required it is absolutely necessary to supplement the stock of wild birds by hand rearing. Unfortunately, the keeper is often handicapped by his inability to obtain a suitable rearing field near his house, or by the restrictions placed upon him in respect to the purchase of food and additional eggs. Under any circumstances where rearing is carried out on a large scale the spring and summer months are an anxious time to the keeper who is responsible.

Where the supply of eggs is obtained from the wild birds on the estate it is probably advisable not to commence collecting them too early, but to wait until laying is in full swing. Outlying portions of the shoot should be first visited, and all nests in exposed places and near throughfares searched for and taken. As is well known, pheasants often seek for the most open and dangerous positions for their nests, and all fences ought to be visited constantly. In an open late spring, when the vegetation is scanty, considerable damage is done by rooks, whose destruction of game eggs is almost incredible, except to the close observer.

Despite the supposed advantages of incubators, most practical rearers pin their faith to the domestic fowl for hatching out the supply of eggs, and when choosing hens for the purpose pay great attention to the size, health, and general condition of those they purchase for this purpose. On a dry, sandy soil bottoms to the coops are not required, but in cold, wet situations they are necessary. Coops, of course, should be moved at least once a day, and where the acreage of the land at disposal is practically unlimited too many crops should not be put to the acre. The closer the coops are the easier the work for the feeder, but the ground too soon gets soiled, and the chicks get mixed, which often results in loss, as some hens will at once kill any strange chicks that come to feed with her own brood. There is no doubt that the Chinese or ring-necked variety are more hardy and more easily reared than the English or old black-necked birds, but the former have a decided propensity to stray away from the coverts, and an old cock not only wanders away into danger himself, but often takes some of the younger birds with him.

When sitting the hens every care should be taken to keep them in good health, and for this reason they ought to get a certain proportion of greenstuff with their ordinary corn. The nests are better if scooped roughly out of the soil, and a small piece of hay put in the cavity. The soil provides that amount of moisture which is necessary to the successful hatching of the eggs.

Probably the most anxious time for the rearer and the period when most of his losses occur is when the young chickens are from 10 to 20 days old, but at no time until they are once in the coverts is he safe from loss. What with cramp, gapes, spittle insect, croup, enteric, and the other diseases and accidents to which they are liable, it is a wonder that the average keeper succeeds so well as he usually does.

Prevention is better than cure, and it is often possible to avoid these annoying losses by the exercise of greater care in the selection of eggs. Where eggs are purchased from game farms the buyer should assure himself that they are the produce of healthy birds, kept under healthy conditions. Then, too, through the process of incubation and the after critical period, every attention should be paid towards the health and comfort of the foster-mother. Far better addled eggs than a clutch of weaklings that will never repay the trouble of rearing, that will die off at odd times, and that from their very weakness are so susceptible to contagious disease.

In the rearing field natural conditions ought to be observed as far as practicable. Regular feeding is most essential, cleanliness of utensils and in the preparation of the food should be observed, and water, often the source of infection, should be as pure as possible. Only sufficient food should be given at each meal, and, as a matter of fact, the birds should be hungry and ready for each feed when given. Sour food will invariably cause scour. Probably more birds are lost through not being kept warm enough than from any other cause. The nature of the soil must be studied, and where there is no grit or sand then this must be carried for the birds. Where there is any sign of scour or looseness then the use of binding food must be increased, peameal being generally added in increased quantities. Birds soon begin to find food for themselves, and each time the coops are moved to fresh ground the chicks get an additional supply of their natural food. When the nights are cold the coops ought to be covered over with old sacks, or failing that, spruce branches make an excellent substitute.

When first put into the rearing field each hen should have from 15 to 18 chicks to attend to. Shelters of spruce or larch branches, cone shaped, should be placed at frequent intervals about the field under which the birds can take refuge at the slightest signs of danger from hawks, etc., or in wet weather. If the rearing ground is surrounded with wire netting, about 6ft. to 8ft. high, it will effectually keep off intruders, whilst a retriever or two can have their kennels moved close up to the inside of the netting, where, by running one end of the chain through a loose wire securely pegged down, the dog is allowed plenty of exercise, without being able to move further into the field than the length of his chain. In a hunting country it is never safe to turn the poults into the coverts until they are able to fly into the trees to roost, but where there are no foxes the coops and hens with the young birds may with great advantage to the latter be removed much earlier into the rides.

Agricultural Co-operation.*

(Continued from page 24.)

Speaking of the tithe question he said the tithe was as much the property of the titheholder as the coats they had paid for, and wore. In some cases, however, the tithe on some land was such as not to make it worth while to cultivate the land, and consequently it went out of cultivation, as uncultivated land could not, by law, be subjected to tithe. The redemption of the tithe, however, was difficult, as by the Act of 1848 the amount required was at least 25 times the amount of the tithe, and the expenses were heavy. It was rather a question upon which he thought they might combine and ask the Legislature to deal with, as it was for the benefit of the whole nation that as much land as possible be cultivated, but they could not be expected to cultivate land at a loss. To remove the restrictions which prevented land from being cultivated would be, therefore, a good thing. In many cases the present state of things was a hardship on clergymen, many of whom were poor men, and were getting no tithe, as the land was allowed to go out of cultivation.

Alluding to the question of railway rates, he said if they asked Lord Stalbridge or any official who had extensive knowledge of the working of great lines they would find the reason why English agriculturists were charged a higher rate for their produce than the Americans were, because it was as much trouble to collect and carry half a truck-load of home produce from districts as it was to obtain a train of 20 or 30 trucks from the foreigner. The foreigner sent his merchandise from the ship at Liverpool to the London market by trainload, which could be run with profit by the railway company at a lower rate than it would be possible for them to carry the English produce in driblets. He did not see why the English farmers could not have a system of gathering their produce at one spot, and make up a trainload of merchandise, which could then be taken at a rate which would allow them to show a margin of profit where they now showed a loss. If the farmers combined and obtained a bulk which it would be worth a company's while to give a special rate for, he did not think the rate would be excessive as compared with that given to the foreign competitor. They must be able to send goods to the market in such quantities that the companies could cut the rates down to a size which would enable the sender to obtain a profit.

* A lecture delivered before the Farmers' Club by Mr. H. W. Chatterton.

Profit-Sharing.

As to the question of co-operation amongst the farmers and labourers with respect to private sharing, he was disappointed to learn where it had been tried in Essex it had not been a great success. It was not fair, however, to attribute the want of success to the system itself as owing to circumstances which farmers could appreciate, agriculture throughout the whole of that county was in such a condition that no system apparently could exist there in these times. There was no reason why it should not be applied with success in a more happily-constituted county. Profit-sharing had been tried with great success in Switzerland, and there were farms in the United States and France that had tried it. The Trade Unions set their faces against this system of profit-sharing, because directly a man found himself interested in the profit of the firm for which he worked he told the trade unionist to go about his business. A man who shared in the profits took care to see that his fellow-workman did the best he could in the common interest. Modern trades unionism, however, said their members must work only up to a certain limit, and the output was limited not to the most skilful, but to the most unskilful in the works.

Some of the rules of profit-sharing were (1) in addition to wages a cash payment is made in the form of a bonus; (2) in addition to wages there is a provident fund, out of the profits, for sickness or old age; (3) in addition to the wages a sum is set apart in favour of each workman, and represents his interest in the business in which he becomes partner; (4) in addition to wages a cash payment is made in proportion to the work done. The workman became a direct partner in the firm, and one of the advantages was that strikes were never heard of in the firms adopting the system; there was a reduction in the waste of material, superior work was done, and there was a diminution in the expenses for superintendence. There were other advantages, but these given showed how manifest were the advantages.

No doubt agriculture was the most difficult industry in connection with which the principle could be applied, and the task was, perhaps, hopeless to attempt until the agricultural labourer was educated up to the elementary condition of seeing that fairness and justice must be given on both sides. No doubt the labour of carrying out the system would be a gigantic one, and one which not one or fifty men could accomplish, but which the recognised heads of the industry might inaugurate. He believed, however, if it was carried out they would see a revival of agricultural prosperity in the country, although many said the agricultural industry and prosperity was a thing of the past, and could not be revived. In conclusion he asked them to combine to make their voting power felt so that the Legislature should feel bound to notice their legitimate interests; to educate their labourers to a state of mental efficiency to join in a genuine system of agricultural co-operation and profit-sharing, as by doing so they would be conferring such a benefit on themselves and on their country as it would be absolutely impossible to over-estimate.

The Milk Standard.—In the King's Bench Division, on Thursday, the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice Channell heard the case of Morgan v. Auger. The appellant had been convicted and fined at Clerkenwell Police Court, under the Sale of Food and Drugs Act, 1875, and asked the Court to quash the conviction. Morgan was charged by the respondent Auger, the Sanitary Inspector of the Borough of St. Pancras, with having abstracted from milk, to the prejudice of the purchaser, a proportion of its cream, the milk being below the standard in that respect laid down by the Board of Agriculture. The appellant was a cow-keeper, and kept eleven cows, the milk of three of which he reserved for infants and invalids. The milk of the other eight was mixed together, and it was from this bulk that the sample analysed was taken. The magistrate found that if the milk of the eleven cows had been mixed together it would have been up to standard, but that the milk of the eight cows was below it; therefore, as it appeared in the case, he convicted the appellant for abstracting the cream, because he had abstracted the milk of the three from that of the eleven cows, although he found as a fact that the milk supplied was in the same condition as when taken from the cows. The Lord Chief Justice thought there had been some misunderstanding in the matter, but said, as the case was stated, the Court had no alternative but to quash the conviction. The conviction was quashed accordingly.

He attends all the leading markets to purchase Stock at lowest rates. References can be given if desired to customers who have been annually supplied. All orders are personally attended to. List of classes and approximate prices sent on application. Reference required; terms cash. Telegrams: "Arnott, Inverness." J.A. is now booking orders. N.B.—Polled Angus or West Highland Heifers and Black-faced Gimmers, Ewes, Wedders, and Lambs for crossing or feeding, in truck loads, at moderate prices. Fat Stock of all classes also purchased.

CATTLE FOR WINTERING. —J. A. will be glad to receive orders for the purchase of Cattle, which, owing to the shortness of straw in Scotland, can now be bought cheaply. A good profit should be the result either for feeding or wintering.

CATTLE AND SHEEP FOR WINTERING. E. GOODWIN PREECE, Live Stock Agent and Exporter, Shrewsbury, will be glad to receive orders for the PURCHASE of CATTLE and SHEEP, which, owing to the shortness of winter keep in the West of England, can now be bought very cheaply. A good profit is assured either for feeding or wintering.

Several lots of Shropshire and Clun ewes, Shropshire, Oxford and Lincoln rams, and cattle of various classes on sale, which can be seen by appointment.

Address, Portland House, Shrewsbury.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.

DOG SHOW, to be held at MANCHESTER, MARCH 25th, 26th, and 27th, 1902.

For the convenience of Exhibitors at the above Show, the London and North Western Railway Company will arrange the running of Special Through Vans for the conveyance of Dogs to Manchester, on Monday, March 24th.

Consignments from the Branch Lines, and from Nottingham, Peterboro', Oxford, Cambridge, &c., will be placed in these Vans at the various Junctions, thus ensuring direct transit to the Exhibition.

All information can be obtained of Mr. ROBERT TURNBULL, Superintendent of the Line, Euston Station, London; or from the Company's District Superintendent, Mr. H. LINAKER, Exchange Station, Manchester.

FRED. HARRISON, General Manager.

General Manager's Office, Euston Station, London, N.W., February, 1902.

LONDON AND NORTH WESTERN RAILWAY.

ROYAL AGRICULTURAL SOCIETY'S SHOW, CARLISLE.

JULY 5th, 7th, 8th, 9th, 10th, and 11th, 1902.

The London and North Western Company's route will afford the most expeditious service for the transit of Passengers, Goods, and Live Stock Traffic to and from the Royal Agricultural Show at Carlisle.

Any information as regards the through rates for railway conveyance and cartage, &c., to and from Carlisle Station and Showyard may be obtained from Mr. FRANK REE, Chief Goods Manager, Euston Station, London, or Mr. L. D. PRICE, District Traffic Superintendent, Lancaster.

Special Goods and Live Stock Trains will be arranged for the speedy and safe transit of Exhibits to and from the Show; and Exhibitors at the Bath and West of England Show at Plymouth, and the Royal Counties' Show at Reading, forwarding Exhibits from those places to the Royal Agricultural Show at Carlisle will find the London and North Western Company's services the best and most expeditious.

The London and North Western Company's Express Dining and Sleeping Car Train Services to Carlisle, which is on their Main Line, provide the shortest and most direct route from London, the Eastern Counties (*via* Cambridge, Peterboro' and Rugby), the Midland Counties, the West of England, Liverpool, Manchester, and all parts for Passengers intending to visit the Royal Agricultural Show.

Care should be taken to clearly consign all exhibits for the Show, "Per London and North Western Railway."

FRED. HARRISON, General Manager.

Euston Station, London, N.W., March, 1902.

THE "SVEA" SEPARATOR

The "SVEA" Separator is the Cheapest because it is

THE SIMPLEST, THE STRONGEST,
THE MOST DURABLE, THE EASIEST TO TURN,
A PERFECT SKIMMER, and
HAS THE GREATEST CAPACITY.

The **"SVEA" Separator** being thoroughly up to date, embodies the following improvements:—

1.—**The Short Bowl Spindle** replacing the usual long one, which so soon gets damaged if not handled with great care.

2.—**The Patented Top Bearing** by means of which the bowl is supported at **both** top and bottom.

This is a special feature of the "SVEA," and is considered a great advantage as contributing to the smoother and easier running of the bowl, also preventing all accidents.

3.—**The Simplicity** of the skimming arrangement consisting of only a few rings or discs (in the small sizes 4) instead of the usual large number.

4.—**The Bowl is easy to take to pieces and clean.** This fact and the small number of the parts to clean will be much appreciated by every one used to Separators.

5.—**The Conical Lugs** on the inside of the Bowl Top make it **impossible for the Bowl to get out of balance** by reason of the threads becoming worn.

6.—**The easy and noiseless motion** effected by the use of Conical Gearing instead of the usual cylindrical one, thus permitting the

7.—**Reduction of friction and wear** obtained by the position of the worm wheel, at an angle of 45° to the worm, instead of the usual right-angled gearing.

8.—The **extraordinary strength** and good workmanship of the machine throughout.

Table of Sizes & Prices

No.	CAPACITY PER HOUR.	PRICE.
1	20 galls.	£9 10 0
2	33 „	11 10 0
3	55 „	17 0 0
4	75 „	23 0 0

The "SVEA" Separator is fitted with an automatic device regulating the inflow of the milk.

The "SVEA" Separator is sent on trial. Carriage paid. No extras.

SULPHATE OF AMMONIA.

Incomparably the BEST and CHEAPEST form of Nitrogen and Ammonia.

PRODUCES LARGER CROPS THAN ARE OBTAINED FROM THE USE OF ANY OTHER FORM OF "ARTIFICIAL" NITROGEN.

See Reports of Experiments at Dalmeny, Woburn, Midland Dairy Institute, The Coachford Agricultural Society (County Cork), The Escrick and District Agricultural Club, The North Walsham and Aylsham Agricultural Society, The Yorkshire College Experiments.

See also Report of Root Show at Scottish National Fat Stock Club, which all the First Prizes in the Open Classes were awarded to Roots and Cabbage grown with Sulphate of Ammonia.

PRODUCES CROPS OF HIGHER FEEDING VALUE THAN ARE OBTAINED BY THE USE OF ANY OTHER MANURE.

See Reports of Analyses of Crops in Experiments at Dalmeny, Woburn, &c.

PRODUCES BETTER QUALITY OF MALTING BARLEY THAN IS OBTAINED FROM THE USE OF ANY OTHER MANURE TESTED AT ROTHAMSTED.

See Report on "Manurial Conditions affecting the Malting Quality of English Barley," in **Journal of the Royal Agricultural Society of England, 1897.**

Also Report of Barley Competitions at the Brewers' Annual Exhibition, Royal Agricultural Hall, London.

MONDAY, MARCH 24, 1902.

Correspondents are requested to address all communications for the Editorial Department to THE EDITOR, "Mark Lane Express," 1, Essex Street, Strand, London, W.C.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 1, Essex Street, Strand, London, W.C.

LOCAL RATES.

"Even in this year, when the Treasury requires every penny it can put into its pocket, the Chancellor of the Exchequer, who means well to the farmer, has given an additional grant for educational purposes. With regard to local rates, too, I think the farmers have a great claim upon the Government. No doubt they have done something which will last for years, but since the Report of the Local Taxation Commission has come out, the duty is more than ever incumbent upon the Government to make the burden of local rates more equal."

The speaker is Mr. Hanbury, at the recent dinner of the Yorkshire Union of Agricultural Clubs at York.

"The only method which can secure fair play all round is consistent adherence to a principle which has often been put forward in discussion, but to which insufficient regard has frequently been paid in practice. That principle is the distinction between services which are preponderatingly national in character and generally onerous to the ratepayers, and services which are preponderatingly local in character, and confer upon ratepayers a direct and peculiar benefit, more or less, commensurate with the burden."

The words are taken from the final report of the Royal Commission on Local Taxation.

With a Chancellor of the Exchequer favourably disposed towards farmers, with a Minister of Agriculture bent upon making his department "not a mere doll dressed up in red tape," but a "living department that shall live and learn to do its duty by those it represents," and with a royal Commission emphasising the injustice of the burden of national and local services resting with undue weight on the shoulders of the class of ratepayers who are least able to bear it; it is surely not too much to hope that in the near future some attempt will at least be made to adjust that burden upon a more equitable footing.

But Longfellow bids us "Trust no futnre, how'er pleasant," and urges us rather to "act in the living present." And having regard to the fact that some time must necessarily elapse before the attainment of a consummation so devoutly to be wished, and withal to the mortality of Governments and the proverbial uncertainties of legislation, it may be wise to face the situation as we find it, and to direct our attention to the possibilities of easing the yoke which sits so heavily upon us.

Probably no subject is more disagreeably familiar than the payments of rates. The principles of assessment also are generally known. And yet, perhaps, it happens not unfrequently that farmers are assessed to heavily, either through an oversight in claiming proportionate relief from rates when they have obtained a reduction of their rent, or through the excess being so small that they have not troubled to appeal. But the poor rate assessment is so often taken as the basis of other assessments that it is all-important to see that it is not one penny more than the proper amount. Thus the assessment for income-tax under Schedule A. is never less (though it may be more) than the poor rate assessment, and it is obvious that a small annual overcharge paid year after year will amount in time to a serious item.

The poor rate is assessed upon the net annual value of the premises. To arrive at this value the overseers take the gross estimated rental, less certain deductions. The rent actually paid is generally a very fair test of the annual value—inasmuch as the gross estimated rental means the sum for which the premises might reasonably be expected to let from year to year, if the tenant paid all usual tenants' rates and taxes, and the tithe rent charge.

But the actual rent paid is by no means conclusive. If the tenant can convince the assessment committe that his place is too dear, they can fix a lower sum as the gross estimated rental; thus they ought to take into account any abatement or return of rent, which is allowed, as this shows that the full rent is too high. So also if he holds free of tithe rates and taxes, for his rent is correspondingly increased. On the other hand he may be liable to pay on more than his rent, as where for family or other reasons he has a remarkably cheap take, or where premiums have been paid or collateral bargains entered into.

When the gross estimated rental has been properly ascertained, there are deducted from it the average annual costs of repairs and insurance and any other expenses that may be necessary to maintain the property in a state to command a rent equal to the gross estimated rental. These deductions may vary in different districts, but generally a fixed deduction of one-sixth or one-eighth (according to the class of property) is allowed off the gross estimated rental, and the result is the net rateable value upon which the rates are paid. A ratepayer aggrieved by his assessment should appeal to the assessment committee. The procedure is simple. He has to give written notice to the committee and the overseers, stating the grounds of his objection. No particular form is required, an ordinary letter will do. He will then be informed of the day when his appeal will be heard. He will go before the Assessment Committee, state his case, and if he has a sympathetic audience of fellow farmers, he will generally get what he asks for in reason. But if he is dissatisfied with their decision, he can appeal to the local justices at the special Petty Sessions, appointed for hearing poor rate appeals; and from them he can take his case to the Quarter Sessions. But for these further appeals he will generally require professional assistance; and before he invokes the aid of Quarter Sessions he will do well to count the cost.

By a Man of Mark Lane.

The agricultural correspondent to the Labour Department of the Board of Trade reports in the March number of the "Labour Gazette" as follows:—Frost and snow hindered the preparation of the land for spring sowing during the greater part of the month, but farm labourers were regularly employed on most farms carting manure, hedging, cleaning ditches, threshing, and attending to live stock. In many districts, however, some casual labourers were thrown out of employment in consequence of the severe weather. The demand for extra men during the month was generally small, and in most of the districts covered by the reports received, the supply of labour was quite sufficient, and in some cases excessive.

The receipts on account of Revenue from April 1, 1901, when there was a balance of £5,596,918, to March 15, 1902, were £134,697,699, against £123,687,739 in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £182,658,029, against £174,654,227 to the same date in the previous year. The Treasury balances on March 15, 1902, amounted to £13,204,668, and at the same date in 1901 to £7,853,010.

There is not the slightest prospect of Mr. Raymond-Greene's Aged Pensioners Bill, the second reading of which was agreed to without a division on Wednesday afternoon, becoming law, the refusal of the Government to afford the necessary financial assistance being an insurmountable obstacle to its ultimate enactment. The Bill will, however, on some early day probably get into Committee, and time may possibly be found for its futrher consideration later in the Session, but the Ministerial attitude with regard to it renders its chances of becoming law hopeless.

An official statement of the yield of grains in the North-West Territories of Canada has been received at the Statistician's Office. These returns show, says the Ottawa correspondent of the *Standard*, that, in the three territories of Assiniboia, Saskatchewan, and Albert, wheat threshed in 1901 amounted to 12,676,343 bushels, against 4,028,294 bushels in 1900. The acreage planted was 508,564, thus showing an average of 24.92 bushels per acre. This compares very well with the Manitoba average of 25.1 bushels per acre, and also with previous records of the North-West itself. Only in 1891, 1895, and 1901 did Manitoba exceed the North-West average per acre of last season. In 18 years, three seasons were higher and 15 lower than the North-West record. Ontario, in the eleven years, 1891-1901, has only beaten the yield of the North-West Territories twice—in 1891, when the average was 25.7 bushels, and in 1897, with its average of 25.2.

The highest average yield in the North-West Territories in 1901 was 34 bushels in West Saskatchewan. The highest average in Manitoba was in North-West Manitoba, with 30 bushels average yield. Saskatchewan Territory is North of 52nd degree of North latitude, and it has a population of 25,679 persons. Its crop of wheat, harvested from 37,000 acres, was, according to threshers' returns, 829,737 bushels, or 22½ bushels per acre. Northern Alberta, just South of the 55th degree, raised 737,344 bushels from 29,634 acres, an average of 25.55 bushels, somewhat over the average of all Manitoba. It is evident, therefore, that the wheat belt of the North-West must be considered as extending over a much larger area than was deemed probable by two Conservative experts a few years ago.

In oats, the returns give a total yield, in the three territories already named, of 11,113,066 bushels from 229,439 acres, an average of 48.43 bushels per acre, comparing well with 40.3 bushels, the average of Manitoba last season. North Alberta "beats the band," with an average, from 79,642 acres, of 61.42 bushels to each acre. In Manitoba the highest average reached was 48.4 bushels—in North-West Manitoba. In barley, the three territories yielded 736,749 bushels from 20,044 acres, or 36.75 bushels to the acre. The yield in Manitoba was 34.02 bushels to the acre, and in Ontario 26.5 bushels. Again the highest yield is in North Alberta—43.65 bushels.

IMPORTANT NOTICE.

TO READERS AND ADVERTISERS.

In consequence of Monday next being a Bank Holiday, the MARK LANE EXPRESS will be published on THURSDAY AFTERNOON, MARCH 27.

All communications for that issue, whether for the Editor or Orders for Advertisements, should reach this Office as early as possible, and in any case not later than by first post on THURSDAY MORNING NEXT.

SUBSCRIPTION RATES:—United Kingdom, one year, 15s.; six months, 7s. 6d.; the Colonies and Abroad 17s. 6d. per annum.

By a Lobbyist.

I am glad to be able to state that the members for rural constituencies are, generally speaking, much gratified at the declaration of Mr. Hanbury's heroic resolve to reorganise the Board of Agriculture. There has been a gradual growth of feeling that the Board as at present constituted is of little value to the individual farmer; and the natural dissatisfaction, with its innocuity, has been intensified by a comprehension of the possibilities of such an organisation. "We, however," said one legislator to me, "have not the agitative spirit within us. We did not intend to denounce the Board, and we even refrained from an active criticism. Our dissatisfaction was shown in the coldness of our attitude towards the Board. We had simply become apathetic—we had no interest in its work or purpose. We knew that it could not be seriously valuable, and we simply relapsed into indifference." This politician, however, like all with whom I have conversed on the point, is convinced that Mr. Hanbury will not lack the stimulating sympathy of both sides of the House in the work which he is about to undertake. As a fact, it is already being extended to him. Mr. Hanbury has been hitherto regarded as in some measure a pathetic figure on the Front Bench. A reformer by instinct, an administrator of undeniable capacity, he has been regarded as foredoomed to inactivity and uselessness. His present assertion is thus welcomed partially because it enables the man to play a part worthy his character.

Will it be possible to reorganise the personnel of the Board itself? This is a question which has been a good deal debated among the rural M.P.'s. The present personnel of the Board is not altogether calculated to induce confidence. It includes the Lord President of the Council, the principal Secretaries of State, the First Lord of the Treasury, the Chancellor of the Exchequer, the Chancellor of the Duchy of Lancaster, and the Secretary for Scotland. It is the fact that the charter of the Board provides for the appointment of such other persons as his Majesty may approve; but how often has this power been utilised? As a fact, in the constitution of the Board itself we have no definite assurance that the destinies of the interest are being controlled by men having any specific knowledge of its necessities. The Board may be better than its constitution warrants us to expect. Would it be possible to reproduce the system adopted in connection with the Irish Board? The Irish Council of Agriculture consists of 104 members, two members being elected by each county, while each province is also represented by members appointed by the Department. From this body you have appointed a representative committee of twelve men. Thus, in the constitution of the Irish Board, you have a specific assurance not only that it is in touch with the requirements of the interest, but that a careful study is being maintained of local agrarian necessities. In this fact you have the real secret of the success of the Irish system.

True, the Irish system costs more than the English system. The English organisation costs—that is, in its machinery—about a hundred thousand a year. The Irish system costs nearly a hundred and seventy thousand a year; but it must not be forgotten that the machinery of the Irish system is much more extensive and practical, and that, unlike the English system, it is directly concerned with the practical side of the farmers' daily life—that it has experiments conducted for their behoof, that it illustrates the possibility of extending their operations, that well-equipped lecturers act as instructors in the modern developments of the agricultural science, that it conducts its own dairy farm for the provision of object-lessons, and that it even sends seeds to farmers for the purpose of testing. "The first person Mr. Hanbury has to consult in his purpose," said a well-known Midland M.P. to me, "is the Chancellor of the Exchequer. He must secure a seriously enlarged grant if he would make the Board of Agriculture a practical body. Of course, he may be able to save a little of the present grant by the reorganisation of the Board's machinery; but it will be very little. If the Agricultural Minister for Ireland has an income of a hundred and seventy thousand a year at his disposal the English Minister ought to have an income of three hundred thousand.

I myself am greatly inclined to the same view as the legislator. Mr. Hanbury will be able to accomplish very little unless he is conceded an increased grant. His establishment is already created, and he cannot decapitate the officials having executive control. Will Sir Michael Hicks-Beach consent to an enlarged grant? Sir Michael has, of course, a native sympathy with agriculture. He is generally regarded as the representative of the country squire element in politics. He is a good landlord, and in that capacity he has sought to encourage a reform in the methods of his tenantry. But it must not be forgotten that at this moment the Treasury has a sufficiency of demands made upon it. It will be urged that a matter of a hundred thousand pounds is a mere flea-bite in the Imperial necessities of the year. That is not the way in which Sir Michael will look at the business. He has had more demands made upon his exchequer than any other British Finance Minister. This has not, however, induced in him a loose hold on the purse-strings. As a fact, he exercises as rigorous a control as ever Sir William Harcourt did. I thus am compelled to look upon Sir Michael as providing the most serious barrier to the realisation of Mr. Hanbury's purpose. My chief hope is that his native sympathy with agriculture may act as an effective ally to Mr. Hanbury.

There be ominous rumours in the air concerning the forthcoming budget. One thing is generally accepted—Sir Michael must enlarge the basis of taxation. He cannot eternally go on increasing the income-tax, for that would mean the alienation of the class most loyal to Conservatism—the middle class. Is it possible for him to so enlarge the basis of taxation that the method adopted shall tighten the fidelity of at least a section of that class? The men who ask this question have in their mind's eye the possibility of some tax on corn. I will not myself say that Sir Michael meditates such a tax, for I have known full well the strength of his allegiance to Free Trade principles. Still, I cannot but chronicle the fact that the story that the fiscal restrictions in connection with the importation of corn are to be revised is in circulation in the lobby. I must admit that the authors of the story are Radicals. As a fact, they would rather welcome the tax, for it would provide them with an effective method of attack upon the Government. For my part, I dare not credit the assertion. Still, the stern fact is that the Chancellor of the Exchequer is practically compelled by the financial necessities bred of this war to enlarge the basis of taxation.

MEM.—I have to apologise for having misspelt the name of the excellent Unionist member for the Tavistock division. That useful politician will pardon the unintentional slip.

OUR LIST OF SHOWS.

The Mark Lane Express

POCKET BOOK

AND

LIST OF AGRICULTURAL SHOWS.

Our list of Agricultural Shows is this year issued in the form of a pocket book, of a convenient size, which, in addition to containing the Show Fixtures for 1902, includes a considerable amount of useful information, consisting of Railway Rates for Stock, tables, etc. The Pocket Book consists of 72 pages and cover, and is of a size eminently suitable for the purpose for which it is intended. A vacant page for memoranda faces each page of the Show Fixtures, and this arrangement will be found of great use, enabling readers to easily and quickly make a note of any prospective engagements.

Copies of the "Mark Lane Express Pocket Book and List of Agricultural Shows" may be obtained free upon application to 1, Essex Street, Strand, London, W.C., the only stipulation being that ½d. stamp for each copy required is forwarded to cover the cost of postage.

Rival Attractions of Town and Country Life.

The Blandford Farmers' Club, some time ago, offered a prize for the best essay on Rural Depopulation, and of the five essays sent in that considered by the judge to be the best was written by Mr. E. W. Drew (ex-chairman of the Club), and entitled "The Rival Attractions of Town and Country Life as they Affect Agriculture." This essay was subsequently read at a meeting of the Club. The author first considered the effect which the large migration of the working classes from the country to the towns has upon agriculture; and he asked why was it that the young men in the country, as soon as they were sixteen or seventeen years old, were so anxious to leave their homes, their parents, and the surroundings to which they had been accustomed, and amidst which they had reached the full vigour of youth with health unimpaired, to go into the towns to work longer hours, to live probably in crowded houses, and to give up, as a rule, most of the comforts which they had always had in their own country homes? The primary consideration with most of these men was what was called more life, which meant more variety, more change, and the hundred and one opportunities which the young man in a town had of seeing and hearing something fresh. This had a greater influence in drawing country people to the towns than even the prospect of higher wages, because amongst the working classes there was a certain restlessness, a desire for change, and a general wish to do something different to what they had been doing. Naturally, too, the prospect of higher wages did draw considerably. No matter how small the balanre in hand at the end of the week might be, the average Englishman would always go where he was able to handle the most cash, hoping and believing that he would manage it differently from other people, and effect a considerable saving where others were obliged to spend all. These two inducements—more life and higher wages—were undoubtedly the main attractions which the town held out to the country lad just verging on manhood; and when it was remembered that village life all the year round was certainly somewhat dull and monotonous, it could not be wondered at that these attractions were extremely powerful. That being so, it was necessary to consider whether this depopulation of the rural districts and the consequent crowding into the towns was for the better or for the worse. Was it for the future good of our country, or would the country in the end suffer on account of it? Undoubtedly, if the crowding into the towns went on at its present rate it would eventually fail-

most seriously on both the moral and physical welfare of the nation at large.

Dealing next with

The Attractions of Country Life,

Mr. Drew went on to say that, as agriculture was still the most important industry, it would be well first to take the work on a farm. The lads employed on farms were mostly either under carters, shepherds, or stockmen. As children they had, of course, been educated at the village school free of cost, and in this matter of education there was much room for improvement. For, whereas the instruction provided might be suitable to the after life of the town child, it could not be said to be at all adapted to the future requirements of those who lived in the country, nor calculated to make them proficient in the duties which they would be called upon to fulfil. The education of the day tended rather towards causing migration to the towns than inducing the young people to stay in the country.

Having passed the required standard, the boys left school, and, as a rule, were readily taken on by their father's employer to do light works on the farm. Should the father be a carter, the boy generally had a fondness for horses; but if the father was a shepherd the lad generally developed a fondness for sheep. In either case he was usually put to work with his father. His wages were not much to begin with, but if he showed ordinary sharpness he soon got a rise, and at 17 or 18 years of age he got full pay. The average hours of work were from 6 a.m. to 5 p.m., with intervals of at least two hours for meals. Either of the occupations mentioned entailed a certain amount of Sunday labour, although now-a-days this was rendered lighter than formerly by the employer having the work got forward on the Saturday. The lad probably lived with his parents, or in comfortable lodgings, and generally paid, as he got towards manhood and received full wages, from 6s. to 7s. a week for board, lodgings, etc.

After his daily work, what was there in the way of recreation? In the summer there was cricket, few villages being without a cricket club; and in winter there was the club or reading-room, where young men could read the papers, play games, and so on. Thanks to the generosity of a few private individuals, almost every parish of any importance had its attractions of that sort. The event of the bicycle had enabled a lad to easily get to the nearest town, to see anything special that might be going on there, so that, as regarded attractions of that sort, he was almost as well off as the lad in the town, and did not feel, like the country lads of former days, that he was out of the world. Most important of all, though this fact was little recognised, the country lad was less exposed to temptations than his brother in the town, and, moreover, he lived amidst the best surroundings as regarded health, freedom and fresh air being the most necessary factors in laying the foundations of a good constitution.

In courting time the attractions of the country were

Far Ahead of those in the Town,

and when marriage took place, when once a suitable cottage had been found, the question of rent was not by any means the serious matter that it was in the town. With a garden and an allotment, now everywhere obtainable, a man was able, not only to grow enough vegetables for his family, but had generally a considerable amount to spare, which he, of course, sold. Then, too, he could keep his pig practically by means of his garden and allotment, and could thus produce meat, which was a considerable source of help. His family, if he happened to have a quiverful of little ones, were naturally much more healthy from being brought up in the pure country air than it was possible for town-bred children to be.

Having spoken of the great need in the rural districts for more labourers' cottages of a suitable character, Mr. Drew next dealt with the man who left the country as a youth and migrated to the town. Generally the lad who left his native village for the town was about 15 or 16, and as he was healthy and strong, and perhaps able to do more work than town lads of his own age, he had not much difficulty in getting employment at higher wages than he had been receiving. If he was intelligent and persevering, he might soon rise to a position of trust, and although he found board and lodging expensive, yet, if he was careful and could resist the manifold temptations to spend money, he could probably put by a fair sum every week. When his day's work was over his evenings could be looked forward to with pleasure, as there was always something going on and plenty of friends to meet. This might satisfy him for a time, but when he wished to marry and settle down, he found rents high, and then he began to realise that, after all, the country had some advantages over the town. If he was blessed with a goodly number of children, the early struggle was sure to be a severe one, both for himself and his wife. The higher rent, and having to buy everything in the shape of food, drew seriously on the income, and it was doubtful whether at the end of the week he was any better off than his brother in the country.

The town undoubtedly possessed stronger attractions than the country, because once a man left the country and took up any kind of work in the town he was pretty sure not to go back again. Once thoroughly accustomed to living in a town few men were happy living out of it. This superior attractiveness of the town drew even the unskilled labourer away from the country, and thereby injuriously affected agriculture by denuding the rural districts of what might be called its elementary necessities. And if it drew away the unskilled workman, how much more did it draw away the better class of men. Considering next how

the Superior Attractiveness of the Town

first began to manifest itself, Mr. Drew said that first of all there was in the town, at any rate for the more intelligent workman, a certainty of always being able to get work. If he had a good character he could always get work, for if one employer did not require his services, he could easily find another. But this independence could not be said to exist even now to anything like so great an extent in the country. Once a man there lost a good situation, he could not, except at certain seasons, replace it at once. When it came to be considered how this was, they were bound to see that agricultural depression was at the root of the evil. Twenty years ago, when bad times first began to manifest themselves, the agriculturist paid off all the men he could possibly do without; and as demand for labour got less in the country, it got greater in the towns; and then began that steady flow to the towns which had been going on ever since.

The same remarks which had been applied to the exodus of the working men from the country applied to the women. In the case of the women the superior attractions of the town were very noticeable, for to a young woman the temptation to start life amid the exciting surroundings of a town generally proved irresistible. Much could be written about the migration of the middle classes to the town, but as such migration did Ynot directly affect agriculture, it was sufficient to say that it was unfortunate, inasmuch as it deprived the country of some of its most stalwart sons, who, as had been so well proved during the progress of the war, were willing to come forward to fight their country's battles. This class of lad, however, probably did not leave country life of his own free will, but was compelled by his parents to go and get a livelihood which in the country he had now-a-days so much difficulty in getting.

So the upper class the town was certainly most attractive. To the workers of this class there were opportunities in the town not to be heard of in the country, and as for the man who sought amusement the town was always studying how to satisfy his cravings. The absence of the upper classes in the towns had a prejudicial effect on agriculture, because the gentleman who resided principally in the town naturally obtained all his requirements there, and did not do as much as he might to increase the prosperity in the place which was his native home. It was, then, an undisputed fact that the town attracted to its midst large numbers of men from the country districts, and this was generally admitted to be a great evil.

Suggested Remedies.

When they came to discuss a remedy they were told on all sides that, in order to induce the working man to remain in the country, they must enable him to obtain a greater interest in the land, and it was generally supposed that a large increase in the number of small holdings would have the desired effect. Experience of small holdings did not bear out this view. A small farm to be worked with profit must be situated near a town, a small holding in an outlying district being practically useless. One of the first and best remedies—next, of course, to paying higher wages, which was impossible in the present depressed state of agriculture—would be the better housing of the working classes in the country, for more and better labourers' cottages would be an undoubted inducement for many young men to stay at home, and would probably draw others back who were born in the country, and had never quite lost their love for it.

For the future physical welfare of our people it was necessary that there should be a good country population; and as this might well be considered a law of Providence it would in the end assuredly prevail. But at the same time it was the duty of man to use every effort to bring about this result. Agriculturists and other employers of labour in the country would best be doing that duty if they did their best to make the lives of those around them brighter and happier, and did not consider their own prosperity alone, but studied the welfare of their servants. Servants should not aim to do as little work as possible for as high a wage as they could get, but rather to do their duty fairly by their employers, thereby gaining their confidence and respect, and so brightening every-day existence. Owners of property should not think entirely of their own pleasure. It rested with them more perhaps than with any other class to add to the attractions of ordinary country life. Anything that could be done to strengthen the good feeling between the three principal classes in the country would be a great help towards making agriculture a more attractive occupation, especially to the working man, and would go a long way towards keeping him on the land. The same remark applied to all classes of men in the town.

By Hordeum.

Composition of Barley.

In the recently-issued journal of the South-Eastern Agricultural College, Wye, Kent (No. 11, 1902) is a short article by Prof. A. D. Hall on the chemical composition of barleys shown at the last Brewers' Exhibition. In this Mr. Hall acknowledges the services of Mr. F. T. Holbrook and Prof. Percival, and the united services of these three gentlemen prove of signal use at the present moment.

Everyone acquainted with the determinations of the judges at this exhibition is acquainted with the fact that the decisions are reached by purely empirical methods. But the combined or united experiences of the competent jurors (allowing for any deficiency on the part of single jurors) enables them to reach to results that are purely scientific. They determined the order of merit of some 200 samples, and the prize order was most faithfully and carefully examined by the professors named, with the result that their decisions are found to agree with scientific lists of merit.

The professors give lists of great interest which confirm absolutely several of the conclusions inferred in former reports of the judges at the Brewers' Exhibition. This is an instance where

Science Confirms Practice,

and the results affect the whole cultivation of barley. For many years past the judges have thrown out suggestions as to the desirability of not folding sheep after roots as the previous step in rotation. As to this the article in question says, "The chemical analyses and mechanical examination of these barleys all confirm the conclusions that high quality in barley is linked with a high starch and a low proteid content, factors which are not readily attained when barley is grown after roots folded off." Quite so. Good malting barley is rarely grown on any soils when sheep are folded, and the barley is the next succeeding crop, no matter how close to the hurdles sowing may keep, and even if the soil be sandy.

In glancing at the admirable tables given, one is struck at the high moisture percentage throughout. This is a point which has not yet received much scientific attention. Do good, sound, dry malting barleys, as ordinarily received by maltsters, contain 15-to 18 per cent. of moisture?

The Degree of Wetness

of any barley is a point that affects all other percentages, whilst a number of the contents of any barley-grain can be absolutely relative the amount of wet affects the whole materially. It will be well for the same series of investigations to be followed at some future show, when the grain can be taken at an early day of the show, and the moisture contents determined promptly prior to exposure to the humid air of the Agricultural Hall in October.

This suggestion, however, does not affect in the slightest degree the results gained, nor does it throw the slightest slur on the accuracy of the tables given. It is merely a minor practical point, which has only to be understood to be followed in such a way that cavillers have nothing left to say.

The practical conclusions are eminently satisfactory.

The prize samples selected give singularly uniform results.

It is well known that the commercial value of barley is ruled by the four factors:—The amount of starch, water, proteids, and fibre contained. The interesting point is how far judgement by eye can determine these, and the result is singularly interesting for, in the tables given, the awards of the judges are confirmed in every detail.

Low Proteid Content

is shown to be inseparable from the outer indications of the grain which determine the opinion of the judges when giving the awards.

The mechanical determinations by Professor Percival are of much value on many of the points involved. It is much to be hoped that he will ere long favour us with a paper on this matter on the same, or even fuller, lines than the very admirable one he recently gave on hops in the Journal of the Royal Agricultural Society. A number of points of real commercial, as well as scientific interest remain to be determined about the physical characters of the grain and its composition as indicated by the outside aspects.

Then also there is another most interesting point which, as yet, has hardly been touched upon.

The Feeding Value

of barley. It is not likely that a really good choice malting barley is of the same feeding value, stone for stone, as a low-grade barley unfit for malt. Yet, what is the true relation? The day has come when the quantity of barley grown may prove of greater importance than its quality, and as quantity can always be ensured by taking the necessary steps, we ought to settle the question: will it best pay barley growers to secure bulk regardless of quality?

This is a question which the article referred to deals with only inferentially; but from the clear, lucid, and scientific handling of the subject, some light on this point even may be thrown, and in the near future the whole matter may be dealt with in a way that will help to settle several of the vexed questions at present little understood. All barley-growers and brewers are indebted to Professors Hall and Percival for the admirable paper they have contributed on this most interesting subject.

The Royal Commission on Arsenical Poisoning.

The Royal Commission investigating the sources of arsenic in food and drink, with especial reference to the arsenical poisoning epidemic in the midlands, have held several meetings recently, but the proceedings have been private. The proceedings at the recent meetings have been what may be described as of an administrative character—the sifting of that which has been accomplished, and the considering and providing for that which is to follow. The complete subsidence of the Manchester arsenical beer poisoning cases, together with the issuing of the interim report recommending the fixing of a standard for malt and hops by the Inland Revenue Department, has curtailed, though it has not closed, that part of the inquiry. It is understood that nothing has yet been done by the Inland Revnue to give effect to the recommendation of the Royal Commission in this respect.

Investigations are now being pursued into the occurrence of a number of arsenical poisoning cases at Halifax, to which allusion was made at the last public meeting of the inquiry, and evidence as to their causes will be given. It is generally conceded that, taking the country through, the beer now being brewed and sold to the public is arsenic free, but there are cases here and there where non-deleterious quantities of the poison are still traced, and elaborate scientific analyses are being conducted to trace even their origin, with a view to their elimination and the production by all of an absolutely pure beer. The purification of malt and hops is also still being carefully experimented upon, and although nothing in the character of further sensational incidents may be looked for, yet much valuable scientific information will be forthcoming. Shortly after Easter further meetings for the reception of evidence will be held.

The Beer Bill.

The Press Association is informed that the Beer Bill of which the second reading will shortly be moved by Mr. Tomlinson, M.P., differs materially from its predecessors. Sir Cuthbert Quilter and his friends have set themselves to evolve a scheme which, whilst securing in the main the object for which they have striven, should involve a minimum of interference with the brewing industry and of trouble to the Excise authorities. The Bill will provide:—

(1) That all beer must contain a fixed proportion of barley malt (put in the Bill at 85 per cent.);

(2) That all hop substitutes shall be prohibited; and

(3) That beer brewed abroad shall only be sold with a declaration to the purchaser that it is "imported" beer.

Previous Bills which have permitted the brewing of two classes of beer ("all malt" and "part malt") have been open to the criticism that even if passed their enforcement would be most difficult, owing to the impossibility of detecting by analysis the difference between the "pure" and the sophisticated liquor. The present Bill sets up a minimum standard to which all beer must conform. The Excise authorities will be charged with the duty of seeing that this standard is enforced, and as the check will be made before the beer goes into consumption, the administration will not be made difficult by any question of analysis. The declaration of materials which brewers are at present required to make in their Excise books will afford prima facie evidence as to whether the law is being complied with. The allowance of a percentage of other materials, the choice of which if left to the discretion of individual brewers, is designed to meet the reiterated contention that to enable certain classes of home-grown barley to be used an admixture of sugar or some other saccharine ingredient is essential.

Home Notes.

The Borough.

Holiday time being now so near, it is not surprising that our trade is feeling the effect of its approach. The volume of business has lessened during the past week, but in every transaction the recent firm tone has been supported. The value of any attractive samples steadily advances, and, owing to speculative buying of several parcels of the lower qualities, there is a perceptible hardening in this direction also. In a market which is at present so sensitive, the slightest falling off in demand exercises some influences, it is therefore evident that pressure to sell is inadvisable, as it would necessarily result in the lowering of bids. Holders will therefore best advance their interests by remaining quiescent, until business is resumed after the Easter recess. The trade in

Foreign Hops

is practically suspended. Imports are almost entirely limited to the shipments required for the completion of earlier contracts. Extremely little new business is passing, as both Continental and American hops can be sold in their respective local markets at prices much above the current value of English growths. Pacifics possessing any claim to quality are nominally quoted on this side at 85s., therefore, while our hops, of reasonably good colour and condition, can be bought quite 40s. lower, there is no inducement for our brewers to buy outside our produce, unless under very exceptional circumstances.

I am informed that meetings will be held during the next few days in various market towns in Herefordshire and Worcestershire, with the object of establishing a

Hop Growers' Association,

specially for these counties. I am very glad to know that my old friends in the Midlands are aroused to the necessity of combination for the protection of their interests. The reasons for their action are set forth in their programme, the first clause of which declares that their chief object is "to advance the sale and demand for hops grown locally," and it is proposed to accomplish this "by publishing and circulating among the brewers, the results of analyses and practical tests, showing that these hops are equal, if not superior, in brewing properties to those grown in any other district, by breaking down the unfair and improper prejudice, with regard to the keeping properties of these hops in comparison with Kents, and by inducing local growers to continue by every possible means to raise the standard of their hops." The first and last paragraphs seem to me to be somewhat inconsistent. I have not the slightest desire or intention to depreciate the excellence of Hereford and Worcester hops, when well grown and properly managed, as I have sufficient evidence that samples from these counties have not infrequently compared most favourably at the brewers' exhibitions and elsewhere, with some of the best specimens produced in the South. But if they are generally "equal, if not superior, to those grown in any other district," I fail to see the necessity of any inducement to "growers to raise their standard." On the other hand, if this latter exhortation be needful, I think it must be conceded that the claim of superexcellence is rather beyond the mark.

The prejudice as to the keeping properties of their hops has long been a grievance with Hereford and Worcester growers; they are well advised in making an effort to remove it, and I wish them success therein. Although many buyers still retain the opinion that yearling Worcesters are not so desirable as yearlings grown in the Southern districts, this objection is certainly not now so general as it was in former years. Improved methods of curing have already done much to raise the estimated value of Hereford and Worcester hops for keeping. I believe the entire banishment of old prejudices can and will be accomplished by the growers themselves, if they determine to concentrate their attention upon the quality of their growths, and give up the modern practice of sacrificing quality to quantity. Should the proposed association be formed, I trust its committee will recognise the necessity of

Limiting the Supply of Hops,

and follow the example of the National Association in insisting upon the adjustment of supply to demand. This is undoubtedly the crux of the whole matter. If we had not grown more hops than the annual consumption required, our growers would not now be groaning over losses, which have arisen only from this cause. While the Southern planters have been "grubbing," their brethren in the Midlands have been "lengthening their cords and strengthening their stakes." Had the reduction of acreage been proportionately equal in every English district, and if all the immature and discoloured hops of last season had been left to blow away, the remuneration of growers would have been quite satisfactory, and the dangers arising from cold storage, which threaten their future, would have been temporarily avoided. I think I may go further and express my conviction that had Midland growers taken due notice of the advice circulated by the Council of the U.A.E.H.G., there would be no need for any local or separate organisation for the defence of their industry. Let it be understood, however, that I write in no spirit of jealousy of, or opposition to, the movement which is being inaugurated. English growers should combine for their mutual protection, and I wish well to my friends who will act as chairmen of the several meetings, and trust they will be faithfully supported.

The New Beer Bill

is now drafted, and, subject to some final polishing up, is in the form in which it will be published and submitted to Parliament towards the end of next month. I was privileged to glance through a rough proof the other day, and am pleased to note that the Bill is not only more directly to the purpose, but less complicated than the proposal of last year. If it be accepted, it will practically accomplish all we desire, in securing that British beer shall be made only of barley-malt and hops, with such small proportion of sugar as experts have decided is actually necessary. The clause which provides that no substitutes for hops as preservatives shall be permitted, coupled with the returns of hops consumed, which all brewers are now compelled to keep account of, will bring us into a position of closer relationship with our ultimate buyers than we have yet occupied, and will materially assist in re-establishing our industry on a sound basis. Therefore I heartily wish success to Sir Cuthbert Quilter, Colonel Brookfield, and others who are engaged in the promotion of this truly patriotic measure.

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interest and benefit to the member of the society.*

Foreign Notes.

Nuremburg.

But very little, if any, alteration has taken place on this market during the past week. Demand is not very active, but values are well maintained. The scarcity of choice samples, and the general diminution of stocks of all descriptions, coupled with the small supplies coming forward, cause increased firmness to such an extent that holders are quite content to wait for the outlet they are looking for when the spring demand sets in.

Munich.

Similar conditions prevail here. Brewers are buying regularly, but not extensively. Prices are fully as high as heretofore, and further advances are expected by holders, as the necessary consequence of the small supplies available, either for present or future use.

Belgium.

Th markets, both in town and country, maintain the firmness which has marked the hop trade

for some time past. Considerable business would have been done in English hops, but dealers complain that they cannot buy them, because the qualities are generally too poor for the acceptance of their customers.

America.

The New York market continues to show advancing prices, although new business is only moderate. But brewers are desirous to get prompt delivery of all contracts, many of which must be executed at a loss to the contractors, who have been unable to cover their sales. Pacific Coast dealers are unusually active in bidding for the next crop, while growers are proportionately reticent in committing themselves to future engagements. The receipts of hops from September 1st to February 21st last were only 68,051 bales, against 126,694 in the same period of the previous season. Exports to Europe were 38,051 bales this season, compared with 55,650 bales in 1900 and 1901. Amongst recent imports were some fairly important lots brought back from London.

The American agriculturist makes the following statement with respect to the trade in hops between America and Australia.

The new tariff laws of Australia, which went into effect last October, will stop the export movement of hops from the Pacific coast, particularly Washington. The traiff has been raised to 12 cents per pound, which is practically prohibitive. Tasmania is the only province which raises hops, and these are of greatly inferior quality to Washington hops, which drove them largely out of the market, and compelled many farmers to give up raising them. Australian farmers have produced only about ten per cent. of the hops consumed in that country, and about 5,000 bales have been imported annually from the United States.

Proposed Tax on Margarine in America.

There is now a Bill before the American Senate which, if it passes in its present form, will have a revolutionary effect upon the sale of butter on the other side of the Atlantic, and will have an indirect effect here. The Bill proposes to put a tax of 5d. per lb. upon all coloured margarine sold in the States, and ¼d. per lb. on all uncoloured margarine. Such a tax as 5d. per lb. will annihilate the coloured margarine trade, and it looks as if the American consumer will have to eat butter instead of margarine, which must enhance the price of butter at home and restrict the export accordingly.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended March 15, 1902, together with the quantities imported in the corresponding week of the previous year:—

The Chicago packers are said to have decided not to send any more meat to Germany. The leading firms say that Germany makes so many petty regulations that they prefer to withdraw entirely rather than endure them.

GARDEN.

Now is the time to get on with the sowing and planting of a great variety of vegetables and other crops, and the persevering gardener will be at work almost from dawn till dark. And the days, fortunately, are rapidly lengthening out now, enabling one to put in a good long day's work. We are now, in fact, close upon the spring, or vernal equinox, when the sun rises and sets at six o'clock—or rather is supposed to do, though, as a matter of fact, it rises several minutes after 6 a.m., and sets considerably after 6 p.m., on the 21st.

At the time of writing, the conditions, from a horticultural point of view, are almost ideal. The weather is mild and fine, if not ver7y bright, and the soil is dry, and in almost perfect condition for working. There would even be plenty of the proverbial "March dust," except that there is scarcely any wind to raise it. Such a calm March, so far, I can scarcely remember.

Continue planting potatoes; the sets will never go in better than now. All the warm borders and other sheltered spots available ought to have been planted with early varieties before this, and now the more open quarters should be dealt with. An excellent maincrop variety of recent introduction is Evergood; this can be strongly recommended, and has evidently "come to stay." Always avoid the use of too much animal manure in the drills or furrows, especially on naturally strong or rich land. Do not omit a good sprinkling of superphosphate or bone-meal, however, scattering this just before planting the sets, preferably, and remember that burnt material of any kind, wood-ashes, etc., is invaluable, while on damp or heavy soils soot usually has a very beneficial effect, but on naturally light and dry ones salt is better.

Sow more peas of sorts, including main-crop kinds as well as earlies. If there are any mice about, dress the seed well with red lead, made into a thin paste with water, before sowing—this is far better than paraffin.

Peas got in a few weeks since will now be coming through, and should be lightly moulded up, and have the sticks put to them as soon as possible, as these alone afford a good deal of protection. Even the dwarf kinds should have a little short spray stuck in on each side the rows, both to protect the plants and keep the haulm and pods off the ground.

The weather is very favourable for the growth of cauliflowers, so finish setting out all the autumn-sown plants, and those raised under glass early in the year ought also to be ready to plant out by this time, or nearly so.

A good batch of winter greens, in variety, ought to be sown without delay. The first lot of Brussels sprouts, sown last month, should be up and fit to pick out now, if not done already, but another batch must be sown at once for the main crop. Sow also a small bed of Savoys, one of cabbage (for late summer and autumn use), two or three kinds of broccoli (preferably of mid-season and late varieties), and a bit of kale, if likely to be required early.

Grafting should be done, now that the trees are beginning to push into growth, the scions having been cut beforehand and preserved in moist soil and a cool and shady position.

Vines on walls in the open air must be pruned at once, as the sap is already beginning to move, and the buds will soon be swelling. Any pruning done after this point will probably be followed by bleeding, which exhausts the vines sadly.

Fairly forward vines under glass are now in bloom, and until the berries are well set the atmosphere should be kept reasonably dry. Maintain a genial warmth, with fairly free ventilation, and rap the cones smartly with the hand daily, about noon, and preferably when the sun shines.

Except in really cold localities, or very exposed positions, when the first or second week in April will be better, roses may now be safely pruned. Thin out all weak or worn-out wood, and shorten back the strong young growths rather severely in the case of the weak or "moderate" growers, and less closely in those of a free or vigorous character. Except where a few large blossoms only are desired, as for show from poses, severe pruning should, however, be avoided, as a rule.

Tea roses should not be pruned before the early part of next month (April), and as the end of the present month, or the first week in the next one, is the best time for planting roses of this exquisite section, the bed or beds should be prepared at once.

Plant plenty of Gladioli, in variety, also Hyacinths, Candicans, Figridi, and others. Divide and re-plant the perennial Phloxes, also Pyrethrums, early-flowering Chrysanthemums, and Michaelmas Daisies. Hardy perennials of any kind may also be planted now, and the sooner the better as a rule.

Monday (March 17th).—Cloudy weather prevailed generally over our Islands, and rain again fell at several places in the north and west. Rain was measured in the morning, as the result of the fall since the previous day, over the northern and western portions of the kingdom, but the amounts were mostly small. The winds were generally westerly or south-westerly, and they were chiefly light. The mid-day temperatures were again above 50 degrees in most parts of the country.

Tuesday (March 18th).—The weather was generally overcast or cloudy, and rain again fell at a few places in the west. Small amounts of rain were measured in the morning, as the result of the fall since Monday, in the extreme north and west. The winds over the whole of our Islands were westerly and south-westerly, and they had freshened somewhat in force, while a moderate gale was blowing in the north of Ireland. The day was warmer than the average, although much cooler than on the previous day. The weather was very cloudy in London, and the highest temperature was 52 degrees, which is about nine degrees cooler than Monday.

Wednesday (March 19th).—Fine weather prevailed in most parts of our Islands, but rain fell at a few places in the midland and southern portions of England. Rain was again measured in the morning, as the result of the fall in the preceding 24 hours, in the west as well as in the extreme north, but the amounts were generally small. An area of low barometer readings was still situated to the north of Scotland, and under its influence the winds were westerly or south-westerly. Shallow subsidiary disturbances were traversing the south of England, and were occasioning a good deal of cloud, with passing showers. Temperature had fallen somewhat, but the thermometer was still above the average over England.

Thursday (March 20th).—Westerly gales occurred in many places on our north and west coasts, and strong and rather boisterous winds were experienced in other parts of the British Islands. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, except in the south of England, but it was only in the north that the amounts were large. Temperature had fallen considerably in the north, but elsewhere the changes were irregular, and in the south and west readings were still above the average. Hail and rain shows occurred over a large part of the country during the day. Heavy rain fell in London during the morning, but the afternoon was fine, and the thermometer rose to fifty degrees.

Friday (March 21).—The weather was again generally unsettled over our Islands, but the conditions were somewhat less disturbed than on Thursday; rain and hail showers were, however, experienced in many parts of the country. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, over nearly the entire kingdom, and the fall was fairly heavy in the west. A cyclonic disturbance still had its centre situated to the north of Scotland, and the winds over the whole of our Islands were under its influence, blowing rather strongly from the south-westward. The temperature had generally decreased, and it was only in the south of England that the midday readings touched 50 degrees.

Saturday and Sunday (March 22nd and 23rd.—The weather continued very unsettled over our islands during these two days, and rain fell very generally in all parts of the country. The amount of rain measured was not large, except in parts of Ireland, and on Sunday especially there were bright intervals in most parts of the kingdom. Temperature continued rather low for the time of year, and on Saturday night the sheltered thermometer indicated a slight frost over a large part of the country, while on the grass, in the open, the frost was rather sharp inland. Rain fell in London during the greater part of Saturday, but the succeeding night was very fine, and the exposed thermometer registered seven degrees of frost. Slight showers were experienced again during Sunday in the metropolis, but the day was mostly fine, and the thermometer rose to fifty-three degrees.

Bedfordshire.

The spring of 1902 has been ushered in by seasonable weather. The trees are budding, and the pasture is wearing a green appearance, which is gladdening the heart of the farmer who has abundance of cattle and no straw or hay left. Is this why the hay trade has gone wrong, or, is it because of our friend the foreigner, who is never so happy as when he is surfeiting us and our cattle with luxuries? All products of the vegetable world are a drug in the market, because the Briton is outbid by the foreigner, the latter having less expenses than the former; but anything connected with the animal world is easy to sell, and that farmer is a lucky man who has plenty of cattle and horses (all his own), and no wheat stacks.

The lambing season is over, and I don't think the majority of farmers have any reasons to lose their pleasant looks because of ill-luck in the lambing fold.

The young wheat is looking well, but will soon waste on our land unless we can get the Cambridge roll on quickly; the land being too wet at present.

Many of the Bedfordshire farmers have got their spring corn in; but I have not, and shall not for another fortnight, as I don't believe in early sowing on land which loves charlock.

Agricultural Apathy.

Will your readers, sir, take the hints of "A Lobbyist," when he says: "This will mean the abandonment of the sluggish apathy which usually possesses the farmer where his own affairs are concerned."

I have often expressed the opinion that agriculture is dying because of this apathy. A week or two ago, at a meeting of our chamber, the question of our food supply in time of war was under consideration, and in order to meet the cost of ensuring a proper supply, a resolution was proposed that, "One shilling duty should be placed upon foreign corn landed on our shores." With such a tempting subject before the Bedfordshire farmers, at the Bedford Town Hall, one would have thought the market, the hotels, and the streets would be deserted by them, and that they would tramp into the Town Hall like a vast army "ready for the battle," necessitating an adjournment to the open air because of the crush. But no, sir, with the large majority of the Bedfordshire farmers it is "Let us eat and drink, for to-morrow we die." I hate to write the result of our great meeting, which was to back up the Government with mighty force, so that we might "fear no foe."

My hand trembles with indignation as I hold the pen to tell your readers all over the world that when this momentous resolution was put to the meeting there were only 16 farmers present, and five of them voted against it. How can we expect any Government to help us when we are so apathetic and even divided among ourselves?

Sir, I throw down by pen in disguest. I don't think I shall ever take it up again—for it is no use—and I know this will please some of your readers who hate plain speaking.—Thomas Street (March 21st).

Cumberland.

As I write the hills in view are white as milk. To-day rain, hail, and snow followed one another; but this evening's glass and sky indicate "March" weather. St. Patrick's Day was what it should be—Irishly mild, and signs on. Some of our near neighbours began seed sowing. More were to follow yesterday (20th), but down came the three wetters, and so oats must bide a wee. Lambs are in evidence, and, strangely too, black-faced little specimens are arriving two months before usual time. Irish cattle sell dearly at Carlisle sands. Query. Why cannot Ireland keep their cows at home, and make beef of them? Talking of Carlisle reminds me of the "Royal." Canny Cumbrians mean to make money at it, and they will. Already houses are being let at £50 and so, for the week, and the occupiers are arranging to vacate, and go on visit to country relations. I mentioned in last report that Cumberland and Westmoreland Chamber of Agriculture is worrying itself on the subject of protection. There will be a wind-up debate thereon next time (29th inst.), and your correspondent means to press the points referred to in your previous issue.—H. M. K. (March 20th).

Leicester.

Farming prospects I never knew looking more unprofitable. I cannot see a bright side in anything that a farmer can put in the market. Corn nearly all gone through the machine, sold, and cash disposed of. And I have no doubt a great many will have to buy from the factors seed at a dear rate. We must have a late seed time. I have not seen a drill going 20th of March; some seasons nearly completed. Turnips nearly all consumed. I knew several lots of hogs bought in the autumn, at about 26s. per head, going out again at about 10s. per head profit. This is a very small profit to stand against losses, and labour. I always consider a turnip crop a very expensive one, getting and disposing of. Haystacks now very small. If this cold weather continues, it will advance in price.—W. C. (March 19th).

Staffordshire (Mid).

Very fortunately for the farmers of this district, whose business is principally the production of milk and the breeding and feeding of live stock, the weather is unusually favourable for an early growth of grass. The necessary expenses of wintering cattle have for some months past been much above the average because of the scanty supplies of hay, straw, and roots. Almost universally the farming year, which will end on March 25th next, will come out badly in the balance-sheet; but it will be a distinct relief to the situation if the succeeding year begins under favourable conditions. In case the coming season should turn out productive of keep for live stock, it is likely that the demand for cattle and sheep will become increasingly active as we further advance in the spring. The condition of all kinds of land is favourable for production, both with respect to its mechanical tilth and with respect to its manurial state. For several years in succession there has been no waste from excessive rainfall, and one may fairly anticipate that if we are favoured with a suitable amount of warmth and moisture the fertility both of grass and arable land will be satisfactory. Autumn-sown wheat is not forward, but its plant is generally healthy and almost all land is in good tilth which is intended for cereals and green crops.—F. C. S. (March 19th).

Salop.

After a delightful spring, very favourable season for ploughing and sowing, and the sprouting of the sown corn everywhere, last Friday we had a continuous rain for many hours; and although the drill has to wait a while, the drying winds of March have great force in drying the land. Barometers have fallen, and showers have followed them, but it is early yet, and we hope to get a good breadth of spring corn sown in proper time. The pastures are in a green growing state, but temperature too low for rapid growth. Ewes and lambs, with all stock, doing well. Good beef and calves in demand in the market. Horses called for South Africa still.—J. G.

Somerset (West).

The month to date has been all that could be desired for both the sowing and establishment of farm crops. The drill has been in full work, and barley sowing is nearly completed. The early sown is looking well, and the country generally has a remarkably fresh green appearance for the time of year. Some complaints are heard of wheat loosing plant, but this is not general, and autumn-sown crops, as a rule, look well. With a favourable spring, roots, hay, and straw may be sufficient, but there will be little surplus in either case. Live stock generally are healthy, and have done well; but prices do not, in what we have to sell, correspond to the necessities of the times, and have, as a rule, been disappointing.—S. K. (March 20th).

Wilts (North).

The winter, which now seems to have come to an end, has, on the whole, not been an unfavourable one for agricultural operations, although the severe weather in February was a considerable hindrance to the early coming of spring corn. Stock have done well, and the prices before now have been much less satisfactory, especially in those districts where the crops of hay have been so scanty. The increased price of purchased artificial food is also a serious drawback. The contracts for milk lately made are said to have been at a higher price, and is much wanted, if one may judge from the large number of advertisements in the local paers. The quantity of rain has been for a series of years less than the normal quantity, and it seems almost marvellous that the springs should have held out so well. It would not be surprising if, before long, there was a cycle of wet seasons, which have been, in living memory, quite a calamity.—W. F. P. (March 20th).

Yorkshire (East.)

The much-hoped for possibility of a forward spring seems likely to be disappointed, cold showers of rain and sleet keep the land wet and sodden, and little or no progress has yet been made with spring corn sowing. No doubt if the soil is allowed to get well dried before the harrows are put on to it a better tilth will be had than has been the case for several years past. The well-remembered dry summer of last year, and the deep frosts of February being responsible for this likely advantage. It is not, therefore, unreasonable to hope that corn sown in a more mellow soil and even seed bed after this will overtake and do better than that put in before. Sharp frosts at night are causing the flockmaster to be uneasy and anxious for the future. Clovers for grazing and other pastures are being put back by these frosts, and, as roots are all about gone, he has to fall back upon manufactured feeding stuffs, or throw his mutton into the already flat and congested markets. The sheep markets have been most discouraging for months past. Beef and pork have been the best. Few farmers, unfortunately, have been able to fatten many cattle this winter, the almost universal failure of roots and the shortage in straw being the principal reasons.

Lambing reports in this district are fairly good; the crop of lambs strong and healthy, up to the average in quality, and light mortality among the ewes.

Many farms are changing tenants, and the spring sales of the out-goers leave much to be desired, store cattle make little money, and work horses were never so chaep. This is considered about the beginning of the farming year in this neighbourhood, and I regret to say the prospects are not at all rosy, and the effects of the last disastrous year will not readily be forgotten.—T. D. R. (March 19th).

Foreign Prospects.

FRANCE.—The condition of the wheat crop is still most satisfactory, and farmers have made much progress in spring sowing.

BELGIUM.—Our reports say nothing about the grain crops, so it may be assumed that they are doing well.

HOLLAND.—No complaints are heard of the crop outlook. Supplies in Groningen are fairly liberal.

GERMANY.—Mild, moist weather has succeeded sharp frosts, to the great benefit of the wheat and rye crops, the condition of which is considered excellent. This hopeful outlook and freedom from crop-scares elsewhere have led to a weaker feeling and some shrinkage in value.

RUSSIA.—Weather in the South has become unsettled; heavy snowstorms and many degrees of frost were experienced in Azoff and parts of the Euxine. The rainfall was above the normal in Central, Southern, and Eastern Governments, but under the average in the North and South-west.

ROUMANIA.—The bright hopes of farmers as to crop prospects have been rudely dashed by the sudden experience of sharp frost and continued low temperature, which is likely to cause injury, especially to the rapeseed plants.

HUNGARY.—Cold and dry weather recently prevalent is not regarded as inimical to crop prospects.

ITALY.—All cereal crops are progressing favourably, and there is hope of an abundant yield of wheat and oats.

NORTH AFRICA.—Recent rains have greatly improved the prospects of the barley crop in Algeria, particularly in the Province of Oran.

ASIA MINOR.—Postal advices speak very well of crops around Smyrna, and accounts from the interior in general are satisfactory.

INDIA.—The latest telegram from the Viceroy states good rain has fallen in Assam and Bengal; none elsewhere.

UNITED STATES.—The condition of the wheat crop is still fairly good, but it is no better than heretofore, and possibly the position is moderately less favourable. The ground is good for spring ploughing and the seeding of oats. In California the general outlook for the wheat crop is favourable. No further rain seems to have fallen since last week, as the total to date remains at 16½ inches, against 18¾ inches same time last season.—*Dornbusch.*

Difficulties of the Milk Standard.—Three milk sellers were prosecuted by the Ramsgate Corporation on the 14th inst. for selling milk below the standard set down by the Board of Agriculture, and in contravention of the Sale of Food and Drugs Act. It was argued for the defence that as the milk was supplied to the purchaser in exactly the same state as the cow gave it no offence had been committed. The justices, while not refusing to accept the statement that the cows produced milk below the standard, fined each defendant £5 and costs. The Bench invited a case for an appeal to be stated.

CORN MARKETS.

LONDON.

Mark Lane, Monday. — Malt, a limited demand. Barley unchanged. Wheat firm. Oats steady. Maize slow at about late rates. Flour about the same.—NIXON, GOWER AND CO.

Mark Lane, Wednesday.—The attendance was small, and the market ruled dull for wheat and flour, and in absence of business values were nominally unchanged. Maize quiet, unchanged. Barley steady, but slow. Oats, slow trade at about late rates. Beans and peas quiet.

Mark Lane, Friday.—To-day's market finished the week in favour of consumers, and there was but little transacted in the general departments, while buyers were assembled in small numbers. With regard to English wheat, town millers continue poor purchasers, but remunerative prices are still being secured, as the supply here remains scanty. Whites range at 29s to 30s, and reds at 28s to 30s per qr delivered up; free on rail in country, well-conditioned reds, 28s to 29s 6d per qr. The quantity available lessened, American reds tended against sellers. No. 1 Northern Duluth certificate quoted at 30s 9d ex ship, 31s 3d landed; No. 1 hard Manitoba, 32s 3d ex ship; hard Kansas, 30s 9d ex granary; New Zealand Tuscan, 29s to 29s 6d ex store, 496lb. Flour remained without improvement all day long. American brands, in fact, showing occasional weakness. Of fancy patents, Mayblossom quoted at 23s; and of first, Pillsbury, Ceresota, etc., 22s 6d. Bakers' grades generally unaltered. Iron Duke, 18s ex store. English remains in sufficient supply for requirements. Town households, 23s; whites, 26s per sack, delivered to the baker. Top price town made, 28s net. Whole meal, 172s per ton. Grinding barley unaltered. Odessa, 19s, ex quay, with ex ship to come against sellers. Danubian, 18s 6d ex ship to arrive. The seed inquiry for English malting continue s satisfactory. Foreign types steady. Oats fairly maintained. F.a.q. Libau common, 17s 3d, and ordinary, 18s ex quay, 39lb, 40lb. Libau, etc., bold, 21s. English very firm. Black winters, 24s, 42lb. Maize maintained, and mixed American continues out of the market. Odessa, 21s ex ship, 21s 6d ex quay. Danubian, 22s 6d in latter position. Plate none. There is nothing fresh to report respecting beans and peas.

COUNTRY.

Ashford, Tuesday.—Wheat a little firmer, but no very great trade was done. Fair trade in other corn and a little inquiry for seed. Flour scaling 23s, seconds, 24s, household 27s, whites 28s per sack.

Banbury, Thursday.—Wheat, 27s to 28s per qr.; barley, 27s to 30s per qr.; beans, 34s to 35s per qr.; oats (black), 19s to 21s per qr.; peas, 32s per qr.

Birmingham, Thursday.—The market was moderately attended, and a little more inquiry was reported for foreign wheats at late rates. English wheat unchanged at 10s 9d to 11s per bag. Maize unaltered to 3d lower; round, 21s 6d to 22s (Sharpness), and 22s to 22s 6d (Liverpool); Plate, 22s to 22s 9d (Sharpness), and 22s 3d (Liverpool); grinding barley, 18s 3d to 18s 9d (Sharpness), and 18s to 19s (Liverpool). English black oats, 21s 6d to 22s 3d; whites, 22s to 23s per qr. (Birmingham); new English beans, 13s 9d to 14s; old, 15s to 16s per bag.

Bristol, Thursday.—There has been only a moderate business passing since our last. There was a shorter supply of English wheat offering on our market to-day, which made fully late rates. Foreign firm on spot, though unaltered in price. Maize, grinding barley, and oats without change in values. Flour inactive, prices remaining unaltered.—GRACE BROTHERS.

Bury, Wednesday.—Wheat: Supply much shorter, with holders asking an advance, but without much success; trade very firm at fully last week's prices. Reds or Whites, 27s 6d to 28s 6d per 504lbs. Barley: Scarcely any business passing; prices nominal. Feeding corns all steady and without change. Linseed cakes firm at £8 15s to £9 per ton. Cotton cakes steady at £5 5s per ton. Bran quiet at £5 10s per ton.

Cambridge.—During the week the weather has been very favourable for Spring sowing, consequently farmers have been very busy and bring very little to market. At this market, to-day, there was a very short supply of all grain. Wheat, though slow of sale, was the turn dearer through scarcity. Red, 27s to 28s, and white up to 29s per 504lb. Barley trade is nearly over. Beans and oats were quite as dear.

Canterbury, Saturday.—Wheat a trifle firmer; other articles unchanged. Ruling prices: White wheat, 28s to 30s 6d; red, 27s to 29s; malting barley, 28s to 33s; grinding, 22s to 24s; white oats, 20s to 24s; black, 19s to 23s per quarter.

Carlisle, Saturday.—Larger show of oats in market to-day; good sale; prices much the same as last week. White oats, 22s 6d to 23s 6d per 336lb; black oats, 22s to 23s per 336lb; barley, 26s per 448lb.—THOMAS ROBINSON.

Chester, Saturday.—Wheat in small supply at late rates. Beans and barley steady. Oats were a slow trade, and inclined to be easier. Quotations: Wheat (white and red), 4s 5d to 4s 6d per 75lb. Malting barley, 4s to 4s 1d per 60lb; grinding barley, 3s 4d to 3s 6d per 64lb. Beans, 5s 6d to 5s 8d per 80lb. Oats, new, 2s 10d to 3s; old, 3s 4d to 3s 6d per 46lb. Indian corn, 12s 6d to 13s 3d. per 240lb.

Chichester, Wednesday.—There was an average attendance, but trade remained quiet, without change in quotation.

Colchester, Saturday.—Very little wheat offering; steady trade at fully last week's prices. Scarcely anything offering in spring corn.—FRANCIS AND CO.

Devizes, Thursday.—There was very little alteration in the price of any description of corn to-day. Wheat was a dull trade at late rates, but is firmly held. Oats continue to sell freely. Quotations:—Best wheat, 13s 6d to 14s 6d; secondary, 12s 6d to 13s; best malting barley, 29s to 34s; secondary, 25s to 28s; grinding barley, 20s to 24s; oats, 21s to 24s; beans, 16s to 20s; fine flour, 22s to 24s; extra fine, 23s to 30s; best bread, 9d.

Glasgow, Wednesday.—There was the usual attendance at our market to-day. Wheat and flour are steady, but still a quiet trade. Indian corn steady, but slow. Round maize easier, owing to large arrivals. Grinding beans and Canadian pease scarce on spot, and the turn against buyers. Home and foreign oats steady, but quiet. Barley dull. Oatmeal steady, but slow. Bran and thirds unchanged; and quiet.—GIBSON AND CLARK.

Leeds, Tuesday.—We have a lifeless market here for wheat to-day, notwithstanding light shipment, and although holders show no inclination to force sales, 3d less money would be accepted, but millers for the moment cannot be tempted. Malting barley in small request at late rates. Maize, beans, and oats steady.

Leicester.—Fair attendance of buyers and dealers, with moderate supplies of home-grown wheats. Trade sluggish, at 27s to 31s per 36 stones. Barley a slow trade. Fine oats very firm.

Leith, Friday.—A fair amount of business has been transacted during the week at unchanged prices. Wheat, Scotch, small supply, at last week's prices. Oats, Scotch, fair trade; good demand for seed; foreign oats, 19s to 21s 6d. Barley, Scotch, quiet sale; foreign feeding, 21s 6d. Hard white pease, 38s; beans, 33s 6d to 34s; maize, 23s to 23s 6d. Parcels with very slight heat, 21s to 22s 6d; damaged, 19s to 20s; millet seed, 19s. Mill offals:—Broad bran, 120s to 125s; sharps, 95s; to 97s 6d; parings, 105s to 107s 6d; cummings, 82s 6d to 87s 6d; dried grains, brewers, 97s 6d; distillers, 102s 6d to 105s; oat husks, 45s; meal seeds, 67s 6d, all sacks included.—WILLIAM MACLAY.

Lewes, Tuesday.—New white wheat, 28s to 30s. New brown ditto, 27s to 29s. Malting barley, 32s to 36s. Grinding ditto, 20s to 24s. Oats, 21s to 25s. Beans, 36s to 39s. Peas, 32s to 36s per qr.

Lincoln, Friday.—A moderate attendance at the Corn Exchange, and a small show of grain. Trade for wheat was slow at the prices of last week. Not much demand for oats, for which recent rates were maintained. Beans, peas, and maize unaltered.

Liverpool, Friday.—The market has had a fair attendance, and wheat is in quiet demand, with prices unchanged to ½d lower than last Tuesday. Flour is badly neglected, whilst no change is made in prices; the tendency is distinctly in favour of buyers for both English and foreign. Maize—Mixed is firmly held at 3d advance over Tuesday, with a quiet trade. European experiences a slight improvement in demand at unchanged values. Plate is steady at quotations. Barley quiet for malting, prices unchanged. Feeding is in better demand, prices favouring sellers. Beans are quiet, and tend slightly in buyers' favour. Peas are steadily held, with a fair inquiry at late rates. Oats are firm, with a moderate inquiry at late rates for English. Foreign sorts are dull, but steady. Oatmeal has had a very small inquiry at last Tuesday's prices. Oilcake steadily held with a fair inquiry at about last market day's quotations.—SEGAR AND TUNNICLIFFE.

Manchester, Thursday.—Poor attendance. A small trade passed in wheat at ½d to 1d decline on the week. English unchanged to 3d lower. A poor demand for feeding stuffs. Indian corn, owing to scarcity, commands last week's prices. Oats, beans, and peas slow at late rates. Flour slow, with occasional drop of 6d per sack on English; Hungarian unchanged.

Newcastle-on-Tyne, Saturday.—At our to-day's market wheat ruled in buyers' favour; slow demand. Maize quiet, unchanged. Scotch oats firm, at late rates; foreign, slow sale, without any alteration in values. Beans 6d. dearer. Peas scarce and prices favouring sellers. No change in barleys.—JOSEPH POLLARD AND CO.

Newport, Wednesday.—There was only a poor attendance, and the little business that was done was at prices unchanged from last week.

Norwich, Saturday.—There is no appreciable alteration in the wheat trade, which remains in small supply, with a firm trade. Showery weather prevails, with cold winds. Wheat: Red, 28s to 28s 6d per qr; weight, 63lb per bushel, imperial. Corn inspector's return for the week ending March, 17th, 1902.—J. ARTHUR MILLS.

Northampton, Saturday.—Good attendance; supply and demand similar to the experience of the last few weeks; 26s to 28s about the price for good wheat. Other farm produce as heretofore. Flour a dull business, and difficult to sell, at a slight reduction from last week. White wheat, 28s to 29s; red, 27s to 28s; barley 26s to 32s.; grinding ditto, 22s to 25s; oats, 18s to 23s; old fine, 25s; beans, 32s to 40s; flour, 20s to 22s; old fine, 24s.

Nottingham, Saturday.—Wheat in small supply; the trade ruled slow at last week's rates. Barley: Malting, nil; grinding, moderate demand, at unaltered rates. Oats and beans: But few offering, and values well maintained.—ROBERT HUBBLE.

Peterborough, Saturday.—The supply of wheat has again been small, and from scarcity it made prices that were unobtainable last week. Barley—Supply and demand both about over. Very few oats offering; trade firm.—THOMAS HILL AND SON.

Plymouth, Thursday.—Average attendance at market to-day. Wheat steady. Maize 3d lower. Barley upward tendency. Oats quiet.

Reading, Saturday.—Despite an excellent attendance of corn-dealers and millers on the Exchange to-day, there was but very little business doing. Wheat came to hand in fair supply, but sold slowly, and the rates of recent markets were generally maintained. Barley did not undergo any variation in price, and oats were a slow trade at unaltered quotations.

Ripon, Thursday.—Business is being done at last week's prices. A few inquiries for barley for seed. An average attendance. Wheat, English, 28s 6d to 29s 6d; ditto, foreign, 29s to 33s; barley, grinding, 22s 6d to 23s 6d; ditto, malting, 26s to 31s; oats (new), 22s to 24s; round maize, 24s to 26s per qr; beans, 1s per stone.

Sheffield, Tuesday.—There was a moderate attendance. The inquiry for wheat was small, but the prices of last week remained firm. Round maize was in fair demand at late rates, and there was no change in beans, oats, or barley. Quotations: Wheat, white, 29s 6d to 30s 6d; ditto, red, 29s 6d to 30s 6d per 540lb.; barley, grinding, 22s to 23s; ditto, malting, 28s to 32s per 448lb.; oats, new, white, 21s 6d to 22s 6d; ditto, new black, 20s to 21s per 336lb.; peas, grinding, 32s to 34s; ditto, blue, 53s to 80s; beans, Egyptian, 35s 6d to 36s per 504lb.; ditto, English new, 37s to 37s 6d per 532lb.; Indian corn, small, 23s to 23s 6d; ditto, American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—At the Corn Exchange all grain was firm at late prices. Wheat fully 28s; oats, 21s to 23s per qr.

Stamford, Friday.—There was a very small supply of wheat, the prices remaining about the same as last week. Very little barley shown, and what there was was principally for seed. Beans unchanged. Maize dear. Oats firm.

Stockton, Wednesday.—There were practically no samples showing of farmers' wheat. The foreign wheat trade keeps steady, and very little business was passing at about last week's prices. Oats and maize unchanged. No malting barley showing.

Sunderland, Saturday.—Little doing at this day's market. Wheat rather easier. Spring corn quiet. Arrivals coastwise:—Wheat, 640qrs; barley, 992qrs; oats, 418qrs; foreign nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—We have a quiet but fairly steady market for wheat. Sellers are not disposed to make any further concessions, seeing that replacements are impossible. Foreign wheat is barely 3d lower on the week, English being unchanged. Little passing in malting barley. Feeding stuffs slow and unaltered.—DUNNS AND CO.

Wakefield, Friday.—English wheat, owing to scarcity, is quoted firm at late rates on our market to-day, and Foreign is rather easier, but the business passing is small, and we have only a poor attendance. Malting barley still offering, with but few buyers. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Wisbech, Saturday.—Small attendance at market. Wheat firmly held, and needy buyers have to pay some advance. Red, 28s. to 29s. Oats very firm, 22s to 24s. Barley, 26s to 30s. Beans, 34s to 38s.—JAS. FLETCHER.

Wolverhampton, Wednesday.—There was a moderate attendance at this market, with no alteration in the prices. Quotations: Wheat, new, 12s to 13s per 216lbs.; oats, old, 15s 6d to 16s per 196lb.; new, 12s to 13s per 196lb.; beans, old, 15s 6d to 16s 6d per 196lb.; new, 14s 3d to 14s 9d per 196lb.; barley, 31s to 32s per 448lb.; maize, new, 25s to 26s per 480lb.; old, 27s 6d per 480lb.

Worcester, Saturday.—There is no change to note on our market this week. The trade continues quiet, and the only lots asked for are the better qualities; but good, clean sorts are scarce, and the prices continue firm.—PIERCY AND CO.

Worcester, Saturday.—Trade quiet. Very little English wheat on offer, and values remain at previous quotations Grinding barley steady on spot, but feeding corn generally was easier to buy.

Worksop, Wednesday.—Small attendance, and very little grain on offer. White wheat, 28s to 29s; red wheat, 27s to 28s; best seed barley, 28s to 32s; secondary, 26s to 28s; grinding barley, 24s to 26s; white oats, 23s to 25s; black oats, 22s to 24s; maize, 24s to 26s per qr.

York, Saturday.—Wheat sells quietly at last week's prices. Barley scarce; fine 29s to 31s; good, 27s to 29s per qr of 32 stones. Oats scarce and dear. White Garton 22s to 23s; black, 21s to 22s; common sorts, 20s to 21s per qr of 24 stones. Rye, 8d to 8½d. Beans, 11d per stone.

FOREIGN.

Hamburg, Saturday.—Weather mild and rainy. Trade quiet, and last week's prices barely supported. Anticipations of larger supplies during the next few months check speculative enterprises. The imports during the week amounted to 11,970 tons wheat, 5,486 tons rye, 3,126 tons barley, 4,719 tons maize. There is some demand for American red winter wheat, but offers of such are wanting. Hard winter No. 2 is held at 28s 9d, Northern spring No. 2 at 27s 9d, Manitoba No. 2 at 27s 6d per 480lb, Walla Walla, May-June delivery, 29s 9d per 500lb. Rye firmer; 9 20/25 Nicolajef, prompt, is held at 23s 9d; other ports, 23s 3d per 480lb c.i.f. Malting barley neglected; holders are ready to make concessions particularly for middling qualities, of which there is a good stock left. We quote good Saale, 29s to 30s 6d; fine Saale, 33s to 34s 6d; Bohemian, 30s 6d to 32s; Mecklenburg and Prussian, 26s 6d to 28s 6d per 448lb f.o.b. Russian and Danubian feeding barley meets a slow sale at 18s to 18s 6d per 400lb. There is but little demand for maize. Danubian and Odessa is offering at 20s 9d to 21s; Turkish at 21s 9d; River Plate, April-May, at 20s 9d to 21s per 480lb.—JOHN TATLOCK.

Paris, Wednesday.—The attendance at the weekly market was more important than of late, the forward state of the sowings having permitted farmers to be more numerously represented. Native wheat.—In spite of the variations of the regulating market, the weekly reunions continue to follow one another without any modification worthy of remark. Sellers attracted by the successive advances of the last few days in the "Marche de Paris," were evidently somewhat disposed to quit, but appeared loth to lower their pretensions, while on the contrary buyers on their part were disinclined to make any large provisions, and the extreme reserve of millers prevented an actual advance in prices. Consequently values may be quoted about the same as last week, but still with a rather supported tendency. Choice Red, 37s 5d to 37s 7d; Ordinary, 36s 6d to 36s 11d, and White, 37s 5d to 38s 3d per 480lbs. The flour market opened stronger, and closed with an improvement of 10c. to 15c. at the following prices:—March, 26 10½d to 27s 1½d; April, 27s 5d; May-June, 27s 11d; May-August, 27s 11d to 28s 2d; July-August, 28s 2d to 28s 5d; and September-December, 27s 2d to 27s 5d per 280lbs. There is still but little trade doing in consumption marks flour among dealers and bakers, demand being limited to their current requirements. Trade in rye is still very quiet, at barely supported rates. Offers of the last few days, although not numerous, appear to be more regular, farmers preferring to sell the remnant they hold than dispose of their wheat at lower prices. Good descriptions are still being sold at 25s 8d per 480lbs. The growing crop looks very well. Oats continue quiet but very firm. The delivery market sees the stock on the spot increasing more and more, but takes no heed thereof, on account of the large sales in blank for March and April. Holders of stock reckon upon storing 20,000 qrs. to 30,000 qrs. this month, but if these are absorbed, as it is said they will be, a reaction is naturally to be expected. Here the tendency was quiet, but prices supported. Quotations are as follows:—Grey Beauce, 25s 3d; Red, 24s 8d; Black, from the Central provinces, 25s 6d; small Picardy, 24s 8d. In foreign oats there is still some business doing. American is worth 24s 1d to 24s 4d; White Libau, 23s 6d to 23s 9d; Black, 24s 1d to 24s 4d; and Swedish, 25s 3d to 25s 6d per 320lb. The export barley trade appears to have been a little brisker, and a rather firm tendency has therefore ensued. Some choice lots are selling in Champagne at 25s 4d to 26s 1d, but ordinary stuff is still held at 24s 3d to 24s 8d. Here prices were quoted as follows:—Malting, 17f.25 to 17f.75 (25s to 25s 9d); grinding, 17f. (24s 8d); and feeding, 15f. to 15f50 per 100 kilos (21s 9d to 22s 6d per 400lbs.). There is still a rather good demand for buckwheat, and prices remain firmly supported at 28s per 480lbs.—*Dornbusch.*

SEEDS

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze, Pond, Borough, London, S.E., report an active demand for those kinds of farm seeds required for spring sowing. As regards cloverseeds, values generally show no change of importance, but stocks all round, with the exception of red cloverseed which is abundant, are being rapidly reduced to moderate limits. Alsyke, and more particularly white, have of late somewhat favoured buyers, but trefoil keep strong. Italian and perennial ryegrasses continue a disappointing market. Some suplies of the latter, which had been kept back, are now being brought forward. Spring tares are in meagre request. An unusually large trade has been transacted this season in Lucerne, and the available supply of same is now approaching exhaustion. Sanfoin is scarce and firm; Timothy steady; Cockfoot dearer. Mustard and rapeseed show no alteration. Canary seed, with some arrivals, is dull. Hempseed also tends downwards; but linseed keeps firm. Blue peas and haricot beans move off slowly on former terms. The Board of Trade returns give the imports into the United Kingdom of clover and grass seeds for the first two months of this year as 81,505 cwts., value £187,737, as against 82,248 cwts value £181,727 for the corresponding period of 1901.

WOOL

Canterbury, Saturday.—Trade for Kent wool continues very disappointing. Although prices for competing wools have advanced 20 per cent. at the London sales, 6d per lb is the extreme top price for Kent fleeces, and the more general figure is 5½d per lb.

MANURES.

Liverpool, Friday.—Nitrate of soda is without change in value and in fair seasonable request, as also sulphate of ammonia. East India bone meal in more request, and slightly dearer. A good demand is experienced for kain t and superphosphate of lime at unchanged values. The trade in feeding stuffs is inactive, and values tend rather in buyers' favour. Rice meal dull, and reduced rates accepted for landing parcels. Nitrate of soda, best quality, i.e., guaranteed 95 per cent, pure, in bags, £10 10s per ton; East India bone meal, fair to prime, in bags, £4 2s 6d to £4 7s 6d per ton; kainit, prime, 23 per cent., in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, £5 15s per ton; linseed cake, American thin oblong, prime, in bags, £7 7s 6d to £7 10s per ton; do English, prime, in bulk, £8 12s 6d to £8 17s 6d per ton; cottonseed cake, N.A., decorticated, in bags, £7 to £7 5s; do English do, soft, in bags, £7 5s to £7 10s per ton; do English, undecorticated, do, in bulk, £4 10s to £4 15s per ton; do Egyptian, do, in bags, nil; do (crushed) 20 to 25 per cent oil, do, in bags, £7 3s 9d per ton; maize germ meal, in bags, £5 7s 6d to £6 per ton; rice meal, Rangoon, as imported, in bags, £5 to £5 5s per ton; Indian meal, coarse to find grinding, prime, in bulk, 12s 9d per 240lb; linseed, fine bold feeding, in bags, £3 1s to £3 3s per quarter, 416lb; N. A. Cloverseed, new red, fair to good, nil; D.N.S. Brand, superphosphate of lime, guaranteed, 25 to 27 sol, in bags, £2 5s to £2 7s per ton (at depot); do, 30 to 31 sol. in bags, £2 10s to £2 12s per ton; do, 35 to 36 sol., in bags, £3 to £3 2s per ton; basic slag, prime quality, guaranteed 30 to 35 per cent phos., in bags, nominal; do, 36 to 40 per cent phos, in bags nominal; finest quality guaranteed 38 to 45 per cent. phos, in bags, nominal.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The position of the New Zealand butter market at the present moment is incomprehensible. Notwithstanding the short supply of Colonial butter, and the rise of 2s to 3s per cwt. in Danish, New Zealand has fallen about 2s per cwt. on the week. It is no doubt true that some of the fall in New Zealand is due to a few timid holders, who are suffering from panicky nerves. "Choicest" New Zealand brings 108s, with an occasional 110s, while "Finest" realises 104s to 106s. What is peculiar about the market is this, "Choicest" brands are intrinsically worth 3d per lb. more than "milled," while the market price shows less than a penny difference. Owing to retailers insisting on a shilling retail price, the consumer is now paying for shilling butter fully 2d per lb. more than its intrinsic value, and this poor quality is restricting the consumption, and the retailer is suffering in consequence. The Copenhagen official quotation remains unchanged at 96 kroner, although the market is firmer in the Danish capital. The high prices prevailing in America at present are preventing any butter being exported to this country, except very low grade butter for the shilling retail trade here. Cheese: The demand for Canadian cheese continues good, and prices have advanced another shilling this week, "Choicest" goods being 55s, with an occasional 56s. New Zealand "Choicest" brands are making 53s to 54s, with an expected rise of another shilling.—W. Weddel and Co.

CHEESE.

Chester, Wednesday.—There were about 15 tons of cheese on offer. With an excellent attendance of dealers from the Midlands and North of England, trade was brisk, and the stock was cleared out within an hour. Best Cheshire made from 70s to 75s, while medium was down to 65s per cwt. Compared with the corresponding fair of last year, prices show an improvement.

Dorchester, Wednesday.—Good makes of cheese were in request at from 46s to 60s per cwt; secondary grades, 22s to 42s.

Glasgow, Wednesday.—Home cheese are nearly exhausted. The demand is quiet. The scarcity causes holders to remain firm in their ideas. Cheddars and Dunlops range from 56s to 62s per cwt. There is a moderate inquiry for New Zealand and Canadian cheese; late prices rule.

Leeds, Friday.—Finest Cheshire, 58s to 60s and 85s; do. lump, 60s to 65s; American, finest, 51s to 56s, and medium, 40s to 44s per 112lb.

Newport, Wednesday.—A good supply of cheese was pitched, and trade was brisk. Prices: Caerphillies, 60s to 66s; fancy dairies, 68s to 70s; truckles, 60s to 65s; Cheddars, 63s to 68s; Derbys, 66s to 68s.

BUTTER.

Tuesday.—Bedale: 1s 7d to 1s 9 per roll of 24oz. Settle: 1s 1½d to 1s 2½d per lb. Spalding: 1s per lb. Leeds: 1s 2d to 1s 3d per lb.

Wednesday.—Barnsley: 1s 3d to 1s 4d per lb. Colne: 1s 2½d per lb. Goole: 1s 1d per lb. Keighley: Wholesale, 1s 2d; retail, 1s 3d per lb. Kirbymoorside: 1s 2d per lb. Knaresborough: Wholesale, 1s 9d; retail, 1s 11d to 2s per roll of 24 oz. Louth: 1s per lb. Masham: 1s 7d to 1s 8d per 24oz. roll. Northallerton: 1s 6d to 1s 8d per roll of 24oz. Stockton: 1s 2d to 1s 3d per lb. Worksop: 1s 2d to 1s 3d per lb. Hereford: 1s 4d to 1s 5d per lb. Market Drayton: 1s to 1s 1d per lb. Uttoxeter: 1s 2d to 1s 3d per lb. Ipswich: 1s 2d to 1s 3d per lb. Dorchester: 10d to 1s 1d per lb.

Thursday.—Brigg: 1s 1d to 1s 2d per lb. Driffield: 1s per lb. Ripon: 1s 10d to 2s per roll of 24oz. Scarborough: 1s 3d to 1s 4d per lb. Wetherby: 1s 2d to 1s 4d per lb. Birmingham: 1s 3d to 1s 5d per lb. Kidderminster: 1s 2d per lb. Wellington: 1s 2d to 1s 3d per lb.

Friday.—Crewe: 1s 2d per lb. Sandbach: 1s 2d per lb. Stockport: 1s 2d per lb. Macclesfield: 1s 2d per lb. Easingwold: 1s to 1s 2d per lb. Helmsley: 1s 1d per lb. Leyburn: 1s 6d to 1s 7d per 24oz. roll. Lincoln: 1s 1d to 1s 2d per lb. Otley: 1s 8d to 1s 10d per 24oz. roll. Leeds: 1s 2d to 1s 3d per lb.

Saturday.—Appleby: 1s to 1s 2d per lb. Berwick: 9d to 10d per lb. Carlisle: 1s 2d to 1s 3d per lb. Doncaster: 1s 3d to 1s 4d per lb. Grantham: 1s 2d to 1s 3d per lb. Howden: 1s per lb. Lancaster: 1s 2d to 1s 3d per lb. Malton: 1s 2d to 1s 3d per lb. Pontefract: 1s 2d to 1s 3d per lb. Retford: 1s 2d to 1s 3d per lb. Richmond: 1s 4d to 1s 5d per lb. Stokesley: 1s 2d to 1s 3d per lb. Whitby: 1s 3d per lb. York: 1s 3d per lb.

EGGS.

Tuesday.—Bedale: 16 for 1s. Gainsborough: 17 or 18 for 1s. Settle: 16 or 17 for 1s. Spalding: 15 for 1s. Leeds: Yorkshire, 8s 9d to 9s 6d per 120.

Wednesday.—Barnsley: 12 to 13 for 1s. Colne: 1s 6d per score. Goole: 15 for 1s. Keighley: Wholesale, 14; retail, 13 for 1s. Kirbymoorside: 16 for 1s. Knaresborough: 13 to 15 for 1s. Louth: 16 for 1s. Masham: 17 for 1s. Northallerton: 15 or 16 for 1s. Stockton: 13 or 14 for 1s. Worksop: 1s 6d per score. Dorchester: 7d to 9d per doz. Ipswich: 14 for 1s. Hereford: 14 for 1s; wholesale, 16. Market Drayton: 17 and 18 for 1s. Uttoxeter: 1s 2d to 1s 3d per score.

Thursday.—Brigg: 17 or 18 for 1s. Driffield: 18 or 19 for 1s. Ripon: 16 or 17 for 1s. Scarborough: 14 or 15 for 1s. Wetherby: 15 or 16 for 1s. Birmingham: 13 to 15 for 1s. Kidderminster: 1s 2d per lb. Wellington: 16 to 18 for 1s.

Friday.—Stockport: 13 for 1s. Altrincham: 13 for 1s. Crewe: 15 and 16 for 1s. Sandbach: 15 and 16 for 1s. Nantwich: 15 and 16 for 1s. Easingwold: 15 to 16 for 1s. Helmsley: 16 for 1s. Leyburn: 15 or 16 for 1s. Lincoln: 16 to 18 for 1s. Otley: 14 or 15 for 1s. Leeds: Yorkshire, 8s 9d to 9s 6d per 120.

Saturday.—Appleby: 16 to 18 for 1s. Berwick: 10d per dozen. Carlisle: 15 or 16 for 1s. Doncaster: 14 and 15 for 1s. Grantham: 16 to 18 for 1s. Howden: 18 for 1s. Lancaster: 12 to 15 for 1s. Malton: 16 to 17 for 1s. Pontefract: 15 or 16 for 1s. Retford: 1s 6d to 1s 8d per score. Richmond: 14 and 15 for 1s. Stokesley: 14 or 15 for 1s. Whitby: 15 or 16 for 1s. York: 14 or 16 for 1s.

POULTRY AND GAME.

Smithfield, Saturday.—Supplies were on a good scale, and met a steady demand at late prices. Quotations:—Fowls: Yorkshire, 2s 9d to 3s 6d; Essex, 2s 6d to 3s; Boston, 2s 6d to 3s 3d; Surrey, 3s 9d to 4s 6d; Sussex, 3s 6d to 4s; Welsh, 2s 3d to 2s 9d; Irish, 2s to 2s 6d; turkeys (cocks), 6s to 7s; ditto (hens), 4s to 5s; goslings, 6s to 7s; country ducks, 3s 6d to 4s 6d; pigeons, 8d to 1s 2d; wild rabbits, 7d to 9d; tame ditto, 10d to 1s each; Australian ditto, 8s 9d to 11s per dozen; wild duck, 1s 6d to 2s; pintail, 1s 2d to 1s 6d; teal, 1s to 1s 3d; golden plover, 8d to 10d; black ditto, 5d to 7d each. Russian: Capercailzie (cock), 2s to 3s; ditto (hen), 1s 6d to 2s; ptarmigan, 10d to 11d; partridges, black game, 1s to 1s 2d; ptarmigan, 10d to 11d; partridges, black game, 1s to 1s 3d; brown hares, 1s 6d; white ditto, 1s each.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The rain that came pelting down on Thursday last was followed by two days of very frequent showers, and the March total of rainfall is not now likely to fall below the mean, though at the end of ieighteen days the probability seemed that we should have a third consecutive dry month to register. The progress made with spring sowings before the rains was gratifying and general; many farmers had actually completed their barley sowings by the 19th inst. The ground is not too wet or sticky for oats, if only the grain can be drilled in, so that, on the whole, the agricultural situation is hopeful so far as the fields go. Rye is being fed off to sheep; the mild temperature has helped the young clover growth, and winter oats have come on surprisingly in the last fortnight. Wheat is irregular, and not so thick a plant as it should be, but the promising fields exceed the others to a great extent, and it is, of course, not at all too late to decide upon a bold policy with reference to really poor fields, resowing them with good spring wheat. We do not expect, however, that much of this will actually be done.

On the Continent, crop prospects exceed an average. We hear of the winter wheat in America being of only mediocre promise, but in both France and the United States oats are being sown on a large and, we believe, extended area. The Argentine maize crop is semi-officially estimated at two million quarters less than last year. This should help the British markets for that staple, as no fresh crops of maize in the Northern Hemisphere will be available before October or ready to ship before December; the crop is not one that is fit to ship for nearly two months after the ingathering.

All the chief staples show a slight falling off in the week's shipments, the decline being 79,000 qrs. in wheat, 13,000 sacks in flour, 6,000 qrs. in maize, 68,000 qrs. in barley, and 85,000 qrs. in oats. The general abatement of exports should strengthen the hands of spot holders.

The supplies coming to hand include a good quantity of wheat from Atlantic ports, some small quantities from Southern Russia, a little from the Baltic, increasing quantities from Australasia, and some from Argentina, while very liberal arrivals of Californian are impending. On the other hand, India is scarcely represented in recent receipts, and very little has come to hand from Roumania, nothing from Chile, Egypt, or Persia.

Of maize arrivals have recently been almost solely of Russian, Roumanian, and Turkish. The prices quoted in market circulars often showed 2s. decline from 1st to 10th inst., and since the 20th have shown 1s. 6d. recovery. Our own price lists show no such changes, because we do not quote either damaged maize or rye, holding such articles to be dangerous, and not to be recommended as food at any price. The arrivals of maize in later February had included a large quantity of damaged and unfit corn.

The stocks of wheat in farmers' hands are now considerably less than at the beginning of the year, and even merchants' holdings show some reduction. There should consequently be a revival of demand at hand, and of this, indeed, we have a sign in the fact that an average inquiry has recently been maintained, notwithstanding the singularly high temperature. Actual quantities on 22nd inst. were as follows:—

	Qrs.
English wheat stocks	2,090,000
Foreign wheat stocks	2,687,000
Total	4,777,000

English wheat is now being brought to market at the average rate of about 150,000qrs. weekly, foreign at the rate of about 250,000qrs. weekly. This will leave a need of 200,000 sacks of foreign flour to keep the supplies up to wants, and as about 125,000 sacks looks like being the extent of April receipts, the market should be progressively improving for the whole month.

Prices for fair average quality wheat at leading markets at home and abroad admit of the following brief comparison:—

	Per qr.
London	27s. 11d.
Paris	37s. 0d.
Berlin	37s. 0d.
Buda Pesth	33s. 6d.
Antwerp	28s. 6d.
New York	28s. 3d.
Chicago	24s. 3d.

The high import duties into France and Germany make Great Britain the focus of the grain trade as a rule, but just now Antwerp is offering a slightly preferential price so as to have a choice of cargoes. As the French duty is 12s. 3d., the American sellers to Paris would only get 24s. 9d., and the German duty being 10s, they would get 27s. when selling to Berlin. But Berlin is more distant and a dearer freight by fully 1s. per quarter, so that the price would not be more than 26s. And London is practically 28s. or a florin better.

The quantity of wheat on passage to the United Kingdom shows very little change in the week's total, but there are interesting variations in the details:—

	This Week. Qrs.	Last Week. Qrs.
Californian	2,390,000	2,400,000
American	270,000	250,000
Argentine	225,000	250,000
Russian	45,000	60,000
Indian	145,000	100,000
Australasian	720,000	700,000
Other countries..	20,000	50,000
Total	3,815,000	3,820,000

Californian, Argentine, and Russian totals seem to have culminated, but Australasian figures are still upon the increase. Indian and American totals are the subject of weekly changes, which do not allow of any clear forecast.

The supply of flour on passage is thus made up:—

	Sacks.
American	280,000
Californian	50,000
Hungarian	21,000
Total	351,000
Total a year ago	430,000

Expectations of maize are just 400,000 qrs. Nearly all of it is sound corn. A year ago there were 565,000 qrs. on passage of barley; there are now the following quantities afloat:—

	Qrs.
Californian	350,000
Russian	60,000
Roumanian	40,000
Turkish	25,000
Total	475,000
A year ago	320,000

There are no supplies of barley now on passage from Chile, Persia, or Canada, all of them usual sources of supply. It is Californian brewing barley which alone inflates the total, and when this has arrived the total left afloat is likely to be less than half the average.

Our recent receipts of barley have included small consignments from France, Germany, and Sweden. Of oats our receipts have embraced, besides the Russian supply, 2,000 qrs. from France, 6,000 qrs. from Sweden, and 12,000 qrs. from Argentine, the latter quite a new source of supply. America is sending us nothing, and New Zealand's shipments are falling off.

Minor, but not uninteresting, arrivals of late have been of peas from Germany, of rice (40,000 cwt.) from Japan, of lentils from Morocco, of sunflowerseed from India, of poppyseed from Asia Minor, of bran from Argentina, and of other milling offals from Roumania. All these receipts point to possibilities of trade development. On the other hand, we get less peas from Canada than of yore, less beans from Egypt, less lentils from the same country, less poppyseed from India, and no longer any grain from Mexico, the West Indies, Brazil, or South Africa. The latter has become a rather considerable importer, not only to the extent of feeding 300,000 fighting men and camp followers, but to the further extent of a diminished home cultivation.

The London markets will be closed on the 28th and 31st (Mark Lane), from the 27th March to the 1st April (the Baltic and Term Markets), and from the 27th March to 2nd April (Subscription Rooms).

THIS DAY'S MARKETS

MARK LANE, MONDAY.

[FIRST REPORT.]

The market to-day was firm for English wheat, and the commoner sorts were rather dearer to buy. English beans were also in sellers' favour, but oats were simply steady, and barley, now the seeding inquiry is over, was neglected. Farm seeds, on the other hand, were in excellent request for spring sowing, and very fair prices were made. Foreign wheat was a little lower for Californian and New Zealand, but was firm for American red, whether of the spring type or the winter. Maize was 3d. dearer, with an improved sale. Oats were firm for heavy sorts, but dull for light grain from South-East Europe. For barley old prices were obtainable, but could not be exceeded, and the same remark will apply to imported pulse of every kind. In the oilseed market, linseed and rapeseed were a little cheaper; cottonseed and sesame a little dearer on the week. On the whole, good prices still rule current on this branch of business.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.		March. s. d.	June. s. d.	Aug't. s. d.
March 17	11 a.m.	6 2	6 1	6 2
	4 p.m.	6 2	6 1	6 2
March 18	11 a.m.	6 2	6 1	6 2
	4 p.m.	6 2	6 1	6 2
March 19	11 a.m.	6 2	6 1	6 2
	4 p.m.	6 1	6 1	6 2
March 20	11 a.m.	6 1	6 1	6 2
	4 p.m.	6 1	6 1	6 1
March 21	11 a.m.	6 1	6 1	6 1
	4 p.m.	6 1	6 1	6 1
March 22	11 a.m.	6 1	6 1	6 1
To-day	noon	6 0	6 0	6 0

Maize: Liberia is weaker; 4s 4d April, 4s 5d May and June, 4s 6d July and August delivery.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

CLOSE OF THE MARKET.

MAIZE LOST GROUND ON SPOT AS THE DAY PROCEEDED; THE TRADE IN FUTURES BEING REACTIONARY. WEAK AMERICAN ADVICES MADE AMERICAN WHEAT WORSE FROM THE OPENING.

THE FLOUR TRADE.

MARK LANE Monday

The tone of trade for London makes was not encouraging. Town Households must be quoted 3d to 6d lower to sell. Country flour, likewise, was weak, but prices were the same where business was done as on the 17th. Some sorts of secondary American flour were pressed on sale at 6d decline. Finest Minnesota made 23s 6d for "May Blossom," "Hiawatha," and "Tuberose" patents, while Kansas "Success" came at 22s 6d, "Royal Lily" at 22s 9d, and "Good as Gold" at 21s per sack. Some Corbeil flour (French) made 21s 3d for finest, and 20s 6d for next quality. Hungarian realised 32s 3d for "Six Anchors," and 29s for "Tisza C.M.C." The market for flour generally did not improve as the day wore on, but there was a fair amount of retail buying by bakers, as there will be no market on either Friday or Monday next.

GRAIN AND FLOUR FACTORS' REPORTS.

The arrivals of wheat and flour are very small, but the trade is quiet, and prices of American wheat and flour are 3d. per quarter and sack lower. Maize dull, and prices are 3d. and 6d. per quarter lower. Barley and oats are unchanged in value.—COVENTRY AND CO.

Milling Offals.—Middlings are in seasonable demand, and 2s. 6d. per ton dearer on the week. Bran is in fair request. Pollard slow, but no cheaper. Supply small. Very little foreign stuff offering. American quotations come 20s. per ton too dear for this market. Offals look like holding their own for some time to come.—J. BAWCOMBE AND CO.

Flour.—Trade to-day has been very quiet, and prices must be written occasionally 3d. lower on the Week.—T. S. MEDILL AND SONS.

Offals.—The dullness in the bran trade still continues, and to effect business lower prices are being accepted.—GREENHILL BROTHERS (Belfast).

Flour.—There is rather more inquiry for spot flour; no improvement, however, in prices, and at the moment very little business being done. Values on spot are as follows:—1st spring patents 24s. 9d. to 25s. 3d., 2nd spring patents 23s. 9d. to 24s. 3d., American winter patents 24s. 9d. to 25s. 3d., extra fancies 23s. to 23s. 6d.—GREENHILL BROTHERS (Belfast).

Flour.—The demand is very slow, and to make sales some concession must be made. Grain.—Flat corn is in small supply, but 1½d. per boll lower. Round corn pressed for sale. Beans and Canadian peas continue very scarce. Barley, oats, oatmeal, etc., are quiet. Mill stuffs.—Bran and thirds are unchanged.—McKINNON AND McDONALD (Glasgow).

FEEDING STUFFS.

London, Monday.—Linseed cake: Trade very quiet, prices unchanged. Decorticated cotton cake and meal steady, but little doing. Undecorticated are in better demand at 1s 3d advance. Linseed: Spot Calcutta has fallen 1s 6d to 2s, but April-June shipment has advanced 9d. Late Plata 1s lower. Russian scarce and unchanged.

SEEDS.

London, Monday.—We had a full attendance at to-day's market, and considerable retail buying took place, dealers operating with much caution. The show of English red clover and other English seeds displays a great falling off, and prices were firm for all farm seeds. By present appearances stocks will be closely used up this season. Haricots and blue peas are neglected.—JOHN PICARD AND CO.

ROBERT AND JOHN HEWETSON.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Weak American advices make wheat cargoes the turn in buyers' favour, and maize cargoes are 3d lower from Saturday. Barley, on the other hand, is held more firmly for futures, and so are oats. Cottonseed cargoes are quiet at the recent improvement, and linseed is better from Saturday for April and May shipment.

BUSINESS DONE.

WHEAT.—Californian, 29s, April shipment; Argentine, 28s 6d, April shipment; Australian, 29s 9d, April shipment; No. 1 Northern, 28s 9d, April shipment; No. 2 Hard Winter, 28s 6d, April shipment; Soft White Kurrachee, 29s 3d, April shipment.

MAIZE.—Roumanian, 21s, on passage; Odessa, 21s 3d, on passage; Galatz, 21s 6d, May shipment; Argentine, 20s 6d, May shipment; Turkish, 22s, May shipment; Caucasian, 22s 3d, prompt shipment.

BARLEY.—Azoff, 18s 9d, May shipment; Californian, 24s, on passage.

OATS.—Vologda, 18s, June shipment; Swedish, 22s 6d, prompt shipment.

LINSEED.—Calcutta, 51s 3d, May shipment; Argentine, 49s, April shipment.

RAPESEED.—Jamba, 31s 6d, April shipment.

COTTONSEED.—Egyptian, £6 18s 9d, May shipment; Bombay, £4 10s, on passage.

HOPS.

London, Monday.—W. H. and H. Le May report:—Whilst the market remains quiet prices continue very firm, and the smallness of the stock still left in seller's hands becomes more apparent day by day.

CATTLE.

Metropolitan Market, Islington.

Monday, March 24th, 1902.

	British.	Total.	March 25th, 1901.
Beasts	1,210	1,210	1,100
Sheep and lambs	11,960	11,960	7,780

	Inferior.	Second.	First.
Beasts	2s. 8d.	4s. 0d.	4s. 9d.
Sheep	3s. 10d.	5s. 2d.	6s. 10d.
Lambs	6s. 4d.	7s. 4d.	8s. 2d.
Calves	6s. 4d.	7s. 4d.	8s. 2d.
Pigs	6s. 4d.	7s. 4d.	8s. 2d.

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 8; Eastern Counties, 800; Midland, Home, and Western Counties, 225; Devon, 20; Ireland, 157.

In the beast market, compared with Monday last, there was an increase of 100 head. From Norfolk the consignments were stronger. For fat beasts trade was firmer, with a slight upward tendency in value. Fat bulls were short in number, and sold readily at an increase. Fat cows were slow, but made late rates. Amongst the Irish arrivals were included 61 stores, 2½ to 3 years old, which were quoted at from £10 to £12 10s. per head. These, however, met with little inquiry.

The following are top quotations per 8lb (sinking the offal):—

	To-day.	March 25, 1901.
Scotch	4s 8d to 4s 9d	—
Norfolks	4s 7d to 4s 8d	4s 5d to 4s 6d
Lincolns	4s 4d to 4s 6d	4s 0d to 4s 3d
Irish	4s 4d to 4s 6d	4s 2d to 4s 3d
Fat Cows	3s 10d to 4s 0d	3s 6d to 3s 8d

In the Sheep Market, compared with Monday last, there was an increase of 2,970 in the number penned. Amongst these, as is usual the Monday preceding Easter, there was a large proportion of lambs. These, being in greater request, made more money, best quality fully 2d per 8lb. For sheep, both wethers and ewes, trade was of a brisk nature, with an advance of from 1d to 2d per 8lb. The supply included 510 Scotch and 4,930 from the Eastern counties.

Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	To-day.	March 25, 1901.
7½ to 8-st. Downs	5s 8d to 5s 10d	6s 0d to 6s 2d
9-st. Downs	5s 7d to 5s 8d	5s 10d to 6s 0d
10-st. half-breds	5s 3d to 5s 4d	5s 7d to 5s 8d
12-st. Lincolns	4s 10d to 5s 0d	5s 4d to 5s 6d
10-st. Down ewes	4s 7d to 4s 8d	5s 0d to 5s 2d
11-st. half-bred do.	4s 4d to 4s 6d	4s 10d to 5s 0d
5-st. Down lambs	8s 0d to 8s 2d	8s 0d to 8s 2d
6-st. half-bred do.	7s 6d to 7s 8d	7s 6d to 7s 8d

The few pigs on offer not worth noting or quoting.

London (Central), Monday.—Moderate supplies; fair trade. Beef carcases, 3s 10d to 3s 11d; hindquarters, 4s 4d to 4s 6d; roastings, 5s 4d to 5s 8d. Sheep: Ewe, 3s 4d to 3s 8d; wether, 4s to 4s 4d; hindquarters, ewe, 4s 2d to 4s 6d; wether, 5s to 5s 4d. Pigs: Large, 3s 8d to 4s; small, 4s to 4s 4d.

St. Ives, Monday.—Beasts, 1,089; sheep and lambs, 642; pigs, 483. Beef, 7s 6d to 8s 3d; mutton, 8s 2d to 9s 11d; pork, 6s 6d to 7s 6d; veal, 11d; lamb, 1s 2d; fat cattle fair stores slow; fat and store sheep lambs and pigs good demand; milch cows, 13, £23; fat calves dear.

FOREIGN CATTLE.

Deptford, Monday.—Beasts 298. To-day's supply compared with Monday last, showed a decrease of 211, and consisted entirely of shipments from the United States, trade for which, though of a slow nature, was rather firmer in regard to value, a clearance being made. The best on offer to dress about 720lbs. made 4s 6d per 8 lbs, offal given in. Seconds were quoted at 4s 3d. Sheep numbered 607, from the United States, trade for which was dull, owing to the higher rates demanded. Best pens made 5s, and occasionally 5s 2d per 8 lb. On Saturday the beast supply consisted of 1,346 from the United States, quoted at from 4s 3d to 4s 5d per 8 lbs, and 460 from Canada, these latter being above the average in point of quality, and were quoted at from 4s 2d to 4s 4d. 596 Canadian sheep were on the market, but the majority were slaughtered. The following were the numbers on offer on the corresponding day last year, with the current top rates:—Beasts, 218, 4s 4d to 4s 6d per 8 lbs, to dress about 720 lbs. No sheep on the market.

Liverpool, Monday.—There were a few more cattle in market to-day; demand slow, but last week's prices were fully maintained. Sheep supply larger; trade firmer and higher prices general for anything choice. Beef, 6½d to 5d per lb.; mutton, 9d to 6½d per lb. At market, 1,148 cattle and 5,182 sheep.

PROVISIONS.

London, Monday.—The arrivals from Ireland last week were 2,351 bales bacon, and from foreign ports, 11,182 bales bacon. The demand for bacon last week continuing very good, prices were again advanced 2s all round on Danish. On Tuesday and on Friday Canadian quotations were 4s to 6s dearer. There was a good sale, and the market closed firm. Current quotations were as follows:—Irish, 54s to 60s, up to 63s; Danish, 54s to 58s, up to 59s; Canadian, 52s to 56s up to 58s. Butter.—There was a steady trade for butter generally and Danish was making a little more money. Danish, 110s to 112s, up to 114s; Colonials, 102s to 106s, up to 108s. Lard.—A steady market at unchanged prices. Irish, 54s to 60s. American pails and boxes, 48s 6d to 49s 6d.

LIVE STOCK AND MEAT TRADE REVIEW.

(Written Specially for the "Mark Lane Express.")

Trade in London.

With regard to the trade for fat beasts of both prime and second quality at Islington, no alteration in regard to value can be noted, though sales at late rates were rather forced. This remark does not, however, apply to the choicest Norfolks to dress from 680 to 720 lbs., these finding ready buyers. The majority of the fat beasts consisted of arrivals from that county, those arriving from Ireland numbering 176, amongst which were 58 stores, which were quoted as follows:—2½ years old, £11 10s. to £13 10s. per head; three years old, £13 10s. to £14. For butchering cows and bulls there was a better demand, and the number on offer being smaller, rates ruled firmer. At the foreign cattle market the supply was lighter, most of the cattle arriving from the United States, and being of rather better quality than during the last month or so. Here trade also ruled slow, but the best were no lower in price. The total number offered for sale on both markets was 4,105 (previous week, 5087), consisting of 1,160 British (decrease, 230) and 2,945 foreign (decrease, 752). These latter comprised 2,485 from the United States, and 460 from Canada. The following were the top rates paid per 8lbs. (sinking the offal):—95-stone polled Aberdeens, 4s. 8d. to 4s. 9d.; 90-stone polled Norfolks, 4s. 8d.; 100-stone shorthorn ditto, 4s. 6d.; 100-stone Lincolns, 4s. 6d.; 95-stone Irish, 4s. 4d.; 85 to 90-stone States, 4s. 4d. to 4s. 5d.; 90-stone fat cows, 3s. 10d. to 4s.; 100-stone fat bulls, 3s. 6d. The sheep trade was practically confined to the Islington market. Trade was of a slower nature, notwithstanding a lighter supply. Wethers were easier to buy, but not quotably lower, whilst ewes met with forced sales at a reduction of 2d. per 8 lbs. Lambs, especially the choicest Downs, of which very few were on the market, were in steady demand. The majority consisted of Dorsets. The total number penned was 10,206 (previous week, 12,587), consisting of 9,610 British (decrease, 990) and 596 from Canada. Best pens made, per 8 lbs., as follows (sinking the offal):—7½ to 8-stone Downs, 5s. 8d.; 8-stone Scotch, 5s. 6d. to 5s. 8d.; 9-stone Downs, 5s. 6d.; 10-stone ditto, 5s. 2d. to 5s. 4d.; 10-stone half-breds, 5s.; 12-stone Lincolns, 4s. 10d.; 10-stone Down ewes, 4s. 6d.; 11-stone half-bred ditto, 4s. 2d.; 4½ to 5-stone fat Down lambs, 8s.; 5-stone Dorsets, 6s. 6d. to 6s. 8d. The calf trade, 35 on offer, was slow, but rates were firm. Best on offer were quoted at 6s. per 8 lbs. Pigs numbered 40, and sold slowly; top value, 4s. 6d.

Trade in the West.

Agriculture has benefited generally by the welcome rainfall of the past week, and this is amply borne out by the increased activity in stores of most kinds, both cattle and sheep. Barreners were beginning to drag a bit before the rain set in; now they sell with the greatest possible readiness, £26 to £30 being frequently realised for a good pair of young bullocks easy of conversion into beef; but a more general run is from £20 10s. to £25 for the ordinary grades. Dairy beasts have also benefited by the improved keep prospects. In fact, just at present everything is selling very well. Just at present, cattle much better relatively than sheep, the latter having been fetching only a poor price for some time. Good bullocks of medium weights now make 11s. to 12s. per score for all the better grades of Devons and Shorthorns (or from £17 to £23 or £24 apiece); and secondary grades may be quoted as making 10s. to 10s. 6d., and rougher qualities 9s. to 9s. 6d. Very little of what is now coming out fails to find a buyer. Fat sheep, on the other hand, meet a dragging sale, a good deal of this arising from the condition in which the sheep come to hand, many of those now on offer consisting of coarse old ewes, which only make about 6½d. per lb., though anything at all possessing quality in the way of tegs or wethers command more attention at 7½d. per lb. and over. Lambs are in much brisker demand than they have been of late, and will undoubtedly be more so during the next few days in preparation for the Easter trade. Some of the best lots in Downs and cross-breds have during the week sold from 38s. to 45s. apiece—quite 10d. to 10½d. per lb., if not over—though we must confess these, as a rule, were splendidly finished. The more ordinary grades are also meeting a steady sale at 8½d. to 9d., this being the range for indifferent qualities. The veal trade, too, promises well, the best calves realising 8d. to 8½d. per lb, and seconds 7d. to 7½d. Rearers also meet a free sale, values having a wide range—from 20s. up to 52s. Although pigs are scarcely as dear as they were, the neater weights find a good market at 10s. to 10s. 6d. per score, and baconers from 8s. 6d. to 9s. 6d. Coarse, heavy sows bring 7s. to 8s. Anything at all serviceable in the way of fat stock may be accurately described as selling very well, and on the whole prices are being well maintained. There is but little passing in store sheep, a few tegs changing hands at 31s. to 33s., and couples from 48s. to 58s. Another month or so will see far greater activity in the sheep trade all round.

Trade in Scotland.

John Swan and Sons, Limited, give the following as their report on above for the current week:—The number of fat cattle on offer this week has been rather larger, and the general quality satisfactory. A fair, steady trade has been experienced throughout, and prices are nearly as possible similar to the preceding week. A large supply of fat cows, the best of which made full prices. Sheep have been in larger supply, demand steady throughout, and all classes met quite as good a trade, with a good clearance effected. Ewes were rather scarcer, and they made a shade more money. Fat lambs continue to come to hand in small numbers, and, if good, quality, selling at from 38s. to 42s. Fat calves exceedingly dear, while pigs maintained previous values. Rather more store sheep on offer, for which a slightly better inquiry was experienced, and prices 1s. a-head dearer. A small number of store cattle, and generally of secondary inferior descriptions. Anything of a good class inquired after and easily sold at full prices, but all others are difficult to move, and part of the secondary descriptions left unsold. A good supply of milch cows, many of an inferior class; the best made nearly last week's prices, but secondary rather cheaper. Quotations:—Best beef, to 8s. 3d. per stone; mutton, to 8½d. per lb.

Trade in Ireland.

With a large falling-off in the supplies of cattle and sheep, and a full attendance of buyers at last Thursday's Dublin Market, business showed more animation and there was a marked advance in prices for anything that was up to the standard. For the nicer selection of beef and mutton, values were distinctly better—from 10s. to 20s. per head for the former, and about 1s. 4d. per pound for the latter. All the cattle and sheep of a useful class were bought up quickly, but a number of rough, unsuitable animals could not be sold, there being no purchasers to be found for such. The beef market opened with great spirit, and all the choice animals were picked up quickly. Choice ox and heifer beef made from 55s. to 58s. per cwt., some extra good lots commanding up to 60s. and 62s. per cwt., good second-class beef 50s. to 55s., and coarse from 44s. to 47s. per cwt. The short supply of sheep gave a good fillip to the mutton trade, and for choice sheep butchers had to pay more money. Wethers made from 7½d. to 7¾d., and small choice weights well up to 8d. per lb., and in some cases over that figure. Rough, common sheep, however, did not share in the advance, though it was easier to dispose of them than in late markets. Lambs were in very variable condition, and prices consequently very up and down. The best butchers' lots made from 30s. to 38s. each, and other sorts from 20s. upwards. Best veal still very scarce and dear, as much as 9½d. being paid per lb. for really choice milk-fed calves; rougher sorts from 5d. to 7d. per lb. Milch cattle plentiful, but the supply of choice cows limited. £21 was about the top price given, values generally being on the downward grade. Some large stock sales took place during the week, but the wintry change which has come over the weather made buying rather slack, except for good forward beasts, which did not require much to finish them off. There was a fair supply in the pig market, and, with a good trade, last day's prices were easily sustained, and a clearance effected. Choice small weights made from 46s. to 50s. per cwt., coarse from 36s. to 44s. per cwt.

In the South of Ireland the depression which has long hung over the store stock trade seems to be lifting, and prices have improved fully 5 per cent. Animals which would not have been looked at some weeks ago now sell freely, and it is expected when grass sets up a bit that buying will be very brisk.

Fat cattle in Cork market remain stationary in price, best quality making from 55s. to 58s. per cwt. Sheep at the same venue are dull enough, but the best mutton cannot be bought under from 7½d. to 8d. per lb., as it is scarce.

LONDON.

Islington, Thursday.—A moderate number of beasts, mainly comprising fat bulls and rough cattle. The demand was of a steady character, and late prices were upheld. Fat bulls, 3s 4d to 3s 8d. Sheep were in small supply, and met with rather better support at steady prices; 7½ to 8-stone Downs, 5s 2d to 5s 4d; 9-stone ditto, 5s to 5s 2d; 10-stone Down ewes, 4s 2d to 4s 4d; and 11-stone half-bred ditto, 3s 10d to 4s. Calves steady, the best on offer making 5s 6d to 5s 10d. Pigs quiet. Neat small porkers, 4s 4d to 4s 6d per 8lb, to sink the offal. Total supplies:—Beasts, 50; sheep, 620; calves, 25; cows, 5; and pigs, 20.

COUNTRY.

Ashford, Tuesday.—Best beef, 11s 6d a score. Mutton slightly dearer, from 4s 4d to 4s 8d per stone for prime Kent wethers; choice small Downs and half-breds, 5s to 5s 4d. Barrens fetched from 3s 6d to 4s a stone. Veal made up to 6s 2d and over. Pork unchanged.

Basingstoke, Wednesday.—At Raynbord and Son's sale-yard there was a good attendance of buyers to meet a supply of 36 fat beasts, 69 calves, 466 fat sheep and lambs, and 57 head of dairy and store cattle, for which the following prices were realised:—Prime shorthorn oxen made up to £25 10s; well-grazed Welsh runts made £20 10s; shorthorn heifers, £18 10s; and polled steers, £20 5s. Fat calves, 70s to £5 10s; smaller, 15s to 45s; dairy cows, from £9 to £18. Prime quality fat sheep realised from 48s to 52s 6d; 13 months old ditto, from 37s to 53s; fat sucking lambs up to 40s; fat ewes up to 54s 6d; fat Hants down lambs up to 38s 6d; Dorset lambs up to 40s; fat ewes made 54s 6d; and fat tegs up to 53s. The show of fat beasts included some prime shorthorns, Welsh runts, and polled beasts, which were cleared at the full prices of last week. Fat sheep—Lambs were shown in larger numbers, and a clearance effected, with the exception of a few half fat tegs and lambs, at fully last week's rates. With an average supply of dairy cattle on offer, for all best descriptions of milchers trade ruled slightly better. Store cattle showed more inquiry. Fat calves are scarce and dear. Ruling values: Best prime quality beasts, 7d to 7¼d; second ditto, 6¼d to 6¾d; bulls, cows, and inferior beasts, 5d to 6d per lb; best quality fat sheep, 7¾d to 8¼d; second ditto, 6d to 7d; fat sucking lambs, 10d to 12d; old ewes, rams, and inferior sheep, 5d to 6d per lb; fat calves, 7d to 8¾d per lb.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart there was a good show of fat beasts of better quality than for some weeks. With a full average attendance of buyers, a good trade prevailed for all descriptions at fully late rates. Large supply of store cattle, which met a better trade, especially all the best bred lots. Larger supply of fat sheep, including several lots of very prime Suffolk hoggets. Trade was without much variation in price, reaching up to 63s per head for some Suffolk hoggets, and 48s for some Southdown hoggets. Fat ewes were in short numbers. Smaller supply of store hoggets, which sold at late rates. Good supply of fat pigs. Brisk trade at last week's rates for all descriptions.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9	6

Under 11 sc. 10 lb.	... Not exceeding 2¾ in....	8	6
Under 12 sc.	Not exceeding 3 in. ...		

—C. & T. Harris & Co., Ltd.

Cambridge, Monday.—Beasts, 375. Beef, 7s to 8s. Sheep, 571. Mutton, 4s 2d to 5s 4d. Horses, 9. A few lots good store beasts but made slow. Fat beasts a good show; prices not so good as last week. Fat sheep, a good number shown; prices a little better. Stores, a few lots to hand, and all cleared. Market closed for pigs. Hay, straw, and roots short supply.

Canterbury, Saturday.—Prices were a trifle higher than last week, good class working tegs making from 30s to 36s, and occasionally 38s per head. Ewes and lambs sell at about 45s.

Chichester, Wednesday.—There was a good supply of fat stock, and a fair trade was experienced for both beef and mutton, prices being without material change. The supply of lambs was in excess of the demand, but prices were steady, a remark which also applies to veal. The store sheep trade was better than of late, and prices showed a hardening tendency. A disquieting feature in this department, however, was the discovery of several animals suffering, it is said, from scab. There was a good supply of pigs on offer, but business was not so active as of late, and prices were easier. The following figures show the number of head of stock in the market: Cattle, 732; sheep, 3,246; pigs, 526; calves, 124; horses, 34; total, 4,672. Tolls taken, £30 5s 5d.

Dorchester, Wednesday.—The mid-weekly market to-day was very heavily stocked, calves, lambs, and light-weight pigs forming a very extensive offer, to say nothing of an abundance of poultry and dairy produce of all kinds. Sales were held by Messrs. Ensor and Son and by Mr. Sampson. A brisk inquiry prevailed in almost every department without exception, and good prices ruled for anything at all serviceable. Calves met a very brisk trade, the best making 8d per lb. and over (or up to £6 10s each), seconds also selling well at 7d to 7½d, and poorer class grades at 6½d. Mutton ruled fairly steady, at 7d to 7½d per lb for best qualities; and lambs were in much more request, at 8½d to 9d per lb, and in some cases over. Light-weight porkers sold from 10s 6d to 11s 3d per score, and baconers, 10s to 10s 5d; heavy pigs, 8s to 9s. The beef trade keeps firm owing to the limited offers.

Dublin, Thursday.—Numbers in market: Beasts, 1,353—decrease, 242; sheep, 3,600—decrease, 236; calves, 34—decrease, 11. Finished cattle were scarce and dearer. Other sorts more easily sold. More life in the sheep trade at a slight advance all round. Cattle: Live weight (best), 33s to 36s per cwt; others, 28s to 32s 6d per cwt. Mutton: Dead weight, 6d to 7¾d per lb. Next auction of store cattle, Thursday, April 3. Entries close March 29. —Ganly, Sons, and Co.

Hereford, Wednesday.—Bullocks and cows, 771; calves, 178; sheep and lambs, 1,018; pigs (fat and sows), 41; sucking pigs, 17; pigs (stores, not more than ten), 275; pigs (stores, more than ten), 62; horses, 2. Prices in Cattle Market: Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 7d per lb; veal, 8½d per lb; pork, 5½d to 6d per lb; bacon, 4d to 5d per lb; lambs (not sold by the lb), 30s to 35s each.

Ipswich, Tuesday.—Messrs. Robert Bond and Son's report a shorter supply of fat beasts, which met a firm trade from 8s 6d to 8s per stone. An average number of fat sheep and a good attendance of buyers. Well-finished hoggets made rather more money; others sold without alteration. Grazing sheep changed hands at late rates. A large entry of calves; those for weaning by pure shorthorn bulls were in strong request. Fat calves dear. Fat swine met a sharp trade, prices ruling against buyers. Well-bred stores dear. About 30 cows were penned, but there was not much animation in the trade, prices remaining on the same level. A few lots of grazing cattle were penned. Trade was slow, and prices ruled low except for those with condition, which were wanted. Numbers at sales and market: Cattle, 561; calves, 63; sheep, 1,204; swine, 1,395.

Leicester, Wednesday.—Large consignments of Lincolnshire and Norfolk fed bullocks, and the bulk of the stock came to hand in excellent condition. Buyers and dealers were well represented, and trade ruled rather sluggish, while quotations were 15s to 20s per head lower all round. Choice bullocks, 6¼d to 6¾d; secondary, 6d to 6¼d; heifers, 6¼d to 6¾d; cows, 4¼d to 5¼d. per lb. Sheep were a fair supply, and sold steadily at 7¼d to

8d for choice light weights; large sheep, 6½d to 7½d; ewes, 5½d to 6d; lambs in active demand at 1s; calves, a brisk trade at 3½d to 10d per lb.

Newport, Wednesday.—There was a good supply of stock, sheep, and calves, a large attendance of buyers, and a brisk trade resulted. Quotations:—Best beef, 6½d to 6¾d; seconds, 6d to 6½d; cows, 5½d to 6d; best wether mutton, 8d to 8½d; ewes, 6½d to 7d; veal, 8d to 9½d; pigs, porkers, 10s 9d to 11s per score.

Salford, Tuesday.—The supply of cattle was smaller. Choice quality met with a good demand, and sellers obtained an advance on last week's prices. About the same number of sheep were penned as at last market. There was a good trade for all kinds at an advance of about 2s per head. A moderate show of calves, and a good demand for best quality at higher prices. Cattle, 5d to 6½d; sheep (in wool), 7d to 8¾d; ditto shorn, 6d to 7¾d; calves, 6d to 9d per lb. At market: Cattle, 2,146; sheep, 9,034; calves, 237.

Sheffield, Tuesday.—The show of milch beasts was small, and trade was slow. Best sorts, £18 to £21; secondary, £13 to £16. Rough beasts were bad to sell.

Spalding, Tuesday.—There was a larger show of beasts, and a fair trade. Best ox beef, 7s 6d to 7s 9d per stone. An improved trade for stores, and nearly all the lots were cleared at better prices. In the sheep market there was a small show; mutton, 7d to 8d per lb.

Stockton, Wednesday.—There were 131 cattle, 30 calves, 290 sheep, 12 lambs, and 221 pigs on offer. Best cattle were shown in small numbers, and prices ranged from 7s 9d to 8s per stone; rougher sorts, 6s 6d to 7s. A fair trade in calves at 6d to 9d per lb. A small show of young sheep, which met with a good demand at slightly higher prices, at 8d per lb; ewes, about 6d; tups, 4d and 5d; lambs, 35s to 40s each.

Thame, Tuesday.—There was a fair supply of stock at market, with an increased attendance of buyers. Trade was very brisk, particularly for beef and veal. Mutton continues to improve in price. Strong, weaning calves met with a good inquiry, all the stock changing hands readily. Mr. Bond's sale comprised 49 fat beasts, 145 fat sheep, 94 fat and weaning calves, and 60 pigs. Fat bullocks made £17 to £22 10s; fat heifers, £14 to £20 7s 6d; fat ewes, 44s to 63s; fat tegs, 41s to 54s 6d; fat lambs, 37s to 39s 6d; fat calves, £4 to £5 1s; cow calves, 23s to 57s; bull calves, 19s to 48s; fat pigs, 10s per score. Stores a better trade. The Easter market will be held on Tuesday next, when a large supply of specially fed stock is expected.

Wakefield, Wednesday.—Average trade at last week's prices. Beef, 5d to 6¾d per lb.; small sheep, 7¼d per lb; other animals, 5d to 7¼d. The numbers were—sheep, 4,125; beasts, 1,246.

Wolverhampton, Wednesday.—There was a fair supply of stock and a moderate trade was transacted. Quotations:—Herefords, 6½d to 6¾d per lb.; shorthorns, 6¼d to 6½d per lb; calves 7½d to 9d per lb; wether mutton, 7¾d to 8¼d per lb; ewes, 6¼d to 6¾d per lb; pigs, bacon 10s per score; ditto porkets 10s to 10s 6d per score; sows, 8s per score.

Worksop, Wednesday.—Fair supply of stock, and trade good. Best beef, 7s to 7s 8d; secondary, 6s to 6s 9d per stone; best wethers, clipped and in wool, 7d to 7½d; ewes, 5d to 6d per lb.

FOREIGN.

Deptford, Tuesday.—Beasts supplied to-day amounted to 630 head, this being 130 more than available on Wednesday, and consisted of shipments from South America, while trade ruled slow at 4s 2d to 4s 5d per 8lb to sink the offal, despite quality being good. 475 ditto were not shown.

Yorkhill, Monday.—The usual weekly sale of United States and Canadian cattle was held to-day, when there were on offer 141 animals landed by the Siberian from Philadelphia: 281 by the Sardinian, from Portland (Me.); and 59 ex Corean, from Boston. Bullocks, as is generally the case, formed the greater proportion of the total number. Taken all round the animals, as regards quality, showed a marked improvement on those exposed last week. There was the usual large attendance of buyers. Trade at first was rather slow, but as it went on it steadily improved, and prices showed an improvement of 2s per cwt. on the rates ruling last week. Small, neat, well-fed beasts secured the best demand, and sold well Bulls met a good selling trade. The dead weight quotations may be given as follows:—States bullocks, best class, medium weights, 58s per cwt, and for really choice up to 60s, one or two even making more; seeondary and heavier, 56s: bulls, best quality, handy sorts, to 50s; secondary and heavier, 46s to 48s. Canadian bullocks, best quality, medium weight, 56s per cwt, and for really choice, 58s, and in one or two instances to 60s; secondary and heavier, 52s to 54s; heifers, 53s to 57s; cows, 46s to 50s, according to quality and finish. The bulls made similar prices to those ruling above.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fair supplies of fruit, steady sale; good supply of greenstuffs. Arrivals of potatoes short, and met with fair support. Nova Scotian apples, 20s to 26s per barrel; Californian, 8s 6d to 12s 6d per case; Almeria grapes, 4s to 8s per dozen lb; bananas, 7s 6d to 12s 6d per bunch; Denia oranges, 10s to 25s; Jaffa, 12s to 15s; Murcia, 7s to 10s 6d per case; pineapples, 1s 9d to 4s 6d each; lemons, 8s to 18s; Canary tomatoes, 3s 6d to 4s 6d per case; cauliflowers, 1s 9d to 2s 6d per dozen; beetroots, 2s per bushel; Brussels sprouts, 1s 6d to 2s per half-sieve; parsnips, 2s 6d to 3s per bag; carrots, 2s to 2s 6d; leeks, 2s to 3s per dozen bunches; horseradish, 1s 3d per bundle; celery, 9s to 12s per dozen rolls; field rhubarb, 2s 3d to 2s 6d; forced rhubarb, 1s to 1s 3d per dozen bundles; Valencia onions, 6s to 7s per case; Dutch, 4s 6d per bag; potatoes, 35s to 80s per ton; new Teneriffe, 14s; Canary, 15s per cwt.

POTATOES.

Borough, Saturday.—Arrivals heavy; no recovery in demand; business quiet at about late rates. Scotch maincrops (Dunbars), 80s; Reading Giants, Blacklands, 40s: Blacklands Up-to-Dates, 45s; Lincoln (Silts) ditto, 55s; Kent Up-to-Dates, 45s to 50s per ton.

Great Northern, Saturday.—Although supplies lighter, demand slow. Scotch maincrops, 85s to 90s; Reading Giants, 40s to 45s; Blacklands Dates, 40s to 50s; Lincoln maincrops, 80s to 85s; Lincoln Up-to-Dates, 50s to 65s per ton; Jersey, 4d per lb; Teneriffe, 16s; Maltese, 12s per cwt.

Spitalfields, Saturday.—Very slow; supplies still in excess of buyers' requirements. Best Lincoln Up-to-Dates, 55s to 65s; Blackland ditto, 35s to 40s; Wisbech, 50s to 55s; Scotch ditto, 60s; Scotch maincrops (grey soil), 65s; Lincoln maincrops, 75s to 85s; Reading Giants, 30s to 35s; Blackland Gartons, 30s per ton.

FEEDING STUFFS.

Hull, Tuesday.—Linseed.—The arrivals are 25,772 qrs. from Buenos Ayres; 30,987 qrs. Rosario; 6,374 qrs. San Nicholas, 9,836 qrs. San Pedro; total 72,969 qrs. The market during the week has been dull and inactive, with steadily decreasing prices. Calcutta opened with sellers of April-June at 52s 3d, but declined during the week, and closes sellers at 51s 3d April-June. River Plate—At the beginning of last week 49s 9d was made for seed on the spot, and Feb.-March was worth 50s 6d, but at the close there are sellers of spot at 48s 3d, while forward positions are quoted nominally 50s. Cottonseed.—The market at one time during the week turned quieter, and sellers on spot accepted £6 12s 6d. But there was a speedy recovery to firmness, and £6 13s 9d to £6 15s since paid, at which latter price still buyers. Business done thereat a few days afloat. March loading made £6 12s 6d to —6 15s, and up to £6 15s paid April-June. A few speculative lots Nov.-Jan. changed hands at £6 3s 9d to £6 5s. To-day £6 16s 3d paid spot and afloat. Oils.—Exports for the wee kending 11th March, 1902:—Linseed oil: 4 Belgium, 1 Denmark, 1 Germany, 18 India, 8 Norway; total, 32 tons. Cotton oil: 102 Belgium, 10 France, 215 Germany, 239 Holland, 15 Sweden; total, 581 tons. The market is quiet. Linseed oil, 28s 6d spot; 28s 4½d March-April; 28s 4½d May-August. Cotton oil, 23s spot; 23s 1½d March-April; 23s 6d May-August. Crude, 21s 9d spot; 21s 10½d March-April; 22s 3d May-August. Rape oil, Jamba naked, 24s spot; 1st quality naked, 24s 6d spot. Oil Seed Cakes—Linseed Cakes are 2s 6d to 5s per ton cheaper, with moderate demand. Cotton Cakes—A very fine market, with good deliveries.

London, Thursday.—Linseed: Heavy arrivals, both in Calcutta and the Plate, combined with large shipments, and the indisposition of manufacturers here to operate, have caused prices to decline further. Spot Calcutta to London, 51s; passage, 51s to 50s 6d; March, 50s 9d; April-June, 50s 6d. La Plata near and passage, 49s to 50s. Hull is also lower. Calcutta, April-June, 51s. La Plata, spot, 48s 6d; March-April, 50s. To the Continent, Bombay, Feb.-March, and April-June, 53s 9d; June-July, 54s. Calcutta, April-June, 51s. La Plata, afloat, 49s; March-April, 50s. Linseed oil early in the week declined in consequence of the heavy shipments of seed, but at the close higher prices are demanded. We quote spot in pipes £30 to £30 5s; barrels, £30 5s to £30 10s; May-August, £29 15s; Sep.-Dec., £28 15s. Hull spot naked, £28 10s; April, £28 10s; May-August, £28 10s. Linseed cakes are steady. We to-day quote London made £8 5s to £8 7s 6d ex mill; American Western, £7 7s 6d to £7 10s; Russian, £7 12s 6d to £8 2s 6d. Cotton cakes quiet, London made £4 5s 3d to £4 7s 6d. Rapeseed: In rather better demand with more doing. Brown Cawnpore, March-May, 37s 6d; Brown Calcutta, April-June, 36s 6d. To the Continent we quote Yellow Cawnpore, March-May, 40s 9d. Brown Cawnpore, March-May, 37s 6d; Brown Calcutta, April-June, 37s. Ferozepore, Feb.-March, 37s 9d. Jamba, March-May to Hull, 31s. Cottonseed: Alexandria has continued to advance, prices, however, still continue to be too far apart to admit of business. Spot London, £6 15s; March, £6 15s; April-May, £6 17s 6d; Hull spot, £6 17s 6d; April-June, £6 17s 6d; Nov.-Jan., £6 6s 3d. Cargoes are too dear to be quoted, importers point to £7 2s 6d. Bombay to Hull: Business continues to be done at £4 10s, March-April.—THE PRODUCE BROKERS' CO., LTD.

Mark Lane, Monday.—Pulse: In this branch of the market milletseed remains very cheap, 30s to 40s per qr., according to quality. Haricot beans: In consequence of the mild weather, demand is less active; prices, however, have not given way, because available lots on offer are so very small that, however slack the demand may continue, it cannot materially affect prices. I quote to-day: Best Hungarians, 42s to 43s; Danubians, 39s to 40s; Hungarian "Cocos," 48s to 50s; Dutch, 50s to 60s per qr. It is thought possible that we may experience a better demand for haricots next month owing to scarcity of green vegetables, and dealers will be well advised to look to their stocks. White Runners: Extra large, 10s to 10s 6d; ordinary, 7s 3d to 7s 6d; second quality, 6s to 6s 6d per bush. German lentils, 13s to 14s per cwt. Split peas: Pearls, No. 1, 52s 6d to 53s 6d; No. 2, 47s to 48s; Canadian F, 43s 6d to 44s per qr. Scarlet Runners, 6s 9d to 7s per bush. Painted Lady beans, 8s 6d to 9s per bush. Canadian Wonder beans, 14s to 14s per cwt.—E. MARCUSE.

Mark Lane, Monday.—Linseed Cakes—Supplies of foreign are exceedingly small, and, with only limited stocks in warehouse, values are well maintained, while a considerable business has been done in forward positions at full prices of last week. Russians in mats are slightly easier, but unchanged in bags. Americans continue by far the best value on the market, and are in good demand at last Monday's prices. Calcutta-made in bags still offer at unchanged quotations. London-made remain quiet and without change. Cotton Cakes—The trade rules quiet, but, with dearer seed, there is a slight check to the downward tendency, and Egyptians are now firmly held at £4 5s to £4 7s 6d, while English sell steadily at unchanged prices. Decorticated move off slowly and without change, and meal at £6 5s. Rape Cakes—Unchanged. Maize Germ Meal—Some small lots of American just to hand find buyers at £5 17s 6d to £6, while English remain relatively cheap at 5s per ton less money. Rice Meal—A steamer parcel of Rangoon due the end of the month offers at £4 15s, but for March-April shipment there are sellers at £4 7s 6d to £4 10s per ton on the usual London ex ship terms.

WATERLOO ROUND FEEDING CAKES, £6 10s 0d PER TON. WATERLOO ANGLO SHAPE 97 PER CENT. PURE LINSEED CAKES, £9 7s 6d PER TON; WATERLOO 97 PER CENT. PURE EGYPTIAN COTTONSEED CAKES, £4 15s 0d PER TON. ALL F.O.R. HULL.

MOLASSINE FEEDING MEAL, packed in bags, of 1½cwt. each. Price per cwt., 7s. 6d. Price per ton, £6 15s., on rail at works, Silvertown, Essex, and F.O.R. Liverpool. A sample lot of 6cwt., in 4 bags of 1½cwt. each, delivered free to any station in England on receipt of remittance for £2 11s 0d

THE BALTIC.

The Term market being weaker, and America being weaker, the Baltic is not an easy market for cargoes arrived, on passage, or for future shipment. Red winter wheat is quoted at 28s. 6d. for No. 2 hard, 29s. 3d. for No. 2 red, while No. 1 northern spring is at 30s. 5d. per 500lb. for April, June, and August delivery and for shipment in the same months. The sales of cargoes have included fine Manitoba at 29s. 3d. on passage, and 28s. 9d. for April shipment; soft red Calcutta at 29s. for April, and 28s. 9d. for May shipment; common (No. 2 northern) Manitoba at 27s. for May, and 26s. 9d. for June shipment; South Australian at 27s. 9d. on passage; New South Wales at 29s. 3d. on passage; Argentine at 29s., April shipment; Californian at 30s. arrived, 30s. 3d. on passage, and 29s. 3d. for prompt shipment; and Oregon at 29s. 6d. for April shipment. These prices are, on the whole, not so good as those given a week ago.

Maize is offered at 22s. 6d. per 500lb. for April shipment from Russia, so that 22s. per 480lb. is no longer obtainable. Cargoes of sound maize are cheaper on the week, but the damaged stuff offered at low prices earlier in the month having disappeared, the mean level of value looks higher.

Barley cargoes fetch 25s. for good Californian, while common Roumanian come at 18s. 6d. per qr. Oats are quoted 19s. 3d. for white Gothenburg, 17s. 9d. for Roumanian, and 17s. 6d. for Turkish. Indian peas (green) are offered for April shipment at 23s. 6d. Other cargo sales include Argentine linseed at 48s. 6d., Calcutta linseed for June shipment at 51s., and Cawnpore brown rapeseed at 37s. 9d. per qr.

The arrivals of grain and seed laden vessels at ports of call since last review have been six, as will be seen by the following table:—

CARGO.	Total.	Calif. and Oregon.	Chili, Aust. & N.Z.	Sundries.	Total Last Week.	Total since January 1, 1902.	Total same time 1901.

STOCK AND SHOW NOTES.

By Herdsman.

Messrs. John Thornton and Co. will conduct two important shorthorn sales in Gloucestershire on the last two days of April, the animals to be offered being the property of the Right Hon. Lord Sherborne, Sherborne, and Mr. James T. Hobbs, Maisey Hampton, Fairford, which is a pleasant drive of ten miles from Sherborne. The first sale will be held at the Home Farm, Sherborne Park, on April 29, the catalogue comprising 35 pure-bred cows and heifers, and 10 bulls. Sherborne, a beautiful and well wooded estate above the River Windrush, on the Cotswold Hills, has been the home of good Shorthorns since about the year 1840, when purchases were made from the great Wiseton and other herds in Nottinghamshire, bulls of Mr. Wilkinson's, of Lenton, and Earl Ducie's blood being used. This herd was dispersed in 1848 at an average of £30 9s. for 77 head, and laid the foundation of several first class stocks. In 1884 several animals were purchased by the Hon. R. H. Eden, then agent, at the Chipping Norton sale, where Miss Barnett's herd, removed from Costylost, Cornwall, was dispersed. Among these were descendants of Mr. Chas. Colling's Old Daisies and Mr. Maynard's Floras, which now comprise about a dozen head. This old Flora tribe bred many excellent animals, especially in the late Rev. T. Staniforth's and Mr. J. P. Foster's herds in Cumberland, and were good milkers and breeders.

When Mr. Gray became agent to the Sherborne estate these animals were carefully selected and improved by the use of first class bulls. Several of the best cows were sent to Mr. Geo. Freeman's prize bull Wiltshire Star 63565; to Mr. R. Singer's Chorister 76351, bred by Mr. Duthie, a son of that famous bull William of Orange, and to those celebrated sires selected at great cost by Mr. R. Garne in Aberdeenshire for the Aldsworth herd. Scottish Chief 67883, descended from an old herd in Lincolnshire, by Mr. Cruickshank's Royal James 54972, was purchased at Birmingham and used four seasons. He proved an excellent sire and was followed by his son Sherborne Duke, from Duchess of Sherborne IX., a very fine cow and great milker. Scottish Monarch 77828, bred by Mr. W. Duthie, is now in service; he is a remarkably even, deep red, thick, fleshed bull, and is the sire of some beautiful young stock, some of which have been shown with success at the Gloucestershire local shows.

Mr. J. T. Hobbs's extensive herd of pure-bred dairy Shorthorns at Maisey Hampton was established just half a century ago, and comprises about 180 head. At the sale to be held on April 30, it is proposed to offer about 30 young cows and heifers and 20 young bulls; the former are all just about in full profit, some having calved and others being nearly due. They have been selected for their state of breeding, and not with regard to pedigree or merit, but are a good representative lot of beautiful young animals from one of the most profitable herds in the country. They are mostly of those fine old tribes established by Mr. Hobbs's father from old Gloucestershire breeders, and are full of Bates blood.

The bulls, which are also for unreserved sale, range from about 12 to 17 months old. They are a particularly good and striking lot, by first class sires, many of them being by Councillor 72264, bred by her late Majesty the Queen at Windsor. The others are by New Year's Gift 77323, bred by Mr. W. J. Hosken in Cornwall. This famous bull won first prize at the B. W. E. Show at Bath, and a second at the R. A. S. E. at York, 1900; he was by Treforrest, the sire of most of Mr. Hosken's prize winners, from that beautiful cow Countess of Oxford XIV., who was also exhibited at the R. A. S. E. Show at York, where she was the first and champion prize cow. The cows and heifers are in calf to one or the other of these two excellent sires, or to Near Go 79473, a bull of great scale and rare quality bred by Messrs. Garne, of Aldsworth. Full particulars of this and Lord Sherborne's sale can be had on application to Messrs. J. Thornton and Co.

The death has been announced, at the age of 49, of Mr. Cadwallader John Bates, of Langley Castle, Northumberland, a well-known antiquary and the author, among other works, of histories of Northumberland and of the Mediæval Border Towns. He was a great-nephew of Mr. Thomas Bates, of Kirklevington, and early in 1897 produced an important work, which has taken a foremost place among Shorthorn literature, viz., "Thomas Bates and the Kirklevington Shorthorns, a Contribution to the History of Pure Durham Cattle." This publication alone was sufficient proof of the author's literary ability, and many agriculturists whose pleasure to-day is in the breeding of pure Shorthorns are indebted to him for this interesting history, setting forth the methods and showing the life work of one of the great pioneers in the breeding of the "Improved Shorthorn." As a breeder himself, Mr. Bates naturally inclined to those strains of blood made famous by his worthy ancestor. His herd, though not large, contains some good specimens of the Red Rose, Oxford, Waterloo, Wild Eyes, Barrington, and Darlington tribes, and most of these are sired by bulls of similar breeding. Recently, however, fresh blood has been introduced by the use of Count Waterloo 74310, a bull of Mr. Duthie's breeding, which, although tracing on th dam's side to the Waterloos, is a son of Count Arthur, who was by Mr. Willis' famous sire, Count Lavender.

The entries of cattle received for the Royal Dublin Society's spring show at Ball's Bridge on Thursday, April 15th, and three following days, number more than those of any previous years, the total, including the milking list, being 1,059, as compared with 919 in 1901. The entries of the favourite Shorthorn breed number no fewer than 552, as against 480 last year. The entries of the other breeds are as follows, the totals of last year being given in parenthesis:—Herefords, 123 (94); Aberdeen-Angus, 207 (176); Red Polled, 13 (11); Kerry, 42 (42); Dexter, 50 (42); Jersey and Guernsey, 42 (42); Ayrshire, 7 (11); dairy cattle, 11 (11); extra stock, 2 (5); milking test, 10 (5). It will be noticed that in only one section—that for extra stock—is there a falling off, whilst most others show an appreciable increase. In the eight classes for breeding swine, white and black breeds, there are 57 entries, against 48 last year, and the money prizes, which have lately been increased, are very considerable. It should be noted that in this section of the show all swine receiving a prize or commendation will be eligible for registration in the Royal Dublin Society's register for swine suitable for Ireland. Butter will make a fine show, there being in this section 265 entries, whilst of eggs there are 39 entries. The entries of horses not yet having finally closed, details of these must be deferred until another issue.

With the object of improving the horses of Felixstowe, a local Horse Parade Society has been formed, having for its president Lord Rendlesham, and for its vice-presidents Captain Pretyman, M.P., and a number of gentlemen resident in the locality. The committee is composed of Messrs. W. Temple (chairman), E. Durrant, S. L. Harlock, J. W. Everett, E. G. Everett (hon. treasurer), and G. H. Cocke (hon. secretary). It has been decided to hold a parade at Felixstowe on June 25th, open to horses, cobs, ponies, and donkeys owned within the Felixstowe and Walton Urban District, or within eight miles radius of Trimley St. Mary's Church. Upwards of £30 will be given in prizes amongst 16 classes.

Mr. Hanbury, President of the Board of Agriculture, speaking at Preston on Thursday, referred to the growing responsibilities of the nation and the competition we now had to encounter with other countries. We could not afford, he said, to have a single child uneducated. We wanted all the talent we could summon to our aid. We must pave the way for talent and merit. The day of patronage was past. He decried mere book knowledge, saying that our children must become, not mere second-hand clothes of other people's knowledge, but an inventive race, which could use to some purpose its own brains.

The SHIRE STALLION shown above is BIRDSALL MENESTREL, 19,337, a two year old bay by Menestrel, 14,180, out of Birdsall Darling, 22,925, bred by Lord Middleton, Birdsall House, York, and now the property of Lord Rothschild, Tring Park, Herts. At the Shire Horse Society's recent show Birdsall Menestrel won Frst Prize in his closs, the £20 cup for the best stallion in the younger classes, and was reserve for the Stallion Championship. At the same Society's show of 1901, he was third in the yearling stallion class, being then exhibited by Lord Middleton; whilst he was shown at the Royal Show at Cardiff by Lord Rothschild, and won a First Prize.

Peterboro' Spring Stallion Show.

The annual parade of shire, hackney, and thoroughbred stallions, under the auspices of the Peterboro' Agricultural Society, was held on Saturday last in the recreation ground adjoining the Cattle Market. The weather proved very favourable, and a good attendance of breeders and farmers were seen at the ring sides, the larger number being round the heavy horse ring, though there also appeared to be more than the usual number looking on whilst the light horses were being judged.

Thoroughbred stallions were first in the catalogue, and these were to have been judged by Mr. Bradley, of Uffington, who, however, was unable to officiate, and so Sir Gilbert Greenall, who was the appointed hackney judge, performed the duty in both these sections. Six thoroughbred stallions were catalogued, and Mr. Edward Hawke's well-known fifteen-years-old mare, Old Coin, who has been the recipient of several King's Premiums, was selected for the first place. He is by Hermit and Galopin Hood, and looks like getting weight-carriers or carriage horses. Mr. H. Martin's Upsieon, who has competed at Peterboro' for several years, was Sir Gilbert Greenall's second choice, and a good, useful horse he is, getting good stock, and he, too, is not a stranger at the Agricultural Hall. Mr. Thos. Constable's Bentinck, a ten-years-old by Donovan, and of Sterling Blood on dam's side, a good quality stallion, though not any too strong in substance, was recommended. Mr. Guy Fenwick's Prince Barcaldine from the Hermit dam St. Olave, and got by Barcaldine, a horse of superb quality, stylish, and with beautiful points, was also highly commended.

Hackneys.

Seven of these were down in the list, but one or two were absent, and of the contestants the judge's selections for premier position was Mr. P. J. Heaton's Society Swell by Pilot 2nd, a good quality stallion and level goer, covering a good deal of ground. The second horse, and that several would have preferred, was Mr. John Powell's well-known stallion, Rosellan by Rosador. He was in very good form and carrying himself well, with his build and substance, as well as action. He is altogether a very good class of hackney. The executors of the late Mr. Thos. Wing's Danegelt's Surprise, a horse with a good deal of substance about him, standing on good feet and moving well, was given the second card. Mr. W. J. Robb exhibited Active Forest King, a capital horse by Forest King, and carrying a lot of substance, a strong horse, fitted for getting some good moving harness horses, and was highly commended. One or two other useful stallions were shown, including Mr. Quadling's Mariner by Rufus, a big horse with good feet, and a good deal of bone that looks like getting horses of the saleable kind.

Shires.

These were judged by Mr. W. Hawkins and Mr. C. R. Chamberlain. The classes were scarcely as strong and good as usual, but several very good stallions were present. The older class (four-years-old and upwards) contained six entries, of which four or five were hardish nuts to crack. Messrs. Forshaw and Sons, King Holt, however, was a very difficult horse to get by; he is big and well built and also possesses immense bone of very good quality, and also moves with freedom. It was therefore impossible to place him anywhere but at the front. Another wonderfully good horse followed in Mr. P. A. Muntz's Watnall Merry Lad by Merry Lad, who, since he took a commended at Islington the other week, has taken the first premium for the West Staffordshire Society, and was at Peterboro' placed second. He moves in very good style, and his great substance and size a capital class of stallion. The third prize went to another very good horse, Mr. John Russell's Bury Premier Duke by Harold, who was looking very well, and is a well put together horse and good all round stallion. He could not, however, get before such strong opponents. Messrs. Forshaw and Sons' was highly commended, the Eastern Emperor, a very good horse, bred by Mr. Howell and got by Blythewood Conqueror. He stands in very good feet, and puts Mr. James Hay's Buscot Cedric by Lord Arthur, another horse standing well on his legs, and put together properly was also highly commended, and Mr. Russell's second entry Buy Blood Royal also looked remarkably well, so that the class, though weak numerically, was very strong as regards calibre.

The three-year-old class was stronger all round, and some half dozen very good colts were doing battle here. Mr. J. P. Cross's London winner and second for the junior championship, however, was easy winner. He seems to have developed a lot since London, and with his capital legs and quality, as well as substance, will take a great deal of beating. Next to him stood Mr. P. A. Muntz's Dunsmore Kipling, a big and good class black horse by Jeroboam out of the good mare Dunsmore Elegance, and Mr. W. Richardson procided a very good colt and promising as a sire in Normoor Statesman, bred by Sir James Blyth and got by Blythwood Conqueror, who was placed third. He is big, and has good back and limbs, as well as standing nicely in the field. Another famous colt from the same stud was sent by Prince Harold, was recommended, whilst Mr. Gee and Mr. A. Ransom were each highly commended for very useful colts indeed got by a very weighty good hunter horse, was

The two-year-old class was a very weak one every way, the first prize going to Commodore, shown by Mr. P. A. Muntz and bred by Mr. Parnell. He was a high priced purchase at Mr. Parnell's sale last autumn, and has stood well since. Mr J. P. Cross came second with another colt, well balanced, cut, and good in his quality got by Blythwood Emperor, Mr. Simpson's Extra Heirloom, a very weighty good hunter horse, was placed third, and Mr. Thos. Stokes was recommended for Danesfield Taxpayer, a nice quality colt by Traitor. The championship was then decided, the honour going to Mr. J. P. Cross's three-years-old Lockinge Forest King, and the second to Mr. P. A. Muntz's Commodore.

Judges.

Hunters': Mr. Thos. Bradley, Uffington, Stamford. Hackneys: Sir Gilbert Greenhall, Bart., Walton Hall, Warrington. Shires: Mr. C. R. Chamberlain, Riddings Farm, Alfreton: Mr. Wm. Howkins, Hilmorton Grounds, Rugby.

Prize List.

CLASS I. (given by the Society).—To the owner of the best thorough-bred stallion or stallion by a registered hunter sire, of any age, suitable for getting hunters, £10; second prize, £5.—1, E. Hawkes, Brampton, Huntingdon (Old Coin); 2, H. Martin, Sewstern, Buckminster, Grantham (Upsilon); h. c., Guy Fenwick, North Luffenham Hall, Stamford (Prince Barcaldine); r., Thos. Constable, Stud Company, Castle Bytham, Grantham (Bentinck).

HACKNEY STALLIONS.

CLASS II. (given by the Society).—To the owner of the best hackney stallion, of any age, £10; second prize, £5.—1, R. G. Heaton, The Ferry, Chatteris, Cambs (Scoreby Swell); 2, John Rowell, Bury, Huntingdon (Rosellan); h. c., W. J. Robb, Burnt Fen, Mildenhall, Suffolk (Active Forest King); r., the Exors. of the late Mr. Thos. Wing, March, Cambs (Danegelt's Surprise).

CLASS III. (given by the Society)—To the owner of the best shire stallion, four years old and upwards, £10; secon prize, £5; third prize, £3.—1, Messrs. J. Forshaw and Sons, Carlton-on-Trent, Newark, Notts (King Holt); 2, P. A. Muntz, M.P., Dunsmore, Rugby (Watnall Merry Lad); 3, John Rowell (Bury Premier Duke); h. c., Messrs. J. Forshaw and Sons, Carlton-on-Trent, Newark, Notts. (Eastern Emperor); James Heys, Yaxley, Peterborough (Buscot Cedric); r., John Rowell, Bury Huntingdon (Bury Blood Royal).

CLASS IV. (given by the Society).—To the owner of the best shire stallion, foaled in 1899, £10; second prize, £5; third prize, £3.—1, J. P. Cross, Catthorpe Towers, Rugby (Lockinge Forest King); 2, P. A. Muntz, M.P., Dunsmore, Rugby (Dunsmore Kipling); 3, Wm. Richardson (Normoor Statesman); h. c., Thos. Gee, Thorney, Peterborough (Wrydelands Surprise); A Ransom, Hitchin, Herts (Blythwood Convoy); r., Wm. Richardson, Doddington, Cambs (Normoor Victor).

CLASS V. (given by the Society).—To the owner of the best shire stallion, foaled in 1900, and eligible for the Stud Book, £8; second prize, £4; third prize, £2.—1, P. A. Muntz, M.P., Dunsmore, Rugby (Commodore); J. P. Cross, Catthorpe Towers, Rugby (Conqueror's Boy); 3, R. Simpson, Wilbarston, Market Harborough (Exton Heirloom); r., Thos. Stokes, Warmington, Oundle (Danesfield Taxpayer).

CHAMPION PRIZE.—To the best shire stallion, in any of the classes—The Society's Silver Medal, Mr. Cross's Lockinge Forest King; r., Mr. Muntz's Commodore.

The Shire Horse Society's Gold Medal.—Mr. Cross's Lockinge Forest ing; r., Mr. Muntz's Commodore.

To the breeder of the winner of the gold medal, £5 (given by the Shire Horse Society).—Lady Wantage.

Norwich Stallion Show.

The Norfolk Agricultural Society's Annual Spring Show of Shire and Hackney Stallions was held on Saturday at the Agricultural Hall, Norwich, when the number of entries of shires was the largest on record, viz., 23, the Hackneys being the same as last year—18. The attendance of spectators was very large and a decided improvement on that of last year, when, however, the weather was very rough, whereas on Saturday it was most favourable. This undoubtedly accounted in some measure for the increased attendance; still, the show is the first, and the most important on the list of exhibitions of its kind in the eastern counties. And it grows every year in the appreciation of those interested in the breeding and rearing of high-class animals. The judges were:—Shires: Mr. T. B. Freshney, South Somercotes, South Lincs.; and Mr. Joseph Paisley, Sandy Hants. Hackneys: Mr. Phil. M. Browne, Fornham, Bury St. Edmund's; and Mr. Alfred Craggy, Newbald, Brough, Yorks.

The first class in the catalogue was for Shire stallions four years old and over, and they numbered 12, three of the 15 entries failing to put in an appearance. They formed a grand collection, amongst them being some that held their own at the Shire Horse Society's Show. Mr. R. Walpole Palmer, Swafield House Stud Farm, North Walsham, carried off the premier honour with Burston Pride, 16574, a fine bay by Fear None, which was a prize-winner at the recent exhibition at the Agricultural Hall. The second prize went to Madresfield Thumper, 17463, a massive well-formed grey, exhibited by Mr. Richard Allen, St. Germans. Mr. E. S. Gowing, Great Melton, was awarded third for Watnell Prince Harold II., 16458, by Prince Harold, a well-made brown, while the fourth was awarded to Duncan III., son of Albert Edward, belonging to Mr. E. S. Stock, by no means a stranger to the prize ring, and he has brought a whole list of honours to the Stud Farm, Bradfield, Manningtree. He was rather unlucky on Saturday in being unable to appear in the ring in his old form, having met with an accident which made him limp somewhat. D'Arcy Royal Harold, 17920, a bay, shown by Mr. Henry Bultitoft, was reserved and highly commended. The next class was for three-year-old Shire stallions, and here again there was a fine array, eight grand animals coming into the ring. Blythwood Ray, 18535, a very handsome son of the celebrated Blythwood Conqueror, caught the eye of the judges, who placed him first. Blythwood Ray, a dark bay 17 h.h., was bred by Sir James Blyth, Bart., and was purchased for 300 guineas at this year's Shire Horse Show at Islington, by Mr. Trenham J. Cresswell, Aldeby Grange, Beccles. The second prize in the class went to Bodenham Sherlock, 18540, a dark bay sire Sheriff, exhibited by Mr. Horace Westrup, Heckingham Lodge; Mr. Alfred Lewis being awarded third for his Heacham Conqueror, by Pratt's Pirate King. Then came the tussle for the championship, which excited the greatest possible interest. The contest lay between Mr. R. W. Palmer's six-year-old Burston Pride, the winner in the first class, and Mr. Trenham J. Cresswell's Blythwood Ray, the winner in the three-year-old class. The judges were unable to agree, and Mr. Alfred Craggy, one of the Hackney judges, was called in as umpire. This gentleman decided in favour of the younger horse amidst a demonstration on the part of the lookers-on which showed that the awarding of the special, for the best Shire, to Blythwood Ray, was a popular verdict.

The Hackneys were without exception of a style and character worthy of the county, which has a world-wide reputation for its trotting cobs. In the first class, which was for stallions, four years old and over, above 15 hands high, there was a sharp fight between Leyswood Speculation, 7155, chestnut, foaled 1897, sire Speculation, exhibited by Mr. Alfred Lewis, Heacham, and Generosity, 5634, another chestnut, by Danegelt, shown by Mr. Garrett Taylor, Trowse House Norwich. The services of Mr. John Rolfe, Carleton Forehoe, had to be invoked, and this gentleman gave the premier honour to Leyswood Speculation, which was sixth at the Hackney Show at Islington this year in a class of 42. The third prize was awarded to Mr. R. W. Palmer's Brompton Hero, 7379, by Garton Hero. There was a corresponding class for stallions four years old and over 15 hands high and under, and here five good movers showed themselves off to advantage. Manifred, 5301, a chestnut, foaled 1893, by Connaught, exhibited by Mr. E. C. Chapman, Alethorpe Stud Farm, Fakenham, took the first place, a position assigned to him last year; whilst the second honours fell to Mr. F. Childerhouse's Sir Herbert, sire MSS., which took first at Dereham last year, as well as in 1900.

There was a grand lot of three-year-olds, and as one or two had come fresh from the London Show, and were pitted against each other, the greatest interest was manifested in the judging. The winner was eventually found in Mr. Joseph Morton's Gold Galore, 7460, by Goldfinder VI., an upstanding chestnut of the stamp likely to find favour in Norfolk. Chestnut, by the way, was rather the prominent colour in the ring, and the second prize was assigned to another, Sedgeford Gay Lad, by Rosador, exhibited by Mr. John N. Anthony, Sedgeford. This horse, too, showed the good points of a Hackney in style and character. Prince Langton, 7958, a very handsome dark brown, by Garton Duke of Connaught, attracted a good deal of notice as a new comer into the district. He was purchased by Mr. E. S. Stock, of Bradfield, of Mr. T. Hall, Langton, after the Islington Show, where he had secured third honours in a big class. He took a like position on Saturday, his action, symmetry, and style being much admired. Then followed the contest for the Hackney Society's silver medal for the best Hackney. It lay between Mr. Chapman's Manifred and Mr. Morton's Gold Galore. The choice fell upon the former, who also took the special prize offered by Colonel E. P. Mackenzie, as the best sire for producing high-stepping cobs, an honour that has been conferred upon him five years in succession. Mr. Garrett Taylor's Generosity was the reserved animal.

PIGS.

Sale of Large Blacks at Ipswich.

The third annual sale of Large Black pigs at Ipswich was held on Friday, the auctioneers being Messrs. Spurling and Sons, in conjunction with Mr. Ernest Prentice, the secretary of the Large Black Pig Society. The importance attached to the sale was evidenced by the very large attendance of breeders from all parts of the country. The catalogue contained about 100 lots, and the number would undoubtedly have been much larger but for the active demand which has sprung up for the Large Blacks, not only at home, but abroad. The list of consignors included gentlemen who have not only formed herds, but have been active members of the Large Black Pig Society, a prosperous organisation, which is evidently doing very much to popularise the breed. Mr. Godfrey Hempson, in opening the sale, said a very nice lot of swine had been penned. The numbers were rather short compared with previous years, due in a measure to the fact of there not being so many young pigs consigned. He thought they would agree with him that they had on that occasion some fine specimens of the breed of Large Blacks from the best herds in the district. It was satisfactory to know that there had been a great demand for this class of animal, not only in this country, but from abroad, purchases having also been made during the last six months for New South Wales, Tasmania, Austria, and Spain. He might mention that in connection with no other class of pigs had there been so many animals registered within the short time that the Large Black Pig Society had been established. As a matter of fact, there were owners of registered herds in no less than twenty-three counties at the present time. Mr. M. G. Hale (Claydon) sent four sows farrowed in April, 1901, which stood first in the catalogue; two, by Hinton Duke, made 6½gs. and 6½gs. respectively, to Mr. Silvester Sills (Warwickshire), while Mr. M. M. Mitchell (Ipswich) secured another by the same sire at 5gs.; but the pick of the bunch was Lot 4, which went to Mr. J. Aldam (Derbyshire) at 8½gs. A sow farrowed in July of the same year, sire Tunstall Black Boy, sent by Mr. John Goddard, of Tunstall, went to Mr. Mitchell for 5gs. There was a large collection of gilts. Eleven were sent by Mr. Thomas Goodchild, of Great Yeldham; three, farrowed in June, by Black Akenham, made £4 10s., £4 10s., and £4, to Mr. Sidney Traylen, Mr. Harper Dobson, and Mr. Ruffel; while the next four, farrowed a week or two later, ranged from £5 to £3, the purchasers being Mr. S. R. Sherwood, Mr. A. E. Hart (Saffrom Walden), and Mr. Jewers. Another was secured by Mr. W. Freeman at 4gs. Mr. John Goddard (Tunstall) had two gilts, farrowed in July, 1901, both of which were taken by Mr. Aldam at 5½gs. Mr. G. P. Watkins (Culpho) consigned a nice gilt, farrowed September, 1901, by Culpho Black Prince, which fetched 7½gs., others making 4¾gs., £3 5s., and £3, the buyers including Messrs. J. and H. Robinson (Sussex), and Mr. Dawson. Five belonging to Mr. A. H. Cobbald (Elder House, Bury), by Eldo Baron, realised £4 5s., £4, £3 15s., and £3, to Mr. Freeman, Mr. Brook, Mr. Ruffel, Mr. Robinson, and Mr. Jewers. The boars were next offered, Mr. Ernest Prentice wielding the hammer. Mr. C. W. Haward, of Wenham, sent a nice animal, farrowed in May, 1901, bred by Mr. A. H. Cobbald, of Eldo House, sire Offton Nablan, which was secured at 9gs. by Mr. S. R. Sherwood. Tunstall Black Joe, by Tunstall Black Boy, sent by Mr. John Goddard, sold for 6¾gs., to Mr. J. Thistleton Smith (for Mr. E. F. Quilter). Two boars sent by Mr. S. T. Traylon made 5gs. and 5½gs. These were the best prices. The other consignors included Mr. R. Eaton White, Messrs. W. Brooks and Sons, Mr. A. S. Mann, Mr. A. J. Burgess (Braham Hall), Mr. Percy Turner, and Mr. E. F. Quilter.

Malton Palmsun Entire Horse Show.—The annual show of entire horses intended to travel the district in the current season was held at Malton on Saturday. The best show of thoroughbreds was made from the Birdsall Stud—and, in fact, of Shires as well, for in both classes Lord Middleton had no fewer than a dozen good horses forward. Both Lord and Lady Middleton were present at the show. The blood horses from Birdsall were the ex-Queen's premium sire Hindley, Thurio's son Red Eagle, and a recent purchase of his lordship's, Wales, a light chestnut, with good quarters, standing 16 hands. Though named Wales, he is far better known on the Irish racecourses. Coachers and Cleveland sires were, as usual, few and select, but there were half-a-dozen useful ones. Mr. George Scoby, of the Beadlam Grange Stud, showed two taking youngsters in Beadlam Prior (a Cleveland) and King of Beadlam) a real Yorkshire coacher, by King Frederick), the latter well known in the prize ring. Mr. Kitching's (Pickering) raking brown horse was also present, and one or two others helped to make a better show of coachers than usual. Shires and agricultural stallions generally were the smallest show seen at Malton for some years.

Mr. Cole Ambrose's Shire.

On Wednesday Messrs. Sexton, Grimwade, and Beck disposed of between fifty and sixty Shire horses, the property of Mr. Cole, Stuntney Hall, Ely. The stud is very well known, as is also its owner, who is one of the largest horse breeders in the country, his stud of Shires and Hackneys consisting of over 300 animals. A very successful sale of animals from this stud was held several years ago. On that occasion the attendance of buyers was very large, and so it was again on Wednesday, when between 400 and 500 visitors partook of the excellent luncheon which preceded the sale. As to the animals offered, it may be said that they were nearly all bred by the owner, and were brought out in capital condition. The old Fen strains, for which the district is famous, were well represented, coupled with the best Derbyshire blood, several of those coming into the ring being out of mares by Derbyshire Lad. Mr. Arthur C. Beck, who wielded the hammer, in opening the sale, observed that every animal coming into the ring would be submitted without reserve. It was not often that there was a sale at which so many horses came into the ring which were all bred by one owner. It was, therefore, essentially a breeders' sale, and he (Mr. Beck) trusted that it would prove highly satisfactory. Some very good prices were realised, 100 guineas being exceeded on three occasions. The top figure of the sale was 150 guineas, which sum Mr. G. Cooper Chandler had to bid before he could get the four-year-old mare Stuntney Priscilla, a bay by Thicket Result. The next highest price was 130 guineas, and this was paid by Mr. Newton Jackson for the brood mare Stuntney Lady II., a black foaled in 1897, sire Ely Harold; whilst Mr. Crompton Roberts paid 110 guineas for Stuntney Griselda II., a chestnut brood mare, foaled in 1897, by Stuntney Marmion. A full list of the other animals sold, together with the prices realised, purchasers' names, etc., is appended:—

Good Prices for Shires at Peterborough.

A three days' sale of pedigree Shire horses was held at Peterborough Repository last week, by Messrs. Secton, Grimwade, and Beck. The first day was Thursday, when about 100 stallions were offered. The animals were from well-known studs, among those sending consignments being his Majesty the King, the Earl of Ellesmere, Lord Bolton, Lord Middleton, Sir S. B. Crossley, M.P., Mr. Victor Cavendish, M.P., Mr. F. Griffin, Mr. John Rowell, Messrs. Freshney, Messrs. N. Lister and Sons (Doncaster), Mr. S. Proctor (Holbeach), Mr. J. Law (Doncaster), Mr. G. Sowersby (Rotherham), Mr. R. S. Hand (Wainfleet), Mr. W. Northing (Gainsborough), Mr. J. Todd (Kirby, Lincoln), etc. There was a good attendance of buyers, and some high prices were obtained. Mr. Victor Cavendish, M.P., sent Hendre Crown Prince, a magnificent bay, foaled in 1895, sire Prince Harold, and the winner of many whilst Mr. Park paid 160gs. for Mr. John Roowell's prizes. He was briskly bid for, and it was not till the figure had reached 210gs. that he was finally knocked down, the purchaser being Mr. Balderston. His Majesty the King was represented by Holdfast, a bay three years old, for which Mr. Tyzack gave 185gs. Ashby Victor, another three year old, sent by Mr. C. Faulkner, of Rugby, was bought by Mr. Fowler for 175gs., whilst Mr. Par kpaid 160gs. for Mr. John Rowell's Granford Chief, a bay foaled in 1897. Mr. F. W. Griffin's Boro' Tom, a bay two-year-old, went to Mr. Parnell for 155gs., and Mr. J. Bradley's Halstead Harold, a brown two-year-old, to Mr. Reed, for 145gs. Lord Middleton's four-year-old, Rokeby Brutus, produced 125gs., the purchaser being Mr. Hicks. A three-figure price was also attained in the case of Whaley Conqueror, a two-year-old, consigned by Mrs. M. R. Aldham, of Whaley Hall, Mansfield, Mr. Edwards being the buyer at 100gs. The other chief prices are given below.

On the second day the catalogue comprised eighty mares and fillies. There was again a good attendance of buyers, and a satisfactory trade, though no very high prices were realised. The highest price was 105gs., realised for a mare, the same sum also being got for a two-year-old filly by Menestrel, forward from Lord Middleton's stud.

Stallions.

TWO-YEAR-OLDS.

	Gs.
Whaley Conqueror, bay f. 1900 (Mrs. M. R. Aldham, Mansfield) ... Mr. Edwards	100

The Late Mr. Leonard Dodsworth's Shires.

The small stud of Shire horses established by the late Mr. Leonard Dodsworth, of Wheldrick, near York, and since in the hands of Mr. Sutton-Lowe, who is relinquishing it in consequence of being ordered to South Africa with the 3rd Lincolnshire Regiment, was disposed of by Messrs. Richardson and Pearce-Brown on Friday. A chestnut Shire brood mare by Mepal Wonder realised £54 12s.; a five-year-old bay Shire mare, Trimmer, by Thicket Hero, made £45 3s.; a four-year-old Shire mare by Lecke Pioneer reached £58 16s.; a two-year-old Shire colt by Thicket Wedger made £26 5s.; and a yearling colt by the same horse realised £17 17s.

NOTE.—The figures for the current Year are approximate only.

Herefordshire Cider Merchant Hoaxed.—Ernest Longford, cider merchant, sued S. de Wett, a Birmingham commercial traveller, in the Hereford County Court, on Tuesday, for £1 11s. 6d. for cider supplied. The plaintiff last year had a stand at the Royal Agricultural Show at Cardiff. The defendant, with some friends, called upon him, drank some cider, and, as well as one of his friends, gave an order. The defendant now said this could hardly be so, inasmuch as he was a life-long teetotaller. The whole thing was a joke. One of his friends said: "You had better send this bounder some as well," and gave his address. Plaintiff said the defendant himself gave his address. A witness called for the defence said the whole thing was a joke. Plaintiff was nonsuited.

Northumberland Agricultural Society's Bull Show and Sale.

The annual show and sale of Shorthorn, Aberdeen Angus, and Galloway cattle, held under the auspices of the Northumberland Agricultural Society, at Berwick-on-Tweed, took place on the 15th inst., under most favourable climatic conditions. The arrangement of the classes was similar to that of last year, prizes being given for two ages of pedigree animals in each of the Shorthorn and Aberdeen Angus breeds, but Galloway bulls were also brought within the prize-list this year. The total number catalogued was 123, being half-a-dozen more than last year, but twelve of the animals were not forward, and one was withdrawn, leaving 110 to dispose of. The stock passed through the ring comprised 58 Shorthorn bulls, 5 Shorthorn heifers, 23 Aberdeen Augus bulls, 15 polled heifers, and 9 Galloway bulls. The largest consigner of Shorthorn bulls was Mr. Nichol (Belford), who had five, and Sir James Miller, of Manderston, Mr. Bell (Ratcheugh, Alnwick), and Mr. Hogg (Old Graden, Kelso), each sent four; while the principal exposers in the polled section were Messrs. Glaholme Brothers (Beal), who were represented by 17 Aberdeen Angus bulls and 14 heifers. The judging was carried on simultaneously in two rings, Mr. T. H. Hutchinson (Manor House, Catterick) dealing with the Shorthorns, and Mr. H. Lindsay (Home Farm, Glamis) adjudicating upon the Aberdeen Angus and Galloway cattle. While there was nothing of outstanding merit in any of the classes, there were some good, serviceable bulls of a useful type.

There was a large attendance at the sale, but trade was rather dull and slow, and prices were low, the top for Shorthorns being 32gs., as against 40gs., last year, and for Aberdeen-Angus bulls, 28gs., the same as last year. Prices for Shorthorns were from £2 to £4 less than last year; the black polls showed a decrease of a little over £1: and the general average over the whole sale was lower by £4 7s. 6d. Only sixteen of the Shorthorns and two of the Aberdeen Angus bulls reached 20gs., while none of the Galloways made that figure. Continuing their practice of providing a certain number of pedigree bulls for the use of members at almost nominal charges, the directors of the Society expended 73gs. in purchasing three Shorthorns, including the Manderston first-prize taker at the top price of the sale, and these will be located during the season in different parts of the county.

In the class for Shorthorn bulls under fourteen months old there were 26 entries, and here Sir James Miller was first for the third year in succession, the prizes being divided between the Manderston herd and that of Mr. A. E. Nichol (Bradford, Belford). The first-prize taker was Manderston Masher, a neat red, by the Legars bull, Aspirant, a bull of great length and depth, and very fine quality. He was purchased by Mr. Bain (Legars), for the Northumberland Society, at 32gs. The fourth-prize bull, also belonging to Sir James Miller, was Manderston Master, a big, strong red bull, by the same sire. He has a deal of substance for his age, and brought 29gs., his purchaser being Mr. Rutherford (Rumbleton Law). These two bulls were awarded the special prize as the best pair of the breed. The whole of Mr. Nichol's consignment of five were by Morning Star, a bull which was first at this show three years ago. The animal from this herd placed second was Wizard, a roan of nice quality, and he pressed the first bull very closely, and made such a good appearance in the ring that he realised the same price (32gs.) which was paid by Mr. Dobie (Enzieholm). Newminster, belonging to Mr. Nichol, was placed third, and was secured for the Northumberland Society at 21gs. These two bulls got the reserve ticket in the competition for the best pair. Others entered in the class realised from 29gs. to 20gs. Only four yearling bulls, between fourteen and eighteen months, were

THE PEN OF CHEVIOT SHEEP shown above was awarded the Silver Cup for the best pen of Cheviots at the London Smithfield Club's Show last December, and also won First Prize in the class for pens of three fat wether sheep of the Cheviot breed above twelve months old. At the time of the show these animals were nineteen months old, and were exhibited by their breeder, Mr. J. McDowall of Girdstingwood, Kirkcudbright, N.B.

A political friend of mine, who has been entered, and they were just a middling lot. Mr. Cruddas (Haughton Castle) was easily first with Rose Duke, a roan by Waterloo Cherry, a useful-looking bull, which was sold at 21gs. to Mr. George Moffat (Acklington). The second prize went to Mrs. Grey (Callaby Castle), for Carley, a small but neat roan, which was taken out by Mr. Grey (Woodholm) at 18gs.; while the third-prize bull, Autumn Tint, sold at 17gs. to Mr. George Armstrong (Newcastle). In the class for bulls over eighteen months old, for which no prizes were offered, there were five animals, and prices ranged from 15gs. to 21gs., the latter sum being paid by Mr. Neüendam (Newcastle) for a two-year-old belonging to Mr. Storey (Longhorsley). The non-pedigree Shorthorns numbered twenty-three, and the best prices were obtained for two roans belonging to Mr. Thompson (Cleughbrae, Otterburn), the first-prize taker, a lengthy, well-fleshed specimen—going at 25gs. to Mr. Adamson (Kirkhill), and the other, which was placed fifth, at 21gs., to Mr. Elliot (Beechfield). Messrs. C. Trotter and Son, Ltd. (Chirnside), were second and fourth; and Mr. R. W. Stobbs (Ontchester Manor, Belford) was third. Of the five pedigree Shorthorn heifers sold the highest price was made by Albemarle Princess III., a well-bred heifer, which only brought 14½gs., and the other prices ranged down to 10gs.

Aberdeen Angus bulls numbered 23, or ten fewer than last year, and in this section Messrs. Glaholme Brothers (Windmill Hill, Beal) made a

clean sweep of the prizes with a lot of thick, typical, well-bred young bulls. There were ten animals in the class for bulls not exceeding twelve months, and six of these belonged to Messrs. Glaholme, who repeated their victory of last year with the same class of stock. The first-prize calf was Beautifier of Beal, a sweet specimen, sired by Gentleman. He sold at 18gs. to Mr. Stowart (Kilham, Cornhill). Laureate, a strong bull, by President of Benton, was placed second, and he brought 17gs., his buyer being Mr. Adams (Thornton Mains). Masterman, another of the same sire's produce, was third, and sold at 17½gs. to Mr. Patten (Park Farm, Alnwick); the fourth bul was Lodger, by President of Beal, and he was bought by Mr. Foster at 17½gs.; while Lieutenant, the bull placed fifth, and which was sired by Gentleman, made more money than any of the others, being knocked down at 18½gs. to Mr. Porter (Doddington, Wooler). In the class for bulls between twelve and fifteen months there were thirteen forward, and the Beal herd provided nine of them, four being sired by Gentleman and four by President of Benton. As has been already indicated, Messrs. Glaholme secured all the honours. Their first-prize taker was Baronet, of the same strain as the first-prize bull calf, and clearly the best male of the breed on the ground. He made 28gs., the highest price for the breed, his purchaser being Mr. John Smyth (Birgham, Coldstream) who also bought Prior, the fourth bull, at 18gs. The second-prize bull, General, by President of Benton, was purchased at the sale by Mr. Nixon (Backworth) for 24gs. The third-prize bull only brought 16gs., but other two of the lot sold at 18½gs. each. The special prize for the best pair of bulls was awarded to the first and second-prize takers in the older class. A class was provided for bulls over fifteen months, but there were no entries. Of the fifteen Aberdeen Angus heifers sold a dozen were from Messrs. Glaholme's herd. They sold rather cheaply, the prices ranging from 11½gs. to 16gs.

Prizes were given for the first time for Galloway bulls with the view of extending this breed in the north-east of England. They made a fairly good appearance for a beginning, there being nine in the class, which was confined to bulls not over two years old. Mr. Thomas Graham (Marchfield, Dumfries) had easily the best pair, and he was awarded the two prizes for yearlings. His first was Gold Seeker, a typical bull, sold at 15gs to Mr. J. Davidson (Woodhall). The second bull was Grave Suspicion, bred by the Earl of Galloway, and he realised 16gs., his buyer being Mr. Black (Ford Westfield). The other consigners in this class were Earl Grey (Howick), Mr. Fenwick (Berryhill, Norham), and Mr. Marshall (Chatton Park, Belford), and their prices ranged from 10½gs. to 14gs.

The total proceeds of the sale amounted to £1,649 3s. 1d., for 110 animals, as compared with £1,957 14s. 6d., for 101 head of stock, last year. The general average of £14 10s. 10d. compares with H19 7s. 8d. obtained last year.

The Aston-Clinton Sale of Jerseys.

An important sale of Jersey cattle was held at Aston Clinton on Thursday by Mr. Thornton. It included all the prize winners recently exhibited by Lady de Rothschild, among which were many very beautiful specimens. During the year 1901, 16 first and 22 other prizes had been won by the herd, besides which the milk records printed in the catalogue were an additional attraction to buyers. The average of milk yielded by the 34 cows in the herd last season was 569 gallons, from which it will be seen that in this herd at least it has been found possible to combine the two great attributes of the Jersey—beauty and utility. Notwithstanding the inclement weather, a large number of breeders and fanciers were present, and the sale resulted in high prices, that must have been very encouraging to all concerned. The well-known cow, Carol, made the highest price realised at a public auction for many years. After an exciting competition she fell to the bid of Mr. Miller Hallett at 210 gns. Mrs. Ratcliff purchased Lady Rowena, the first-prize cow at the London Dairy Show, at 105 gns.; and also Coralie, a two-year-old heifer, that has not yet been exhibited, at 115 gns.; whilst Wild Rose, a first-prize winner at Tunbridge Wells, brought 110 gns. from Sir Thomas Gooch. As will be seen from the sale list given below, there were many other high figures, and the average of nearly £40 was reached for 56 head:—

COWS AND HEIFERS.

Sale of Mr. J. E. Platt's Red Polls.

This sale, which had long been spoken of by breeders of this fine old Eastern Counties' breed of cattle, took place on Wednesday last at Howbury Park, Bedford. Mr. Platt has always been a great admirer of these choice cattle, and when Mr. J. J. Colman's celebrated herd was dispersed some years ago he purchased several of the highest-priced lots, including the bull, Champion 5370, who was the winner of seven firsts and two champion prizes. They were first taken to Bruntwood, and afterwards to Howbury. The stock were in beautiful condition. Milk records had been kept for some years, and many of them had been successfully exhibited at the various shows. There was a large company round the farm all the morning, and the grand lot of cows and yearlings were greatly admired.

After the customary luncheon a move was made to the ring side, where many well-known faces were noticed. Lots 1 and 2 made respectively 41 gns. and 31 gns.; and lot 3, Brinhilda, 64 gns., was the first of several to be purchased for Mr. S. A. Converse, of U.S.A., as will be seen from the sale list. Good prices continued to be made for the cows, the principal purchasers being Lady Lonsdale, Lord Radnor, Lord Rothschild, Sir W. Corbet, Sir T. Gooch, Sir Oswald Mosley, Hon. W. F. Smith, and Mr. Garrett Taylor. For lot 30, Sleeping Beauty, a well-known show heifer, winner of five first prizes, Lady Lonsdale's representative gave 260 gns., as well as 80 gns. for the heifer calf, Sweet Rose, lot 41. The bulls also met with a ready demand, the same high price (260 gns.) being given by Sir Thomas Gooch for the two-lear-old bull, Pistol 8558, who was sired by Champion, and won first and reserve for the champion prize at Cardiff last year. An average of over £56 was obtained for 50 head. The auctioneers were Messrs. J. Thornton and Co. We give below a sale list:—

COWS AND HEIFERS.

	Gns.
Red Dolly (N 2) 8907, c Jan. 22, 1893; s Red Prince 2902 ... Lord Radnor	41

Bull Sale at Perth.

Messrs. MacDonald, Fraser, and Co., Ltd., held their special sale of pedigree and non-pedigree Shorthorn and Aberdeen-Angus bulls, cows, and heifers, at Perth, on Wednesday. The entries were larger than at the corresponding sale of last year, comprising 109 animals, and with a large attendance of buyers a capital demand was experienced for Shorthorns and for the best class of Aberdeen-Angus bulls. Small fleshless sorts

were, however, more difficult to sell than at the annual sale a month ago. Pedigree Shorthorn bulls were selling from 24 to 30 gns.; and from 16 to 23 gns.; pedigree Aberdeen-Angus bulls from 15 to 22½ gns.; non-pedigree Shorthorn bulls from 10½ to 21 gns.; non-pedigree Aberdeen-Angus bulls from 13 to 20½ gns.; pedigree Aberdeen-Angus heifers to 16 gns.

Hereford Herd Book Society's Bull Show and Sale.

The Hereford Herd Book Society's first show and sale for this year took place on Wednesday. The Society decided to offer better prizes this year, and the result was that a much lar-er entry was received, there being four or five times as many animals in the aged and two-year-old classes, whilst the quality was also an improvement. Fortunately, fine weather favoured the proceedings, and there was a very large company present. The judges were Mr. Francis Evans, of Weston, Bredwardine, and Mr. J. H. Yeomans, of Stretton, and their awards met with general approval.

Old bulls numbered twenty-five—more than at any previous sale—and some of them were very superior animals. The biggest and best of the lot was Sultan, a grand five-year-old son of Majestic, the property of Mr. Bennett, and he was awarded the first prize. On being weighed he scaled 22cwt., but as he had been putting on flesh lately his owner thought he would have gone even a little heavier. Mr. Bennett bought him at the 1899 sales, when he headed his class on that occasion. The second-prize bull was the heavy-fleshed six-year-old General, sire Buckton Thumper, bred by Mr. Nott (Buckton Park). There was also a third prize, which was awarded to Newdigate, a well-known prize-winner at the Royal and other shows. Highly-commended tickets were awarded to the Leen-bred Lysander, belonging to Mr. J. Bounds and to Lord Coventry's Primate; and a commended was given to Mr. J. P. Evans's Monitor, bred by Major Heygate. Thirty-eight very useful animals were forward in the class for two-year-olds. The quality was pretty even, but the best for scale and quality was undoubtedly Lord Coventry's Merman, whose sire Mercury was first at the Bath and West and second at the Royal last year. Second prize was awarded to Mr. J. R. Hill's Cadet, first at the Evesham Show but as he did not reach his reserve figure in the sale-ring he will not be entitled to the prize. Third prize was awarded to Vulcan, bred and exhibited by Mr. S. Robinson, the president of the Society, who was present at the sale when the bull was bought by Colonel Everard for his herd of Herefords at Randalstown mansion in county Meath. Mr. H. B. Evan's Pyon Dauphin was decorated with the reserve ticket. Commended's were given to Mr. H. W. Taylor's Zodiac and Mr. R. Green's Marmaduke. There were seventy-five yearlings, which varied so considerably that a recession of them was very quickly seen issuing from the judges' ring. Amongst half-a-dozen of the princes, Capt. Heygate's young bull, The Earl, took the eye readily as the best, and was awarded the prender prize of £10. He is a symmetricel deep, thick, good-coated grandson of the celebrated Champion Albion. There was eager bidding for him in the sale ring, and he realised the highest price of the sale, viz., 85 guineas. The second prize was awarded to Musketeer, a very nice young bull from the Leen herd, a son of Mortimer, who was a second Royal winner, and boasted Statesman as his grandsire. Mr. E. Caddick's symmetrical bull Kitchener, came in for the third prize, whilst Monteith, another of the Leen exhibits, took the fourth prize, and Mr. P. Coats's Paisley the fifth prize, Mr. R. W. Hall's Alexander receiving the reserved number. Mr. E. Caddick's King Edward was h.c., and commended tickets were distributed amongst Mr. H. R. Hall's Maximus, Lord Glanusk's Commandant, and Mr. E. W. Caddick's Caradoc Rouser, who was first at Lord Tredegar's show last year and has a lot of prize-winning blood in his veins.

The sale, which was conducted by Messrs. A. and D. Edwards and Messrs. H. F. Russell and son, commenced at 11.30, and though a somewhat early hour, there was a good gathering of buyers round the ring. The bidding was fairly brisk, and although orders from abroad did not very appreciably stimulate the demand, and a great many lots did not reach the high reserves placed upon them, yet there remains the gratifying fact that more animals were sold than at any previous sale. Altogether, eight animals were disposed of by the auctioneers for a total of £2,484, or an average of about £31 apiece, the account for the corresponding sale last year being fifty-four bulls sold at not quite so high an average. This is all the more satisfactory owing to there having been so many closing out sales by Hereford breeders during the last six months. It was thought that many of the usual customers at these gatherings would have supplied themselves at those out-sales and that the demand would be slow. It is evident, therefore, that more cattle-breeders are using Hereford bulls. As mentioned above, the top price of the sale was 85 guineas, paid by Mr. Edward Farr for Capt. Heygate's young bull, The Earl. This sum, it may be mentioned, has been considerably exceeded at previous sales. A list of the principal prices realised, and purchasers, on Wednesday, is given below, the name of the seller being given in parentheses after the particulars of the animal sold:—

Carlisle Bull Show and Sale

At Carlisle on Friday Messrs. Harrison and Son held a special sale of young Shorthorn and Galloway bulls, including a number of pedigreed animals. There were 250 forward. There was a large attendance, and business proved satisfactory, although prices were scarcely so high as those obtained at the first sale. The following were the chief awards and prices:—Pedigree Shorthorn bulls—1, Mr. Harris, Calthwaite Hall (sold for 32 gns.); 2, Messrs. Wood, Blencogo (31 gns.); 3, Mr. Harris, Calthwaite Hall (25 gns.). Shorthorn bulls, calved after Lammas, 1900—1, Mr. James, Manor House; 2, Mr. Mark, Kirkbampton (23 gns.); 3, Mr. Jefferson, Neal House. Shorthorn bulls, calved after Candlemas, 1901—1, Mr. Winter, Meaburn Hall; 2, Mr. Mattinson, Ireby; 3, Mr. Littleton, Arkleby Hall. Galloway bulls—1, Mr. Graham, Marchfield (20½ gns.); 2, Mr. Beattie, Mossknowe (13½ gns.); 3, Mr. Beattie (£11). White bulls, calved after Lammas—1, Mr. Adamson, Springs Farm Keswick (23½ gns.); 2, Mr. Hunter, Mosedale (23 gns.); 3, Mr. Smithson, Ireby (£22). Shorthorn bulls, calved after Candlemas, 1901—1, Mr. Hunter, Mosedale (34 gns.); 2, Mr. Mattinson, Whiecroft (34 gns.); 3, Mr. Littleton, Arkleby Hall.

Particulars of Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.

At Stokestown, Co. Roscommon, on Monday, there was a small fair, and a good demand prevailing; a clearance was effected. Prices: Calves, first class, £4 15s. to £5 5s.; second class, £4 5s. to £4 10s. Yearlings, first class, £7 5s. to £8; second class, £5 14s. 3d. to £6 10s. Two-year-olds, first class, £10 to £11 10s.; second class, £8 to £9 10s. Three-year-olds, first class, £14 to £14 15s.; second class, £10 15s. to £13. Springers, first class, £17 13s. 4d to £19; second class, £13 10s. to £13 12s.

Castleblakeney Fair (Co. Galway) was held on Monday, when there was but a small supply, and only a few local buyers present. A moderate demand was experienced for cattle in choice condition, but middling and inferior young animals were hard to sell. Springers sold at prices slightly under recent fairs. There was an average supply of sheep, chiefly hoggets; the demand was slack except for animals in forward condition, which were scarce. Ewes sold much better than wethers. Quotations: Yearlings, second class, £5 15s to £6 10s. Two-year-olds, first class, £10 10s. to £11 2s. 6d.; second class, £7 10s. to £9 10s.; third class £5 12s. 6d. to £6 10s. Three-year-olds, second class, £10 15s. to £11 10s.; third class, £8 to £9. Springers, second class, £11 to £12 10s.; third class, £8 10s. to £10. Sheep: Over 12 and under 24 months old, first class, £1 7s. 6d. to £1 8s.; second class, £1 2s. 6d. to £1 5s.; third class, 18s. 6d. to £1 1s. Two-years-old and upwards, second class, £1 11s. to £1 15s.; third class, £1 2s. 6d. to £1 5s.

The fair at Baltinglass, Co. Wicklow, held on Thursday, was an averaged sized one, at which a rather brisk demand prevailed for nice one, and two-years-old cattle at improved prices. Quotations. Calves, second class, £3 15s. Yearlings, first class, £8 to £9 15s.; second class, £6 7s. 6d. to £7 15s. Two-year-olds, first class, £11 15s.; second class, £8 10s. to £10 10s. Three-year-olds; first class, £13 5s.; second class, £10 5s. to £12 10s.; third class, £8 10s. Springers, second class, £15.

Londonderry Fair, held on Wednesday, was a small one. A good demand prevailed, except for springers, which were hard to sell. Prices:—Calves, 1st class, £5 10s. to £6; 2nd class, £4 5s. to £4 12s. 6d.; yearlings, 1st class, £7 10s. to £8 10s.; 2nd class, £5 12s. 6d. to £6 13s. 4d.; 3rd class, £3 17s. 6d. to £5; two-year-olds, 1st class, £10 to £10 12s. 6d.; 2nd class, £8 to £9; 3rd class, £5 to £6 10s.; springers, 1st class, £15 5s. to £17 5s.; 2nd class, £10 10s. to £13 5s.; 3rd class, £7 15s. to £9.

There was an average-sized fair at Kinsale, Co. Cork, on Wednesday, the supply consisting chiefly of young cattle, and demand was fair for those in condition. Prices:—Calves, 1st class, £5 10s. to £5 16s. 8d.; 2nd class, £4 to £4 10s.; 3rd class, £3 10s. to £3 15s.; yearlings, 1st class, £7 10s. to £8; 2nd class, £6 to £7 2s. 10d.; 3rd class, £4 10s. to £5 15s.; two-year-olds, 2nd class, £9 10s. to £9 15s.; 3rd class, £6 5s. to £7 10s.; springers, 2nd class, £12 15s. to £13 5s.; 3rd class, £9 10s. to 10 15s.

At Balla, Co. Mayo, on Wednesday, there was a large fair, composed chiefly of three-years-old bullocks, for which there was very good demand. A large number of buyers attended, and an early clearance was effected. There were but few sheep, which sold at a very bad price. Prices:—Calves, 2nd class, £2 15s. to £3 10s. 10d.; yearlings, 2nd class, £4 17s. 6d. to £6: 3rd class, £3 to £4 12s. 6d.; two-year-olds, 2nd class, £7 10s to £9 5s.; 3rd class, £5 12s. to £7; three-year-olds, 1st class, £13 10s. to £15 10s.; 2nd class, £11 10s. to £13; 3rd class, £7 10s. to £9; springers, 2nd class, £12 to £15; 3rd class, £8 to £9 10s. Sheep, over 12 and under 24 months old, 2nd class £1 6s. to £1 10s.

High Prices for Irish Farms.—At Limerick on Saturday very high prices were paid for interests in farms. Six hundred and fifty pounds was paid for a 30-acre farm, held at a judicial rent of £49, and £1,110 for a 53-acre holding, at a rent of £85.

Diseased Pigs at the Central Market.—George Wade, farmer, of Little Waddingfield, Suffolk, was summoned at the Guildhall Police Court on Thursday for sending the carcasses of five diseased pigs and four plucks to the Central London Market, intending them for sale as human food. Mr. Vickery appeared on behalf of the Corporation, and said that defendant had eight pigs killed by the local butcher, who noticed that some of them were not quite right. He drew defendant's attention to them, but he said he thought they were all right, and had them sent to London. He (Mr. Vickery) did not suggest any criminal knowledge, but there was gross carelessness, inasmuch as after the butcher had drawn his attention to the carcasses the defendant did not make a more careful examination. Dr. W. Collingridge (Medical Officer of Health) gave evidence as to his examination of the meat, and said that the eating of such meat would have been attended with serious results. Defendant gave evidence on his own behalf, and swore that he thought the pigs were good, and he was very pleased with the look of them. Sir John Moore said although he acquitted defendant of guilty knowledge, he must convict him of gross carelessness, and having reference to the serious consequences to consumers of this class of meat he must impose a penalty of £20 and five guineas costs.

COMING SHOWS.

Royal Counties at Reading.

Below we give a list of the gentlemen who have agreed to act as judges at the Royal Counties Agricultural Society's Show at Reading on June 10th and three following days:—

SHEEP.—Hampshire Down: George Blake, Amesbury, Wilts; George Judd, Cocum, Micheldever. South Down: Edward Hobgen, Shripney, Bognor, Sussex; George Jonas, Duxford, Cambs. Shropshire: J. E. Farmer, Felton, Ludlow. Kent: A. Amos, Spring Grove, Wye. Oxford Down: J. Treadwell, Upper Winchendon, Aylesbury. Somerset and Dorset Horn: J. Chick, Compton Valence, Dorchester. Suffolk: J. W. Eagle, The Hall, Walton-on-Naze.

HORSES.—Agricultural: E. Green, The Moors, Welshpool; H. Smith, Cropwell Butler, Nottingham. Hunters: G. Evans, Merton Grange, Sandy; The Earl of Orkney, Wing Lodge, Leighton Buzzard. Harness Horses, Hacks and Ponies: R. T. Hermon-Hodge, M.P., Wyfold Court, Reading; W. Waterhouse, Starborough Castle, Edenbridge, Kent.

CATTLE.—Shorthorn: J. T. Hobbs, Maisey Hampton, Fairford, Glos.; W. T. Garne, Aldsworth, Northleach. Aberdeen Angus: Clement Stephenson, Sandyford Villa, Newcastle-on-Tyne. Sussex: D. Swaffer, Mumford, Kingsnorth, Kent; Devons: J. Chick, Compton Valence, Dorchester. Hereford: W. Price, The Vern, near Leominster. Jersey: Colonel F. Willan, Thornhill Park, Bitterne, Hants; J. R. Fisk, Brightstone, Newport, Isle of Wight. Guernsey: George Long, Ogbourne St. Andrew, Mariborough; C. J. Drewitt, Drayton, Chichester. Kerry and Dexter: F. A. Hordern, Buxted, Sussex. Dairy Herds and Dairy Class: James Stratton, Chilcombe, Winchester; H. J. Gibbs, Milford, Salisbury.

PIGS.—Berkshire: J. W. Kimber, Fyfield Wick, Abingdon. Other Breeds: J. Treadwell, Upper Winchendon, Aylesbury.

POULTRY.—T. Coke-Burnell, Winchester.

BUTTER.—Miles Benson, British Dairy Institute, Reading.

Suffolk, at Ipswich.

A meeting of the stewards appointed to make arrangements for the show of the Suffolk Agricultural Association at Ipswich, on June 5 and 6, took place in Ipswich Town Hall on the 14th inst. Mr. S. R. Sherwood presiding. Some tenders were first considered and accepted, and then a long discussion took place with reference to the butter prizes. Eventually it was decided that the first class for the best 2lbs. should be perfectly open, and that for the next class, Channel Islands and crosses, should be excluded.

Mr. W. E. Watkins, secretary to the East Suffolk Technical Instruction Committee, forwarded a copy of the resolution passed by that body—that they would grant £50 towards the erection and equipment of a Model Co-operative Dairy, to be exhibited in operation during the show.—Mr. C. C. Smith said this resolution was confirmed at the County Council meeting. He proposed that a sub-committee should be appointed to carry out the details of the enterprise, in conjunction with the sub-committee of the county authority, who were Rev. C. J. Steward, Mr. A. Harwood, and their secretary (Mr. Watkins). This proposal was carried, and the following were appointed a sub-committee:—The chairman, Mr. C. C. Smith, Mr. S. A. Flick, and Mr. G. Fiske, jun.

In reply to a communication from Mr. Griffiths Davies (the secretary to the Dog Show Committee), it was left to the chairman and Mr. Bond to arrange with them as to the arrangements necessary for enclosing the dog show ground, the cost of which was estimated at some £6 only.—It was also resolved that admission tickets should be granted to all dog show exhibitors who make application for the same at the time of entering their dogs, and that the officials of the agricultural show shall have free admission to the dog show.

The next business on the agenda was "to consider what arrangements shall be made for entertaining the public at the show during the evening of the first day."—The chairman said this was rather a large order, with regard to which many suggestions had been received, while any others would be carefully considered. The proposals thrown out included a jumping competition in the evening—which could be carried out, he thought—and sheep dog trials. Then they had received lots of letters with respect to illuminations, engagement of bands, and that sort of thing. The Ipswich Swimming Club talked of giving an exhibition of high diving and water polo in the Round Pond.

After discussion, it was understood that the drawing up of a programme for the evening should be left to the chairman and the secretary, who would probably be met on behalf of the town by Mr. F. G. Bond and Mr. W. Bantoft.

At the suggestion of the secretary, it was resolved that sixpence should be the charge for admission in the evening of the first day, from 6 o'clock until 10.

Cheshire.

A meeting of the Cheshire Agricultural Society was held at Crewe on Monday, to make arrangements for the society's next exhibition, which will take place on August 23rd, at Hyde. At the outset it was unanimously resolved that Mr. T. Carter-Beeley, Mayor of Hyde, be president of the society for the year, and that gentleman, in returning thanks for his election, promised to do all he could to promote the success of the show at Hyde. The various committees were then appointed.

As the Cheshire Dairy Farmers' Association were not offering a silver cup for the best four Cheshire cheese, it was agreed to suggest that one of Mrs. Hyde-Clark's cups should be offered in that class. The Mayor of Hyde said he should like to offer a silver cup for the best dairy cow in the show, the property of a tenant farmer in the society's district. His lordship also offered prizes for milksellers' cows within a certain radius of Hyde. The offers were accepted.

The secretary said that Mr. Alfred Day would offer a challenge cup for the best dairy cow or heifer in the show belonging to a tenant farmer in the society's district. Mr. S. S. Raingill, of Altrincham, having won Mr. Day's 30-guinea challenge cup for the best shire mare or filly three years in succession, it becomes his absolute property, and a letter was read from Mr. Day intimating that he would offer another cup for competition, and the society accepted the offer.—Mr. Beckett said that the Earl of Egerton would probably again give a cup for the best shire mare or filly, the property of a Cheshire tenant farmer. The chairman offered a silver cup for the best brood mare with a foal at foot, the property of a Cheshire tenant farmer.

The Hackney Horse Society offered a medal for hackneys. Prizes were offered by Mr. S. Schiff, of Newbold, for hunters the property of tenant farmers within the limits of the Cheshire and Wynnstay Hunts, who had no wire of a dangerous nature in their fences during the hunting season. Mr. A. Tyler offered a cup for two years for competition in the polo pony class, the entrants to be confined to farmers who have no barbed wire in their fences. It was announced that the Tarporley Hunt were not offering their prizes this year, but it was stated that these would probably be made up locally. It was decided to introduce a class for turn-outs driven by ladies, a Chester lady offering a prize.

The co-operation of the Chester Beekeepers' Association was invited, and the subject of devoting a section to dogs was left open for future discussion.

IN PARLIAMENT.

HOUSE OF COMMONS.

Old Age Pensions.

On Wednesday Mr. R. Greene moved the second reading of the Aged Pensioners Bill, the object of which was to give to the aged deserving poor who had reached the age of 65, through the existing machinery of the Poor Law, pensions of not less than five or more than seven shillings a week, the sum to be provided out of the rates and a Treasury contribution of six pounds per annum for every aged pensioner. The estimate of the amount required, should the Bill become law, was ten millions per annum, which, in 1911, would be increased to twelve millions. That sum was to be equally divided between the National Exchequer and the local authorities.

Mr. Channing moved as an amendment that the provision for old age pensions should be universal, and its application should be wholly independent of the Poor Law, but he subsequently withdrew it.

Mr. Cripps urged that no Bill was acceptable which threw a large proportion of the expense of the scheme on the local rates until the system of local taxation had been placed on a more equitable basis.

Mr. Long said all were agreed that some steps in the direction of old age pensions would be desirable; but the real crux lay in the cost. The contribution from local taxation would mean a rate of between 7d. and 8d. in the pound over the general ratable value of the country; the balance from Imperial taxation was more than the Exchequer could be burdened with. The Government believed in poor-law reform, but they could not hold out any hope, if this Bill were passed, of affording the financial assistance that would be needed to carry it into effect. They were likewise anxious that nothing should be done to weaken the spirit of self-reliance which had done so much to make the people of this country what they were.

The Bill was eventually read a second time without a division, amid cheers from both sides of the House.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read. 70th edition, 6s. and 7s. 6d. post free. JARROLD'S IMPERIAL FARM ACCOUNT BOOK, 3s. 6d. JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d. List of Game and Dairy Account Books post free of JARROLD and SONS 10 and 11, Warwick Lane E.C.—[ADVT.]

SOCIETIES.

Polo Pony.

Mr. John Barker (president) occupied the chair at a meeting of the Council of the Polo Pony Society held at the Royal Agricultural Hall, Islington, on the 13th inst., at which 18 new members were elected.

The secretary presented the report of the Finance Committee, showing a balance at the bank of £619 9s. 6d.; receipts since last meeting, £111 10s. 6d.; arrears of subscriptions, £4 5s.; accounts for payment, £45 2s. 6d. Report adopted.

An interesting letter was submitted by Professor Cossar Ewart from Mr. Frederick Wrench, intimating that they were carrying out an experiment at Lough Glyrm. They had a stud of 15 Connemara pony mares and two Erris ponies. Nine of the Connemaras were in foal to an Arab, two to a Connemara stallion, and the two Erris ponies to a thoroughbred. This season 10 of the mares would be put to the Arab, and seven to a young and very promising Connemara pony; and all the results would be watched and carefully noted. Among the mares were some lovely ponies, and they were all (except the two Erris, which were a type of their own) quite the right stamp and pictures as brood mares.

Annual General Meeting.

The Council meeting having concluded, the annual general meeting was held under the chairmanship of Mr. John Barker.

The secretary (Mr. A. B. Charlton) read the annual report, in which it was stated that continuous and steady progress had favoured the society during the past 12 months. The membership has increased; improvement in numbers and quality marked with success the second spring show at Islington; the utility and attractive character of the riding pony has been recognised by the further provision of classes and of bending races at an increasing number of country shows. Everything bespeaks a healthy interest in the pony whose welfare the society specially safeguards, and to whose efforts much of this renewed interest is undoubtedly due. The members on the register on January 1st numbered 492, composed of three honorary members, 463 annual members, 26 life members; an increase of 116 since March, 1901. Thanks to the liberal response in donations, the society has, during 1901, been able to maintain and extend its contributions to the London Show, to the Polo pony classes at the Royal Show at Cardiff, and at the associated shows, while enabling the finance committee to bring forward a respectable balance on the working account, with an undiminished reserve fund. The Council, therefore, propose to put forward an extended programme for 1902, without an appeal for special contributions. They entertain the hope that the ordinary income of the society will be able to meet the requisite outlay, and if members will tender their support by each securing one new member during the coming year, their anticipations will be more than realised. A schedule comprising seven classes has been provided for polo ponies at the next Royal Show, the necessary funds being provided by the society and the Carlisle Local Committee, who, after consultation with the Council, arranged to also set apart three classes for Fell ponies, the mountain and moorland pony of the district. The society has drawn up three schemes for affiliated shows, offering £10, £15, or £20 respectively for polo ponies, the qualifying amount carrying a corresponding number of medals, so that a show giving the largest sum may claim three silver medals; prizes value £15 have two medals allotted, while one is available for class or classes with an aggregate of £10. Sir Patteson Nickalls will be the president during the forthcoming year, and the Council beg unanimously to propose Rev. D. B. Montefiore as vice-president (*i.e.*, president in 1903).

Mr. Barker, in presenting the report, said that it was a great pleasure to him to report the progress made, though in his opinion it should have been larger, and it would be so with the co-operation of the members. He attributed the great success of the society to two causes: one, the selection in 1898 of Mr. G. Norris Midwood as president. Owing to his interest and energy the society had largely increased its membership, and his example had stimulated each succeeding president. The second cause of their prosperity was the institution of a London Spring Show, the details of which had been put before them. Personally, he took a deep interest in the society, not only as president for the year, but in its welfare. It spoke well for their management and organisation that in a membership of over 500 they had an arrear list of four. Their schemes of gold and silver medals in the country were doing much good, but he must impress upon the members that they must assist the Council's efforts by getting people to join, and they would have full opportunity of doing this during that and the succeeding day at the ring-side. He did not pro-

pose to dwell upon the question of remounts, though he thought that they should have had more sympathy from the Government, who should give more than £30 for a five-year-old pony. Their society's work was for the good and benefit of the community in general.

Sir R. D. Green-Price, in seconding the report, hoped that members would take Mr. Barker's remarks to heart, as he thought they could do a lot for the society by bringing its work before all interested. Referring to the question of remounts, he believed the remarks of Lord Kitchener would be especially appreciated, as he in particular picked out for praise the English pony as having been found the best for the work in South Africa. He also noted with pleasure that the Secretary of State for War had spoken strongly in praise of the pony; in fact, it had suddenly dawned upon the authorities that the best horse for mounted infantry was the pony that the society was encouraging breeders to produce. They must not overlook the fact that though called the "Polo Pony Society," the efforts of the Council were directed to improving the breed of ponies generally; in fact, they were doing good work for the country in finding ponies suitable for the mounted infantry.

Mr. Tresham Gilbey said that it might assist breeders if their stewards were to ask the representative of the War Office in the hall what class of pony they were really looking for. He had himself made inquiries, and understood that it was a pony of 15 hands; and he would propose that in future the height limit for the remount class should be for ponies up to 15 hands.

The chairman, in putting the report to the meeting for adoption, thought that the best thanks of the society were due to Mrs. Montefiore and the gentlemen who had offered cups at the present show. He always found that when ladies took a matter up that it succeeded, and he hoped that members would follow the good example set by one or two members of the Council by proposing their wives.

The report was then adopted.

The secretary presented the report of the scrutineers showing that the following 10 gentlemen had been elected members of the Council in the place of that number retiring:—Major C. W. Campbell-Hyslop, Captain Dennis St. G. Daly, A. L. Goodson, Rev. A. E. Green-Price, Sir Gilbert Greenall, Bart., Colonel E. N. Henriques, Major E. D. Kennedy, Charles McNeill, Clervaux Morley Saunders, Rev. F. Furse Vidal.

On the motion of Mr. G. Norris Midwood, seconded by Mr. Tresham Gilbey, Messrs. James Harris and Sons were elected honorary auditors of the society.

A vote of thanks to the chairman, moved by Sir R. D. Green-Price, seconded by Viscount Ebrington, closed the proceedings.

Royal Lancashire.

The quarterly meeting of the Council of the Royal Lancashire Agricultural Society was held at the Guildhall, Preston, on Monday afternoon, Mr. J. White, Warrington, presiding, Lord Derby, president, being unable to attend.

The secretary's report stated that the local fund for the Preston show had now reached £1,200, and there was every probability of at least the £2,000 required being raised. In anticipation of this the Showyard and Prize List Committee had already drawn up a most generous prize list, and had introduced several new features.

The Local Prize List Committee recommended that at the forthcoming Guild show the classes for hunters and polo ponies be struck out, and Dr. Wingate-Saul suggested the society should offer prizes for horses likely to make cavalry chargers.

Mr. W. W. B. Hulton said he viewed with amazement and alarm the proposal to strike out the classes for hunters. In times of peace he had always looked upon a remount as a misfit, an animal which, bred for another purpose, had just missed its mark. On the other hand, there was no class of animal so useful as a hunter.

Mr. Webster explained that the committee found that, whereas there were 71 entries of hunters at the last Preston show, last year they only numbered 35, and as the prize money amounted to £130, they thought it wise to strike out the classes. However, the council wished to refer the matter back, the committee would be glad to give it further consideration.

Dr. Wingate Lane suggested that the society should offer prizes for horses likely to make good cavalry horses. There was a scarcity of remounts just now, and if they could do anything to encourage the breeding of such horses it was their bounden duty to do so.

Mr. Mercer called attention to the recommendation of the committee that in future no member of the council should act as judge in any section. It would be ridiculous to restrict themselves to outside judges. Members of the council had always acted in cases of emergency, and done so with credit to themselves and the society. After discussion, it was agreed to add the following words to the committee's recommendation:—"Except in case of emergency, such cases to be decided by a committee called together in accordance with Rule 23."

Mr. P. S. Park, of Preston, referred to the work of the dairy, and said the application for a grant for the Lancashire County Council as it stood might be misleading. They were not asking for a grant in order to erect a building similar to those they had had in past years, but in order that their dairy might be brought up to date, chiefly with regard to ventilation and the doing away with the trestle floor. He had had the pleasure of a consultation with the chairman of the Agriculture Committee of the Lancashire County Council, who had expressed to him the desire of that body to work hand in hand with the society. ("Hear, hear," and applause.)

The Earl of Derby and Messrs. W. E. Hale, G. Mather, P. S. Park, R. Woods, and Porter were re-elected to represent the board on the Joint Agricultural Sub-committee of the Lancashire County Council.

Thirty-one new vice-presidents and 33 new annual members were re-elected, and the secretary remarked that the former, including the Right Hon. A. J. Balfour, M.P., was the largest number ever elected at one meeting of the society. They represented an additional income to the society of £150 per annum.

Mr. G. H. Dyson said it was predicted that the removal of the society's headquarters to Preston would result in its downfall. Could the secretary inform the council what the increase had been since that event occurred.

Mr. Bohane replied that there had been a net increase of 49 vice-presidents, and the total membership to-day stood at 1,032, the largest in the history of the society.

The following gentlemen were appointed judges for the show at Preston on September 2, 3, 4, and 5:—

CATTLE.—Shorthorns: C. W. Priestley and Price Evans, Wellington. Dairy cattle: J. Howard, Gargrave, Yorkshire. Channel Islands: Rev. F. C. Wood.

HORSES.—Leapers, first and second days, Robert Mason; third and fourth days, J. Marshall Tyson. Hackneys, ponies, and harness classes: J. Morton, Norfolk, and Mr. Godlass, Yorkshire. Shires: J. Eadie, Derby, and E. Green, Welshpool.

SHEEP.—Shropshires, Mr. McQueen, Welshpool; Leicesters and Wensleydales, G. Harrison, Darlington; Herdwicks and Lonks, G. Dewhurst, Southport.

PIGS.—J. Barron, Barrowash.

MISCELLANEOUS.—Cheese: Mr. Sherrey, Bolton, and Mr. R. S. Simpson, Preston. Dogs: M. Marsden, Marple. Poultry: G. Furness, Abbott, Parbold, and Enoch Hutton, Leeds. Pigeons: A. M'Kenzie, Liverpool. Implements and carriages: G. Morton, Cheshire.

Suffolk Horse.

The annual meeting of the Suffolk Horse Society was held on Tuesday, at the Town Hall, Ipswich, Mr. Herman Biddell in the chair. The secretary, Mr. Fred. Smith, read a letter from the president, Sir Cuthbert Quilter, Bart., M.P., in which, after expressing his regret at his inability to be present, he said:—"I hope that the meeting will recognise what our financial position is, and that we have very little money to vote away for any purpose this year. We must husband our resources as much as possible, but I think we should do all we can to continue our connection with Richmond, which certainly proved a good market last year for first-rate geldings that were for sale. I should have liked also to call attention to the very low rate of subscription paid by the members, compared with those of other societies, and to have pointed out that £5 is hardly a sufficient composition for life-membership. It seems to me that it would only be reasonable to increase the amount to £10 in the latter case, and to £15 in the case of life-governors. The council and the Society work very hard to improve the local breed, and I think we are justly entitled to a large measure of support from the leading agriculturists of the county. It is a matter of great satisfacion that the membership of the Society keeps on increasing, and has now obtained a record, and that the export of Suffolk horses to various parts of the world continues to grow."

Letters of apology were also received from Mr. F. G. Cook and Mr. F. C. Starkie, the latter gentleman remarking that if the breeding scheme needed more help financially, he should, for one, be glad to lend a helping hand.

The chairman said he was sure that they would appreciate Mr. F. C. Starkie's kind offer to render pecuniary aid in the direction indicated in his letter if it were found to be necessary. As to the question of increasing the subscriptions, referred to in the president's letter, he (Mr. Biddell) should like to take the opinion of the members generally upon the subject.

Mr. C. P. Ogilvie urged the advisability of more attention being given to the question of adding to the regular income of the Society. He expressed concurrence in the suggestion that there should be, if possible, an increase in the contributions under the different heads indicated, and he said that unless they could awaken a greater interest and support in the financial affairs of the Society, they must find a greater difficulty in presenting a satisfactory balance-sheet year by year.

Mr. J. D. Hustler said he should be most happy to support the recommendation that there should be an increase in the contributions on the lines suggested. Of course, when the subscriptions were fixed upon the comparatively low rate at which they stood at the present time, it was not anticipated that it would be necessary to expend so much in the way of advertising the Suffolk horse. If they wished to push the breed, they must undoubtedly have more money at command with which to do it. The expenditure of £20 in connection with the London Horse Parade, for instance, was not probably contemplated when the membership subscription was originally fixed at the low figure of 10s. Those members of the Society who were breeders of Suffolks were probably getting an increased benefit from the operations of the Society, and if they paid a sovereign for membership they would really be getting more in return than they did in the old days, when they paid 10s., because of the greater enterprise of the council.

It was understood, as a result of the discussion, that the council recommended the advisability of a consideration of the propriety of an increase of the subscriptions.

The annual report, having been printed and circulated, was taken as read. The accounts showed a balance of £97 9s. 5d., as compared with £36 9s. It would be observed, nevertheless, that the balance of assets over liabilities had decreased £62 16s. 10d., viz., from £300 17s. to £238. The report went on to state:—"The breeding scheme adopted by the Society has now been in force three years, and has undoubtedly stimulated the breeding of Suffolk foals. Although only fifteen nominations were granted during the past year against nineteen in 1900, the diminution is probably more than accounted for by the fact that some of the original recipients of nomination, realising that the price of Suffolk foals has advanced, have considered it to their interest to reserve freedom of action with regard to the sale of their foals. The three Society mares on which money was advanced in 1899 each produced a foal, the three realising an average of £16 10s. each—the exact sum allowed by the Society." The membership of the Society was now the highest on record, several members having joined from outside the county; the total membership being 222, including 33 life and 165 annual members.

The report was unanimously adopted.

On the proposition of Mr. Horace Wolton, the hon. auditors, Mr. J. A. Hempson and Mr. Wm. Toller, were re-elected, with thanks to them for their services.

The chairman said he had much satisfaction in proposing the re-appointment of the secretary, Mr. Fred. Smith, who had carried on the affairs of the Society so entirely to their satisfaction. Mr. C. P. Ogilvie seconded the motion, which was carried *nem. con.* On the proposition of Mr. E H. Preston, Mr. R. Kerrison was re-appointed hon. treasurer.

The following gentlemen were elected members of the council in the place of the six gentlemen retiring by rotation:—Mr. A. T. Pratt, Mr. Eaton White, Mr. Robert Edgar, Mr. E. A. Cook, Mr. F. S. Lewin, and Mr. W. E. S. Wilson.

Darlington Chamber.

The Darlington Chamber of Agriculture met at Darlington on Monday, and discussed the subject of a duty on imports. The Earl of Ronaldshay was in the chair, and there was a fairly large attendance. The Right Hon. James Lowther, M.P., wrote:—"I am very glad that an effort is to be made to press the just claims of the agricultural interest, which, in common with all others, is suffering from the injustice with which foreign producers, who are exempt from any share in the heavy rates and taxes that are levied upon home-grown food and other British products, are so scandalously favoured in their competition with our national industry. I trust the Chamber will speak out strongly as so many other representative bodies have been recently doing, both in rural and urban centres, for it is no longer the agriculturists only who feel the present condition of affairs. Upon revenue grounds alone the Cobdenite system will have to go, as with the enormous increase in expenditure, independent of the South African, fresh sources of taxation must be found. Hence the desirability of letting the Government know our minds."

The following resolution was moved and seconded:—"That in the opinion of this meeting it is necessary that the home producer should be protected from unfair foreign competition, and that discriminating revenue duties should be placed on foreign imports," whilst a member moved an amendment in favour of the re-imposition of a registration duty of a shilling a quarter on imported wheat, which, he said, would bring in about £3,000,000 a year.

After some discussion the resolution was adopted, only two voting in favour of the amendment.

A resolution had been sent by the North Cotswold Farmers' Association in favour of the compulsory dipping of sheep as the best means of stamping out sheep scab, and this Chamber was

asked to support it. Mr. F. C. Gibson, of Croft, proposed a resolution supporting that view, and suggested that the dipping should take place twice a year. Mr. George Gibson, of Brettanby, while strongly in favour of dipping, was opposed to its being made compulsory, and moved as an amendment that the resolution of the North Cotswold Association should lie on the table. The amendment was carried by 11 votes to 9.

The question of the purchase of remounts was on the agenda, and the Secretary moved a resolution—based on the recent declaration of Mr. Hanbury at York—in favour of empowering the Board of Agriculture and the War Office to act in direct co-operation in the purchase of Army horses and remounts. Mr. Foster seconded the motion, which was agreed to without discussion.

Another subject brought forward related to the milk and butter regulations. Captain Fife proposed a resolution to the effect that the Chamber impress upon the Minister of Agriculture that British farmers should be protected from all cases of fraud in regard to milk and butter standards. Mr. George Gibson considered this resolution was too general, and submitted an amendment declaring that the percentage of moisture in butter should not in any case exceed 16 per cent., and that any compounds which contain moisture in excess of that extent ought not to be sold as butter. This amendment was seconded by Mr. Eade, Darlington, and adopted.

Monmouthshire Chamber.

A general meeting of the Monmouthshire Chamber of Agriculture will be held at the Beaufort Arms Hotel, Chepstow, to-morrow (Tuesday), commencing at 2.30 p.m. The agenda is as follow:—

1.—Election of new members and other general business, including minutes of meeting at Pontypool, on March 1st, and any matters arising therefrom.

2.—The budget (if introduced).

3.—Railway rates.

4.—To consider the advisability of approaching the Minister of War with a view to the provision of remounts for the Army.

5.—Circular from the Butter Association re "milk blended butter."

6.—Circular from the Warwickshire Farmers' Association asking the Chamber's support to two of their resolutions, as follow:—(a) "That the Warwickshire Farmers' Association disapproves of the use of any preservative in milk"; (b) "That the Warwickshire Farmers' Association is unanimously of the opinion that the importation of foreign flour and meal is injuriously affecting the farmers of this country; has been the means of stopping the milling industry; and strongly recommends a tax upon these manufactured articles."

The Chamber has a pamphlet containing a report of the annual meeting at Newport on January 22nd, and a paper read by Mr. J. Thomas Davies, entitled "Farming in Western Candada"; also a list of members, rules, etc., making it a most interesting pamphlet to the members of the Chamber.

Grantham Mid-Lent Fair.—This annual fair was held on Monday, when there was not a large supply of cattle, but there was a good attendance of buyers, and a brisk trade was experienced in beasts in good fresh condition. Strong bullocks, three years old, made £17 to £20, two years old £12 to £13, younger steers £8 to £12, milk cows £14 to £19, in-calvers £14 to £18, and heifers £15 each. Sheep were also somewhat scarce, only a few hogs being offered, and their price ranged from 35s. to 40s.

Wallingford Hay Sale.—Messrs. Franklin, Gale, and Newton conducted their annual sale of hay and straw at the Town Hall, Wallingford, on Friday last, the 14th inst., with very satisfactory results. To begin with, the catalogue was the heaviest ever remembered in this district, no less than 80 ricks being entered, representing some 1,800 tnos of clover, sainfoin, mixture and meadow hay, and wheat straw. The Town Hall was practicularly filled with buyers and others, which will give some idea of the importance which this sale has now attained. Despite the recent wavering in the trade owing to the mild weather, the greater proportion of the lots were cleared, in fact, a much more satisfactory sale resulted than was expected, the total amount realised being over £4,000. Some very large ricks were offered, and one belonging to Mr. J. Shrubb's executors made as much as £240. The following were the ricks realising upwards of £100:—Mr. G. H. Abbot, clover hay £190, meadow hay £120; Mr. A. D. Wells, clover and trifolium £100; Mr. R. C. Hatt, clover hay £123; Mr. J. Shrubb's executors, meadow hay £130, clover hay £191, meadow hay £240, meadow hay £161; Mr. T. Latham, meadow hay £124; Mr. N. Paxman, clover hay £140; Mr. T. E. Way, meadow hay, £135; Mr. Joseph Gale, mixture £146.

Dairy Farming: Foreign Competition.

I propose to consider dairy farming athome and abroad, and how the two departments react on one another.* Lectures such as this are not infrequently loaded up with figures. Fortunately, the circumstances under which this lecture has been prepared preclude the possibility of your being burdened in that particular way. The one broad figure fact, so far as the Bhitish farmer is concerned, is that foreign countries and our own colonies are sending us an increasing volume of dairy produce every year, and that no matter how eager and active the authorities in this connection may be, the ingenuity of the gentlemen who blend the various classes of dairy produce get ahead of them, and behind all legislative enactments. What enables them to do so is the cheapness of foreign and colonial dairy produce and the low rates at which all kinds of it can be set down in the open ports of Great Britain. For many years we have been familiar with the imports of foreign butter and cheese, but it is clear, from recent trade returns, that the trade in fresh milk from the Continent, although not yet of great volume, is growing, and that this trade will by and by, should it go on extending, seriously compete with those who are supplying London with fresh milk. I take it that those whose market is the east-end of London will first feel the brunt of this competition.

To the average citizen of this country the spectacle of these growing foreign importations alongside square miles of derelict land in Essex and other counties in England, and the depopulation of the rural districts, is a standing puzzle. He cannot understand why the British farmer should not supply this great market himself, and least of all can he understand why there should be derelict land, or land going out of cultivation here when the British public are clamouring for food. But if the average citizen would do a little plain thinking he would see that the British farmer, not being primarily a fool, cannot farm land which it will not pay to farm. That is to say, he cannot make a living at present prices of produce out of land which lies idle. This is due to either of three causes, all of which may be summed up in the words,

Land is too Dear.

Some of it is of such a nature that it will not pay working expenses even if it were to be had for nothing. Another portion of it is worth more for other purposes than could be got for it under agriculture—that is to say, it is too highly rented to admit of its profitable cultivation, and yet another section is so heavily weighed with tithe rent charges that even with no landlord's rent the working expenses could not be paid.

The primary, but not the sole, reason why so much land is going out of cultivation in this country, while the consuming wants of the people are increasing, is that it pays farmers, and those who would be farmers, better to do something else than cultivate the soil, and produce milk, butter, and cheese. If Great Britain is to be the great commercial nation of the world—the great exchange—then her agriculture must be content to retire into the background, and her people must increasingly be fed by other lands. The history of the world shows that the continuance of an Empire subject to such conditions has hitherto been unknown. There are elements in the constitution of our national life not present in the national life of such nations as one has in view in that connection, and, therefore, what has been, may not be in our case; but the recollection of the decay of imperial Rome should give pause to those who believed they have solved all economical and social problems by the enunciation of the great principle, buy in the cheapest market, and sell in the dearest. I am not to travel farther in this line of Carlylean thought. But it is not inappropriate to travel so far in order to realise something of the weighty issues bound up in continued adherence to a fiscal policy which undoubtedly means the abandonment of agriculture, and a national devotion to commerce.

Dealing with the situation as it is at the moment and bids fair to continue to be for some time, certain

Features of Dairying Abroad.

may be commented on. The foreign and colonial manufacturer of dairy produce has (1) cheaper land than the British farmer; (2) he is either content to live on a lower social scale than the British farmer, or conducts his business on a wholesale principle of combination which enables him to produce his material at a cheaper rate than does the home producer; (3) he is unhampered by restrictive legislation in respect of sanitation and housing, and therefore can afford to work with less capital outlay; (4) his methods of manufacturing his produce remove him from the necessity of facing a labour problem; (5) he has the cordial support and even encouragement of his Government to produce the best possible article for the British market, and restrictive legislation is confined to what will induce him to send to this country only the genuine article; (6) and, finally, agriculture in the countries and colonies which compete most seriously with the British farmer in his own markets is the primary industry—the very existence of these states and colonies is meantime bound up in the prosperity of their agriculture—and hence all that the governing powers in these countries do is to foster the industry.

This statement of facts shows the ineptness of the line of argument so frequently followed by those who write on the subject of foreign imports of butter and cheese. There is no parallel between the small farms of Denmark and France, and small farms and allotments in Great Britain. The Danish farmer and his family are content to live as our great grandfathers lived, *plus* a knowledge of the technicalities of dairying, of which our great grandfathers were ignorant. His hours of labour are the hours which our ancestors wrought, and his remuneration and opportunities for social intercourse are those with which they were familiar. It cannot be otherwise with Denmark, nor yet with the present proprietors of France. If we be content to live as they do, and toil as they toil, and at the same time be as eager to learn as they are the technique of agriculture, then there may be a parallel between the two countries. But so long as our people can live easier lives, and enjoy greater social ease and fellowship, so long will analogies based on the condition of things abroad break down and be misleading. Denmark and our own Colonies are bound to foster agriculture. Their very existence is

Dependent on their Agricultural Prosperity,

hence all that their Governments do to bring about agricultural prosperity.

With the opening of the great Trans-Siberian railway a new competitor has entered the field. The area of competition has been widened, and there is reason to believe that last year large quantities of Danish butter, originally made in Siberia, have found their way to this country. It is alleged that the persons who manufacture butter in Siberia have an idea that Copenhagen is the nearest town in England to the Continent.

* A lecture by Mr. MacNeilage, delivered at a meeting of the Eastern Counties Dairy Association.

Hence they address their butter to that city. No doubt, by and by, they will learn the geography of Europe to better purpose, but meantime it is necessary that Siberian butter should be fitted for presentation in the English market by judicious manipulation on the western shores of the Baltic or thereabout.

The dairy farmer may learn from the foreigner to understand his market. The association now being addressed does not need so much enlightment on this point as many. Its very existence is due to a strenuous effort on the part of the farmers in Essex to understand their market, to get into immediate touch with it, and to supply it with the article, and under the conditions which the market demands. All dairy farmers are not so happily situated, or have not made so praiseworthy an effort. In the west of Scotland a beginning has been made, but progress is slow. The proverbial caution of the Scotchman is being demonstrated in the disposition to let some other one make the experiment. Still it is well to have a beginning. It is galling to be placed, as the home producer is, under all kinds of legislative restrictions in respect of sanitation, etc.; while his foreign competitor is free of all this, and reaps equal benefit. The remedy for this, however, is not the absence of these restrictions but compliance with them, and a determination to put produce on the market in the best possible condition to please the consumer. In this the foreigner can give the British farmer points. The result of the success of Danish, Canadian, and Australian produce in the British market is the efforts made by the foreign and colonial authorities to learn how the British public likes to receive its produce, and, if possible, to go beyond his desires and demands. This is second only to uniformity of quality, and in respect of it the dairy farmer has a good deal to learn.

In Glasgow the milk delivery cans are at the mercy of every boy and girl messenger. Fortunately the great majority of these are honest, and little complaint is made of the way in which they perform their duties. But in respect of other departments it is not so. The first-class buttermaker understands how to present her butter to please her customer, but a much greater number give this aspect of things no thought at all. It is the same with cheese, although Scots cheese is, as a rule, better in this respect than Scots butter. Scots cheese are much better made as regards their exterior than English cheese. It is, however, with the sweet milk trade we are chiefly concerned, and no effort should be spared to put whole milk on the market in the best possible condition. There is an unlimited market for milk, if the public can only be satisfied that it is produced and marketed under the most wholesome conditions. Great leeway has to be made up by the railway companies before this is in every respect as it ought to be. The mode in which milk is often carried from the country station to the city railway platform is admirably fitted to put a period to a milk trade altogether. The lesson which foreign and colonial competition teaches here plainly is that the dairy farmer should anticipate the demands of the authorities.

The dairy farmer should be quick to adopt whatever material science may bring before him for the effective prosecution of his business. I presume

the greatest wants at the present time

of this nature are a mechanical milking machine, a railway or distributing churn which will equalise the butter fat in its contents without doing injury to the keeping qualities of the milk, and a mechanical butter fat test which may be successfully manipulated by anyone of ordinary intelligence. The last has possibly been provided in the Gerber test, but the other two are not yet quite in sight. So far as a mechanical milking machine is concerned, enough has been accomplished to warrant the belief that such a machine is not a dream. The tentative efforts of mechanical geniuses have certainly proved that cows may be milked clean by such means without detriment to their teats or udders or their milk.

The last mechanical adjunct to which I need refer is the most necessary at the present moment. The new milk standard has taught farmers one lesson at least. Milk is a very variable quantity, and undergoes change so rapidly that a seller may be outside the scope of the law at one moment, and within its grasp half an hour afterwards. The butter fat rises very sharply to the surface, and the milk drawn from the ordinary churn, when that vessel is nearly empty, is of very different quality from that contained in the same vessel when full. If the milk be drawn by spigot from a long, deep dish, the woman who comes last will fare best; but if it be lifted from an open vessel on the milk-shop counter, those who come last will fare worst. The inspector argues, and from his standpoint soundly, that he is to protect the last comer as well as the first, and, therefore, he has nothing to do with the depth of milk in the vessel. The remedy is a vessel which may be so balanced that it will distribute its butter fat without churning the milk.

CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appointment to
H.M. THE KING.

The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses all competitors.

Address—CHAS. HEARSON & CO., "D" Department, Ltd.,

Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.
W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY
The Largest Manufacturer of Incubators in the World.

Plymouth Rocks.

This breed are of American production, and there are three varieties, viz., the barred (first introduced), buff, and white.

All are exceptionally hardy, and, when bred from good-laying strains—that is to say, when bred *for laying*—and with careful management, they will lay all through the autumn, winter, and spring. They are rather inclined to get over-fat if well fed, and unless broken of their broodiness at once, keep to the nest some time between their laying periods, but when sitters and mothers are required, they are excellent for the purpose.

Their eggs have brown shells, and they are large birds on the table, but have *yellow skins*, which are not considered good on table fowls by English people, although the Americans delight in them, and do not like white-skinned fowls.

Though Plymouth Rocks have yellow legs, when they are crossed many of their offspring have white legs if they are crossed with white-legged birds. Surrey and Sussex fatteners like crossed Plymouth Rocks, as they do so well in the fattening coops.

If bred from selected stock, Plymouth Rocks grow very fine birds.

For very many years Plymouth Rocks were one of the most popular varieties in England, that is before the Orpington varieties were brought out, as they were so very hardy. They lay a tinted, or brown egg, varying in colour.

The pullets, as a rule, begin to lay about 7 or 7½ months old. When bred from big prize stock they are occasionally a month longer before they lay.

We are pleased to say that Plymouth Rocks made a larger price last year out of the show pen than ever before. Several birds changed hands at £30 to £40 each.

The chickens are not only hardy, but they grow fast, but the cockerels do not feather very quickly, and those who have never hatched Plymouth Rocks must remember they are likely to get birds of two or three shades, some light and some dark.

The characteristic stamp of the Rock has a stand-up appearance, and should be evenly barred. Beak yellow, and very strong; eyes bright, clear, and prominent, light brown or hazel; comb, single, well serrated, medium size, straight, and well set on head, free from side spikes; red face and earlobes. The body of the bird is deep and well formed, and the legs set well apart. Bright yellow legs, four toes on each foot.

The cockerels run from 7½lbs. to 10½lbs. in weight, and when fully developed in the second year, from 10lbs. to 12lbs.

The hen should have a straight comb, standing well up, single, and well serrated; red face and earlobes same as cock, only, of course, smaller in every way; neck hackles full; body large, deep, and square; legs much shorter than those of the cock, which gives the hen the appearance of a very deep-bodied bird.

Pullets of 6½lbs. to 8½lbs; hens, 8½lbs. to 10lbs.

The plumage of the barred Plymouth Rock cocks is very awkward to describe, although pretty to look at. It is cuckoo colour, finely and evenly barred with a bluish black. The two colours, although blending at first, are quite distinct, should be free from smut or rust, the hackles very fine, even, and distinct; barring to the skin. The neck hackles should correspond in shade with the saddle hackles, and be free from brown or rust; breast and thighs evenly barred distinct to the hocks. Shoulders and wing bars also evenly barred. Each wing feather should be distinct in the marking, and free from patches of white, but evenly marked with a dark blue black. The long tail or sickle feathers should have distinct even barring from the root to the tip of the tail.

The colour of the hens should be like the cock's breast all over, every feather being evenly marked with a bluish black, the markings being well defined, and looking bright, and free from dulness of colour. The barring should go right down to the stem of the feather, where it joins the hen's body.

"Mark Lane Express" Diary.

March.

18, 19, and 20. Horse sales at Wrexham.
18. General Meeting of the Suffolk Horse Society.
19. Sale of the entire herd of Red Polled cattle belonging to J. E. Platt, Esq., at Howbury Hall, Bedford.

24. East Berks Horse Show Society's Spring Show at Hawthorn Hill Racecourse.

The Lady and the Water Finder.

In the King's Bench Division on Thursday, before the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice Channell, the case of "Pritty v. Child" came on for argument. It was the defendant's appeal from a decision of Judge Eardley Wilmot given in the Ipswich County Court in favour of Miss Pritty. It appeared that the defendant was a miller and also a professional water finder, and had been so employed for 30 years. Some successful effort on the part of the defendant to find water caused some stir or excitement in the neighbourhood, and Miss Pritty put herself into communication with him as to his finding water upon her estate. The defendant said he would attend and find water for 25s. He came over and by means of a hazel twig pointed out a spot on the lawn where, according to the plaintiff's case, he said that water would be found from 25 to 30 feet down. A well was sunk for 40 feet, but no water was found, and a second well was also sunk not so deep, and again the search was unsuccessful.

The plaintiff sued the defendant for the return of the 25s. she had paid him, as she said the consideration had failed, and the money was paid into court by the defendant and taken out by the plaintiff. Then the plaintiff sued him to recover £62 odd, the expenses of sinking the wells, on the ground that he had not carried out his contract, and the learned County Court judge decided in plaintiff's favour as to the first well, and awarded her £42 6s. 8d. damages. As to the second well, he decided that there was no contract, and found in the defendant's favour. For the defence it was denied that there was any contract to find water, or that defendant made the definite statement alluded to, and said that as the defendant had not been reckless or negligent he was not liable. It was also said that the plaintiff, having succeeded in her first action, could not maintain the second.

It was mentioned that during the sinking of one of the wells one of the workmen, when down it, was overcome by gas, and as no one else would go down, Miss Pritty did so by means of a rope and bucket, and brought the man to the surface. He, however, died of suffocation, but plaintiff received the Royal Humane Society's medal and another medal for her bravery.

Mr. Rawlinson, K.C., and Mr. W. Rowley Ellis-ton appeared for the appellant, and Mr. A. H. Poyser and Mr. C. T. Packard for the respondent.

The Lord Chief Justice said if he had been sitting as a judge of first instance he should have hesitated a long time before he came to the conclusion that the defendant made any statement other than an expression of opinion, but they were bound by the findings of fact of the County Court judge, and those rendered it impossible for them to interfere.

The other learned judges concurred, and the appeal was dismissed with costs.

Cider as Part of Wages.

In the King's Bench Division on Tuesday, before the Lord Chief Justice, Mr Justice Darling, and Mr. Justice Channell, Mrs. Jones, a Worcestershire farmer, appealed against a decision of the local justices, who had convicted and fined her £5 and costs for an offence under the Truck Acts. It appeared from the case stated by the justices that for some time a man named Cooper worked for the appellant as a waggoner under different agreements which varied the rate of wages. There was some little dispute as to whether in his first agreement there was any provision as to the amount of cider he should receive, but appellant said there was not. In the later agreements, under which Cooper's wages were raised, there was, however, no mention made of his having any cider, although during the whole time he was with appellant he was supplied with some. Ultimately Cooper was dismissed by the appellant, and sued her before the Petty Sessional Court for some wages and 6s. 8d. for cider, his case being that the price of the cider was due to him under a verbal agreement. He obtained an order against Mrs. Jones for the wages he claimed, but the sum he claimed for cider was disallowed. Mrs. Jones was then proceeded against under the Truck Acts for supplying Cooper with cider in lieu of current coin as wages, and although she contended that the cider was a gift, in accordance with the practice of farmers in the country, the magistrates convicted her.

Mr. Rawlinson, K.C., and Mr. Corner appeared for the appellant, and Mr. Amphlett, K.C., for the respondent.

The Lord Chief Justice, without calling upon the latter, gave judgment. He said he doubted whether he should have come to the same conclusion as the magistrates, but they had found that the cider was in fact supplied in part payment of wages, under a verbal understanding which existed between the parties at the time of the existing agreement. It was impossible for the Court to say there was no evidence of that in view of the servant's statement, and, therefore, they must confirm the conviction. He was not going to suggest, however, that any gift given by an employer out of the kindness of his heart was part of a man's wages, but he regretted, on the finding before them, it was impossible to say the conviction was wrong.

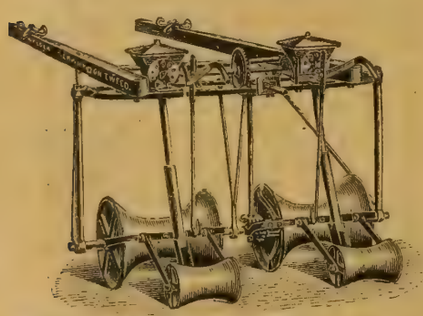
Mr. Justice Darling and Mr. Justice Channell concurred, and the appeal was dismissed with costs.

New Agricultural Patents.

Specially compiled for *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son, and Co.), patent agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

5,406.—Frederick Cutlan, of Hatton Garden, London, for "A grinding or sharpening attachment for machines in which milling cutters or the like are employed."

4,924.—Harvey Laroy Hopkins, of Strand, for "Improvements in cutter caps for mowing machines, and the like."



4,945.—John Chinnock, of Norwich, for "An improved can or vessel for sterilizing and preserving milk."

Patents Sealed.

20,416.—A. McGregor, of Lancashire, for "Reaping and mowing machines."

20,688.—E. Geneux, of Piccadilly, London, for "Paring potatoes, etc."

The London and North-Western Railway's list of the principal horse and cattle fairs for the coming year has now been issued. This handbook will be found serviceable to all concerned in the movement of horses and livestock by rail, as it contains not only a very complete list of fairs, but is replete with kindred information of a most useful character. This annual has so grown by new features being added from year to year with the increasing demand it has met with that, from a small beginning, it now extends to 191 pages, but is produced in so convenient a size and shape as to be quite easy of disposal in one's pocket. It is issued free of charge, and copies can be had, post free, on application to the Cattle Traffic Superintendent's Office, Crewe.

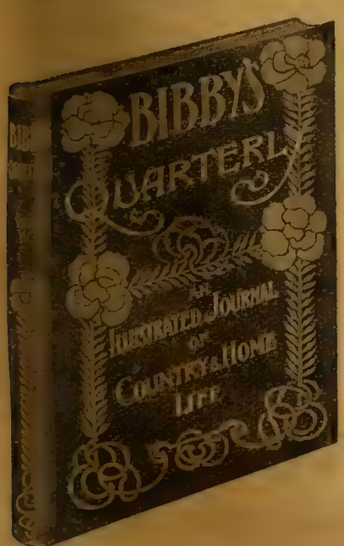
BIBBY'S QUARTERLY

AN

Illustrated Journal



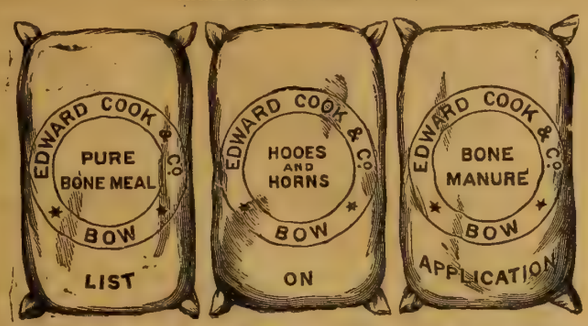
OF

COUNTRY & HOME LIFE.

THE **SPRING NUMBER** of **BIBBY'S QUARTERLY,** completing Vol. IV., **is now** ready, and will be sent postage paid to any address on receipt of nine penny stamps, or it may be had at this office or at the office of any of our agents for 6d.

We have been trying to make BIBBY'S QUARTERLY the most interesting and useful journal that a farmer can buy, and the present number is the best we have yet turned out.

The complete volume, carefully indexed and neatly bound as below, will be ready on the 1st of April, and will be forwarded after that date to any address on receipt of 3s. 6d.



Vol. IV. of BIBBY'S QUARTERLY makes a very handsome volume, and is, we believe, the best book of its kind on the market.

Orders may be given to our local representatives, or to the Publishers,

AUCTION SALES.

OGWELL, DEVON.
NEAR NEWTON ABBOT.

IMPORTANT TO AGRICULTURISTS, CART HORSE BREEDERS, AND OTHERS.

RENDELL & SYMONS have been instructed by the Executors of the late D. R. SCRATTON, Esq., to SELL by AUCTION at SHUTE DENBURY, 3 miles from Newton Abbot, on FRIDAY, APRIL 11, 1902, at 3 p.m., the following valuable Shires:—The very fine 3-year-old Stallion OGWELL CONQUEROR 18995, 17 hands, a sure foal getter, and a very valuable Stud Horse. Three splendid Brood Mares: WHITSTONE FORTUNE 21153, 8 years old. WHITSTONE MORELLA 22715, 7 years old. WHITSTONE SARAH 25122, 6 years old, in constant work.

These are all in foal by Ogwell Conqueror.

7 very fine Fillies: 5 3-year-old, Montford Kathleen 33166, Montford Keal 33167, Montford Kate 33155, Montford Kit 33168, and Ogwell Princess 33333; 2-year-olds: Girton Pride, by Marmion II. 0885 out of Girton Prudence 26053, and Ogwell. Famous by Buckingham Harold 16570, out of Whitstone Fortune 21153. Also by permission, the property of the Ogwell Shire Horse Association, the very fine brown Stallion WOOLSTON PRIMATE 17093, foaled in 1896, bred by Mr. G. W. Edwards, Woolston, Oswestry, by Regent II. 6316. This horse stands 17 h. 2 in.; has sired some good stock, and is a good worker.

Conveyances will leave Newton Abbot station at 1 o'clock. Return fares, 1s. 6d.

Catalogues, with description and pedigrees, can be obtained of the Auctioneers, at Newton Abbot, or Totnes, Devon.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.
ROYAL AGRICULTURAL SOCIETY'S SHOW, CARLISLE.
JULY 5th, 7th, 8th, 9th, 10th, and 11th, 1902.

The London and North Western Company's route will afford the most expeditious service for the transit of Passengers, Goods, and Live Stock Traffic to and from the Royal Agricultural Show at Carlisle.

Any information as regards the through rates for railway conveyance and cartage, &c., to and from Carlisle Station and Show yard may be obtained from Mr. FRANK REE, Chief Goods Manager, Euston Station, London, or Mr. L. D. PRICE, District Traffic Superintendent, Lancaster.

Special Goods and Live Stock Trains will be arranged for the speedy and safe transit of Exhibits to and from the Show; and Exhibitors at the Bath and West of England Show at Plymouth, and the Royal Counties' Show at Reading, forwarding Exhibits from those places to the Royal Agricultural Show at Carlisle will find the London and North Western Company's services the best and most expeditious.

The London and North Western Company's Express Dining and Sleeping Car Train Services to Carlisle, which is on their Main Line, provide the shortest and most direct route from London, the Eastern Counties (*via* Cambridge, Peterboro' and Rugby), the Midland Counties, the West of England, Liverpool, Manchester, and all parts for Passengers intending to visit the Royal Agricultural Show.

Care should be taken to clearly consign all exhibits for the Show, "Per London and North Western Railway."

FRED. HARRISON,
General Manager.
Euston Station, London, N.W.
March, 1902.

MISCELLANEOUS.

KALE AND KOHL-RABI.

Arable sheep farmers are very generally sounding the praises of these two plants just now, for they have once more aided materially in saving their flocks from being destitute of green food this spring, the value of which to those who have ewes suckling young lambs can scarcely be appreciated too highly. As flockmasters and shepherds should generally be aware, kale sends out its sprouts far earlier than either swedes or turnips, which is of great importance to all who desire their ewes to lamb down as early in the year as possible. Lambs seldom thrive satisfactorily, and certainly not economically, without adequate pickings of green feed, either of grass or of some tillage crop that can be provided for them, and of the latter there is nothing that can possibly surpass the tender shoots of kale. There is ample proof just now that the most succulent shoots of turnip-greens are very inferior, for, although lambs are remarkably fond of them, scouring invariably ensues whenever they partake heartily of this diet. There were large breadths of late-sown common turnips raised last autumn; and, indeed, but for that many farmers would have had scarcely any. Owing to the recent mild weather, these are now running to tops rapidly, and in all cases of ewes and lambs having to feed them, the latter have scoured dreadfully; and nothing weakens a lamb so much, or tends to undermine constitutional vigour more, than when a tendency to scour lays hold of the system. On the other hand, kale, however succulent, can be partaken of with impunity, and will never cause the slightest scouring.

When the late Mr. Robert Russell delivered his famous lecture on the plant at the Farmers' Club, he laid great stress on the remarkably healthy property of kale. Nothing that could be grown would agree with the sheep's internal organic system better, he said. He grew it in preference to rape for his lambs in autumn, because of the serious loss rape-feeding is liable to cause by gases being engendered so rapidly in the intestines, that a dozen sheep have been known to drop down dead suddenly in a couple of minutes, before the shepherd was aware there was danger. But kale never causes this terrible gastrisis, or engenders the slightest internal disorder, yet Mr. Russell insisted on the point that it was quite as nutritive as rape, or, at least, that he had found it to be so. Another very intelligent argument adduced by him was based also on his own experience, to the effect that in-lamb ewes can be allowed to partake of kale freely all through the period of pregnancy without there being any risk of abortion or of still-born lambs coming; whereas the fact is generally known that shepherds do not dare to give their in-lamb ewes many turnips, lest flooding of the womb should lead to one or other of these disasters. Mr. Russell was often heard to declare that his losses from abortion and deaths in lambing, in his flock of about 330 ewes, scarcely would average one per cent., and that in more than one year the entire

twelve months had passed without a single ewe having been lost. As to scouring, we have never heard the declaration disputed that kale-fed sheep are entirely exempt from the affection.

Owing to the frequent recurrence of drought summers, it has proved a matter of great difficulty to secure good swede crops in recent years, and the good policy of growing kale, or kohl-rabi, instead has over and over again suggested itself. Even before this was the case, it became very customary to grow swedes and kale together as a twin crop, solely to obtain the advantage of the early sprouting of the kale in early spring for the suckling lambs, whose dams would have the swedes cut and given to them in troughs. There is, however, another great advantage in taking this course, in being able to make more sure of a crop, for should fly carry away the young swede plants, the kale would most likely succeed, and in the event of fresh sowings meeting a similar fate, there would be abundant young kale to transplant, and fill up all intervals. The disposition to attempt the growth of swedes with kale appears to be very much on the increase, the system being to drill the seed of kohl-rabi and kale at the same time, three rows of one and three of the other; and, according to the experience of some very large flock-masters, there is no crop for the winter-feeding of sheep that answers better. Mr. George Adams, the well-known Oxford Down sheep-breeder, is accustomed to keep his ewes and lambs on kale and kohl-rabi until April, after which, until May, he prefers kale and swedes. Mr. Robert W. Hobbs, another distinguished Oxford Down breeder is likewise fond of both dual crops.

Very questionable is it, however, whether Mr. Gorringe, on the Sussex hills, has not hit on the surest and most economical way of providing sheep with succulent food throughout the winter, because it saves so much manual labour. Kale, like rape, can be grown profitably, without the plants requiring to be singled out by hand. Mr. Gorringe, taking advantage of this, and having found in the past great difficulty in raising swedes and turnips, to get labourers to thin them out, has for several years grown little else for his big flock of a thousand lambing-down ewes but kale, that has had no hand-thinning or any other riddance of surplus plants than a set of light harrows drawn across the field at the proper time would take out.

Growing kale in this way would meet two common objections sometimes urged against its culture, besides conferring the desirable benefit of labour-saving. The unsightly, troublesome stalks which are left behind after a crop has been fed off would not be produced, because they are the result of the bush growth which develops so many thousand heads, causing a field to appear exceedingly beautiful, with its bulky, handsome shrubs, but taxing the resources of the soil somewhat to produce them. And this leads up to the other objection, which is, that kale requires a much larger quantity of manure than swedes. This possibly may be true, if the old way of imparting tree-growth be pursued, but most likely the woody fibre of the big stalks is what pulls the land. Growing kale after the system of Mr. Gorringe ought not to require more than 3cwt. superphosphate and 1cwt. nitrate soda, and when, as often is the case, a precious green crop is fed off previously, so as to leave a legacy in sheep-droppings, the nitrate might be dispensed with. Gardeners find that by ridding peas of their lengthy stalks they can produce more pods. Fruit-growers also get abundant crops of pears on their dwarf trees by curtailing the wood; and, on the like principle, the rationale of depriving kale of waste woody fibre, and growing alone what is valuable, may be vindicated.

By a Man of Mark Lane.

In the "Crop Reporter," the official organ of the United States Department of Agriculture, it is stated that the total exports of breadstuffs from the United States for the seven months ended January 31 of the fiscal year 1901-2 show a decrease in value, as compared with those of the corresponding months of the previous fiscal year, of 10,339,720dols. The decrease is due chiefly to a heavy decline in the exports of corn and oats. Exports of corn during the seven months under consideration amounted in value to only 12,947,980dols., against 52,969,826dols. in the corresponding period of the previous fiscal year, a decline, it will be noted, of over 40,000,000dols. Exports of oats, likewise, show a decrease of over 3,000,000dols., the exports of the first seven months of 1901-2 having been 3,199,730dols., against 6,387,998 dols. for the corresponding period of 1900-1.

This deficit of over 43,000,000dols. in the exports of corn and oats was, however, offset to a large extent by an increase of over 32,500,000dols. in the exports of wheat and wheat flour. Exports of wheat for the seven months ended January 31, 1902, amounted in value to 78,793,749dols., against 48,503,503 dols. for the like period in the preceding fiscal year, an increase of over 30,000,000dols., while exports of wheat flour for the same period in 1901-2 amounted to 41,853,518dols., against 39,165,338dols. for the corresponding months of 1900-1, an increase of over 2,500,000dols.

Thus it will be seen that of the 10,339,720dols. deficit in exports of breadstuffs in the first seven months of 1901-2 over those in the same months in 1900-1, all but about 1,000,000dols. is accounted for in the combined exports of wheat, wheat flour, corn and oats.

In the second general memorandum on the Indian wheat crop of the season 1901-2, issued by the Statistical Department of the Government of India, it is stated that the sowings of wheat were everywhere made under somewhat adverse conditions, owing to the early withdrawal of the monsoon. Moreover, the winter rains gave a very inadequate supply of moisture wherever they fell, and they were entirely absent from Western and Central India. It is anticipated, therefore, that the wheat crop generally will be substantially below the average. From the reports of the individual provinces, it would appear that the area under cultivation is very much below the normal.

The receipts on account of Revenue from April 1, 1901, when there was a balance of £5,596,918, to March 22, 1902, were £139,787,210, against £128,004,366, in the corresponding period of the preceding financial year, which began with a balance of £3,517,047. The net expenditure was £187,322,499, against £178,250,508 to the same date in the previous year. The Treasury balances on March 22, 1902, amounted to £13,590,874, and at the same date in 1901 to £9,263,356.

The Department of Land Records and Agriculture for the North-Western Provinces and Oudh on February 26 issued its second forecast of the linseed and rapeseed crops for 1901-2, in which it was stated that the season had been unusually dry and the growth of the plants had been retarded where the supply of moisture was insufficient. The light rainfall received towards the close of December and the beginning of January benefitted the rapeseed and linseed crops, which were badly in need of rain. The crops have generally escaped from fungoid diseases, but rapeseed is reported to have been somewhat injured from frost in places. Harvesting has now commenced. In the Meerut and Agra divisions, where rain was scanty from the beginning, but where oilseed crops are not largely grown, the out-turn is not expected to exceed 75 per cent. of the normal. In the other divisions the crops are comparatively better, being about 90 per cent. in Allahabad and 80 per cent. in the other divisions, taken as a whole.

According to the recently issued census returns, the United States cotton crop of 1899-1900 yielded to the farmers 4,566,000 tons of cottonseed, worth 10.28dols. per ton, or in the aggregate 46,951,000dols. It is not much more than thirty years since cottonseed was thrown away. In most cotton-growing districts its destruction was enforced by law, in order to avoid the poisoning of streams or the destruction of cattle. In 1870 practically all the cottonseed oil was exported, and its value was 15,000dols. The exports of cotton oil in 1900 were 49,357,000 gallons, worth 16,521,000dols. The seed crushed represented only half the available supply.

Of the by-products there were 900,000 tons of cake and meal of the value of 16,000,000dols. at the mill. Over one-half of this was exported to Europe for cattle feed. The remainder was consumed at home, chiefly as fertiliser in the South, mixed as follows: ¼ cotton meal, ¼ potash, etc., ½ phosphate rock. Another by-product are the hulls—in 1900 1,200,000 tons—which are used for cattle feed, hundreds of thousands of cattle being fattened with it, and new experiments have shown that excellent use can be made of them as paper stocks. The linters (short lint) recovered from the seed—over 57,000,000lb. in 1900—are used as filling for cheap cotton materials, carpets, wadding, etc.

I have received a copy of the second forecast of the wheat crop of the Punjab for the year 1901-2, issued by the local Department of Land Records and Agriculture, on February 25th. In it is stated that from the time of submission of the first forecast up to the middle of the current month (February) there has been no rain at all anywhere in the province, and no further sowings of wheat have been possible. The total area now estimated to be under wheat in the Punjab is 6,118,900 acres. This is 95,000 acres or 1.5 per cent., less than the area returned in the forecast of November last, and 1,735,000 acres, or 22.1 per cent., less than the area given in the last year's final report.

The falling off is due simply to early cessation of the monsoon of 1901 and to the failure of winter rains. No improvement can be expected, as the sowing time has long expired. On the other hand, it is probable that if existing weather conditions continue, the greater part of the unirrigated area—2,970,100 acres—will entirely fail. In many places it has already commenced to wither. The irrigated crop is in average condition.

At a meeting held at Washington on Wednesday, the final steps for the formation of a National Millers' Federation, representing a capital of four hundred million dollars, and a flour output of one hundred million barrels, were taken, and the officers of the federation elected. The president of the federation declared that it should endeavour to extend the flour market by diplomatic and commercial reciprocity or otherwise. Resolutions protesting against the high dockage rates in London were adopted.

By a Lobbyist.

Both the great measures introduced into the House of Commons during the present week are of direct interest to the rural classes, the first, perhaps of indirect interest, but the second of direct interest, as enunciating new principles applying to the land, which, though at this moment restricted to Ireland, may, in their contagious influence yet have a serious effect upon English agrarian politics. I will deal with both measures in their order. Frankly, I doubt whether the new Education Bill will pass in its present form. At first there were a section of Radicals, led by that rather lachrymose philosopher, Mr. Haldane, who were inclined to give it cordial greetings, but since that Radical antagonism has stiffened. The mere fact is that the Bill is, in itself, an anomoly and a paradox. It calls into existence a new educational authority—which, of course, is to take the place of the School Boards—and then this body is to possess no emphatic powers to do anything. The educational committees which are to be appointed by the Councils on the nomination of other bodies may, or may not, carry out the purpose for which they are to be called into existence. Then, even these committees are to have no representative character. They are to include "persons of experience in education"—an ambiguous sentence, which may mean the dominance of clericalism. Finally, the voluntary schools—whose work no man ought to deride—are apparently to be given unlimited use of the public rates, and that without any corresponding public control. I judge this from the fact that the public authority, such as it is, will only have the power of appointing one-third of the managers of these voluntary schools.

Permissive in its character, unrepresentative in the method which it would pursue, disloyal to the now accepted principle that where public moneys are spent there ought to be public control, the Bill is doomed not to settle the educational controversy, but to embitter it. Should it be carried, it would only be the precursor to a new propaganda by the advocate of popular sectarian education. I had anticipated that this measure would prove a great boon to the rural districts. I sadly fear that it will prove a great deterrent to their mental development. We cannot eliminate education from the villages—that is certain. What we, then, ought to do is to give it such a character as will better fit the pupils for their after-life. What does this Bill do? Well, it certainly does not pretend to do this. What it does do, however, is practically to penalise the villages resorting to it. The provision in the Bill that any capital expenditure for an elementary school will fall only on the parish or parishes served by the school imposes a fine on the well-disposed. Hitherto the idea has existed that the Government would see to it that the expenditure was spread over the county area. What body of village labourers, unless they are inspired by an idealistic care for the future of their lads, will deliberately mulct themselves in a serious expense? They will probably have only to look to the neighbouring villages to see their fellows jogging along comfortably, without indulging in any such heroic expense. Naturally, the idea will be suggested that it is a piece of Quixotic foolishness to mulct themselves.

I believe that the Bill is a bad thing for education, a bad thing for the influence which the priesthood still exerts upon our educational system, and a bad thing for voluntaryism. The re-dowering of the voluntary schools and the re-placing of the control in the hands of an ill-regulated body elected in an *ad captandum* manner will inspire revolt. It is thus, in my view, a very mistaken sop to clericalism—a sop which will have a boomerang character, and strike a return buffet at the obect it is intended to benefit.

Frankly, I do not see what the new educational authority can seriously accomplish. It is, in the first place, given a permissive capacity, and then the managers of any existing schools may join with ten ratepayers in petitioning the Board of Education against any school proposed by this authority. What, in the name of common-sense, does this mean but depriving these non-representative bodies of all power but that of doling out money to the voluntary schools? I have again and again lauded the work of the voluntary system; but this measure is, I repeat, calculated to provoke a feeling which may secure its ruin. It is a queer hodge-podge of fancy franchises, indecision, and unwise ungenerosity. In this last sentence I am repeating the language of one of the most resolute Conservatives in the House. This Bill is a bad thing, especially for the rural education of the villages, and it is calculated to breed a miserable crop of disputes between the Church and the Nonconformists educationists. It is no turgid democrat who writes this, as my readers know. Can it be that the Government is riding for a fall?

The fatal stamp of voluntaryism, or, rather, of permissivism, is over Mr. Wyndham's Irish Land Bill. I hope that I shall not be branded with inconsistency if I frankly declare that I think that in this instance this policy is wise. The purpose of Mr. George Wyndham is, apparently, to finally apply the principles of compulsory purchase to the whole of Ireland. This, however, is too great a revolution to be adopted, in the first instance, in anything but a tentative fashion. Of course, I am aware that in proceeding in this manner you may accidently intensify discontent. Supposing, for instance, that ten out of every hundred estates are sold—and it must not be forgotten that the one lesson of present-day experience in Ireland is that the farmer who is on his way to become a freeholder pays less for his land than the ordinary tenant—you cannot expect the tenants on the other ninety estates to be possessed by a holy satisfaction because of the lanlords' indisposition to sell. All this danger, great as it is in the present electrical state of the Irish atmosphere, has to be faced. We may have strikes against rent, as we have now on the DeFreyne Estate; but the question is if much more significant evils than this might not be bred of the too-hurried adoption of the compulsory principle of purchase. Expatriation of the Irish landlords may be a good policy; but I am convinced that if it be so, it is not wise to rush to it in a bull-headed fashion, simply at the dictate of that very emotional person, Mr. T. W. Russell.

I am whole-hearted in my sympathy with this Bill, both with the methods it adopts and the tentative fashion in which it proceeds. In applying the machinery of the Congested Districts Board to the whole of Ireland, it has adopted a machinery which has been proved to have been effective in character and practical in operation. In turning the Land Commission from the work of rent-fixing to that of a grand salesman of Irish land, the Government has shown a wise appreciation of a valuable body; and in allowing that Commission to become an actual landlord to the tune of a million's-worth at a time, it reveals an absence of niggardliness which should have an effect on the impressionable Irish tenants. What is more, in offering the landlord, in payment, definite cash instead of land-stock, and in rendering unnecessary the entire process of transfer, examination of title and the whole irritating procedure which attends sale in unhappy England, the Government holds out an inducement which in some districts will be as effective as compulsory powers. There is only one serious blot on the Bill from the tenant's point of view. Suppose that when he makes an application to have a fair rent fixed the landlord asks the Land Commission to fix terms of purchase. Should the tenant refuse to consent to those terms, he loses his right to have a fair rent fixed, and he reverts to the old rent. This is the one barrier to the acceptance of the Bill. It had better be dropped.

Is there any prospect of even an attempt being made to re-produce this Bill in England? I spoke to some of the most extreme land reformers in the House—land reform now is but a dulcet aspiration, and no longer an assertive ambition—in reference to this point, and they agreed that the Bill was only justified by the peculiar conditions which exist in Ireland. The land system there has been hopelessly broken down. Here in England it is accepted with only one or two mild expostulations against minor anomalies, which serve to throw into greater relief its very acceptability. This is a bold venture—at least, so far as the principle involved is concerned—to save a desperate situation.

OUR LIST OF SHOWS.

The Mark Lane Express

POCKET BOOK

AND

LIST OF AGRICULTURAL SHOWS.

Our list of Agricultural Shows is this year issued in the form of a pocket book, of a convenient size, which, in addition to containing the Show Fixtures for 1902, includes a considerable amount of useful information, consisting of Railway Rates for Stock, tables, etc. The Pocket Book consists of 72 pages and cover, and is of a size eminently suitable for the purpose for which it is intended. A vacant page for memoranda faces each page of the Show Fixtures, and this arrangement will be found of great use, enabling readers to easily and quickly make a note of any prospective engagements.

Copies of the "Mark Lane Express Pocket Book and List of Agricultural Shows" may be obtained free upon application to 1, Essex Street, Strand, London, W.C., the only stipulation being that ½d. stamp for each copy required is forwarded to cover the cost of postage.

Market Tolls.—In the Chancery Division on Monday Mr. Justice Farwell gave judgment in an action by the Duke of Newcastle for the purpose of asserting his rights to tolls exacted in respect of fairs within the town of Worksop. The duke's predecessors had acquired the right to hold markets and fairs and to collect tolls in respect of the same, the charters going back to Edward I. The duke had granted a lease of all the markets and rights to tax to the Worksop Urban District Council, but he wanted to prevent them collecting tolls on the ordinary market days coincident with fair days, on the ground that the fairs swallowed up the markets, and that only fair tolls were payable on these days. It did not appear that, as a matter of fact, any fair tolls as such had been collected by the duke or his predecessors for a great number of years when the fairs were duly proclaimed by the duke's public criers His lordship dissented from the contention that it was impossible for a market to be held on a fair's day, and came to the conclusion that the lease by the duke to the District Council of the markets' rights was executed on the assumption that no fair tolls would be collected. He accordingly gave judgment against the duke, and dismissed the action with costs as between solicifor and client.

Western Agriculture.*

Much interesting information on the agriculture of Canada and the United States was gathered by Professor F. B. Smith, of the South-Eastern Agricultural College, in his recent visit to those countries. Professor Smith has embodied his experiences and the results of his investigations in a book under the head of "Agriculture in the New World." His first object in undertaking the tour was to visit the various agricultural colleges and experiment stations, and thus glean some idea of the systems of teaching agriculture in vogue in America, and also observe the results of these systems. Secondly, he wished to observe the aid rendered by the two great Governments to agriculturists and the organisation of state-aided agricultural education and research. Mr. Smith says that "the inhabitants of the New World are great believers in education and in the importance of developing the faculties of each individual to the full, and one of the facts which struck me most forcibly during my journey was the brightness and intelligence of the people. Recent as is the settlement of the North American continent when compared with our own civilisation, systematic agricultural education is of older growth there than here, and the provisions made for it exhibit wonderful forethought and sagacity. Indeed, the system of agricultural education and research in vogue in the United States at the present time is the most comprehensive, and, judged by results, the most practical of any nation in the world. Canada, though the resources at its command are not equal to those of the United States, is doing its best, and is pursuing a wise and enlightened policy.

"The desirability of some form of agricultural education was recognised in the United States as far back as the close of the eighteenth century; and the present development is the outcome of the agitations and experiments which have been conducted from that time onward. In the early days of the movement, several agricultural schools and colleges were founded, sometimes by state aid, but more frequently by private enterprise. For various reasons most of these institutions failed to realise the expectations of their promoters, and gradually ceased to exist, and it was not until about the middle of last century that the foundations of the present system were laid. The passing of the Morrill Act of 1862, and the consequent establishment of the Land Grant colleges, marked a new era, and placed matters upon an entirely different footing, and from that time onwards agricultural education has steadily progressed until, by a process of evolution, it has attained its present position.

"Thus, at the present time, there is in every state of the Union at least one agricultural college, and one experiment station; which, though closely associated and mutually helpful to each other, are distinct as far as organisation and revenue are concerned. Munificent as are these endowments, so useful have the colleges and stations proved, and so greatly have their efforts been appreciated, that in many instances the various states in which they are situated have largely supplemented their incomes by additional grants, and the amount of money spent upon them is enormous—for instance, in 1900 the total income of the 65 colleges then in existence amounted to no less than £1,286,209, and of the 57 experiment stations £234,171, or a grand total of £1,520,380. Though the Federal Government has endowed the colleges and stations so liberally, it has reserved to itself no share in the administration of the funds thus provided, and the various states are at liberty to lay out the money as they think fit, so long as it is not devoted to purposes other than those specified by donating acts.

"The Federal Government has so far confined itself to assisting the colleges and stations, leaving the various states to make such provision for elementary and secondary agricultural education as they may deem expedient. In this respect there is considerable variation; some states are doing nothing in the way of agricultural education beyond administering the funds obtained under the Morrill and Hatch Acts; whilst others are endeavouring to introduce agriculture or nature study into the curriculum of the rural schools, and in a few instances tentative attempts are being made to establish a system of secondary education in the shape of farm schools. In most states there is a well-organised system of extension teaching, usually consisting of popular lectures and addresses delivered at farmers' clubs and institutes, by members of the college staff and other selected speakers.

"In Canada matters are rather different; the Dominion Government maintains and controls a series of experimental farms, somewhat akin to the experiment stations in the States, but it undertakes no responsibility with regard to agricultural education, such instruction as is given being provided entirely by the various provinces. Through lack of time I had to confine my investigations in that country to the Province of Ontario; and there I found a thorough and complete system of agricultural education in vogue, commencing with classes in the elementary schools and culminating with the college at Guelph.

"The Agricultural Departments of the two countries and of the states and provinces within them differ considerably from the English Board of Agriculture in many ways. In the first place the offices are more liberally supported, they are larger and more completely organised than ours; and consequently they have greater opportunities of exercising their functions. The manner in which the different bureaus and offices of the Department at Washington, for example, are equipped and conducted, is greatly in advance of anything we have in this country. In many respects, as, for instance, in the collection of promising varieties of seeds and plants from all parts of the globe; in the raising of new varieties of plants; in the assistance and encouragement afforded to stock-breeders; in the improvement and cheapening of methods of transport; in the opening up of new markets, and in the steps taken to ensure that only reliable and suitable produce shall be exported, etc.; and in the general efforts made to organise the agricultural industry, they more closely resemble the bureaus of certain Continental nations than the English Board of Agriculture.

"This tendency for the state to associate itself more directly with the conduct of agricultural affairs appears to be growing and many undertakings, which were originally founded and maintained entirely by private enterprise, such as agricultural societies, live stock associations, farmers' clubs, etc., are now supported and managed, either wholly or in part, by the Government.

"The Departments maintain a very close connection with the industry committed to their charge, and one feels that they are administered by men thoroughly acquainted with the conditions of country life, and with the difficulties and perplexities which the farmers have to face.

"So far the system, as at present established, has worked uncommonly well, and, as a striking example of the influence which well-directed State effort can have in fostering and assisting a great industry, the Agricultural Departments of the two countries are deserving of careful consideration."

* "Agriculture in the New World" (London: The Press Printers, 2s.), Mr. F. B. Smith, Professor of Agriculture, South-Eastern Agricultural College, Wye, Kent.

Prevention of Potato Disease.

For more than ten years experiments have been carried out in different parts of the British Isles in order to test the effect of certain dressings in checking the ravages of potato disease (*Phytophthora infestans*). As in all other experiments, the results have varied to a considerable extent, but in the majority of cases they must be regarded as satisfactory. It might have been expected from the success which has attended the operation that it would have become the general practice throughout the country to spray potatoes in order to prevent, or, at any rate, check the disease. This, however, has not been the case, and in most districts of England and Wales preventive measures have never been tried. With the view of directing further attention to the matter in North Wales trials were made in 1901 at the Farm of the University College of North Wales, Lledwigan, and at three centres in Carnarvonshire. It has been found in previous experiments that the best results have been obtained where the dressings were applied before the disease made its appearance, as it spreads so rapidly under favourable conditions that in many cases it is impossible to arrest its progress after the plants have been attacked.

The preparation most frequently in use is known as the Bordeaux mixture, and consists of :—20lb. of sulphate of copper, 10lb. of lime, 100 gallons of water. The mixture is applied at the rate of 100 to 150 gallons per acre.

It will usually be found convenient to purchase the sulphate of copper and lime of guaranteed purity mixed together in the above proportions, so that it is then only necessary to dissolve them in the required quantity of water. There are several preparations in use similar in their main features to the Bordeaux mixture.

In all cases the liquid, which should be kept well stirred, is applied to the plants by spraying machines, care being taken to cover the surface of the leaves more particularly on the under side. The success of the treatment depends upon the time it is carried out, upon the weather, and upon the care with which the work is done. It should be repeated if the dressing is washed off by rain.

In the present experiment the dressing was applied by a twin-spray machine about the middle of July. There was then no trace of disease. It was intended to repeat the dressing after an interval of three weeks, but this was not done owing to the unfavourable state of the weather.

A noticeable feature of the experiment was the fact that the sprayed plots remained green for fully ten days after the unsprayed plots, a result probably due to the increased vigour imparted to the plants on the sprayed portion.

It was noticed that with one exception the total weight on the sprayed plots was considerably greater than on the unsprayed. As, however, this does not appear to be the most important feature of the experiment, smaller tables are inserted below, giving the averages at the four centres for the different qualities of potatoes.

MARKETABLE POTATOES.

	T.	C.	LB
Average weight per acre at four centres, sprayed	11	4	0
Average weight per acre at four centres, unsprayed	10	3	24
Average increase per acre on the sprayed over the unsprayed plots	1	0	88

The table shows that on the average there was an increase of marketable potatoes on the sprayed plots of over a ton per acre, and it is worthy of note that the increase occurred at all the centres. This would appear to indicate that one effect of the spraying was to produce a more vigorous growth—a result which is confirmed by the following table, which shows that there was a much larger quantity of small potatoes on the unsprayed than on the sprayed plots.

TABLE II.—SMALL POTATOES.

	T.	C	LB.
Average weight per acre at four centres, sprayed	1	7	58
Average weight per acre at four centres, unsprayed	1	11	79
Average increase per acre on the unsprayed over the sprayed plots	0	4	51

It was found that the average weight of diseased potatoes at the four centres shows that the dressing was not very effective in preventing disease. The figures, however, scarcely represent the facts, as the detailed results show that at two centres the quantity of diseased potatoes was about one-half less on the sprayed than the unsprayed plots. At another centre it was reduced by about 1¼ cwt. per acre, but at the other centre there was actually more disease on the sprayed plots.

Farmers' Plea For Fair Play.

There was a large attendance at a recent meeting of the Framlingham Farmers' Club to hear Mr. Albert Ranson speak upon "The Agriculturist's Plea for Fair Play."

Mr. Ranson, in his address, said the position of British agriculture was a matter of grave national concern. A great deal had been written of late in the "Times" on the subject of our

food supply in the time of war. There was a grave danger in seeing the wheat lands of this country becoming derelict or producing very poor pasture. Sir John Glover, speaking of the shipping tonnage of the last ten years, reminded his audience that four out of five loaves which came to their table were dependent upon sea carriage. We were defended by the Navy, but we were fed by the mercantile fleet, and any failure of the latter would develop a state of things which the most powerful Navy could not prevent. We had not merely to get the stuff abroad, but if we got involved in a foreign war, we had to guarantee that when we wanted to buy the stuff there would be ready sellers. What was the remedy? He was going to give them, in plain English, the remedy that lay close at hand.

Mr. J. Holland Rose, in an article in the "Monthly Review" upon "Our Food Supply in the Napoleonic War," referring to the more complex circumstances that now constituted the problem of food supply, indicated some pregnant questions which rendered an official inquiry desirable. Amongst these were, whether the teachings of history in regard to the Napoleonic war justified their reliance on the Navy alone to safeguard our food supply? Whether such reliance would not impose on the Navy an intolerable burden of responsibility? Whether trust could be placed in the plan of neutral ships bringing corn to a neutral port near these shores? Whether the effort to build an overpoweringly strong Navy, in order to safeguard our corn supply, did not defeat its own ends by inciting other powers to make the same increase? Whether a system of granting bounties on the growth of wheat would not also be beneficial to the country districts, and bring a feeling of added security to the nation at large, and whether the present wasteful use of the necessaries of life, the thriftlessness of our working classes, and the tendency of the sensation-mongering Press to magnify every incident, would not create an intolerable situation in time of a great naval war, unless some precautionary measures were taken beforehand? The "Statist" said that the agricultural decay was disquieting. To it was largely due the increased extent to which we were dependent upon other countries for our own existence.

There was no money in British agriculture, the speaker said. The labourer, farmer, and landlord were so bound up together that one could not prosper unless all did. He regretted that there was generally so little cohesion amongst the farmers and the men, brought about, he believed, by the feeling handed down from father to son that the labourer at one time was oppressed and badly paid. There must be money in agriculture if it was to prosper, and to that end he would suggest as a remedy that they should reimpose the shilling registration on all the grain that came into this country. They had that for 25 years after the repeal of the Corn Laws, and it never hurt anybody. The Chancellor of the Exchequer in 1901 estimated that this shilling would bring in £2,183,000; this he (Mr. Ranson) would not have applied towards the war expenditure, but to be given as a temporary small bounty per acre for wheat culture. Let the nation relieve the landed interest of the responsibility of tithe. Abolish the land-tax, a most iniquitous tax, specially imposed years ago when there was very little other property in the country which could bear taxation. They wanted the whole tax taken off, and they would be prepared to pay rates on the houses they lived in and the buildings they occupied.

He wanted both the expenses of education and the roads borne by the nation, and he thought the Government might have assisted them a little if they had encouraged them in horse-breeding instead of going to the other ends of the earth for animals which were not worth paying carriage on.

Produce of Crops in 1901.

There has been issued by the Board of Agriculture a yellow book showing the estimated total produce and average yield per acre of the principal crops. On the 3rd of December last the Board of Agriculture issued a preliminary statement showing the total produce and the yield per acre of wheat, barley, and oats as estimated for Great Britain and for England, Scotland, and Wales separately. The county details for these and other crops have in recent years been included only in the complete annual volume of the agricultural returns. That publication, which comprises a general report in which reference is made to the finally revised and complete figures of the returns generally, has necessarily to wait for the completion of returns relating to the agricultural imports and exports of the calendar year, and for certain colonial and foreign agricultural statistics. It has, therefore, been deemed desirable to make, in advance of the annual volume, a further issue of the tables containing the full results of the estimates of the produce of the crops in 1901.

To the total results of the several crops in Great Britain herein shown, it may be convenient to add the corresponding figures for Ireland which have been issued by the Department of Agriculture and Technical Instruction in that country. The aggregate for the United Kingdom, exclusive of the Isle of Man and Channel Islands, for which no produce returns are collected, can thus be shown as under for 1901:—

Crop.	Estimated Total Produce.			Estimated Yield per Acre.		
	Great Britain.	Ireland.	United Kingdom.	Great Britain.	Ireland.	United Kingdom.
WHEAT	Bushels. 62,467,602	Bushels. 1,470,127	Bushels. 53,927,729	Bushels. 30·84	Bushels. 34·24	Bushels. 30·93
BARLEY	61,107,623	6,535,563	67,643,186	30·98	40·42	31·70
OATS	110,105,530	51,069,002	161,174,532	36·74	46·45	39·35

Visit of Agriculturists to Hungary.

The Essex County Technical Committee evidently finding the continental tours formerly arranged by them so successful have determined to organise one of agriculturists to Hungary. In order to give agriculturists an opportunity of studying farming and agricultural organisations in Hungary, the following arrangements have been made for a visit of a party to that country. Leaving London (Holborn Viaduct Station) at 9.25 a.m. on Friday morning, May 16th, the party will travel direct to Vienna, via Queenborough, Flushing, Hanover, and Breslau. Sunday will be spent in Vienna, and the following fortnight will be devoted to excursions in Hungary as follows (subject to alteration):—

The Agricultural College, the experiment stations, and the Archduke Frederick's dairy farms at Magyar Ovar; Kuhne's implement factory at Moson, on Monday. M. Szell's pure-bred herd of Simmenthal cattle at Ratot, near Szombathely; electricity as applied to farming at Ikervar; Count Erdody's estate and farms at Gyepii Fuzes, on Tuesday. The State farms and studs at Babolna and Kisber; Hungarian, Simmenthal and Kuhland cattle, Hungarian, Arabian, and thorough-bred horses, Mongolian swine, Rambouillet-Merino sheep; agricultural school at Komarom, on Wednesday and Thursday Receptions by the Minister of Agriculture and the National Agricultural Society; conference with the various co-operative and agricultural credit societies; the markets; the flour mill and elevator; the seed control, entomological and agricultural analysis stations; the horticultural and veterinary colleges and the agricultural museum, in Buda Pesth; the pig-fattening farm at Kobanya; bee and poultry farms at Godollo, on Friday and Saturday.

On Sunday they will attend the English service at the Presbyterian Church at Buda Pesth; visit to Count Karolyi's estate at Foth. On Monday, through the Banat to Bazias, one of the corn ports on the Danube; thence by steamer through the Kazan Defile to the Iron Gates and the Baths of Hercules. On Tuesday visit the farms at Arad; cultivation of cereals; feeding of cattle in connection with the breweries. On Wednesday they will visit the State farm of 40,000 acres at Mezohegyes; cultivation of wheat, barley, maize, hemp, sugar beet, fodder crops, etc., pure-bred Hungarian cattle and pigs; stud of 3,500 horses; sugar, spirit, and hemp factories and breweries in connection with farm. On Thursday and Friday they will visit the agricultural college and peasant farms at Debreczin; the Hortobagy Puszta—an extensive tract of grazing land belonging to the municipality; Hungarian sheep; reconstruction of vineyards at Tokay. Excursion in the Tatra Mountains on Saturday, from Poprad Felka to the lake of Csorba; Hungarian forestry.

The return journey will be made by Berlin, where Sunday is spent, and London is reached on the Tuesday evening. (Gentlemen whose time is limited can, by travelling through Berlin without break of journey, reach London on the Monday morning). The party will travel 2nd class to and from Hungary (1st class on board the steamer). Compartments will be reserved, and greatly reduced rates have been secured. Sleeping cars will, it is believed, be placed at the disposal of the party when required for night travelling during the stay in Hungary. Owing to these facilities it is anticipated that the total expense of the tour will not exceed £15 15s. each. Luggage must be restricted to the compass of a Gladstone or other hand bag. Applications to join the party, which will be strictly limited to 40 persons, must be sent in not later than April 16th. A remittance of £10 10s., to defray cost of tickets and the earlier expenses of the tour, must be sent as soon as intimation of admission is received.

A detailed itinerary of the tour is being prepared by the Hungarian Minister of Agriculture acting in conjunction with the National Agricultural Society of Hungary, who, having offered the party a cordial welcome, are kindly undertaking the detailed arrangements. A copy of the itinerary will be supplied to each member of the party. All further particulars can be obtained from Mr. T. S. Dymond, County Technical Laboratories, Chelmsford, who will accompany the party, and to whom intention to join the party should be notified as soon as possible.

Sale of Shorthorns at Annan.—On Tuesday Messrs. Kirkpatrick held a special sale of yearling shorthorn bulls at Annan. About 100 were brought under the hammer, and good prices were obtained. One bull was sold at £17, and others made up £15 2s. 6d. All the animals were sold.

The Tasmanian Apple Trade.—Approximately over 230,000 cases of Tasmanian apples will during the next three months be shipped from Hobart for the English market. Last year the total shipments were 12,000 cases less. These shipments will be made in 16 large ocean-going steamers, and the magnitude of the trade thus indicated is but a foreshadowing of greater things to come. There is scarcely any limitation to the producing powers of Tasmania as regards apples, and, although seasons go with varying phases of luck as regards root and grain crops, orcharding shows a fairly equal yield. A few thousand cases less in one season will probably be countervailed by many thousands more in the next, and so the planting out of apple trees continues. The present season commences under fairly bright auspices. So far there is no indication of an excess of blight or other orchard pests; the task of extermination progresses by slow degrees, but steady persistence is beginning to tell.

The Beer Bill.

The solemn secrecy, hitherto maintained by the important personages who have the drafting of this measure is at last broken, and the provisions of the Bill are given to the world for consideration.

It will come as a surprise to most people, as in its naked simplicity it is an utter abandonment of all that has hitherto been supposed to be the principle involved.

We have now, if we agree with this drafted measure, to shift our ground completely. All that has been contended and fought for must be thrown to the winds. Pure beer is an impossibility, and, apparently, for so we must assume, brewers are to be allowed to use anything they like in lieu of malt, the only restriction suggested being the amount of substitutes employed.

Prominence is given to the objection to hop substitutes, which are forbidden. We learn that a llthe terrors of foreign competition and rivalry are completely disposed of by a declaration by vendors that it is "imported beer."

It would be most interesting to know how this

Complete Change of Front

has been effected, and by whom? Have all those who have fought the battle for consumers and barley-growers been consulted? And, if so, do they agree that this step is a right or desirable one to take? For instance, the subject of pure beer has for many years past been frequently considered at the council meetings of the Central Chambers of Agriculture, and many resolutions have from time to time been agreed to, always unanimously, or with large majorities. There is also a permanent committee, known as the Beer Committee, and which was duly reappointed recently at the ordinary council meeting of the Central Chamber. Has this committee met? And, if so, did it approve of this draft? If not, why not?

The Principle Involved

is the first consideration, and it requires explanation. We ought to fully comprehend what is involved before any definite action is taken, and this is certainly a case where those responsible for the step should show just cause for the abandonment of a high and fixed principle. It must not be confused, for it is not merely a question of a glass of beer containing so much more or less of what it has been so ardently striven to secure as the right ingredient.

The true issue is a matter of right, or what should be common honesty in trading. Everyone who contended that margarine, if sold by itself, or mixed with butter, should be sold as margarine and not butter, knew that the principle involved was honest trading. The law was successfully appealed to, and, apart from mere moral honesty, it was enacted that the sale of margarine as butter was a fraud punishable by the Law.

The fact that margarine was as nutritious and harmless as butter did not influence the question in the least.

Honest Trading

was the end sought, and so far as such a matter can be secured by law, the end has been gained. In the matter of another article of food, quite as important in its way, many earnest workers have shown that just as we had a legal definition of butter we needed one for beer. It was contended that anything other than barley-malt employed by brewers was incapable of giving to the fluid produced the essential characteristics of beer, and that the substitution of malt left the product not of the nature and substance demanded when a glass of beer was called for.

So far, for the principles involved, the issues are very simple, and it rests with those responsible for the drafting of this measure to justify their action and to get all honest men to agree with them if they are right. It is a matter for argument, and there should be no difficulty.

If, on the other hand, it is a

Commonplace Compromise,

who are parties to the contract? And do brewers agree to the terms?

The sort of apology published through the Press Association, and given in the last issue (page 363), if accepted by Agriculturists, binds them in the agreement with, or acceptance of, reiterated falsities as facts. It has not been admitted yet, for, on the other hand, it has been emphatically and conclusively contradicted and shown to be false that any substitute for barley-malt is necessary in beer. Why, therefore, should we now be asked to go on our knees and humbly confess to all men that we have wilfully and knowingly tried to deceive them? If it is a question of expediency, surely then some good and substantial result should be squarely set before us, and in common decency and courtesy we ought to be allowed a little time for consideration and agreement, prior to the complete surrender of our position.

The Beer Bill.

We give below the full text of the Beer Bill prepared and brought into the House of Commons by Mr. Tomlinson, Sir Cuthbert Quilter, Colonel Kenyon-Slaney, Mr. Frederick Wilson, Mr. Purvis, Mr. Edwards, Colonel Brookfield, Mr. Griffith-Boscawen, Mr. Broadhurst, Mr. Round, Mr. Corrie Grant, and Mr. Stevenson.

MEMORANDUM.—By the Inland Revenue Act, 1880, referred to in clause 2, "beer" includes ale, porter, spruce beer, and black beer, and any other description of beer; and by the Customs and Inland Revenue Act, 1885, it is enacted that the term "beer" in the Inland Revenue Act, 1880, shall be construed to extend to any liquor which is made or sold as a description of beer or as a substitute for beer, and which, on analysis of a sample thereof, at any time shall be found to contain more than two per cent. of proof spirit.

A

BILL

TO

Amend the Law relating to the Manufacture and Sale of Beer.

BE it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. This Act may be cited as the Beer Act, 1902.

2. In this Act the term "beer" shall have the meaning assigned to it by the Inland Revenue Act, 1880, as extended by the Customs and Inland Revenue Act, 1885.

3.—(1.) It shall not be lawful in brewing or preparing beer for sale to use a less quantity of barley malt than eighty-five per cent. of the total saccharine yielding materials employed, the quantity of materials other than barley malt being calculated according to their respective equivalents in malt, as fixed for the time being for the purposes of the charge of duty on beer.

(2.) If any brewer for sale brews or prepares any beer in contravention of this section, or knowingly sells or offers for sale any beer brewed or prepared in contravention of this section, he shall be liable, on summary conviction, to a fine not exceeding for the first offence *one hundred pounds*, and for the second offence *two hundred pounds*, and for any subsequent offence *five hundred pounds*.

4.—(1.) It shall not be lawful to use in brewing or preparing beer for sale any substitute for hops.

(2.) If any brewer for sale uses in brewing or preparing beer or has in his brewery any substitute for hops he shall be liable, on summary conviction, to a fine not exceeding for the first offence *fifty pounds*, and for the second offence *one hundred pounds*, and for any subsequent offence *two hundred pounds*.

5. It shall be the duty of the officers of Inland Revenue, acting under the provisions of the Inland Revenue Act, 1880, Part II., to enforce the foregoing provisions of this Act.

6.—(1.) Beer not brewed in the United Kingdom (in this section referred to as "imported beer") shall not be sold otherwise than under some name which shall clearly distinguish it as being imported beer.

(2.) All casks, jars, or bottles containing imported beer, and all taps and engines from which the same shall be drawn, shall be distinctly marked or labelled with some name which shall clearly distinguish it as being imported beer.

(3.) All casks, jars, or bottles containing imported beer which are not distinctly marked or labelled in manner aforesaid are hereby prohibited to be imported into the United Kingdom, and shall be included among goods prohibited to be imported as if they were specified in section forty-two of the Customs Consolidation Act, 1876.

(4.) If any dealer in or retailer of beer knowingly sells or offers for sale any imported beer otherwise than under some name which shall clearly distinguish it as imported beer, or knowingly sells or offers for sale any imported beer in or from casks, jars, or bottles, taps, or engines which are not marked or labelled in accordance with the provisions of this section, he shall be liable, on summary conviction, to a fine not exceeding for the first offence *twenty-five pounds*, and for the second offence *fifty pounds*, and for any subsequent offence *one hundred pounds*.

7. This Act shall not apply to "spruce" or "black" beer.

8. This Act shall come into operation on the *first day of October, one thousand nine hundred and two.*

Scottish Sanitary Inspector's Views of the New Milk Standard.

Mr. John Frew, sanitary inspector for West Lothian, in his annual report, which has just been issued to the members of the County Council, comments adversely on the new milk standard. He states:—"It was thought that with the advent of the circular by the Board of Agriculture giving a standard for sweet milk, the difficulty of getting a conviction would be simplified. Experience has proved otherwise. What was formerly a difficult task is now rendered more so. Every sort of subterfuge is resorted to to prove that milk is genuine. New calved cows are trotted out, and bare pasture is also brought into evidence, notwithstanding the fact that the milk sold to customers is sometimes 25 per cent. poorer than that taken from the cows at the dairy. If they only come into court and swear that they milked the cows, never lost sight of the milk till they sold it on the street, and that they did nothing to it in the interval, the sheriff has no option but to dismiss the case. The circular, to my mind, is a grand protection to the dairyman, but so far as the public are concerned there is not much security.

"I am of opinion that before the Food and Drugs Act can be put upon a satisfactory basis the standard should be imperative—that is, the dairyman who sells milk under the given standard should be convicted of a contravention under the Act, and he ought to be compelled to keep and feed his cows so that they may give the required liquid. Acting on the advice of the sheriff, when we find a case of adulteration, we go to the byre early in the morning and get a sample direct from the cows milked in our presence. This is then sent to the public analyst and compared with the certificate of the adulterated sample. In every case we have got genuine samples of milk from the dairies, while that sold on the streets showed an abstraction of, in some cases, 19 per cent. of its natural fat, proving, I think, conclusively that some form of adulteration had been practised between the cow and the consumer. I may say that going to the byre is purely a voluntary procedure, and is not required by the statute."

Bristol Grocers and Milk-blended Butter.

At a meeting of Bristol and District Grocers' Association, held on Monday to consider the subject of "Milk-blended butter," a communication from the Bristol Provision Trade Association was read to the effect that in the opinion of that association the establishment of a standard of 16 per cent. of moisture in butter would be fair and equitable, and to the advantage of producers, traders, and consumers. The following motion was agreed to:—"That this association protests very strongly against the legalised sale of milk-blended butter as being opposed to the spirit of present food legislation, and asks the President of the Board of Agriculture to take steps to put

a stop to the sale of all butters, whether milk-blended or otherwise, which contains more than 16 per cent. of moisture."

Preston Cheese Fair.

Preston monthly cheese fair was held on Tuesday. The pitch consisted of 53 lots, comprising 675 cheeses, an increase of 19 lots and 212 cheeses compared with the corresponding fair of last year. There was a fairly good attendance, but all the cheeses being new, the demand was slow, and prices easier than last fair. Quotations:—Common, 55s. to 60s.; medium, 62s. 6d. to 65s. 6d.; best, 68s. to 70s.; one or two special lots realised 72s. 6d. to 74s.

IN PARLIAMENT.

HOUSE OF COMMONS.

Irish Land Bill.

On Tuesday Mr. Wyndham, the Chief Secretary for Ireland, introduced the Irish Land Bill. Explaining the scheme of his Bill, Mr. Wyndham put forth as its most important principle the fact that within certain limits and under certain conditions the Government is prepared, through the Land Commission, to take over the whole of a landlord's estate, or as much as he wishes to sell, and to conduct its re-sale. One of the conditions is that three-fourths of the tenants shall indicate their intention to purchase their hodings. The remaining fourth may, if they please, remain in their holdings as tenants of the Lond Commission. A working capital will be provided by the appropriation of a reserve of £247,000 accumulated under an earlier Act. Cash will be substituted for land stock in the advances made to landowners, a concession expected to enable many landlords to sell who now find it impossible to dispose of their estates. For the tenant the instalment of repayment will be lowered from £4 to £3 15s. He claimed for the Bill that it would bring the landlord and tenant together, and make an end of costly litigation.

In the course of the debate which followed Mr. J. Redmond congratulated the Irish Secretary on the lucidity of his explanation of the measure. The general tone of the Nationalist members was not unfavourable to the Bill, which was read a first time, amid cheers. However, notice to move the rejection of the Bill on the second reading has been given by Mr. Hutton and Sir Charles Dilke.

Railway Rates for Produce.

Major Rasch asked the President of the Board of Trade on Tuesday whether his attention had been called to the fact that, in the case of a railway which also owned a line of steamers running between the Continent and an English port, a fixed system of rates is imposed by law for the land journey, but no such control was exercised over the sea traffic; whether the Great Eastern Railway Company, for example, may charge the same rate for a given quantity of goods from Rotterdam (via Harwich) to London as from Harwich to London; and whether the Board of Trade could take any steps to require the same sea rates to be charged to all traders alike for the same class and quantity of goods.

Mr. G. Balfour: My hon. and gallant friend's question involves considerations of great legal nicety upon which I must decline to express an opinion. The jurisdiction to determine matters relating to undue preference rests with the Railway and Canal Commissioners, who would only decide on some specific case brought before them.

Major Rasch: May I ask the right hon. gentleman whether he thinks these differential rates are fair to the British home consumer.

No answer was given.

Practical Sympathy for an Old Farm Labourer.—The Malling (Kent) Guardians had before them on Wednesday the case of Edward Jeffrey, an octogenarian, who had worked as an agricultural labourer in one parish for nearly 60 years, and had been married 59 years, and who on Monday last was charged with attempted suicide owing to his inability to obtain work. The old man, who bore an excellent character, had become very despondent at his failure to obtain work, and found that the 3s. weekly poor relief allowed him was not sufficient to keep him and his wife out of the workhouse. The master of the workhouse yesterday reported to the guardians that, as a result of the newspaper reports of the case, a number of remittances had been received for the old man. A gentleman living in Cavendish Square, London, had offered to make an allowance of 10s. a week for life to Jeffrey and his wife, and also to provide a cottage for them on his estate near Brighton.—The Board directed certain inquiries to be made concerning Jeffrey, in order that the case might be dealt with at the next meeting.

Home Notes,

The Borough.

Although we are nominally at work, it is clear that, as regards the hop trade, the holidays have already commenced. During this week business is practically suspended, and as both factors and merchants close their offices from this (Thursday) evening until next Wednesday morning, we cannot expect any further movement of importance for several days to come. But there is some satisfaction in the knowledge that the traders leave the market in a healthy condition. So far as firmness can be spoken of in connection with so low a range of values, it is very evident. Not only are choice samples dearer, for they are sought for, and are difficult to find, but the lower and formerly despised qualities have been sold in large quantities at better prices, and the demand for them in abeyance for the moment, will probably be renewed as soon as the holidays are well over, with the results that quotations will be advanced, to which there is not much doubt that buyers will not be unwilling to respond. Depletion of stocks is not infrequently used as an argument to induce buyers to operate, and it is rather surprising to those who are not behind the scenes to find that such alarmist reports generally seem to have the power of drawing hops, and apparently from the uttermost parts of the earth, so that plenty again prevails. But I am assured by experts that the magnitude of recent business has been such as to reduce unsold supplies into a smaller compass than has been known, at this period of the season, for several years, and it is now anticipated that the large crop of last year and the whole of the reserves from previous seasons will be taken over, long before we approach the advent of the new crop. It must be borne in mind, however, that this extensive

Buying is mainly speculative,

It is impossible that the hops can have been acquired for consumption, either immediate or in the early future. Brewers have bought them because they are cheap, and are storing them to provide for possible contingencies. Those who have the gift of foresight cannot fail to realise that these circumstances suggest future complications, which can only be met by the counteracting influence of a limited yield in the present year, and I cannot too strongly endeavour to persuade my country friends not to allow themselves to speak or think of "peace, peace, when there is no peace," but rather to arouse themselves to consciousness of the real danger of the position, and to regulate their course accordingly. A parallel may be found in our national experience. The South African Republics, with whom we are now waging bitter and apparently interminable war, were permitted to accumulate military stores to an enormous extent. We looked on indifferently, until the insolent ultimatum was issued, and have since suffered grievously for our blindness. The stocks of hops now being stored will be used to the detriment of growers when the time comes, if we do not bestir ourselves in taking defensive measures. As with the struggle in South Africa, so with our own smaller fight, the issue will ultimately be favourable to us; but in the meantime, if we are not wise in time, we must pass through grievous trials and suffer serious losses. May the warning be taken to heart and acted upon.

I have had some correspondence with the organising secretary of the proposed

Hereford and Worcester Hop Growers' Association.

and also with several of my old friends, who are planters in these counties. They all deprecate any desire to act in opposition to the National Association, whose efforts for the promotion of the interests of the English hop industry they acknowledge. But they consider that local combination for local purposes is desirable, in order to remove certain prejudices concerning their produce. This attitude cannot be objected to, if by such means their object can be attained. But it appears to me that the industry is essentially one, as far as every English district is concerned, and that unity of aim and action is necessary for the prosperity of the whole. By whatever process the new association proposes to work, the Midland growers must not forget that on the London central market, from which the great bulk of our consumers obtain their supplies, the value of hops is estimated mainly by the brewing merits of the samples. The ancient preferences for the produce of certain districts, which existed when the difficulties of locomotion and transit necessarily limited comparisons, are being steadily but surely put aside. Year by year this fact becomes more evident. There is therefore, as a natural consequence, a better chance for Worcester and Hereford hops to assert their value now than heretofore, and the wisest course, in my humble opinion, for Midland growers to follow is to fall into line with the old-established customs of the borough with respect to sampling and selling, to raise their standard of quality by all possible means, to abandon their ambition for big crops, and boldly to enter the competitive arena, and there strive for the mastery. By such means they will achieve the desired results, and the remuneration they desire will be secured to them. Any local association cannot accomplish more, and it is possible that by narrowing their attention to merely local matters they may lose the substance while grasping at the more attractive shadow. But I cannot say more than wish my friends all the success within their reach.

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interes and benefit to the member of the society.*

Foreign Notes.

My comments on the foreign hop trade are necessarily brief. But three days have elapsed since I prepared my last report, and in that short space nothing of importance has occurred. At Nuremberg the market remains quite firm in tone, the prices of any good parcels being inclined to advance, and the values of the lower grades being fairly well maintained. The new supplies are diminishing, proving that the country holdings are almost exhausted; the question of meeting the requirements of consumers during the summer is becoming more difficult to answer, and is assuming a serious aspect.

In Belgium there has been a slight reaction from the recent display of strength. Values have receded by two to three points, but it is considered that this depression is only temporary, being caused by the approach of the Easter recess, and that when business is resumed prices will again harden up, and probably advance even further than the latest highest figures.

American advices continue to emphasise the strength of the markets both on the eastern and the western coasts. Values that appeared to be unattainable a few weeks ago are now ordinarily current. Choice parcels are especially firm, but medium and low grades have participated in the advanced movement, which still indicates life and energy. Brewers are buying with caution, lest their want of hops should be too clearly seen, but they are well aware of the actual position of supplies, and therefore are not passing favourable opportunities to replenish their stocks. Growers in all sections are now practically cleared out of hops. Dealers can control the market, but as many of them are committed to early contracts, which they can hardly cover with profit, it is doubtful if their power of control will help them much.

Experiments upon Hops.

In a report contained in the current number of the Journal of the South-Eastern College, it states that the manuring of the hops grown in the Experimental Garden of the Agricultural College at Wye, in 1901, was as folows:—A small coating of dung (about 12 loads per acre) was put on in the winter; 15cwt. per acre of fish guano were dug in during March. In April, 4 cwt. per acre of superphosphate was sown broadcast and nidgeted in.

The hops grew away rapidly after the end of April. Some fly was seen on June 2nd, but was never very abundant. Washing was done two or three times during June and July, and the hops were sulphured once at the end of August. Picking began on September 7th, and ended on the 24th, but after September 17th the hops went off rapidly with both blight and mould, and were only picked because of the necessity of obtaining a continuous record of the crop on each plot. As it is, the figures for this season are probably less trustworthy than usual, because the disease was irregular and some plots were more affected than others.

When picked, the crop was the heaviest we have recorded; the average of all the plots was 20.9cwt. per acre as against 20.1 in 1899. In the last four years the fluctuations of the crop on this garden have been extreme—11.9cwt. per acre in 1898, 20.1cwt. per acre in 1899, 10.4cwt. in 1900, and 20.9cwt. in 1901.

The quality of the 1901 crop was low; there were very marked differences to be seen in the hops as they lay in the baskets after picking. Some

were well grown out, firm, and full of condition; others were unripe, small, thin, and soft, and amongst these again many were diseased. It is particularly noticeable that the hop plant was very far from ripe at picking-time; even the lower leaves had not yellowed as usual, and for weeks after picking the bine and leaves were green and vigorous.

It will be remembered that during the early part of the season, through May, June, and early July, there was plenty of sun and temperatures were high. There had been abundant rain in March and April, so that the plant was well supplied with subsoil moisture, and made a good growth in consequence This period was followed by a considerable rainfall about the end of July, with the result that the plant started to grow again just at the time it should have been beginning to mature. Genial weather and occasional rain prolonged the growth, a second crop developed, and, in the end, hops were still growing and forming, at a time when the whole should have been ripening off.

Doubtless the ideal-state conditions for a fine hop crop would be found in plenty of warmth, sun, and moisture during the early season, causing a period of free growth. This should be followed by a gradual increase of temperature and dryness from the time the hops came into burr. In the growing period the plant should take all the manure it requires from the ground, and should spend the latter part of the season in elaborating the raw material it has already stored up, into the finished "hop."

In such a season as the last it is possible that an advantage would be obtained by ceasing to cultivate the ground after July, for this would tend to stay the formation of "nitrates" in the soil and the supply of nutriment which causes growth late in the season. Deep cultivation, again, late in August, by depriving the plant of many of its feeding-roots might also be of value.

Training Experiments.

The hop garden at Wye is divided into plots, each of approximately half an acre in extent, on each of which the hops are trained in a different fashion, so as to obtain a comparative test of the merits of the various systems in vogue of training hops upon wire and string. The results obtained during the seasons 1897-1901 are set out in the table on the following page. The systems of training represented in the garden consist of the Butcher in various forms, the Umbrella, and a modification of the Worcester system.

In the Butcher system three strings start from the hill, up each of which two bines are led. The strings rise vertically to a breast wire 4ft. 6in. from the ground. Then they are taken on the slope to the top wire, which is above the next row of hills at a height of 12ft. 6in In the Wye garden the upward slope is towards the north, so that the strong winds from the south and south-west strike on the face of the slope. Six of the plots in the Wye garden are planted in this fashion, but with varying distances between the hills and the alleys. The width of the alleys affects not only the number of hills to the acre, but also the ang'e of the sloping string, for as the height of the top wire is invariable, the broader the alley the flatter the slope of the string will become. The hop plant grows most freely as the slope of the string approaches the vertical; the bine climbs with difficulty when the angle is 45deg., and must be trained by hand for still lower angles. This means a considerable expense for labour when the alleys are wide and the slope flat. On the other hand, the flat slope induces a greater fruitfulness and causes the lower laterals to throw hops more freely, so that the smaller number of hills per acre is compensated for by the greater yield per hill. When the alleys are wider and the number of hills per acre are less, the cultivation is a little easier and not so expensive, because many of the operations of the hop garden are paid for per 100 hills rather than per acre.

Another advantage of the wider alleys and of wide spacing between the hills comes from the greater exposure of the growing bine and hops to sun and air. The result is that the hops become harder and more fully developed, and in consequence are better able to resist blight and mould. There are not so many of the soft, green, half-grown hops that are seen in a crowded garden.

As far as can be learnt from the plots at Wye, where the alleys vary from 10ft. to 6ft. in width, and the hills from 700 to 1,200 per acre, there is not much difference in yield, taking the mean of several years. On the whole, the more widely-planted plots have given the larger crop, except in very short seasons like 1900, when the more closely-planted plots had an advantage.

Our general impression is that the 8ft. square plant has given the best results, if we take into account the quality of the hops grown on this system and their freedom from disease, as well as the gross weight per acre. The plot with alleys 10ft. wide, through growing very fine hops, costs too much for training up the flat string.

As regards the comparative merits of the different systems—Butcher, Umbrella, and Worcester—the Umbrella has this year maintained the leading position it has had for the last two seasons, giving the heaviest crop of any of the plots. The disadvantage of this system lies in the difficulty of washing properly; the interlacing strings shield one another from the stream of wash, and when there is much bine it is almost impossible to get any spray on to the top. In the matter of washing, the Butcher system is the most easily cleansed, because all the bines are in one plane and the jets can be arranged to thoroughly cover this area as the washer moves along. The Umbrella system is also more liable to wind-bruise than the Butcher; the wind gets under the bines more easily, and the whole structure chafes and sways, because it is without the stiffening which the breast wire gives in the Butcher system. The Worcester system gave this year a crop rather above the general average of the garden, whereas for the two previous seasons the crop on this plot was lower. This effect is not so much due to the system itself as to the practice of cutting the bines at the stock when picking, which is usually followed when hops are grown on this system, because there is no convenient breast wire over which the bines can be thrown. The experiments which were reported in the last number of the Journal show that this practice of cutting the bine causes a diminution in the succeeding crop. Accordingly last season care was taken not to cut the bines on the Worcester system, with the result that the crop on this plot has returned to or even exceeded the average of the garden. The Worcester system is rather expensive to cultivate, because it is doubly planted and carries 1,700 hills to the acre. It has also the disadvantages of the Umbrella system in want of stiffness against wind, and difficulty of washing.

It is also noticeable that the Butcher system, with a pole and three strings which replaced the two-pole work in 1899, has this year cropped up to the average of the garden, whereas in 1900, and still more in 1899, it was below the general average. Previous to 1899 the bine had always been cut at the stock, and the weakening of the succeeding bine that resulted was very manifest in 1899, less so in 1900, and has now disappeared.

Effect of Stripping.

Two rows in the Butcher system were this season stripped of all the lower leaves and laterals to a height of 4ft. 6in. on June 24th, and compared with two rows adjacent which were left unstripped, the hills being merely kept free from brush.

The crop on the stripped and unstripped portions was identical, and this season the stripping process has had no injurious effect on the yield. This bears out the conclusions that had been drawn in 1899 and 1900, that in years of free growth the plant will recover from any check caused by stripping, but that injury may result from the process in years when the plant is not very strong. It was noticed that the crop is alike on stripped and unstripped plots in the two years of big crops—1899 and 1901—but in the two seasons of scanty crops, stripping has reduced the yield.

The remarks that were made in last year's report on this subject may be repeated:—"The stripping resulted in a great diminution of crop this year; in 1899 it caused no loss; in 1898 it caused a smaller, but considerable loss of crop. The reason for this discrepancy is to be found in the character of the seasons. The practice of stripping must give the plant a check at the time, but in a year of free and abundant growth like 1899 the plant recovers and shows no effect of the check in the crop; whereas in seasons like 1898 and 1900, when the growth of the hop is indifferent, the plant never recovers from the check it receives through the stripping. And as 1900 was with us a year of even poorer development than 1898, as shown by the smaller crop, the stripping had a worse effect in 1900 than in 1898.

"Stripping in some form or other is a necessary operation in a hop garden, otherwise it would be very difficult to keep the lower leaves and laterals free from vermin; attacks of mould also are nearly always first seen on the lower parts of the plant. At the same time this lower growth, if left, shades the ground and prevents the access of sun and air—conditions which favour the development of mould. Necessary as stripping may be, the experiments show that it may cause a serious and even a disastrous diminution of crop. It is desirable that growers should give the operation a little more consideration than it usually receives, and in seasons when the bine is slack and the plant is not growing freely it is necessary not to strip so far up the plant as usual, or to go over the garden twice, the first time stripping only for two or three feet, the operation being completed after a fortnight's interval."

Effect of Cutting the Bine at Picking Time.

In the last report evidence was given that the hop plant at the time of picking is still unripe. It was shown by analysis that the leaves and bine contain a considerable quantity of nutrient material which will return to the root and be available for the following season, if the bine, etc., be allowed to remain attached to the rootstock until it is completely ripe or "dead." It was further shown that cutting away the bine at the rootstock when the hops are picked, as must be done when the hops are grown upon poles, results in a weaker plant and a smaller crop in the following season. One plot in the college garden was grown upon piles in 1897 and 1898, with the result that the crop on this plot fell below the general average of the garden in the years succeeding the cutting of the bine at harvest, i.e., in 1898 and 1899. In 1899 the system was changed and the practice of cutting the bine discontinued, with the result that in 1900 the crop was beginning to recover and approximated to that on the rest of the garden. In 1901 the crop on this plot was practically equal to the general average crop of the whole garden, or the injurious effect of cutting the bine in 1897-98 has now been entirely eliminated.

Late Dressing of the Stocks.

An experiment was tried this year on the effect of late cutting of the stock. The general garden was cut over about the last week in March, but two rows were not cut until April 24th. These two rows grew 1,528lb. of green hops, the two adjoining rows grew 1,586lb.—practically the same. In this season, at least, the late cutting did not diminish the yield. It appeared, though, that the hops on the late-cut rows were rather more attacked by mould than on the adjoining rows.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended March 22, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living:	1901	1902.		1901.	1902.

* Not shown in 1901.

We have received from Messrs. Thomas Kennedy and Co., seedsmen, nurserymen, and florists, High Street, Dumfries, a copy of a spring catalogue of select florist flowers, herbaceous, and bedding plants.

The various items in the April number of "The Smart Set," number no fewer than fifty, and they cover almost the whole field of literary excellence. The number opens with a novelette, entitled "The Ambition of the Baron," and written by Marian Dana. It is primarily a romantic love story, wherein a series of surprising events develops a happy issue. One of the best of the short stories is "A Glimpse of the Garden," by Mary L. Pendered—an idyllic study of human hearts, in which the author reveals both analytical skill and poetic vision. The other prose contributions are too numerous to enumerate, but mention may be made of "The Science of the Sea," an interesting article by Prince Albert of Monaco, who details briefly the merits of oceanography, a science to which he is devoted, and on which he is an authority. The number also contains many poems of real literary worth, by well known writers.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read, 70th edition, 6s. and 7s. 6d. post free. Gloucester.

The spring up to now has been about all one can wish for getting in barley and oats. The lambing season, now about over, has been in most cases very good. There has been a very large amount of lambs in many places. Cattle of all kinds have done well, and the hay seems to hold out better than was expected. The mutton is selling badly and very disappointing. There will be very small profit (if any) for sheep farmers this year.—J. D. (Mar. 26th.)

Lancashire (North).

The winter, on the whole, has been mild, with not too much rain; indeed, unless the spring is showery, there will soon be heard murmuring as to the want of rain. For the present, however, land is getting into good form for spring sowing, and for the time of year is pretty well forward. We should say that stock has been generally fed from the produce of the farms since Christmas, judging by the small demand reported all over for feeding stuffs, and, granted an open spring, farmers may be able to congratulate themselves on getting over the usually expensive time at a much smaller cost than at one time looked probable. Fat stock is selling better now, and for anything really fit good prices are obtainable. Stores are held for very high prices, however, and there is the prospect, to which feeders must by this be getting used, of very little profit for grazing them. Potatoes which came off a big crop are selling badly. It is too early yet to say the probable acreage sown respectively with wheat, barley, and oats. The former is a very small item nowadays, and gets smaller year by year, oats and barley appearing to grow in favour. Lambs are offering to come a good crop and healthy.—R. S.

Worcester.

The weather of February put the land into beautiful order for the planted. Some farmers have finished the seeding, when land was ploughed in time; no labour required to put it in order; and the roots being a very poor lot, the ground was clear, though probably it is quite early enough for barley in this district. The stock seems healthy, and have got through the winter fairly well, and most of the straw has been cut, and there is more demand for straw than hay in this part. Beef is getting scarce rather, and making 7d. per lb., and sheep are more inquired for by local butchers. Some of the small hop growers are doing away with them, and more would, but no demand for poles, they letting them stand and planting roots between them. The price for potatoes keeps low, and will do probably throughout this season. The wheat is a good plant, and looks healthy when any is planted, but you scarcely see a field in a parish. We may hope for an early spring. Should it be cold and late it will mean a heavy outlay for feed, most of the stuff now having been consumed.—W. H. (Mar. 26th.)

Labouring Life in the Country,

Perhaps there never was a time when the agricultural labourer was the subject of so much comment as at the present. Everything points to the fact that he is getting to be a scarce commodity, and it is also suggested that the general quality is not up to the old standard. The last census returns were certainly not encouraging. In scores of country districts there was evidence of serious depopulation, and all manner of arguments are advanced as causes. Apart from figures, we have heard the complaints of farmers during the harvest times of the last few years that there has been a dearth of labourers, and the material available has been of a second-rate character. Over-education, the War in South Africa, inferior house accommodation in the country, lowness of wages, increase of trade elsewhere, and the excitement of town life are a few of the reasons put forward why the country lad will not stop on the land and follow in the footsteps of his father. Doubtless there is something in the arguments, but my office here is not to discuss the why and the wherefore so much as to point out a few of the drawbacks, as well as the advantages, that are part of the lot of the agricultural labourer.

One authority has said that the man has no prospect for his old age bevond that of rheumatism and the workhouse. There is something in it. The average labourer's pay, even in these days, is not sufficient for him to make much provision for old age, and he cannot look very hopefully to the future. If he gives the best part of his life to one employer, he may be allowed to potter about the place as long as his legs will carry him there, with perhaps a small pension to end his days on, but if circumstances force him to move about much when he is young and strong, no one wants him when he is old, and he is dependent on charity or the rates. The tendency of this age is to rise, and the agricultural labourer is no exception in this respect. Unfortunately there are not many opportunities for him in his own line, so he leaves the land for something offering better prospects. The land itself is outside his reach, because there are not half enough small holdings, and the inclination and capital do not seem to be forthcoming to establish them. Many a labourer would be willing enough to stop on the land if he could see a chance of becoming a small farmer some day in the future, and if there was more of this peasant proprietorship not only would the land produce more, but it would support a greater number of people than it does now.

Wages perhaps are the greatest bait that draws the sturdy young labourer from the land, and in this particular I do not see that there can be any location of blame. In the present state of agriculture it is quite obvious that the farmer cannot afford to pay more. Indeed, his resources are taxed to the utmost now, and in many cases the employer is worse off than the employed. But with the prospects that farm labour offer, can you blame the country lad for forsaking it in favour of railway service, the police force, and other callings where he is paid more, works fewer hours, and has a prospect of promotion? It has ben said that machinery has ruined hand labour. Perhaps it has in a sense, but the wonderful mechanical development of the past century has opened up immense fields of labour which the country has largely supplied. It is easy to try and persuade the country youth that he is no better off for the higher wages of the town when the expenses are considered, but the biggest sum on Saturday night has too great an attraction for him.

Again, the agricultural labourer is none too well housed. In many rural districts cottages are very scarce, and some that exist are unsanitary, badly ventilated, and hardly fit for human habitation. No one seems to accept the responsibility of building, and the labourer has to make the best of his shanty, for the simple reason that he cannot get another. But when the opportunity comes for him to improve his position and his habitation he is not slow to take advantage of it. There may be something in the contention that the standard of labour is deteriorating, and the reason does not seem hard to find. The best men are no longer satisfied with the conditions of agricultural labour. Other fields are opened up, the land holds no prospect for improvement, so they leave it, and the farmer has to make the best of the second-rate class of labour that remains.

But all the good labourers have not given up the old calling. Fortunately many yet remain, and are content to follow in the footsteps of their fathers. Such being the case, let me point to a few of the attractions that tend to keep good labourers on the farms. In the first place, there are the associations of the country. A man who is born and bred in a village looks on it as home. He may go away to a town, for the sake of its advantage, but the old place is home to him, and he likes to come back to it when opportunity permits. These home ties prevent many from leaving their native place, though they might improve their positions by making a change, but it is better for the rural districts that they should remain. We don't want them to migrate; we want country lads to follow their fathers in the place of their birth, according to the old order of things; but to induce them to do so there must be attractions held out.

I question whether any working-man is much better off than the country cottager who has a decent habitation to live in, a regular place of employment, fair wages and a good garden. It is surprising what an inducement the latter is if the man is encouraged to cultivate horticultural tastes. I have known men to refuse tempting offers elsewhere because they would not leave the old cottage and the garden. Call this sentiment if you like, but it is the kind of sentiment that is worth encouraging. One farmer I know takes a great interest in the labourers' gardens, or provides them with manure, and helps them generally. He sees that the comfort of the cottages is attended to, and gives as his reason that if the labourers were disposed to leave his service they would hesitate about leaving a good cottage and garden for fear that they might do worse. If to the house and garden could be added a piece of land where the man could keep his cow and poultry, the home ties would be still greater. There are other advantages attached to a country-labourer's life. He lives in pure air and amidst charming scenes, instead of being penned in by a forest of bricks and mortar around him and a gloomy canopy of smoke o'erhead. He fears neither strikes nor labour disputes; he goes to work in the morning and returns at night with no weighty responsibilities on his shoulders, and instead of being a unit in a mighty crowd, he holds a respectable position in the little world around him. This may not sound much, but to-day a good labourer is valuable, and the backbone of the country's labour lies in the rural workers.

A good labourer takes a pride in his work. He is fond of it, proud of his accomplishments, and this is a strong reason why he is loth to give it up. Farm work has many branches, and you find experts in each and all of them. This man is only a cowman, but he is as useful in his way as an army officer or a lawyer, if he is a good workman. Everything hinges on this, as farmers know full well. Stock is the forte of a good cowman. He loves his animals, take a pride in them, and never spares himself when their interest is concerned. The occupation of another labourer is that of shepherd, and, being proud of his sheep, he envies no man. His employer's flock is safe in his hands for he has a personal interest in it. He thinks nothing of the long hours during the shearing season, and considers that his personal reputation depends on the number of lambs he safely rears in the spring. You may tell by the very appearance of the team what sort of a waggoner any farmer has got, and I have known men to leave their employment because the master did not keep horses that would do them credit. I like to see an efficient ploughman surveying the furrow with a practised eye, and proud of its straightness and regularity. I like to see a number of such men pitting their powers against each other on a rough piece of ground at the local ploughing match. There is a spirit of friendly rivalry between them; each man considers that he holds his reputation in his hand, and one after another they show their workmanship in the furrows they draw.

Have you ever seen a length of hedging and ditching after a good labourer has done with it? There you will observe signs of workmanship that are as creditable to the farm hand as a beautiful oil painting is to an artist. On some farms the hedges and ditches are in a very much better condition than on others, which is proof that the farmer takes an interest in these important items, and has got a good man to do the work. It is the same with the hay and corn stacks. An untidy stack-yard is an abomination to a good farmer, but very much depends on the labourer. If he is a thorough workman, and takes a pride in his ricks, they will be upright, neatly thatched, and perfectly proportioned. Rick-building is an accomplishment, and if a man who possesses it turned out a badly-formed stack his reputation would be gone for ever.

These are the things that go to make a farm-labourer's life enjoyable: pride in his work, and the desire to do it well. In spite of what pessimists may say, we have a race of labourers of this stamp on the land to-day. We want more of them, and it is to the interests of agriculture that their children should follow in their steps. Skilled labour is wanted even on the farm, and everything possible should be done to encourage the labourer to take an interest in his home and his work.

Let him have a good house, a good garden, and reasonable wages. Those who have the time and means and interest can do much to improve labour by instituting gardening societies and competitions for ploughing, hedge-cutting, rick-building, and so forth. Above all things, the land itself should be available, so that the energetic labourer may have an opportunity to work on a bit of it for himself, as well as labouring all his life for someone else. With these facilities there is a chance for the standard of labour to improve; for a working man in the country, though attired in corduroys and dirty boots, if he has a comfortable cottage amid genial surroundings, with a well-kept garden and a bit of land in the rear, if he can farm it, is an individual to be envied. It is under such conditions, when reasonable comfort and contentment exists, that the labourer is satisfied with his lot, and can say truthfully, in the words of the well-known poem—

"'Mid pleasures and palaces though we may roam,
Be it ever so humble, there's no place like home."

RUSTICUS.

Carnations in pots must have all the air possible; auriculas also, with more water and weak liquid manure.

Cinerarias in bloom must be kept regularly moist, but shade from light, sun, and keep the syringe off the flowers. Any still in bud should have weak liquid manure once or twice a week until they begin to expand. Calceolarias (herbaceous) ought to be rooting out in the flowering pots now, and rather more water may be given, but still be careful. If they flag in hot sun, do not soak the soil, but shade lightly and sprinkle them frequently overhead. Sow a bit of primula seed (Chinese) for early or autumn flowering.

AGRICULTURAL SHOWS FOR 1902.

APRIL 2 and 3.—County Cork Agricultural Society, at Cork. Entries close, March 22. Secretary, E. Corrigan, 21, Cook Street, Cork.

APRIL 3.—Castle Douglas Agricultural Society, at Castle Douglas. Entries close, March 17. Secretary, Malcolm McL. Harper, British Linen Co. Bank, Castle Douglas.

APRIL 9.—Royal Jersey Agricultural and Horticultural Society's Bull Show. Entries close, March 22. Secretary, J. A. Perré, 8, Church Street, Jersey.

APRIL 10.—South Devon Herd Book Society, at Totnes. Secretary, Alfred Michelmore, Gate House, Totnes.

APRIL 12.—Kilmarnock Farmers' Society, at Kilmarnock. Entries close, March 29. Secretary, R. D. Tannahill, National Bank Buildings, Kilmarnock.

APRIL 15, 16, 17, and 18.—Royal Dublin Society's Spring Show, at Balls Bridge, Dublin. Entries close, March 15. Agricultural Superintendent, Robert Bruce, Leinster House, Dublin.

APRIL 16.—Hereford Herd Book Society's Bull Show and Sale, at Hereford Cattle Market. Entries close, March 26. Secretary, W. E. Britten, 20, East Street, Hereford.

APRIL 24.—Lincolnshire Red Shorthorn Association's Bull Sale, at Lincoln April Stock Fair Ground. Entries close, April 3. Secretary, S. Upton, St. Benedict's Square, Lincoln.

APRIL 29 and 30.—Ayrshire Agricultural Association's Show of Implements and Live Stock, at Ayr. Entries close: Implements, April 8; Live Stock, April 15. Secretary, J. Howie, 58, Alloway Street, Ayr.

APRIL 30 (probably).—New Forest Pony Association, at Cuffnell's Park, Lyndhurst. Secretary, H. St. Barbe, 72 High Street, Lymington, Hants.

APRIL 30, MAY 1 and 2.—North-East of Ireland Agricultural Association's Spring Show, at Belfast. Entries close, April 5. Secretary, Kenneth MacRae, 37, Donegall Place, Belfast.

MAY 2 and 3.—Wharfdale Agricultural Society, at Otley, Yorkshire. Entries close, April 12; extra fees, April 19. Secretary, W. Holmes, 34, Market Place, Otley.

MAY 3.—Dumbartonshire Agricultural Society, at Balloch (probably). Entries close, April 26. Secretary, W. Davie, 258, Main Street, Alexandria, N.B.

MAY 3.—Rawtenstall Agricultural Society, at Rawtenstall. Entries close, April 26. Secretaries, Mansfield and Wint, Thorn Hill, Rawtenstall.

MAY 3.—Rochdale Horse and Turn-out Show, at Rochdale. Entries close, April 26. Secretary, Robert Turner, Union Bank Chambers, Rochdale.

MAY 8.—Royal Jersey Agricultural Society's Show of Cows and Heifers. Entries close, April 19. Secretary, John A. Perré, 8, Church Street, Jersey.

MAY 10.—Darwen and District Agricultural Show, at Darwen. Entries close, April 29. Secretary, John Ainsworth, Post Office Chambers, Darwen.

MAY 13.—Rufford Agricultural Society, at Rufford. Entries close, May 8. Secretary, T. Mayson, Church Lane, Rufford, near Ormskirk.

MAY 13 and 14.—Oxfordshire Agricultural Society, at Whitney. Entries close: Implements, March 26; Stock, March 31; double fees, April 7. Secretary, A. F. Milton Druce, 16, Queen Street, Oxford.

MAY 14 and 15.—Newark Agricultural Society, at Newark. Entries close, May 1. Secretary, E. Brooks, Barnby Gate, Newark.

MAY 14, 15, and 16.—Somerset County Agricultural Association, at Wiveliscombe. Entries close:—Stock and implements, April 14; cheese, butter, wool, etc., April 16; poultry and pigeons, April 18. Post entries (double fees), April 21. Secretary, W. R. J. Greenslade, 3, Hammett Street, Taunton.

MAY 15.—Prescot and District Agricultural Society, at Knowsley Park, Prescot. Entries close, May 1. Secretary, F. W. Halsall, 12, Church Street, Prescot.

MAY 17.—Edgworth and District Agricultural Society, at Edgworth. Entries close, May 12. Secretary, James Whitehead, Greenacre, Edgworth, Bolton, Lancs.

MAY 19.—King's Heath Horse Show, at King's Heath. Secretaries, Messrs. Bailey and Poste, 93, High Street, King's Heath.

MAY 19.—London Cart Horse Parade Society, at Inner Circle, Regent's Park, London. Entries close, April 28; late entries, May 5. Secretary, F. F. Euren, 12 Hanover Square, London, W.

MAY 19.—Lydney and District Farmers' Club, at Lydney, Hon. Secretary, F. Montagu Lloyd, The Grange, Newnham-on-Severn.

MAY 19.—Ixworth Farmers' Club, at Bury St. Edmunds. Secretary, Chevell Lawrence, jun., Bury St. Edmunds.

MAY 19.—Clitheroe Agricultural Association, at Clitheroe. Secretary, T. Robinson, 3, Wesleyan Road, Clitheroe.

MAY 20 and 21.—Notts Agricultural Society, at Nottingham. Entries close, May 3. Secretary, W. H. Bradwell, Thurland Street, Nottingham.

MAY 21.—Ormskirk and Southport Agricultural Society, at Southport. Entries close, May 10. Secretary, E. C. Stretch, 15, Moor Street, Ormskirk.

MAY 21.—Reigate and Bedhill Horse and Hound Show, at Reigate. Secretary, Eustace Frith, Reigate.

MAY 24.—Accrington Agricultural Society. Entries close, May 14. Secretary, F. C. Riley, 3, Church Street, Accrington.

MAY 26.—Newchurch and District Society, at Newchurch, near Manchester. Entries close, May 20. Secretaries, Messrs. Mitchell and Burrows, Newchurch, near Manchester.

MAY 27, 28, 29, 30, and 31.—Bath and West and Southern Counties Society, at Plymouth. Entries close: Implements, March 18; Stock and Produce, April 7 (post entries and double fees, April 14); Poultry, May 2; Harness Horses and Jumping, May 10. Secretary, T. F. Plowman, 4, Terrace Walk, Bath.

MAY 28 (about).—Eastern District of Stirlingshire Agricultural Association, at Falkirk. Entries close, May 21. Secretary, W. Wright, Newmarket Street, Falkirk.

MAY 31.—Batley and District Agricultural Society, at Batley. Entries close, May 24. Secretary, T. Machell, 28, Beaumont Street, Batley, Yorks.

JUNE 3 and 4.—Wiltshire Agricultural Association, at Swindon. Entries close, May 6. Secretary, J. Welch, Market Lavington, Devizes.

JUNE 4.—Yealmpton Agricultural Society, at Yealmpton (seven miles from Plymouth). Secretary, John Pearse, 15, Princess Square, Plymouth.

JUNE 5.—Renfrewshire Agricultural Society, at Paisley. Entries close, May 23. Secretary, B. Lang, Solicitor, Paisley.

JUNE 5 and 6.—Shropshire and West Midland Agricultural Society, at Shrewsbury. Entries close:—Implements, April 21; stock, April 28. Secretary, T. Whitfield, junr., 11, Talbot Chambers, Shrewsbury.

JUNE 5 and 6.—Suffolk Agricultural Association, at Ipswich. Entries close, May 7. Secretary, Robert Bond, Old Bank House, 6, Butter Market, Ipswich.

JUNE 6.—Kintyre Agricultural Society, at Campbeltown. Entries close, May 23. Secretary, G. Erskine Inglis, Estate Offices, Campbeltown, Argyllshire.

JUNE 10.—Huntingdonsnire Agricultural Society, at St. Neots. Entries close, May 20. Secretary, A. G. Dilley, Market Hill, Huntingdon.

JUNE 10, 11, 12, and 13.—Royal Counties Agricultural Society at Reading. Entries close:—Implements, April 5; post entries, April 12; stock, April 19; late entries, April 26; poultry, May 10. Secretary, F. Simons, Basingstoke.

JUNE 11.—Edinburgh Agricultural Association, at Edinburgh. Entries close, May 19; post entries, May 24. Secretary, J. Wylie, J.P., Royal Bank, Leven Street, Edinburgh.

JUNE 11 and 12.—Northamptonshire Agricultural Society, at Daventry. Entries close, May 14. Secretary, A. E. Lovell, Harpole, Northampton.

JUNE 11 and 12.—Royal Cornwall Agricultural Association, at Camborne. Secretary, H. Tresawna, Lamellyn, Probus.

JUNE 12.—Waltham Cross and Three Counties (Essex, Herts, Middlesex) Horse and Foal Show Society, at Waltham Cross. Entries close, May 21. Secretary, J. Crawter, junr., Chesnunt.

JUNE 13.—Stirling Agricultural Society, at Stirling. Entries close, June 5; post entries, June 7. Secretary, Andrew C. Buchanan, 26, Port Street, Stirling.

JUNE 13 and 14.—Richmond (Surrey) Horse Show Society, at Richmond. Entries close, May 24; double fees, May 26. Secretary, C. Capel Smith, 1, The Little Green, Richmond, Surrey.

JUNE 14.—Ossett Agricultural Society. Entries close, June 7. Secretary, A. Shaw, Ossett.

JUNE 14.—Ramsbottom and District Agricultural Society, at Two Gates, Ramsbottom. Entries close, June 7. Secretary, M. Bortwistle, 8, Garden Street, Ramsbottom.

JUNE 17.—Murrow Foal Show, at Murrow. Secretary, A. Huddlestone, Murrow, Wisbech.

JUNE 17, 18, and 19.—Herefordshire and Worcestershire Agricultural Society, at Hereford. Secretaries, A. Edwards and T. H. Edwards, Corn Exchange Offices, Leominster.

JUNE 18.—Thorne Agricultural Society, at Thorne. Entries close, June 1. Secretaries, C. Haycroft and J. Servant, Thorne, Doncaster.

JUNE 18 and 19.—Norfolk Agricultural Association's Summer Show, at Norwich. Entries close, May 19. Secretary, Caleb Barker, East Harling, Thetford, Norfolk.

JUNE 18 and 19.—Glasgow Agricultural Society's Summer Show, at Scotstoun, Glasgow. Entries close: Implements, May 21; stock, May 28. Secretary, A. Russell, 54, West Nile Street, Glasgow.

JUNE 19 and 20.—Essex Agricultural Society, at Romford. Entries close: Stock, May 19; Implements and Dairy, May 26; Poultry, June 2. Secretary, F. Taylor, 17, Duke Street, Chelmsford.

JUNE 24 and 25.—North West of Ireland Agricultural Society, at Londonderry. Entries close, June 11. Secretary, Ashmur Bond, Castle Street, Londonderry.

JUNE 28.—Dalkeith Agricultural Society, at Woodburn Park, Dalkeith. Secretary, T. Watson Dods, Dalkeith, N.B.

JUNE 28.—Keighley Agricultural Society, at Keighley. Entries close, June 21. Secretary, F. S. Pearson, Old Bank Chambers, Keighley, Yorks.

JULY 1.—Bishop Auckland Agricultural Society, at Bishop Auckland. Entries close June 24. Secretary, W. Burkitt, Grange Hill, Bishop Auckland.

JULY 2.—Barnstaple Agricultural Society, at Pilton Park. Hon. Secretary, T. Yeo, Barnstaple.

JULY 2.—Mid-Kent Agricultural Association, at Maidstone. Entries close, June 11. Secretary, P. Champion, 3, Market Buildings, Maidstone.

JULY 2.—Scunthorpe Agricultural Society, at Scunthorpe. Entries close, June 25. Secretary, G. W. Johnson, 40, High Street, Scunthorpe.

JULY 2.—Mansfield and District Agricultural Society. Secretary, G. Cox, West Gate House, Mansfield.

JULY 2 and 3.—Leicestershire Agricultural Society, at Leicester. Secretary, H. C. Ardron, Syston, Leicester.

JULY 2 and 3.—Doncaster Agricultural Society, at Doncaster Race Common. Entries close, June 7. Secretary, F. H. Chafer, 9, Market Place, Doncaster.

JULY 2 and 3.—County Cork Agricultural Society's Summer Horse and Sheep Show, at Show Yard, Cork Park, Cork. Entries close, June 9. Secretary, E. Corrigan, 21, Cook Street, Cork.

JULY 3.—Brentwood and Mid-Essex Horse Show Society, at Middleton Hall, Brentwood. Entries close, June 21. Secretary, F. A. Thorne, Brentwood, Essex.

JULY 4.—Ripon and District Agricultural Society, at Ripon. Entries close, June 26. Secretary, B. North, 31, Market Place, Ripon.

JULY 4.—Malton Agricultural Society, at Malton. Entries close, June 14. Secretary, T. Mitchell, the Mount, Malton.

JULY 5.—West of Fife Agricultural Society, at Dunfermline. Entries close, June 21. Secretary, R. Husband, Solicitor, Dunfermline.

JULY 5.—United East Lothian Agricultural Society, at Amisfield Park, Haddington. Entries close, June 20. Secretary, J. Stirling, Haddington.

JULY 5, 7, 8, 9, 10, and 11.—Royal Agricultural Society of England, at Carlisle. Entries close: Implements, &c., March 15; post entries, at double fees, April 1. Live Stock (horses, cattle, sheep, pigs), April 15; at post entry fees, April 30; late fees (last day), May 15. Poultry and Farm Produce, April 30, at ordinary fees; at post entry fees (last day), May 15. Secretary, Sir Ernest Clarke, 13, Hanover Square, London, W.

JULY 8, 9, and 10.—Peterborough Agricultural Society, at Peterborough. Entries close, June 14. Secretary, J. E. Little, Cowgate, Peterborough.

JULY 9.—Southmolton Agricultural Association, at Southmolton. Entries close, June 27. Secretary, J. Blackford, F.A.I., Castle House, Southmolton, N. Devon.

JULY 9.—East Surrey Agricultural Association, at Addiscombe Farm, Croydon. Secretary, Harry Fuller, 83, High Street, Croydon.

JULY 9 and 10.—Mallow Agricultural and Show Society, at Mallow. Secretary, N. F. Davin, Mallow, Co. Cork.

JULY 15, 16, 17, and 18.—Highland and Agricultural Society of Scotland, at Aberdeen. Entries close: Implements, May 12; Stock, June 9. Secretary, J. Macdonald, 3, George IV. Bridge, Edinburgh.

JULY 16 and 17.—East Kent Agricultural Society, at Ashford. Entries close, June 2; post entries, double fees, June 9. Secretary, P. M. Collard, Little Barton, Canterbury.

JULY 16, 17, and 18.—Lincolnshire Agricultural Society, at Boston. Entries close, June 10. Secretary, S. Upton, St. Benedict's Square, Lincoln.

JULY 17.—Halesworth Horse Show Society, at Halesworth. Hon. Sec., H. Brown, Halesworth.

JULY 17.—Great Chesterford Colt and Foal Society. Entries close, July 5. Secretaries, Messrs. C. Edward E. Cooke, Hinxton Grange, Saffron Walden, and W. C. Emson, Strethall Hall, Littlebury, Saffron Walden.

JULY 17.—Herts Agricultural Society, at Hatfield. Entries close, June 26. Secretary, W. A. Sherriff, Hatfield, Herts.

JULY 17.—Royal Isle of Wight Agricultural Society, at Newport, I.W. Entries close, June 17. Hon. Sec., H. J. Way, Newport, Isle of Wight.

JULY 17.—Thorney Shire Foal Society, at Thorney Park. Entries close, July 10. Secretary, H. Horrell, Thorney, Peterborough.

JULY 18.—Driffield and East Riding Agricultural Society, at Great Driffield. Entries close: Stock, July 3; dogs, July 8; poultry, etc., July 10. Secretary, T. Holtby, Exchange Street, Driffield, Yorks.

JULY 22, 23, and 24.—Gloucestershire Agricultural Society, at Tewkesbury. Entries close, June 16; post entries (double fees), June 23. Driving and Jumping, entries close, July 7. Secretary, F. J. Townsend, Cirencester.

JULY 23.—Bridlington Agricultural Society, at Bridlington. Entries close, July 12; post, July 14. Secretary, B. M. Townsend, Quay Road, Bridlington.

JULY 23.—Cambridgeshire and Isle of Ely Agricultural Society, at Chatteris. Entries close, Stock, June 30; post entries (double fees), July 5; Implements, July 5. Secretary, R. Peters, 7, Downing Street, Cambridge.

JULY 23.—Chesterfield and East Derbyshire Agricultural Society, at Chesterfield. Entries close, July 8. Secretary, T. Wardle, Auctioneer and Valuer, Chesterfield.

JULY 23.—Cleveland Agricultural Society, at Middlesbro'. Entries close, July 12. Secretary, T. S. Petch, Liverton Lodge, Loftus, R.S.O., Yorks.

JULY 23.—Wadebridge District Agricultural Association, at Wadebridge Hon. Secretary, T. Rickard, Cleveland House, Wadebridge.

JULY 23.—Chiltern Hills and Southern Bucks Agricultural Association, at Slough. Secretary, J. Bliss, 26, High Street, High Wycombe.

JULY 23.—Perry Barr and District Agricultural and Horticultural Society, at Perry Hall Park. Secretary, J. B. Ross, Perry Barr, Birmingham.

JULY 23.—Upholland Horse Show. Secretary, J. H. Wright, Sunny Bank, Orrell Port, near Wigan.

JULY 23, 24, and 25.—Northumberland Agricultural Society, at Newcastle-on-Tyne. Entries close, June 28. Secretary, W. J. Bolam, Berwick-upon-Tweed.

JULY 23, 24, and 25.—North-east of Ireland Agricultural Association's Horse and Sheep Show, at Belfast. Entries close, June 28. Secretary, K. MacRae, 37, Donegall Place, Belfast.

JULY 24.—Bedfordshire Agricultural Society, at Bedford. Entries close, June 21; post entries, double fees, June 28. Secretary, H. R. J. Swaffield, Ampthill.

JULY 24.—Maltby Horse and Foal Association, at Maltby. Secretary, J. R. Spear, 12, Carlton Avenue, Rotherham.

JULY 30.—Burton-on-Trent and District Shire Horse Society, at Burton-on-Trent. Secretary, F. D. Winterton, Walton Warren, Burton-on-Trent.

JULY 30.—Long Sutton Agricultural Society, at Long Sutton. Entries close, July 23. Secretary, H. Garthwaite, Long Sutton.

JULY 30, 31, and August 1.—Yorkshire Agricultural Society, at Leeds. Entries close, June 21; late entries, June 28. Secretary, J. Maughan, Blake Street, York.

JULY 31.—Launceston Agricultural Society, at Launceston. Entries close, July 12. Secretary, J. Kittow, West Holm, Launceston.

JULY 31.—Lismore Farming Society, at Lismore. Entries close, July 16. Hon. Sec., E. W. Becher, South Mall, Lismore, Co. Waterford.

JULY 31.—Newport and District Agricultural Society, at Newport, Salop. Hon. Secretary, W. H. Burton, Newport, Salop.

JULY 31.—Wainfleet Foal Show Association, at Wainfleet. Entries close, July 28. Secs., C. Lucas and W. M. Epton, Wainfleet, Lincs.

JULY.—Inverness-shire Farmers' Society, at Inverness. Entries close, middle of July. Secretary, D. Gray, 36, Union Street, Inverness.

JULY.—Stranraer and Rhins of Galloway Agricultural Society, at Stranraer. Secretary, J. Bennoch, Solicitor, Stranraer.

AUGUST 2.—Crayen Agricultural Society and Farmers' Club, at Skipton, Yorkshire. Entries close, July 23. Secretary, R. Wilson, Bank Buildings, Skipton.

AUGUST 4.—Wisbech and District Horse Society, at Wisbech. Entries close, July 24. Secretary, W. J. Chamberlin, Cornhill, Wisbech.

AUGUST 4.—Chepstow Agricultural Society, at Preecefield Park. Entries close, July 25. Secretary, Louis C. Wrigley, Trellick Grange, Chepstow.

AUGUST 4.—Tyneside Agricultural Society, at Hexham. Secretary, R. Ord, Beaufront, Wood Head, Hexham.

AUGUST 4.—Lutterworth and District Agricultural Society, at Bitteswell Road, Lutterworth. Entries close, July 10. Secretary, T. C. Bodycote, Lutterworth.

AUGUST 4.—Ecclesfield Farmers' Club, at Hillsboro' Park, Sheffield. Entries close, July 23. Secretary, V. Siddall, Wadsley Bridge, Sheffield.

AUGUST 4.—Oxted and Godstone Agricultural Association, at Oxted. Entries close, July 12. Secretary, J. Stanley, Tandridge, Oxted.

AUGUST 4.—Herefordshire Horse Show Society, at Edgar Street, Hereford. Entries close, July 12. Secretary, W. T. Williams, 6, St. John Street, Hereford.

AUGUST 4.—Ludlow Agricultural Society, at Ludford, Ludlow. Entries close, July 21. Secretary, E. H. Wood, 30, Broad Street, Ludlow.

AUGUST 4 (probably).—South Brent and District Dartmoor Pony, Sheep, and Horse Society, at South Brent, Devon. Secretary, Wyndham Hull, South Brent, Devon.

AUGUST 4.—Whalley Agricultural Society, at Whalley. Entries close, July 23. Secretary, J. M. Rawcliffe, Regent Terrace, Whalley, near Blackburn.

AUGUST 4.—Brentnor and Lydford Pony Society, at Lydford Junction, Devon. Entries close, July 9th. Hon. Secretary, J. N. Jackman, Burnville, Tavistock.

AUGUST 4.—Gainsborough Agricultural Society, at Gainsborough. Entries close, July 29. Secretary, T. J. Dixon, 17, Morton Terrace, Gainsborough.

AUGUST 5.—Border Union Agricultural Society, at Kelso. Entries close, July 11. Secretary, A. Stevenson, Kelso.

AUGUST 5.—Welbeck Tenants' Agricultural Society, at Welbeck. Entries close, July 1. Secretary, H. W. Woods, Scotland Farm, Worksop.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: The trade continues quiet. Barley steady. Wheat slow at about late rates. Oats quiet. Maize about the same. Flour firm.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—In view of the nearness to Easter the London Corn Exchange moved in quite a holiday mood, both attendance and business being of a very small order all along, and prices left off much about the same as those last current. The position of English wheat remains firm, both here and in the country, with supplies becoming scarcer, and millers pay good value without difficulty. Whites range at 29s 6d to 31s; reds, 28s per qr. delivered. American reds unchanged to-day, and rather easier since last Wednesday. No. 1 Northern Duluth inspection, 30s 3d ex ship; 30s 6d ex granary; hard Kansas in latter position, 30s 6d; and Californian, 30s. Russian continues nominal, being still quite above United Kingdom levels; and India, as of late, fails to export. Plate, none offering. There is nothing fresh to report in the flour market. American brands without improvement. Fancy patents, Mayblossom, etc., 23s 6d. Of first, Pillsbury, Ceresota, etc., 22s. 6d. Of bakers' grades, Iron Duke, 18s ex store; Cascadias, 22s 3d. English in excess of requirements, while unaltered. The London Millers' Association made no alteration at this afternoon's meeting. Town Households, 23s; whites, 26s per sack, delivered to the baker. Hungarian, 33s for best. Whole meal, 172s per ton. Grinding barley occasionally 3d easier since last Monday. Odessa, 18s 9d ex quay. Danubian, 18s ex quay. Fair Danubian poultry barley, 21s 5slb. English unaltered, being now stationary, as maltsters have now secured most requirements, and seed parcels are little mentioned. Oats supported. F.a.q. Libau, common, 17s 9d; and ordinary, 18s 6d 38lb. ex quay; 40lb. Libau, bold, 21s ex quay; Danubian, 17s 6d ex ship; and 18s 3d for fair, 38lb. ex quay. English oats continue to get more and more scarce. Black, 24s 42lb.; fancy qualities, 24s 6d. Maize again occasionally lower for round corn. Odessa, about 21s ex ship, 21s 3d ex quay being still in poor condition. Sound Galatz-Foxanian, 32s ex quay; and Danubian, same position, 23s. Plate none. The market for imported beans and peas points to nothing fresh. Arrivals of grain ths week:—English and Scotch barley, 2,390 qrs.; foreign wheat, 15,740 qrs.; barley, 40,350 qrs.; oats, 28,780 qrs.; beans, 110 qrs.; maize, 1,500 qrs.; flour, 27,210 sacks.

COUNTRY.

Ashford, Tuesday.—Trade quiet for all descriptions of corn. Wheat, white, 27s to 30s; ditto red, 27s to 29s. Flour unchanged.

Barnsley, Wednesday.—Business was steady, but there was rather more doing. Wheat was firm, and prices showed an advance of 3d per load. Oats were also firmer, but there was practically little doing.

Boston, Wednesday.—Small attendance. Slow trade. Wheat, 27s 6d; grinding barley, 22s; oats, 21s to 21s 6d; peas, 55s to 65s; beans, 33s to 33s 6d; maze (new), 22s; ditto (old), 23s 9d per qr; linseed cake, £8 15s; cotton cake, £5 5s per ton.

Gainsborough, Tuesday.—Again a small attendance of farmers at market, and few samples of grain on offer. Prices unaltered for the past few weeks. Wheat, 27s 6d to 29s; white oats, 21s to 22s; black oats, 18s to 20s; grinding barley, 23s; malting barley, 32s; English beans, 34s; peas, 27s; small maize, 26s; flat maize, 27s per qr.

Glasgow, Wednesday.—Wheat slow, and about 1½d to 3d per 240lb cheaper on the week. Flour nominally unchanged, with small trade passing. Indian corn steady but quiet. Round maize 1½d to 3d per 280lb easier, with large arrivals. Grinding beans steady. Canadian peas sold out on the spot. Home and foreign oats unchanged. Barley quiet. Bran and thirds quiet. Oatmeal dull.

Glasgow, Wednesday.—There was about the usual attendance at our market to-day. Wheat slow, and about 1½d to 3d per 240lbs. cheaper on the week. Flour nominally unchanged, with small trade passing. Indian corn steady, but quiet. Round maize, 1½d to 3d per 280lbs. easier, with large arrivals. Grinding beans steady. Canadian pease sold out on spot. Home and foreign oats unchanged. Barley quiet. Bran and thirds quiet and unchanged. Oatmeal dull.—GIBSON AND CLARK.

Hull, Tuesday.—The arrivals of wheat are 2,348 qr. from Buenos Ayres; 20,622 qr. Karachi; 310 qr. La Plata; 6,210 qr. New York; 5,825 qr. Odessa; 24,664 qr. Sydney; total, 60,050 qr. The market continues very dull, and to sell rather slower prices would have to be submitted to. Barley—For foreign malting there has again been a fair demand at full prices, and it is evident that importers' stocks will be low when the present malting season ends. Feeding is scarcely so high in price as it was a week ago. Oats are decidedly firmer, with a better country demand, and the stiffness in prices from abroad. The quotation for Egyptian beans, washed, is 32s 9d to 33s, to arrive; none on spot. Maize is inactive at unaltered prices. At to-day's market the wheat trade is quiet, with little or no change in prices. Beans, peas, and maize: There is little inquiry; prices about the same as last week.

Ipswich, Tuesday.—Wheat: On a short supply holders were asking an advance, but failed to obtain it. There was, however, a healthy demand at last week's full prices. Reds, 29s; whites, 29s to 29s 6d per 504lbs., delivered at Ipswich. Oats remain scarce, and are a firm trade, at 21s to 24s 6d per qr. Foreign steady and unchanged. Maize slightly easier; round, 22s per quarter. Beans rm, at 32s to 36s per quarter. Lentils unchanged; Bombay, 23s 6d; Calcutta, 28s 6d per 504lbs. Grinding barley rather harder. Linseed cakes firm at £8 10s to £9 per ton. Bran steady at £5 5s to £5 10s per ton.

Ipswich, Tuesday.—Small attendance and a limited supply of wheat. Trade quiet at unaltered quotations. Reds, 28s to 29s; white, 30s per 504lb. Grinding barley

Leeds, Tuesday.—America has fairly upset the apple cart, but we should not be surprised to see a reaction and the "Bulls" once again gaining the upper hand. Wheat, though slow, is remarkably steady, American descriptions alone being lower. White wheats and Russians scarcely show any decline, and English none. Feeding stuffs quiet at late rates.—DUNNS AND CO.

firm. Oats steady. Maize, beans, and peas no change.

Louth, Wednesday.—A very small supply of wheat, and a steady trade, with no alteration in prices. There was also a fair trade in barley, with a good inqury for seed, prices ranging from 27s to 32s; oats, 21s to 23s per qr. A very slow trade for beans. Peas quiet.

Market Drayton, Wednesday.—A largely attended market, with fair all-round trade. Malting barley slightly dearer. Quotations: Wheat, white, old, 13s to 13s 6d per 226lb; white, new, 13s to 13s 3d per 226lb; red, old, 13s to 13s 6d per 226lb; red, new, 13s to 13s 3d per 225lb; oats, white, old, 18s per 200lb; white, new, 14s to 15s per 200lb; barley, malting, 14s 6d to 15s per 210lb; grinding, 11s 6d to 12s per 210lb; Indian corn, new, 13s 9d to 14s per 240lb; old, 14s to 14s 3d per 240lb; beans, new, 14s to 15s per 240lb; old, 20s to 21s per 240lb; peas, white, 18s to 19s per 240lb.

Newcastle, Tuesday.—Wheats of all descriptions in very limited demand at nominally Saturday's quotations. Maize tending in buyers' favour. Oats firmer. Beans and peas steady. Flour slow sale at last week's prices.

Newport, Wednesday.—Wheat was quiet at last week's prices, and there was no quotable change in other grains. Flour, fines, 22s 6d per sack. Offals in demand and very firm.

Penrith, Tuesday.—There was again a large show of oats. Vendors continued to ask increased prices, and trade was of a dragging character. Anything suitable for seed made 25s to 27s per qr.; provender oats, 24s to 25s; black oats, 24s to 25s 6d per qr. There were a few samples of rye, business being done at 10s to 11s per bushel.

Romford, Wednesday.—Wheat trade very firm at last week's full prices, owing to the small supply. Red wheat made 28s 6d to 29s, and white wheat 29s to 30s per qr.

Salisbury, Tuesday.—There was a fair supply of grain and a good attendance of buyers at the Corn Exchange, but trade was dull throughout. Wheat sold slowly at an advance of 6d, whilst barley scarcely maintained the decreased prices of a week ago. Beans and oats firm and unchanged. Quotations:—Wheat, 27s to 30s; barley, 26s to 30s; oats, 20s to 25s; beans, 34s to 41s.

Sheffield, Tuesday.—Farmers were too busily occupied in their spring work to attend market in great numbers. English and foreign wheat were very quiet, and prices were unchanged. Oats scarce. Beans and barley in slack demand at last quoted prices. Round maize unchanged, but flat sorts were quotably lower. Prices:—Wheat, white, 29s 6d to 30s 6d; ditto red 29s 6d to 30s 6d per 501b.; oats, new white, 21s 6d to 22s 6d; ditto new black, 20s to 21s per 336lb; barley, grinding, 22s to 23s; ditto, malting, 28s to 32s per 448lb; peas, grinding, 32s to 34s; ditto blue, 53s to 80s; beans, Egyptian, 35s 6d to 36s per 504lb; ditto English, new, 37s to 37s 6d per 532lb; Indian corn, small, 23s to 23s 6d; ditto American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—The wheat trade was firm at 28s per qr. Oats 3d to 6d dearer on the week, making 22s to 22s 6d per qr. Very few lots of beans and peas offering.

Stockton, Wednesday.—Very little English wheat showing, which made last week's prices. Foreign wheat trade quiet owing to weakness in America; prices were 3d to 6d dearer. Maize 3d per qr dearer. Oats unchanged. No malting barley showing.

Sudbury, Thursday.—There were very few samples of wheat at 28s to 29s 6d per qr. Maize 24s delivered.

Worksop, Wednesday.—Small attendance, and very little grain on offer. White wheat 28s to 29s, red wheat 27s to 28s per qr, best barley 28s to 32s, and very scarce; secondary 26s to 28s, grinding barley 24s to 26s per qr, white oats 23s to 25s, black oats 22s to 24s, maize 24s to 26s per qr.

FRUIT AND VEGETABLES.

Covent Garden, Tuesday.—Good supplies of greenstuffs on offer met with fair support. Fruit was in fair supply, and evidenced a steady sale. Greenstuffs: Cauliflowers, 6s to 9s per tally; beetroots, 2s to 2s 6d per bushel; sprouts, 2s to 2s 6d per half-sieve; parsnips, 2s 6d to 3s 6d; turnip tops, 2s 6d to 3s per bag; carrots, 2s to 2s 6d; turnips, 2s 6d to 3s 6d; parsley, 4s to 5s per dozen bunches; horseradish, 1s 3d to 1s 6d per bundle; celery, 9s to 12s per dozen rolls; seakale, 8s to 12s per dozen punnets; field rhubarb, 1s 6d to 3s 6d; forced ditto, 10d to 1s 3d per dozen bundles; English onions, 4s to 4s 6d per bushel; Valencia, 7s to 9s per case; Dutch, 4s 6d to 5s 6d per bag. Potatoes, 35s to 85s per ton; New Canary, 13s to 15s per cwt. English apples, 6s to 10s 6d per bushel.

THE BALTIC.

The London Corn Trade Association inform us that the following standards have just been made up, viz.:—Plate wheat of the Province of Santa Fé, Nov.-Dec. shipment; Yellow La Plate maize, December shipment; White La Plata maize, December shipment and adopted. New South Wales wheat crop 1901-1902. The association also announce that the committee have adopted the standard wheat samples crop 1901-1902 received from the Sydney Chamber of Commerce. All these samples can be seen and sample packets bought at 2, Lime Street Square, Fenchurch Street, E.C.

Cargo sales on Tuesday and Wednesday were few in number, but there was a somewhat improved inquiry for maize at the slightly lower prices accepted on Monday. Transactions have been as follows:—Wheat: Californian, 29s., prompt shipment; Walla Walla, 28s. 9d.; fine Bahia Blanca (South American), 29s. 3d.; Rosario, 28s.; No. 1 Northern Manitoba, 28s. Maize: La Plata May shipment, 20s. 3d.; fine Galatz, 21s.; Caucasian, 22s. 3d; Turkish, 21s. 6d.; Roumanian, 20s. 6d.; and American May shipment, 24s. 6d. per quarter. Barley: Azoff May shipment, 18s. 9d.; Roumanian, 416lb., 21s. 3d. Oats: Libau, arrived, 18s. The Government took a cargo of Russian 320lb. oats at 21s. 3d. per quarter.

Prices asking for cargoes, but not obtained, were about as follows: Australian wheat, 30s. 3d.; Kansas winter wheat, 30s.; Californian standard barley, 24s.; Chilian brewing barley (for prompt shipment), 25s.; unscreened Yerli barley, 20s.; Konigsberg oats, 20s.; white Canadian peas, 35s. (best); 33s. 3d. (secondary); Chilian peas, 37s.; Turkish canary seed, 36s. 6d.; Smyrna millet, 30s.; La Plata linseed, 48s.; Calcutta linseed, 51s. 3d. Cottonseed, Egyptian, prompt shipment, £6 16s. 3d. and November (new crop), £6 3s. 9d. per ton.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The wheat plant is not particularly thick on the ground or high above it for the time of year, but there are no reasons for fearing a short crop, provided April and May are reasonably showery and the summer of an average warmth. The late February sowings of barley are already up, a sign that the seed-bed was a good one, and that the rains of last week were timely. The land is not too sticky for oat sowing, which has been proceeding very briskly. Seed merchants have sold more oats than usual this season. Seed oats at Mark Lane have gone off at a good price, and all the signs point to an increased area of well-selected oats, which should yield well in the autumn. The increased sowings in France and the United States are, however, some menace to value. Winter tares have apparently found the open season in their favour, as they look decidedly healthy. But the cold February kept them from a too precocious growth, and, speaking generally, the season, though about up to date, is by no means beyond a Lady Day aspect. Deliveries of English wheat are falling off at last at the country markets, but they were maintained at a good figure for so long that the value of foreign wheat at the great ports, including London, has been most prejudicially affected, holders getting weary of waiting and stuff being pressed on sale day the last fortnight, with the usual result to the price.

The Government report on the 1901 crops in the different counties is presented to us several weeks earlier than usual this year. The report is not indeed quite complete, but it contains all the more vital figures, and the head of the statistical department at St. James's Square is cordially to be congratulated on his expedition. One cannot urge too often that in statistics, as in other things, he gives twice who gives quickly. The return itself requires more detailed examination than we can give it under this section.

The Government at present have nothing to say in their reports about the condition of the stored crops, but from what we can learn the winter has not been favourable to the stacks. There is a great plethora of rats and mice, the result, it may be, of the absence of anything like prolonged frost. The condition of English wheat at the later markets has not been up to the standard of a couple of months ago.

The present expectations of soft and medium soft white wheat from California are colossal, and threaten to affect the value of English wheat very prejudicially between now and mid-summer. After June is over, there should be a decided recovery. Strong red wheat is quite scarce in comparison with rather weak wheat of good light colour, and should pay to hold from now forward for a good price. The term market quotation of 30s. per 500lb. for fine American red is tempting, and may lead to millers doing a good forward purchasing for June, July, and August delivery.

The American markets just before Easter were decidedly weak, but it is not likely that there will be any pressure of reserves on sale before the new crop prospects have declared themselves. The American Bureau report is not due before May 11th, and even then no free sales are likely unless the promise of the crops is seen to be decidedly good. There is no excess of wheat on American merchants' hands, and shipments of American flour have recently shown a diminution which will relieve our market from some anxieties.

Supplies on passage at Lady Day were as follows:—

	1902.	1901.
Wheat, qrs.	3,860,000	3,340,000
Flour, sks.	250,000	420,000
Maize, qrs.	395,000	540,000
Barley, qrs.	470,000	310,000
Beans, qrs.	7,000	11,000
Linseed, qrs.	325,000	195,000
Rapeseed, qrs.	30,000	6,000
Cottonseed, qrs.	49,000	70,000

It will be seen that wheat has increased by one half a million quarters on the year. The increase is exclusively in the soft white wheat, of which we have already spoken. The supply of maize likely to arrive in April is below the average, besides being practically confined to round corn. The excess in the barley on passage is wholly of Californian brewing barley, which is in request to meet brewers' requirements, and does not depress either fine malting or common feeding kinds. The liberal expectation of the oilseed trade are not the cause of anything like a weak market, as all that is coming will be wanted. American supplies in the hands of merchants on Lady Day are thus cabled. There are no cables to hand for barley or rye; stocks presumably being trivial.

AMERICAN VISIBLE SUPPLY.

	Lady Day. 1902. Qrs.	Lady Day. 1901. Qrs.
Wheat	10,756,000	10,446,000
Maize	1,849,000	3,681,000
Oats	905,000	2,006,000

America is very poor in spring corn this year.

Imports of cereals into the United Kingdom from September 1 to March 25 are returned as follows:—

	This cereal year. Qrs.	Last cereal year. Qrs.
Wheat	8,242,000	8,395,000
Barley	4,725,000	3,528,000
Oats	3,667,000	4,087,000
Beans	218,000	215,000
Peas	281,000	346,000
Maize	5,964,000	7,311,000

The increased receipts of barley have gone a good way to balance the marked falling off in maize, but there is no increase in beans, balancing the deficiency of foreign peas. It was the partial failure of the Canadian crop which brought about the latter event. Of oats, the supply from abroad is 421,000 quarters deficient on a little more than the half year. Russia has shipped with spirit, both Roumania and Turkey have superseded our expectations, but their joint efforts have by no means made up for reduced exports from the United States, Canada, and New Zealand.

Maize shipments from November 1st to March 22nd were as follows:—America 671,000 quarters; Argentina 535,000 quarters, Russia 2,386,000 quarters, Roumania 2,908,000 quarters, Turkey 563,000 quarters. In the like period of last maize year—the maize year begins November 1st—the shipments were much smaller from all quarters save the two Americas; but North America then shipped 9,492,000 quarters and South 623,000 quarters. The total deficiencies largely exceed this season the total surpluses. Shipments this civil year, *i.e.*, since January 1st, have been as follows:—

	Qrs.
From America	280,000
Argentina	125,000
Russia	1,850,000
Roumania	1,675,000
Turkey	300,000
Total	4,330,000

Last year in the same period considerably over six million quarters were shipped.

The stocks of wheat in the United Kingdom on Lady Day are thus estimated:—

	Qrs.
Foreign wheat	2,746,000
English ,,	1,950,000
Total	4,696,000

This is a very moderate total, and we may hope that after Easter the fact will have due weight with the trade. At the present juncture the impatience of holders at postponed business, and the general idea that the Boer war is at last nearly at its end, are causes of a weaker feeling, but the total supply of breadstuffs for the cereal year now in progress shows no signs of being in excess of the requirements, and this being so the balance of supply and demand should assert itself before long, and remove the present exceptional depression.

We have left behind us the period of maximum supplies from English farmers and of maximum shipments from America, North and South. Yet we have not added appreciably to the stocks according to usual computation of requirements, and the returns of those in the port warehouses show no very great increase.

	Qrs.
25th March	2,746,000
1st September	2,415,000
Increase	331,000

Millers probably hold this amount less than usual of wheat in their mills, as they have been discouraged by the large importations of American flour from buying wheat for their own working.

The shipments of linseed last week were 71,000 quarters from Argentina and 60,000 quarters from India. Alexandria reports a stock of 96,000 tons of cottonseed, and last week's shipments were 4,500 tons.

CORN STATISTICS.

LATEST MARKETS

MARK LANE, WEDNESDAY.

The Market was rather full for the mid-week, and a good retail trade was done. Speculation, however, was quite absent, and the leading operators will not be back before the 2nd April.

English wheat was steady, foreign weak. Malting barley was quite as dear on Monday, but feeding sorts were 3d. down. Oats were firm for English, Scotch, New Zealand, and Swedish, but weak for the North and South Russian kinds. Maize was rather against holders, but pulse was steady for all sorts, and firm for some, notably tares and dari. The market for oilseeds was quiet, but linseed was not pressed on sale, despite the big arrivals, and rapeseed was held for previous best rates.

THE FLOUR TRADE.

MARK LANE, WEDNESDAY.

The Millers' Association did not alter credit terms from 28s. for best, 26s. whites, and 23s. households; but for cash, the prices made did not exceed 24s. 6d. whites, and 21s. 6d. households.

Country flour was 6d. lower for the commoner kinds.

French flour favoured buyers, 21s. 3d. being accepted for Corbeil's very finest.

American flour made 22s. 6d. for the favourite Minnesota mark "May Blossom," while Kansas "Success" was offered at the like price, and "Manhattan" at 18s. 6d. per sack.

Hungarian flour was steady, at 32s. 3d. for "Victoria Empress." English flour made by Hungarian process commanded 26s. 6d. per sack.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	March. s. d.	June. s. d.	Aug't. s. d.
March 24 11 a.m.	6 0	6 0	6 0
4 p.m.	6 0	6 0	6 0
March 25 11 a.m.	6 0	6 0	6 0
4 p.m.	6 0	6 0	6 0
March 26 11 a.m.	6 0	6 0	6 0
4 p.m.	6 0	6 0	6 0

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

GRAIN AND FLOUR FACTORS REPORTS.

Mark Lane, March 26. — The market for foreign wheat is in much the same position, there having been no animation. Buyers are still acting with great caution, and will only operate for their more pressing needs. Speculation is entirely absent at the present time. Shipments afloat continue heavy, and this is the main reason for the indifference of buyers. The statistical position seems to point to a steady level of prices for some little time, but the season of crop scares is now commencing in America, where it is stated the Kansas crop is likely to be a complete failure. This, however, is no doubt a very extreme view, but it is quite possible that a considerable amount of damage has been done. With such reports the market is likely to be unsettled for some little time to come. Offerings from the Argentine are extremely limited, and the quantity shipped during the present season to this country will be very far short of last year's shipments. As regards Australian wheat, shippers are holding above U.K. values, so that business is impracticable, buyers and sellers being fully 6d. per quarter apart. The weather throughout the United Kingdom and on the Continent has been very seasonable and in every way favourable for the spring sowings, and also for the growing wheat. Wheat, Australian.—Ex store: Supplies on spot are restricted, and these have met only a slow demand at about late rates. We quote: 31s. to 31s. 6d. per 496lb. Farmers are now busy in their fields, and the supply of English wheat on the market is therefore restricted, and prices are well maintained. Maize: There has been some improvement in the demand for this article during the past week, and values have recovered fully 6d. per quarter. Barley: This article meets with a slow demand at unchanged prices, and oats are also slow of sale at late rates.—WEDDEL AND CO. (16, St. Helen's Place, E.C.)

Mark Lane, March 26.—Trade for flour quiet. Spot prices unchanged; forward, 3d. to 6d. dearer. —W. M. READ AND CO.

Mark Lane, March 26.—Oatmeal: Midlothian, quiet at £14 15s.; Aberdeen, steady at £12 12s. 6d.; Canadian, firmer at £12 15s. for coarse, and £10 for fine. (Special.)

Mark Lane, March 26.—Meal: Some American maize germ meal just to hand went at once into sale at fully previous prices, but rice meal was only saleable at a slight decline. (Special.)

BUTTER.

Tuesday.—Bedale: In rolls of 24oz., 1s 9d to 1s 10d per roll. Gainsborough: 1s 4d per lb. Leeds: York lump, 14s 6d to 15s per stone; long rolls, 1½lb, 1s 9d to 1s 10d per roll; fresh in 1lb prints, 1s 2d to 1s 3d per lb. Settle: 1s 1½d to 1s 2½d per lb. Spalding: 11d per lb. Stone: 1s 2d to 1s 3d per lb.

Wednesday.—Barnsley: 1s 2d and 1s 3d per lb. Boston: 11d per lb. Colne: 1s 2½d per lb. Keighley: 1s 2d per lb (wholesale); 1s 3d per lb (retail). Knaresborough: Wholesale, 1s 9d; retail, 1s 10d to 2s per roll of 24oz. Louth: Wholesale, 11d per lb. Market Weighton: 1s per lb. Masham: In rolls of 24oz, 1s 8d to 1s 9d per roll. Northallerton: 1s 8d to 1s 10d per roll of 24oz. Stockton: 1s 2d to 1s 4d per lb. Worksop: 1s 2d to 1s 3d per lb.

Wednesday.—Hereford: 1s 4d to 1s 5d per lb. Market Drayton: Best, 1s 1d to 1s 2d per lb; seconds, 1s to 1s 1d per lb. Uttoxeter: 1s 1d to 1s 2d per lb.

Wednesday.—Hereford: 18 for 1s. Market Drayton: 17 to 18 for 1s. Uttoxeter: 1s 3d to 1s 4d per score.

CHEESE.

Glasgow, Wednesday.—Market now pretty well cleared of home cheese; values favour sellers. Cheddars and Dunlops, 56s to 62s per cwt. Fodder cheese will be offered in a month. The reason that home cheese is now almost exhausted is that many of the farmers sent their milk to the creameries. There is a fair demand for Canadians and New Zealands at firm prices.

Highbridge, Tuesday.—Upwards of 12 tons of cheese pitched to-day. Best dairies realised 64s 0d per cwt., other dairies selling at 58s to 62s 6d. A few inferior lots failed to reach more than 40s.

Newport, Wednesday.—A fair attendance of buyers and an average supply of cheese. Quotations: Caerphillies, 60s to 65s; fancy dairies, 60s to 67s; Derbys, 66s to 68s; Cheddars, 63s to 65s; truckles, 65s to 70s.

EGGS.

Tuesday.—Bedale: 15 to 16 for 1s. Gainsborough: 17 for 1s. Leeds: Yorkshire, 8s 9d to 9s 6d per 120. Settle: 18 to 19 for 1s. Spalding: 18 for 1s. Stone: 16 to 17 for 1s.

Wednesday.—Barnsley: 13 or 14 for 1s. Boston: 18 or 19 for 1s. Colne: 1s 5d per score. Keighley: Wholesale 15, retail 14 for 1s. Knaresborough: 15 or 16 for 1s. Louth: Wholesale 18 to 20 for 1s. Market Weighton: 17 or 18 for 1s. Masham: 17 for 1s. Northallerton: 12 or 13 for 1s. Stockton: 12 to 14 for 1s. Worksop: 1s 6d per score.

CATTLE.

(Metropolitan Market, Islington.

Thursday, March 27th, 1902.

	British.	Total.	March 28, 1901.
Beasts	100	100	110
Sheep and lambs	1,790	1,790	1,180
Calves	75	75	60
Pigs	5	5	20
Milch cows	5	5	—

Quotations per 8lb (sinking the offal).

ENGLISH.

	Inferior.	Second.	First.
Beasts	2s 8d ..	4s 0d ..	4s 8d
Sheep	3s 10d ..	5s 0d ..	5s 8d
Lambs	5s 10d ..	6s 2d ..	7s 10d
Calves	4s 2d ..	5s 10d ..	6s 8d

To-day's supply, as usual on a Thursday, was very limited, but included a fair proportion of fat beasts, which, however, met with but little demand. The best on offer made from 4s 6d to 4s 8d per 8lb (sinking the offal). Fat butchering cows and bulls met with forced sales at lower prices.

The supply in the sheep market numbered 1,170 more than on Thursday, chiefly due to larger arrivals of lambs, which being in excess of requirements, were much lower in value (2d to 4d per 8lb), at which reduction a clearance will not be made. Trade for wether sheep was slow, and rates 2d lower, but ewes made Monday's quotations.

Undermentioned quotations are at per 8lb (sinking the offal) and are for the best of each class penned:—

7½ to 8-st Downs	5s 4d to 5s 8d
9-st Downs	5s 4d to 5s 8d
10-st half-breds	5s 0d to 5s 2d
12-st half-breds	4s 10d to 5s 0d
10-st Down ewes	4s 6d to 4s 8d
11-st half-bred ewes	4s 2d to 4s 4d
5-st Down lambs	7s 8d to 7s 10d
6-st half-breds	6s 0 to 6s 2d

With a moderate supply, the calf trade was brisk, prime quality making fully 6s 8d per 8lb (sinking the offal).

London Central, Wednesday.—Fair supplies offered met a good demand, prices being firm to occasionally dearer. Arrivals of beef included 60 tons of Scotch, 900 Liverpool sides, 1,850 hindquarters, and 800 forequarters American killed. Prices:—Beef: Scotch short sides, 4s 6d to 4s 10d; long, 4s 4d to 4s 6d; English, 4s 2d to 4s 4d; American, Deptford killed, 3s 11d to 4s; Liverpool, 3s 10d to 4s; American refrigerated, hindquarters, 4s to 4s 4d; forequarters, 2s 10d to 3s. Mutton: Scotch, 4s 6d to 4s 10d; English wethers, 4s 4d to 4s 6d; ewes, 3s 4d to 3s 10d; English lamb, 6s to 6s 8d. Veal: English and Dutch, 4s to 5s. Pork: English, 4s 8d to 5s; and Dutch, 4s 4d to 4s 6d per 8lb.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Owing to the earlier to-day to which we go to press, comparison of numbers of cattle shown cannot be compared with last week, as an important market day at Deptford (Saturday) cannot be included. At the Islington market, where the supply was rather larger, trade for fat beasts, especially of best quality, was of a somewhat firmer and steadier nature, but though the tendency was an upward one it was not sufficiently marked to warrant higher rates being quoted. A clearance on Monday was made, but a few were held back. On Thursday, fat butchering cows and bulls, with slower trades, were in fair request, but were bought on easier terms. At the foreign cattle market, on Monday, trade was rather slower, but at a slight advance in value, and on Wednesday, with a choicer lot on sale, higher rates were obtained. The total number on offer at both markets was 1832, consisting of 1,310 British (increase 150), and 582 foreign, these latter being from the United States. The following were the top rates paid per 8lb., sinking the offal:—90-stone polled Aberdeens, 4s. 9d.; 90-stone polled Norfolks, 4s. 8d.; 100-stone Shorthorn ditto, 4s. 6d.; 100-stone Lincolns, 4s. 6d.; 90-stone Irish, 4s. 6d.; 85 to 90 stone States, 4s. 6d. to 4s. 8d.; 100-stone fat cows, 4s.; 100-stone fat bulls, 3s. 6d. to 3s. 8d. At Islington, as usual the Monday preceding Easter, there was a much larger supply in the sheep market, amongst which was a large proportion of lambs, the best of which sold readily at 8s. per 8lb. Trade for sheep, both wethers and ewes, ruled firm at an advance of 2d. per 8lb., but on Thursday a reaction set in, rates having to be lowered 4d. for lambs and 2d. for wether sheep. At Deptford, rates were firmer, but trade very slow. The total number penned was 14,357, consisting of 13,750 British (increase 4,140) and 607 from the United States. Best pens made, per 8lb., as follows, on Monday:—7½ to 8 stone Downs, 5s. 10d.; 8-stone Scotch, 5s. 8d. to 5s. 10d.; 9-stone Downs, 5s. 8d.; 10-stone ditto, 5s. 6d.; 10-stone Half-breds, 5s. 4d.; 11-stone Hampshires, 5s. 8d.; 12-stone Lincolns, 5s.; 10-stone Down ewes, 4s. 8d.; 4½ to 5 stone fat Down lambs, 8s. to 8s. 2d.; 6-t. Half-bred ditto, 7s. 6d. to 7s. 8d. Calves numbered eighty, the best, on Thursday, making fully 7s. 8d. per 8lb., sinking the offal.

Trade in the West.

With the near approach of Easter, which has come upon rather earlier than usual this year, interest naturally centres in the great sales of lamb and veal, which have been one of the chief features of the trade during the past week. Of course, the earliness of the season, coupled with the cold storms we have had, accompanied in many places by hail, and in others (in the North) even by snow, has not been without its effect on the trade, the inclemency of the weather affecting the lamb trade more prejudicially than that of veal. In spite of these adverse circumstances, however, lamb, probably from the fact of the supply at many centres being none too large, has met a fairly good demand for good, ripe, well-finished Downs or cross-breds, animals that have been carefully turned out of hand, which in some places have been selling from 35s. to 45s. apiece—quite 11d. to 1s. per lb., and in some cases more. Of course, these are exceptional values; but purveyors with a good connection have shown but little hesitation in giving this price, as many of them at this particular know where to place their purchases, and at the same time to do so on remunerative terms. The more ordinary runs of lamb have also been meeting with a good consumptive demand at from 9d. to 10d. per lb. (or from 32s. to 36s. each); and even the rougher grades of unfinished lambs have been in request, though at from ½d. to 1d. per lb. less money. The weather, no doubt, coupled with the earliness of Easter, made another ½d. to 1d. per lb. difference in the price; otherwise the season would have been a fairly satisfactory one, and, as it is, it is, on the whole, even now a trifle better than it has been in some former years, though hardly up to last year's values. Relatively speaking, as far as we can gauge, the veal trade compares favourably with the price of lamb. Really ripe, well-finished calves have met a brisk sale at most of the leading centres at 8d. to 8½d., and in some cases more where purveyors have taken a fancy to certain lots. This, as may be well understood, is an extreme quotation, and of course refers to specially picked lots. The great bulk of the veal has met a good season's trade at from 7d. to 8d. per lb.; and vendors have experienced but very little difficulty in finding purchasers where a disposition has been shown to accept anything like a reasonable price, such as would admit of the middle-man getting a trifle for his trouble. The great bulk of the offer—which, too, has been very heavy at most centres this year—has been cleared at, on the whole, by no means discouraging prices. The only other branch of the trade which has been characterised by anything like brightness has been in respect to the lighter weights of porkers, which have been in active request up to 11s. per score for choice qualities, those a little heavier, and verging on bacon weights, selling from 9s. 6d. to 10s. The coarser breeds have been a little more neglected, owing to the special demand for other classes. Beef, in spite of the other calls, has ruled fairly firm, especially for steers and heifers, which have manifested a healthy feeling, the great bulk of the offer being cleared at from 11s. to 11s. 6d. per score (or £17 to £23 each); fat cows making £14 to £16 10s. (or 10s. to 10s. 6d.). There are but very few wethers on offer just now, but those at market make 7½d. to 8d., coarse heavy ones being difficult to cash except at low rates—6½d. to 7d. The chief business passing in stores is in milch beasts and barreners, the trade for both of which is particularly buoyant, the former especially so in consequence of the extra demand on town dairies during the holiday season, good dairy cows commanding a ready sale at from £17 to £21 each, and plainer kinds (cows) £14 to £16 15s. Fresh-condition barreners, after the rain, are meeting a very free sale from £22 to £27 per ?, and others of a rougher class from £16 to £20. In other things business is none too fast, the holidays somewhat interrupting the trade.

LONDON.

London (Islington), Tuesday.—Fair supplies met a sustained demand, prices being firm. Beef supplies included a fair amount of English, 460 Liverpool sides, 1,500 hind-quarters, and 600 fore-quarters American killed. Prices: Beef, English, 4s 2d; American, Deptford killed, 3s 10d to 4s 1d; Liverpool, 3s 10d to 4s; American refrigerated, hind-quarters, 4s 1d to 4s 3d; fore-quarters, 2s 8d to 2s 10d. Mutton: Scotch, 4s 4d to 4s 8d; English wethers, 4s 4d to 4s 6d; ewes, 3s 4d to 3s 8d; English lamb, 6s to 6s 4d. Veal: English and Dutch, 4s to 5s per 8lb.

COUNTRY.

Ashford, Tuesday.—Best beef ranged from 11s to 11s 6d per score, and mutton from 3s 6d per stone for Kent barrens to 5s 4d for half-bred and Down wethers of prime quality. Veal again very dear, making up to 6s 6d per 8lb. Lamb was in much request for the Easter trade, and 11d to 1s 3d per lb was easily made. The teg trade very good.

Basingstoke, Wednesday.—At Raynbord and Son's saleyard there was a good attendance of buyers to meet a supply consisting of 45 fat beasts, 60 calves, 602 fat sheep and lambs, and 50 head of dairy and store cattle, for which the following prices were realised:—Shorthorn fat beasts made up to £24 15s; polled steers, £20 10s; Welsh runts, £19 15s; and a Devon cow, £17 10s. Fat sheep, 40s to 54s 6d; fat ewes, 38s to 51s; fat lambs up to 43s 6d; fat calves, 80s to £6 7s 6d; small, 25s to 55s; dairy cows up to £20 10s. A good show of fat beasts met a brisk trade. A clearance made. Fat sheep and lambs were shown in large numbers, meeting a clearance with an advance on the prices quoted last week, prime quality fat sheep and fat ewes especially realising more money. Dairy cattle sold readily at last week's prices. Store cattle met with a better inquiry. Fat calves, with a brisk trade, were easily sold at high figures. Ruling values:—Best quality fat beasts, 7d to 7¼d; second ditto, 6¼d to 6¾d; bulls, cows, and inferior beasts, 5d to 6d per lb. Best quality fat sheep, 7¼d to 8¼d; fat ewes, 6d to 7d; fat sucking lambs, 10½d to 1s 2d per lb; fat calves, 8d to 9d per lb.

Boston, Wednesday.—A good show and a brisk trade. Best beef, 7s 6d to 7s 9d; cow beef, 6s to 6s 6d per stone; strong steers, £14 to £16; growing steers, £11 to £12; drapes, £11 to £13 10s; in-calvers, £19 to £21; heifers, £16 to £18; calves, 65s; hogs, 40s to 46s each; best wether mutton, 7d to 7½d; ewe ditto, 5d to 5½d per lb.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart there was about an average supply of fat beasts. Trade was about on last week's rates, prices reaching up to £25 5s. Small supply of store cattle, for which there was a better inquiry. A few lots of yearlings also sold well. Very short supply of fat sheep for the time of year, there being insufficient for the large attendance of buyers. Suffolk hoggets went up to 63s per head. Half-bred hoggets reached up to 57s per head. Fat ewes also met a better trade. Several fat lambs were penned, and all the best met a good trade. Rather more store hoggets on offer, and an improved inquiry prevailed. Good lot of wether keeping hoggets made 38s 6d per head. Other lots from 35s to 30s per head. Half-bred hoggets fetched from 35s 6d to 32s 6d per head. About average suppl yof fat pigs, which realised a good trade at late rates. Shorter supply of store pigs and of London jointers.

Cambridge, Monday.—Beasts, 361; sheep, 886; lambs, 148; horses, 21. Beef, 6s 6d to 8s 6d; mutton, 4s 8d to 5s 6d; lamb, 11d to 1s 1d per lb. A few more store beasts, but trade slow. Fat beasts a good show; trade better. Fat sheep: A fair number to hand; trade better at more money. Lambs a good show, and sold well all round. Stores: A large number to hand; trade fair. Hay, straw, and roots short supply.

Derby, Tuesday.—The market was well attended, and anything of good quality found a ready sale. Mutton, 8½d; beef, 6d to 7d; veal, 9d to 9½d; mutton, 7d to 8½d; lamb, 36s to 45s.

Dumfries, Wednesday.—Large supplies. Fat cattle in good demand at the full rates of late markets. Horned bullocks to £18; ditto heifers to £15; polled bullocks to £16; ditto heifers to £14; Ayrshire cows to £14; shorthorn bulls to £23; Galloway heifers to £14; Galloway cows to £13.

Edinburgh, Wednesday.—There was a good supply of sheep, but inferior qualities met slow trade. Cheviot hogs sold to 28s; greyfaced to 36s; and half-bred to 37s. Poor show of cattle, and inferior qualities bad to sell. Bullocks to £14 5s; Ayrshire cows to £18, and shorthorns to £22.

Gainsborough, Tuesday.—Good show of superior calves at prices ranging from 35s to £2 each.

Gisburn, Wednesday.—An average number of cattle, chiefly English, but the attendance of farmers was not representative, and buying was limited. Calving beasts, £16 to £22 10s; geld beasts, £2 under; cross breds, £8 to £12; veal, 7d to 7¼d per lb.

Glasgow, Wednesday.—At market, 1,078 cattle and 5,545 sheep. Fair trade, prices firmer. Top Scotch cattle, 65s; secondary, 60s to 62s; top Irish, 60s per cwt. Top mutton, 8½d; secondary 7½d to 8d per lb. Values of dead meat fairly well maintained; best Scotch beef, 6d; best States, 5¾d; best Canadians, 5¼d to 5¾d; best cows, 5d per lb.

Hereford, Wednesday.—Bullocks and cows, 659; calves, 220; sheep and lambs, 1,445; pigs (fat and sows), 53; sucking pigs, 11; pigs (stores, not more than ten), 272; pigs (stores, more than ten), 154; horses, 3; colts, 1. Prices: Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 7d per lb; veal, 8½ per lb; pork, 5½d to 6d per lb; bacon, 4d to 5d per lb; lambs, 1s to 1s 2d per lb.

Hull, Tuesday.—There was a good supply, consisting of about 1,000 sheep and 100 cattle. Dairy cows, £14 10s to £20; cows in calf, £14 to £17; store beasts, £10 to £14. Sheep consisted entirely of grazing hoggs, and business was done at 32s to 38s each.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a larger number of fat cattle were forwarded, and, with plenty of buyers present, a brisk trade was experienced at rather more money for ripe animals. The entry of fat lambs was larger than expected; all those of fair weight sold well. The fat sheep pens were full; trade was slow, without much alteration in values. A good entry of fat hogs and Londoners, and a strong attendance of buyers; prices advanced fully 6d per stone. A large number of calves were penned; those for killing were in strong request at more money. This being the nineteenth annual sale of shorthorn bulls, about 30 were catalogued, including a choice lot of Cumberland bulls; several distant buyers were present, and prices ranged from 27gs. to 14gs. Several cows and heifers were penned; trade was dull and prices somewhat lower. Numbers at sales and market—Cattle, 610; calves, 83; sheep, 2,225; swine, 1,358; horses, 108.

Leeds, Tuesday.—The Easter market to-day presented an animated appearance, the supplies were large, and the attendance of buyers was much above the average. All sections of the market, with the exception of cattle, show a large increase, compared with the previous week. This was most noticeable in sheep and calves, the former showing an increase of 560. The cattle comprised a very good selection from the North of England, Scotland, Ireland, and Norfolk. Business all through was of an active character for beef, buyers investing freely for the coming holidays. The primest English and Scotch cattle sold readily, the best heifers and bullocks in a few instances making 7d per lb, with the ruling quotation fully 6¾d, best Irish cattle, 6½d to 6¾d; good beef, 6d; cow and inferior ditto, 5½d. The increased supply of sheep caused business to proceed rather slowly, but at the close a good clearance had been effected. The quality all round was above the average, prices were firm, and in some cases a little higher than last week. Choice small shearlings in the wool made to 8d per lb; ditto hogs, 7½d to 7¾d; ewes, etc., 6d; nice small clipped sheep, 6½d to 7¼d. The feature of the market was the excellent supply of veal calves, numbering 130, the quality comparing very favourably with previous Easter markets. A good demand prevailed, and prices advanced, the best veal calves realising 9d to 9¼d, and second-class animals 7¾d to 8d per lb. Lambs were shown in increased numbers, and met with a good inquiry. Nice small fat lambs fetched up to 1s per lb, and larger sizes 10d. The demand for dairy cattle was quiet, and prices easier. Best milkers, £15 to £19. Numbers at market—Cattle, 589; sheep, 2,730; and calves, 130.

Leicester, Wednesday.—Good average consignments of Norfolk and Lincolnshire-fed bullocks. Buyers and dealers were well represented. Trad ruled brisker all round at an advance of 20s in choice qualities, and 10s per head on secondary. Heifers, 6¼d to 7d; choice bullocks, 6¾d to 7d; secondary, 6¼d to 6¾d; cows, 5d to 6d per lb. Sheep were a full supply, and sold freely at 7¼d to 8d for choice; large sheep, 6¾d to 7¼d; ewes, 5¾d to 6d per lb. Lambs in brisk demand at 1s; choice calves very firm at 10d; secondary flat, at 8d to 8½d per lb.

Lincoln, Tuesday.—An average supply of beasts, with a good trade. Best beef, 7s to 7s 9d; other sorts, 6s 6d to 7s per stone; veal, 6d to 9d per lb. A very fair show of sheep, for which there was a ready sale. Clipped ewes, 5½d; woolled ditto, 6d to 6¼d; wethers, 7d to 7¼d; clipped hoggs, 6¼d to 7¼d; woolled ditto, 7d to 8d; lamb, 11d to 1s per lb.

Malton, Tuesday.—Liberal offer of both beef and mutton. Trade for former finished even better than at the opening; choice heifers; 8s; others, 7s to 7s 6d per stone; Wold bullocks, £16 to £18 each; shorn mutton, 6d to 6½d; good woolled shearlings, to 8d per lb. Calves were very dear, in view of Eastertide.

Newcastle, Tuesday.—Cattle rather slow, but steady. Prime heifers, 7s 3d to 8s; steers, 7s 9d to 8s; second class, 7s 3d to 7s 9d; coarse and inferior, 6s to 6s 6d. Pork steady, 5s 6d to 8s 3d. Sheep slower, 6d to 8d. Veal firm, 6d to 10d. Lambs a good trade, 30s to 34s. Numbers: Cattle, 1,871; sheep, 5,930; and calves, 60.

Preston, Wednesday.—Being the market prior to Easter, there was an exceptionally large attendance, and very full supplies of all classes of stock. Beef met with improved demand at slightly higher prices, but sheep sold slowly and made less money. Calves, except for the best quality, did not make the money expected. Beef, heifers and bullocks, 6¼d to 7d; cows and bulls, 5¼d to 6d; mutton, hoggs, 8¼d to 9d; tups, 5¼d to 6¼d; ewes, 7d to 7¼d; calves, 8¾d to 9¾d; lambs, 1s 3d per lb. At market—325 cattle; 3,197 sheep, and 253 calves.

Romford, Wednesday.—Small supply of fat beasts; trade better. Best animals made 4s 6d to 4s 8d, and middlings 4s to 4s 2d per stone. Calves in very short supply, and trade dear, at 5s 10d to 6s per stone. Sheep in average supply; trade a little better. Best sheep 5s 4d to 5s 6d, and middlings 5s to 5s 2d per stone. Lambs in average supply; trade dear, at 7s 8d to 8s per stone. Few store beasts on offer; slow demand.

Saffron Walden, Tuesday.—There was a steady trade for sheep. Fat ewes sold freely up to 55s 6d; Down hoggets, 59s 6d; choice South Downs, 42s 6d. Fat lambs were in short supply, but quality was excellent; the best made 40s to 50s. Beasts were an average supply, and trade was somewhat slow. Ripe shorthorns fetched £22 5s. Fat calves met with a ready sale up to £6 15s, and weanels 39s. There was a good trade for pigs. Hogs realised 23s, porkers 46s, stores 21s 6d, and fat sows 13ss.

Salford, Tuesday.—There was a slight increase in the number of cattle on offer, but a firm trade at last week's prices. The supply of sheep and lambs was considerably larger than last Tuesday. Notwithstanding this, trade ruled brisk for sheep, and sellers obtained more money. Lambs were in good demand. There was a large show of calves and a good demand, last week's advance being maintained. Quotations:—Cattle, 5d to 6¾d; sheep (in

wool), 7d to 9½d; ditto shorn, 6d to 8d; lambs, 1s to 1s 2d; calves, 6d to 9½d per lb. At market—Cattle, 2,254; sheep and lambs, 10,371; calves, 648.

Sheffield, Tuesday.—Small show of milch beasts. Best lots were in fair demand at £18 to £21; secondary, £12 to £16.

Spalding, Tuesday.—Fat cattle in small supply, and trade brisk, at 7s 9d to 8s; cow beef, 7s 6d per stone. Milking cows in demand at good prices. Of stores there

Thame, Wednesday.—The Thame Easter market was supplied with an exceptionally good lot of stock-fed, especially for this sale, and b g prices were realised throughout, being the sharpest trade experienced this year. There was an unusually large attendance of buyers, and biddings were brisk, every head of fat stock changing hands with only few exceptions. Veal and lamb were in great demand, and was a record trade. Mr. Bond's sale comprised 59 fat beasts and a few stores, 200 fat and store sheep, 47 fat lambs, 15 fat calves, 76 weaning calves, 107 fat and store pigs, and 3 horses. Fat bullocks made £18 to £27; fat heifers, £15 to £27; fat tegs, 43s to 55s; fat ewes, 44s to 57s; fat lambs, 37s to 50s; fat calves, £3 10s to £6 1s; cow calves, 23s to 56s; bull calves, 18s to 51s; fat pigs, 10s per score. Stores a better trade Pork sold readily.

was a large show, and high prices were asked, trade being slow. In the sheep market the show was small; best wethers, 7d per lb. A fair number of lambs, and a brisk trade up to 36s each; veal, 8d per lb.

Stockton, Wednesday.—There were on offer 124 cattle, 54 calves, 288 sheep, 10 lambs, and 145 pigs. The supply of best cattle was very small, and trade was firm, at 7s 9d to 8s per stone; rougher kinds, 6s 6d to 7s. A good show of calves, which met with a good demand at 6d to 10d per lb. Sheep trade easier. Lambs, 30s to 40s; young sheep, 8d; ewes, 6d; tups, 4d to 5d per lb.

Trowbridge, Tuesday.—A full market. Beef, however, was scarce, but that on offer made 11s to 11s 6d for best, and 10s 6d to 11s for secondary sorts. A good demand for barreners, making up to £15. Milk showed no improvement on last market, and met a dragging trade. Moderate supply of mutton, best realising 8d; ewes, 6d to 6½d. Lamb, 11d to 1s. A large number of calves sold remarkably well, weaners making up to 74s, and veal over 10d per lb. Messrs. Foley, Son, and Mundy sold 50 beasts, 186 calves, etc., as follow:—Fat cows, £16 10s to £18 15s; fat heifers, £16 to £17 5s; meaty cows, £14 to £14 10s; barreners £12 to £14 15s; rough grazers, £8 12s 6d to £10 15s; in-calf cows and heifers, £10 to £15; cows and calves, £12 5s to £15 5s; fat calves, £3 10s to £6 2s 6d; store calves, 12s to 74s; fat ewes, 34s 6d; fat bull, £14 15s. Messrs. George Snailum and Sons' entries were:—Young calves, 16s to 62s; fat calves, 63s to 117s; cows and calves, £8 17s 6d to £14 5s; in-calvers, £12 to £14; three stirks, £24; barreners, £6 15s to £14; yearling bulls, £4 17s 6d to £7 5s; two-years-old bull, £12; poultry, a large entry—fowls, 1s 8d to 3s 7d each; ducks, 2s; geese, 5s.

Wakefield, Wednesday.—There was a lighter show in all departments, with the exception of calves. A large number of butchers and buyers were in attendance, and a slightly better trade was experienced. The fat beasts were of a fairly good quality, and comprised Scotch, Lincolnshire, East Riding, home-fed, and a few Irish. There was an excellent demand for young heifres and bullocks, which realised 6¾d; good beasts, 6½d; inferior, 5d to 6½d. A very slow trade was done in dairy cattle, the market being of a holiday character. Superior cows, £16 to £21 10s; inferior, £14 to £16. An average trade in store cattle, the prices obtained being from £8 to £12; calving cows, £13 to £21. A large number of fat calves, including some really first-class animals. The best made about 10½d; others, 6d per lb., and upwards. A better trade in sheep, and dealers nearly succeeded in clearing out their stocks. Nice small young sheep were anxiously inquired after, and 8d was paid; medium met with a fair sale at 7d to 7½d; strong sheep, 6¾d to 7d per lb. There was a large supply of clipped sheep, real s ing about 6½d per lb. A large number of lambs were on offer, and a fairly good trade was done, prices varying from 11d to 1s 1d per lb. A slow trade in the pig market; stores, 25s to 56s; suckers, 15s to 21s each; porkers, 6s 6d to 7s 3d per stone of 14lb. Numbers at market:—Beasts, 1,208, against 1,246; sheep, 3,375, compared with 4,125; calves, 170, against 9; and pigs, 329, against 478.

Worksop, Wednesday.—Very fair supply of stock, especially calves. Best beef, 7s to 7s 6d; secondary, 6s to 6s 9d per stone; best mutton, clipped and in the wool, 7d to 7½d; ewes, 5d to 6d per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies to-day totalled 284 head, this being a decrease of 354 as compared with last Wednesday's arrivals, and again consisted of shipments from the United States. Quality being good, trade ruled firm, at 4s 6d to 4s 8d per 8lb, to sink the offal

Yorkhill, Tuesday.—A sale of United States and Canadian cattle was held yesterday, when there were in the lairages 101 cattle, landed by the Salacia (s.) from Newport News, which were held over from Thursday's sale, and 206 by the Pomeranian (s.), from Boston, which lost one overboard during the passage. Compared with last week, the number on offer shows a falling-off of 176 beasts. Another consignment was advertised, but did not arrive prior to yesterday's sale, and in consequence the supplies have been rather limited. Bullocks, as is generally the case, formed the majority of the total number, but there were also a number of bulls included in the different shipments. The attendance of buyers was scarcely so large as usual, but wholesale dealers were well represented. Trade during the sales was of a much better character than that ruling last week, the demand being brisker and the rates realised higher. Small, neat, well-fed beasts secured the best inquiry, and sold very dear. Bulls met a good demand, and made satisfactory prices. Messrs. Duff, Paul, and Ferguson had on offer 101 States cattle and 56 Canadians; Messrs. Edward Watson and Ritchie 60; Messrs. Oliver and Son (Limited) 71; and Mr. Roderick Scott 20 cattle. The dead-weight quotations may be given as follows:—States bullocks, best class medium weights, 60s per cwt, and for really choice, up to 62s; secondary and heavier animals made 58s per cwt; bulls, 48s to 50s, according to quality and finish. Canadian bullocks, best quality, to 58s, and for a few really choice, up to 60s per cwt; secondary and heavier, 55s; bulls, best class, to 50s; and secondary and heavier, 46s to 48s. The Pomeranian only arrived the day of sale, and in consequence the cattle scarcely looked their best, but all were presented in fairly good condition. The sale terminated at a late hour, when a number were held over.

SEEDS

Yorkhill, Tuesday.—A supplementary sale of Canadian cattle was held to-day, when there were penned in the sheds 71 cattle ex Pomeranian (s), from Boston. The majority of the cattle were bullocks, but there were also a number of bulls included. As regards quality, the cattle were the best that have been shown for some time. There was a fair attendance of buyers forward, and trade was of a very satisfactory character. The deadweight quotations may be given as follows: Bullocks, best quality, 60s per cwt, and a few really choice up to 61s; secondary and heavier, 56s to 58s; bulls, best class, to 50s; and secondary and heavier, 46s to 48s.

POULTRY AND GAME.

Tuesday.—Bedale: Chickens, 2s to 2s 6d; fowls, 1s to 1s 3d; ducks, 2s 6d to 2s 9d each. Guinsborough: Chickens, 3s to 4s per couple; turkeys, 8d to 1s per lb; guinea fowls, 5s 6d to 6s 6d per couple. Settle: Ducks, 5s to 6s 6d per couple; chickens, 5s to 5s 6d per couple; turkeys, 11d to 1s per lb. Stone: Ducks, 5s 3d per couple, dressed 5s 9d to 6s per couple; fowls, 2s 6d to 3s 6d per couple, young dressed 4s to 4s 6d per couple.

Smithfield, Wednesday.—Fair supplies, a fair business being passed at firm prices. Quotations:—Fowls: Yorkshire, 2s 9d to 3s 6d; Essex, 3s to 3s 3d; Boston, 2s 6d to 3s; Surrey, 3s 6d to 4s 6d; Sussex, 3s 6d to 4s 3d; Welsh, 2s 6d to 3s; Irish, 2s 6d to 2s 9d; turkeys, cocks, 6s to 7s; hens, 4s to 5s; goslings, 6s to 7s; country ducks, 3s 9d to 4s 3d; pigeons, 8d to 1s 3d; quail, 10d to 1s; wild rabbits, 7d to 9d; tame, 10d to 1s 2d each; Australian, 8s 3d to 10s 6d per dozen; wild duck, 2s to 2s 6d; pintail, 1s 2d to 1s 4d; teal, 1s to 1s 2d; widgeon, 1s to 1s 2d. Russian game: Blackgame, 1s to 1s 2d; capercailzie, cock, 2s to 2s 9d; hen, 1s 9d to 2s; partridges, 1s to 1s 3d; ptarmigan, 10d to 1s; brown hares, 1s 6d to 1s 9d; white, 1s to 1s 2d each.

HAY AND STRAW.

Bristol, Tuesday.—Clover hay, 105s to 110s; meadow hay, 100s to 105s; straw, 62s 6d to 67s 6d.

Cumberland, Tuesday.—Best-selected hay, 110s to 120s; good ditto, 95s to 110s; inferior ditto, 75s to 95s; prime clover, 100s to 110s; good ditto, 90s to 100s; inferior ditto, 70s to 90s; best mixture, 105s to 112s; good ditto, 95s to 105s; straw, 28s to 40s per load.

Manchester, Wednesday.—Hay, 6¾d to 7½d; clover, 7d to 8d; straw (wheat), 6d, straw (oat) 5½d to 6d per stone.

Whitechapel, Tuesday.—Supplies good, but with subdued demand; business very slow headway, prices, however, being steady. Best clover, 95s to 110s; inferior, 80s to 90s; specially picked hay, 115s; good, 108s; inferior, 80s to 90s; mixture and sainfoin, 90s to 100s; and straw, 28s to 40s per load.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 11,386qrs from Buenos Ayres, 35qrs Harlingen, 2,484qrs. Rosario, 1,076qrs San Nicholas, 5,095qrs San Pedro, 1,047qrs Villa Constitution; total, 21,123qrs. Linseed is dull and inactive. Calcutta opened with 52s the value April-June, but steadied a little during the week, and closed with sellers at 52s. River Plate: Spot opened at 48s 3d, declined during the week 3d per qr, and closes with sellers at the first quotation; afloat seed is worth 48s 6d, and March-April is nominally 49s 6d. Cottonseed: There has not been much business passing in the past week, but, with continued light supplies, values have been well maintained. £6 16s 3d paid spot and afloat; £6 15s March, and same still required April-June. An occasional sale reported November-January at £6 5s, whereat sellers. The market is very quiet to-day, without quotable change. Oils: Exports for the week ending 18th March, 1902:—Linseed Oil: 4 Germany, 10 Holland, 16 Norway; total, 30 tons. Cotton Oil: 81 Belgium, 1 Denmark, 10 France, 209 Germany, 147 Holland, 4 Norway, 17 Sweden; total, 469 tons. The market is quiet. Linseed Oil: 28s 9d spot; 28s 9d March-April; 28s 9d May-August. Cotton Oil: 22s 7½d spot; 22s 7½d March-April; 23s May-August. Crude: 21s 4½d spot; 21s 6d March-April; 21s 9d May-August. Rape Oil: Jamba naked, 24s spot; 1st quality naked, 24s 6d spot. Oil Seed Cakes.—Linseed Cakes: A quiet market and 2s 6d per ton cheaper on the week. Cotton Cakes: A steady market at previous rates.—KEIGHLEY MAXSTED AND CO.

WATERLOO ROUND FEEDING CAKES, £6 10s 0d PER TON WATERLOO ANGLO SHAPE 97 PER CENT PURE LINSEED CAKES, £9 7s 6d PER TON; WATERLOO 97 PER CENT. PURE EGYPTIAN COTTONSEED CAKES, £4 15s 0d PER TON. ALL F.O.R. HULL.

MOLASSINE FEEDING MEAL, packed in bags, of 1½cwt. each. Price per cwt., 7s. 6d. Price per ton, £6 5s., on rail at works, Silvertown, Essex, and F.O.R. Liverpool. A sample lot of 6cwt., in 4 bags of 1½cwt. each, delivered free to any station in England on receipt of remittance for £2 11s 0d

MANURES.

Liverpool, Wednesday.—Nitrate of soda is very firm, and there is a good demand on agricultural account. Kainit and bone meal in seasonable request at late rates, whilst the home demand for superphosphate of lime is brisk, at the following rates for the respective and guaranteed tests. The trade in feeding stuffs all round is quiet, and values favour buyers; and to-day's rates are as follows:—Nitrate of soda, best quality, i.e., guaranteed 95 per cent, pure, in bags, £10 10s per ton; East India bone meal, fair to prime, in bags, £4 2s 6d to £4 7s 6d per ton; kainit, prime, 23 per cent., in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, £5 15s per ton; linseed cake, American thin oblong, prime, in bags, £7 1s 3d to £7 3s 9d per ton; do English, prime, in bulk, £8 10s to £8 15s per ton; do foreign, round, prime, soft and oily, in bags, £8 2s 6d to £8 5s per ton; cottonseed cake, N.A., decorticated, prime, new, in bags, £7 to £7 2s 6d per ton; do English do, prime, soft, in bags, £7 5s to £7 7s 6d per ton; do English, undecorticated, prime, in bulk, £4 10s to £4 12s 6d per ton; do Egyptian, do, prime, in bags, nil; do, crushed, 20 to 25 per cent oil, prime, in bags, £7 3s 9d per ton; maize germ meal, prime, in bags, £5 17s 6d per ton; rice meal, Rangoon, as imported, in bags, £5 to £5 2s 6d per ton; Indian meal, coarse to fine grinding, prime, in bulk, 12s 6d to 12s 9d per 240lb.; linseed, fine bold feeding, in bags, £3 2s to £3 3s 6d per quarter, 416lb.; N. A. cloverseed, new red, fair to good, nil; D.N.S. Brand, superphosphate of lime, guaranteed 25 to 27 sol, in bags, £2 5s to £2 7s per ton at depot; do, do, 30 to 31 sol, in bags, £2 10s to £2 12s per ton at depot; do, do, 35 to 35 sol., in bags, £3 to £3 2s per ton at depot; basic slag, prime quality, 30 to 35 per cent. phos., nominal; do, do, 35 to 40 per cent phos., nominal; finest quality, 38 to 45 per cent phos., nominal.

SEEDS.

London, Wednesday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., report to-day's seed market thinly attended. There is, nevertheless, an active all-round demand for those kinds of seeds required for immediate sowing. Fine clean purple samples of English red cloverseed are getting scarce. Alsike and white meantime find buyers at about late quotations, but ryegrasses and tares favour buyers. Full prices are asked for sainfoin, timothy, and cocksfoot; whilst a further advance has to be noted in lucerne, of which the supply is proving very short. There is no alteration this week in either mustard or rapeseed; but linseed is dull. Bird seeds move in narrow limits. Very low rates now prevail for g ant scarlet runner beans. As regards blue peas and haricot beans, the sale continues small.

WOOL.

Ashford, Tuesday.—Trade quiet at the old rates of 5½d per lb for fleeces and 4d for lambs' wool.

Liverpool, Wednesday.—The second series of periodical auctions for this year began on the 18th instant. East Indias being catalogued on that and the two following days, sundry combing descriptions yesterday, and clothing kinds to-day. The arrivals of East Indias reached 12,700 bales, and importers still held over 1,650 bales out of the 2,670 bales they withdrew in January, so that with a few second-hand parcels, 14,552 bales were offered, and nearly 11,500 bales disposed of, the home trade getting 7,100 bales, the Continent 2,000 bales, and America 2,400 bales. There was a fair attendance of English buyers, supplemented by the usual few from the Continent, some American orders adding to the competition, which, though never animated, was pretty well sustained throughout White Vicanere and Joria showed no quotable change from January currency, and the best Kandahar whites often went a little dearer, while fair to good yellows suitable for France, were ¼ to ½d per lb cheaper. Bagdad Persians realised full figures, but Bussorah grease, Native skin, goat hair, etc., which were largely represented, did not meet with much attention, and to a great extent had to be withdrawn. The arrivals for March reach 2,261 bales, and 6,123 bales are afloat. It is yet too early to form anything like an accurate estimate of what is likely to be available, but we do not look for more than 17,000 or 18,000 bales.

The third public sale of River Plate wool for the present season was held on the 26th of February, when 3,534 bales were catalogued, and including a few sold immediately afterwards, 3,350 bales changed hands. The selection was a fair one, and a large attendance of buyers acounted for excellent competition, so that compared with the rates ruling at the January auction, we quote merino and fine crossbreds, ½d per lb, strong crossbreds ¼d to ½d per lb, lambs, bellies, and pieces ¼d per lb dearer. The fourth sale will be held on the 25th of April, when we expect nearly 3,000 bales to be available.—RONALD AND RODGER.

London, Tuesday.—The second series of London sales of Colonial wool, which commenced on the 12th inst, closed to-day. The net total available amounted to 163,000 bales. Of these, 152,000 have been sold, 73,000 bales for home consumption, 75,000 bales to the Continent, and 4,000 bales to America, leaving 11,000 bales to be carried forward to next series. The series opened for merino wool with prices at from par to 5 per cent. above the February closing rates, and on this basis the sales have proceeded amid uniformly brisk and general competition, with great steadiness to the end. Very fine wools were in special demand and showed the rise most, but with this exception no descriptions can be particularised as being more favoured or less favoured than the rest, the improvement applying to all alike. A rise of par to 5 per cent. marked the prices of fine, and of 5 to 7½ per cent. those of coarse cross-bred. The former, if anything, gained ground as the sales proceeded, but the latter became somewhat weaker at the close. Capes were in good demand and nearly the whole of the available supply was placed at an advance of 5 per cent. for grease and at slightly higher prices for snowwhites. The sales close with a firm tone, leaving the market practically clear of stocks. Although the total Colonial supply available this year must be appreciably smaller than in 1901, the quantity that has passed into the hands of the trade exceeds that of last year by about 130,000 bales. The opening of the next series has been postponed to Tuesday, the 6th May, with a limit of 400,000 bales, the list, however, not to be closed later than the 28th April. The net quantity available, deducting transit wools and adding old stocks, will probably amount to about 280,000 bales.—HELMUTH SCHWARTZE AND CO.

London, Wednesday.—English—per pk. of 240lb.—Fleeces, S. Dn. hoggs, £7 to £8 10s; half-bred hoggs, £6 to £7; ditto, wethers, £5 to £6; Kent fleeces, £5 to £6; Sth. Down ewes and wethers, £7 to £8 10s; Leicester ditto, £5 to £5 10s; Colonial—per lb.: Vic.—Fleece super, 1s 5d to 1s 7d; scoured, good, 1s 7½d to 1s 8½d; scoured, average, 1s 6½d to 1s 7½d; greasy, average to fair, 10½d to 11½d; N.S.W. scoured average, 1s 4d to 1s 4½d; greasy average, 8d to 9d; S. Aus., greasy average, 6½d to 7d; N.Z. scoured average, 1s 5d to 1s 6d; grease average, 5½d to 9½d; Cape Scred. sup., 1s 5d to 1s 6d; fleece average, 7d to 7½d; greasy average, 6½d to 7d; Natal, scoured, 1s to 1s 1d; greasy average, 6¾d to 7½d. Crossbreds—Grs.: Vic. good to super, 11d to 11½d; New Zealand fine, 8½d to 9½d; ditto, medium, 5½d to 6d; ditto, coarse, 4½d to 4¾d.

Leicester March Cattle Fair.—There was a very large show of home-bred bullocks at this fair on Friday, the bulk being in very good condition. Buyers and dealers attended in good numbers. The demand was principally for choice qualities, and very prime lots changed hands very freely at £1 per head higher. For secondary descriptions the demand was very dragging. Milch cows were only in moderate supply, and superior qualities met with a very ready sale at £22 to £24 per head. Medium and inferior lots were very difficult to sell at £1 per head decline. Good lots made £16 to £18, inferior £13 10s. to £15, and heifers £10 to £13 per head. Irish cattle changed hands readily at £17 to £18 for the best lots, while secondary sorts made £12 10s. to £15 10s. per head. Young stock of all kinds sold slowly at £8 to £10 per head. Calves flat at 15s. to 30s. per head. Sheep were only a moderate show, and good hogs sold at 27s. to 37s. per head. Agricultural horses were very scarce, and good animals sold readily at high prices.

STOCK AND SHOW NOTES.

By Herdsman.

The entire herd of pure-bred Jersey cattle bred by the late Right Hon. Lord Rookwood is to be sold by auction, without reserve, on Wednesday, April 9, at the Home Farm, Down Hall, five miles from Harlow, Essex.

Down Hall has long been the home of good stock. A herd of Black Polled cattle was kept for some years, and dispersed in 1896; also a small herd of Guernsey cattle, which were sold two years later. The late Lady Rookwood was fond of Jersey cattle, and three fine cows were retained for the dairy, but, unfortunately, particulars of their breedin have not yet been found. After the sale of the Polled cattle and the Guernseys, Lord Rookwood added to the Jersey herd, and purchased several well-descended animals of English strains from Captain Spicer's old-established herd at Spye Park, Wiltshire; from Mr. Hugh C. Smith, Roehampton, Surrey; and from Mrs. McIntosh, of Havering Park. The sires used have been Jim, bred by Captain Spicer, a son of Mr. R. J. Pope's Carolina's Lad 5108, from Favourite, descended from stock bred at Spye Park since 1864; Gay Lord Quex, lot 30, now in service and for sale, was bred by Colonel McCalmont from prize strains; his sire, Censor 6499, won first at the B.W.E. Show, Cardiff, 1898, and his dam, Faux Pas, was the winner of nine prizes; there are some very pretty calves by him, and most of the cows are again forward in calf. The sale will commence at one o'clock, and will be conducted by Messrs. John Thornton and Co.

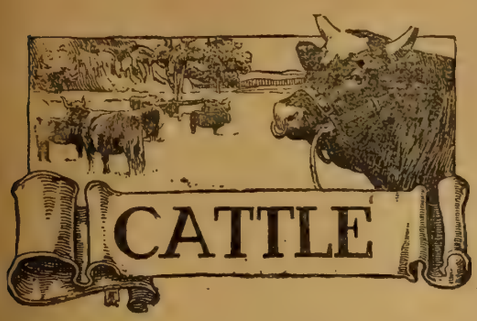
On the day preceding the above sale, the same auctioneers will dispose of nearly the whole of Mrs. McIntosh's herd of pure-bred Jerseys at Havering Park, Romford, Essex. The catalogue comprises the whole of the two-year-old and yearling heifers and bulls and a number of young cows and calves, with three exceptions, of last season, only the older cows being retained for the establishment. Some of the choicest animals in the kingdom will therefore be offered for unreserved sale; among them may be mentioned Charlotte 6th, Pearl 4th, Little May, Zenobia 48th, Havering Glorissa 2nd, Butterman. There is also the produce of those beautiful prize-winning cows, Glorissa 3rd, Fairy, Clementine 4th, Havering Moon 3rd, Forget-me-not, Havering Carnatie, Linda, and Emmeline. The blood of those famous sires, Golden Lad 3324 and Golden Fern's Lad 6236, runs in the veins of a large number of the animals, and in many cases the dams have been winners in the inspection classes, as well as in the butter tests. The heifers are all in a very forward state, being due to calve in April and May, so that they will come in at an excellent time for the summer shows, the sale taking place in time for entries to be made at most of the forthcoming shows this season.

It may be mentioned that Jerseys have been kept at Havering Park since the year 1879. A few years ago the herd began to take a leading position in the showyards. Prizes were won at the principal shows in the South of England, and in 1900 the number of animals had so considerably increased that the whole of the yearlings and some of the cows were sold. The great merit of the herd was attested by the high prices then realised, the seventeen yearling bulls and heifers averaging £44 7s. Most of the calves born that year were heifers. These became greatly distinguished last season; numerous prizes were won, including the first prize for yearling bulls, with Butterman (who is included in the sale), at the Royal Agricultural Society's meeting at Cardiff. During the past five years animals from the Havering Park herd have won the Blythwood Bowl twice, five championship prizes, 54 first, 72 seconds, 48 thirds, and numerous other awards in inspection, whilst in butter test competitions they have secured one gold, one silver, and three bronze medals, and 13 certificates of merit.

I learn that Mr. Sanders Spinar, of Holywell Manor, near St. Ives, Hunts., shipped two especially good Large White boars on Wednesday last, by Messrs. Bailey and Leetham's s.s. Ess, from Hull. These pigs were to the order of Mr. Morgunoff, of Russia, whose grand herd is comprised mainly of Holywell Manor blood, purchases having been made from it for nearly twenty years. The two boars are particularly well bred, being by Holywell Emperor, a prize-winner, and the sire of winners, at the Royal Show at Cardiff, whilst the dams are Holywell Czarina, by Holywell Dublin (both prize-winners), and Holywell Czarina 2nd, by Holywell Elephant, the latter the sire or grand sire of many prize-winners. The season, thus far, in the Holywell Manor herd appears to have been a busy one, the sales of boars and yelts totalling 114 in less than three months.

The records of March stock sales in America to hand up to the present contain nothing very striking. A composite sale of Shorthorns was held at Chicago on March 6 and 7, which included a number of Scotch Shorthorns imported by the Forbes-Prather-Norton Company. Good prices were paid for these throughout, the average for 30 females sold being £124, and for five bulls, £117. The cow, Spicy Clara, was bought by Messrs. G. Harding and Son, Waukeoha, Wisconsin, for £300, the next highest price being £222, paid by Messrs. F. W. Diess and Son, Read, Iowa, for Minorca Maid; £181 was paid for Laura by Mr. H. A. Lathrop, while £161 was given for Rosemary 203rd by Mr. E. S. Donahey. The highest-priced bull was British Glory, which went to Messrs. S. E. Prather and Son, Springfield, Illinois, for £172. The next highest bull was Dorothy's Pride, which was sold for £121 to Mr. Glen Pierce, Anchor, Illinois.

The stock prize list in connection with the important meeting of the Royal Counties Agricultural Society, to be held at Reading on June 10 and three following days, under the presidency of the Lord-Lieutenant of Berkshire (Mr. J. Herbert Benyon), has now been issued, and we may once more congratulate the society on its extensive and liberal character, thanks in no small measure to the generous help accorded by the local committee and various donors of special prizes. All departments of live stock are, as in previous years, well provided for. The sheep section comprises classes for Hampshire Downs (with two champion prizes), South Downs (with a champion prize and two medals), Shropshire, Kent, Oxford Down, Somerset, Dorset, and Suffolk, the last-named breed being included for the first time in the history of the society.



Agricultural horses have eight classes, with two champions and one silver medal, the principal champion prize being offered by his Majesty the King (patron of the society) for the best cart stallion. Hunters are given a similar number of classes, with one champion prize and three medals. Animals entered in these classes will be judged on the first day of the show, and will be allowed to leave the show at the end of the second day, when harness horses, hacks, and ponies will be admitted, remaining until the end of the show. This arrangement not only creates more interest by distributing the judging over two days of the show, but it should also be of great advantage to intending exhibitors in many ways. The special horse competitions, which include classes for open and local jumping, pair horses and tandems, will doubtless prove one of the chief attractions of the show.

The cattle section comprises classes for Shorthorns, Aberdeen-Angus, Sussex, Devons, Herefords, Jerseys, Guernseys, Kerries, and a Shorthorn and open dairy class, with various champion prizes, including an offer by his Majesty the King of a special champion prize for the best Shorthorn. Pigs are headed by the well-known Berkshire breed, for which there are no less than three champion prizes offered, and there are classes for Large or Middle White and other breeds.

An entirely new and unique feature of this year's prize list is the inclusion of a dairy herds competition, with two classes, one for herds of dairy cows (of any breed) over 50 in number, and the other over 20, but not exceeding 50, in number, the bona fide property of tenant farmers residing in the county of Berkshire, the cattle to be judged at the respective farms prior to the date of the show. Liberal prizes are offered by Mr. Martin John Sutton, and the competition ought to prove an attractive and successful one.

THE HACKNEY MARE, GOLD FLASH, shown above, is a chestnut seven-year-old, bred by Sir Gilbert Greenall, Bart., Walton Hall, Warrington; sire Goldfinder 6th, dam Flash, 2,752. At the recent London Shire Horse Show, Gold Flash was placed first in the class for Mares foaled in or before 1897, over 14 and not exceeding 15 hands, in foal or with foal at foot.

Fluke in Cattle.

When I came to Ireland, some twenty-three years ago, said Mr. J. Watson, M.R.C.V.S., in the course of a lecture to the Irish Central Veterinary Association, I found that the Roscommon sheep were dying by hundreds of so-called "rot." The subject at once engaged my attention, and I soon found that, not only the sheep, but the cattle—especially young stock—were very extensively the victime of the same disease Of all the diseases affecting the bovine tribe in the county named, there is not one approaching this in gravity, in slow but ruinous mischief, and in the continual legal wrangling it involves at Quarter Sessions. On the subject of sheep-rot a great deal has been said and written; but of liver fluke or "distomatosis" in cattle, and the symptoms it produces, you will find the literature extremely scarce. It is an insidious and intractable disease, and the complexity of the subject would almost frighten a man from entering on it. The people in Connaught, when I first knew them, called the disease in calves "big-gall," mistaking a symptom for the disease, and although they are wiser now, the appellation remains with them still. Let me, therefore, in dealing with the causes of the disease, try, with the help of Professor Thomas, to show you the main culprit.

And firstly, you must understand that the disease is

Due to a Parasite

known as a fluke, and that this parasite only becomes a perfect fluke in the bile ducts of ruminants or other vertebrate animals. It belongs to the group of flat worms, and multiplies by producing eggs in vast quantities. Each of the eggs gives rise to a creature which is never like its parent, never does become like it, and never lives where its parent lives. It—that is, the embryo from the egg—enters into the body of some snail or slug, and there grows and multiplies, not in the common way by producing eggs, but by giving rise to germs within itself. After describing in detail the life history of the fluke, Mr. Watson went on:—

"Allow me here again to summarise what I have already indicated of the life history. The adult fluke in the liver of the ruminant produces enormous numbers of gggs, which with the bile pass out into the intestines, and become distributed indiscriminately with the droppings. These eggs, meeting with moisture and a suitable degree of warmth, continue to live, and in each is formed an embryo. The embryo leaves the egg and swims about in pools of water in search of the particular snail, within which its future life and growth take place. Having met the snail, the embryo bores into it and there grows into the form called a sporoyst. This sporoyst gives rise within itslef to the second generation known as redia.

"These redia in turn produce the third generation, which has the form of a tadpole and is called a cercaria. The cercariæ quit the snail, and attaching themselves to blades of grass and other stems, they surround themselves with a gummy exudate, lose their tails, and become enclosed in an envelope of cyst. When the grass or plant to which the cyst adheres is swallowed by the ruminant, the young fluke becomes liberated, takes up its abode in the liver of its host, which it probably reaches through the *ductus choledicus*, and the fatal circle is completed. We thus see that distomatosis is a disease which alternates between a particular snail and the ruminant. A calf or sheep cannot take the infection from another calf or sheep, nor can one snail take it directly from another snail. The bullock or sheep, by spreading the ova of the fluke, gives the infection to the snail, and the snail in turn, by harbouring and distributing the cercariæ, conveys the mischief to the ruminant.

"We now come to ask ourselves the question, At what age, and at what time of the year, does the invasion of the cattle take place? In my experience, cattle at the ages of from six months to two years are the most frequent subjects of attack, and the most active months of infection or infestation are from July to October inclusive. At the same time I believe the ova of the fluke are being distributed in fæces of cattle at all times of the year, while the old pastures, undrained lands, and wet climate we have in the West of Ireland are specially favourable to fluke-production, so that, unless opposed, an almost constant immigration and emigration may be taking place. I have made post-mortem examinations at all seasons of the year, and have almost invariably found the fluke and its eggs in the bile ducts.

Symptoms.

"Let us next consider the symptoms to which distomatosis gives rise in cattle at different ages, and at different periods after invasion—and here let me say at once, that there is no disease in the ox tribe in which the symptoms are more obscure. In the early stages they are never positive, but almost always negative. You have to guess at the disease, not so much by the symptoms shown as by those which are absent. The beast is simply 'not thriving,' and there is nothing to indicate how or why. I have sometimes noticed that they take violent notions of licking themselves, and the country man may tell you that 'that is due to the grubs biting him.' One of the drawbacks to diagnosis is that the mischief is often far advanced before a deviation from health is noticed, and the first indication will be a failure of appetite, when the beast will wander about picking only the tops of the grass."

In cattle, as in sheep, the period of immigration of invasion generally passes unnoticed, although in calves of from eight to ten months I have occasionally met with acute symptoms which I have attributed to the first invasion of the fluke. The animal may be in good condition, but suddenly ceases to feed, and during defecation has a tendency to strain or press, and although the fæces may be soft, it is passed in small quantities, and is accompanied by clots of blood and mucus, and followed by frothy slime, while there is also congestion of all the mucous membranes. These cases are somewhat exceptional, but with injudicious treatment may prove rapidly fatal. I have found, however, that a dose of oil and turpentine with a little digitalis and bicarbonate of soda is then very beneficial.

The period of anæmia and wasting comes on as a rule very gradually, and is always accompanied by a scour. This wasting diarrhœa is one of the most prominent symptoms of distomatosis, and if not checked it will, within a month or two, transform a thriving, plump-looking yearling into a miserable, lean, dirty, and dejected specimen of a bovine. The tail, hind quarters and legs get covered with an offensive discharge, the flanks become hollow, the eyes sink in the head, the membranes are pale, and a watery bag may form under the chin. When this stage is reached the prognosis is not hopeful, and it will be difficult indeed to resuscitate such a life; but by treatment, and a careful dietary, I have not infrequently seen such cases rally. On the other hand, we are over and over again called upon to make post-mortem examinations of such animals which have died from exhaustion, and which we have never seen during life, so that I sometimes remark, we make more out of a dead beast than a live one, because there is a legal aspect to this question, of which we will say more anon.

Should the yearling be tided over its first troubles, and transferred to a sound pasture and better conditions, before structural changes have taken place in the liver, it may still develop a useful existence by living into the season, at which the emigration of the distomes is supposed to take place. But it is to be hoped that a great many—if they are ever quite free from fluke—become reinfested and drag out a miserable, scouring and dejected existence as two-year-olds, and later. Older animals seem better able to resist the inroads of the fluke; and heifers especially when once they have entered on the procreative stage of life may do wonderfully well for a season or two, even with a very badly disorganised liver.

One curious and well-known fact which I have already hinted at is this—that an in-calf cow having liver disease will frequently carry on a fairly natural and apparently healthy existence until the birth of her calf, when she will immediately begin to decline and die from inanition within from one to 15 days. I can only account for this by the fact that the liver of the fœtus is comparatively of enormous development, that it takes on its functions at a very early period, and that these functions to a great extent compensate for the defective hepatic secretions of the mother. It is at least a well-known fact in Connaught that a cow with what people call a "rotten liver" will succumb after calving. Hence it is that the smaller farmers and jobbers, when they go to market, will not purchase unless the seller gives a "warranty" soundness, or what they call an 'engagement.' And it is here that the legal aspect of distomatosis crops up in coming to a conclusion as to the length of time an animal may have been diseased.

Of course, a post-mortem examination is absolutely necessary. In old cows that have harboured the distomes for probably a number of years, we find some marvellous livers. I have met them weighing from 20 to 100 lb., and if you put your foot on them they would crunch like a bag of shells. The bile ducts had not only become greatly dilated, but their coats converted into bony ramifications. The natural weight of the liver of a fully grown shorthorn beast averages about 11 pounds, so that deviation from this standard, taken in conjunction with the extent of the structural changes in the bile ducts, will enable you to give an approximate idea of the length of time the disease has existed.

Prevention.

In dealing with this, as with many another disease, prevention is better than cure. The fluke, like the proverbial rabbit, on whose tail we would like to throw a little salt, is very remote in his *habitat*, and trying to reach him through the circulation is, to say the least, very uncertain. Tonics and good food certainly do a great deal to prolong the lives of fluke-infested animals, and for yearling cattle, I have seen much benefit from the daily administration of powders containing cinchona, digitalis, bicarbonate of soda, and aniseed, these to be dissolved in about a teacupful of warm water, and given with an equal quantity of linseed oil. The bicarbonate emulsifies the mixture; the cinchona is a model astringent; the digitalis acts as a heart tonic, and by its action on the kidneys carries off some of the superfluous water of the anæmic system; while the aniseed, besides being a flavouring ingredient, acts as a mild tonic and diuretic.

Several agents are supposed to have the power of killing the fluke, such as turpentine, paraffin oil, spirit of salt, sulphate of iron, common salt, etc., and these may certainly destroy any parasites in the digestive tract, but how they can reach the bile ducts is more than I can make out. Of course, the liver is said to have the power of arresting metallic poisons, and of neutralising poisons introduced into the blood by the intestines, and in this way such substances as I have mentioned may have a destructive influence on the life of a parasite. The fact, however, remains that animals recover after the administration of these agents. At whatever age cattle may suffer from distomatosis, the giving daily of small doses of common salt, with other tonics, will be beneficial, but by all means avoid giving Epsom salts. The pulse is small, and the system dropsical; the vital spark is low, and a dose of salts would extinguish it. In my experience, there is no specific remedy for the disease.

The Immunisation of Cattle against Tuberculosis.

Professor McFadyean (principal of the Royal Veterinary College), in the course of his report for 1901, to the Royal Agricultural Society, describes the results of some experiments that have been in progress at the College the last three years, the object of which was to ascertain whether a valuable degree of immunity against tuberculosis could be experimentally conferred on cattle. Tuberculosis, it may be observed, has generally been regarded as a disease against which no protection is ever acquired naturally. As a matter of fact, however, says Professor McFadyean, there does not appear to be in existence any reliable evidence to show whether an animal or a man that contracts this disease becomes more or less resistant to infection. Eminent authorities have cited in support of the view above stated instances in which human beings have suffered from two successive attacks of tuberculosis; and, indeed, cases of that kind have been brought forward to prove that a first attack of tuberculosis, so far from conferring any protection, actually leaves the individual more susceptible than before. However, few, if any, of these cases are entirely free from the doubt that the apparent recovery from the first attack may have been only a period of temporary improvement.

There is just as little trustworthy evidence with regard to tuberculosis of the lower animals. Until recently it was generally believed that an animal never made a complete recovery from this disease, but within the last few years the use of tuberculin has appeared to prove that such recovery is by no means rare in cattle. Recognition of this fact, however, still leaves the question open, for it is conceivable that recovery might leave the animal with just its original powers of resistance.

The experiments which have been made at the Royal Veterinary College have been carried on on three cattle. The plan of two of the experiments was to take an animal free from tuberculosis, as indicated by non-reaction to tuberculin, to infect it experimentally by injecting tubercle bacilli into its veins, to subsequently test or treat it with tuberculin at intervals, and, in the event of its ceasing to react after a considerable period of rest, to attempt re-infection by the intravenous injection of bacilli. In the other case the plan was of the same, save that the animals had contracted the disease naturally before the experiment was begun.

In each case the result indicated that it was thus possible to confer a very high degree of immunity on the animal.

In the first case the experiment was begun in September, 1898, and the subject of it was a Shorthorn heifer, then three years old. It was free from tuberculosis, according to the tuberculin test. Tubercle bacilli from the liver of a fowl were injected into one of its veins on September 29th,

1898, and on October 7th following it reacted to tuberculin. It reacted again on October 17th and November 18th, but on December 15th it failed to react, and none of the symptoms of illness which usually follow the injection of a large number of tubercle bacilli into the veins subsequently set in. On the contrary, the animal remained apparently healthy, and even improved in condition. Since the last-mentioned date tubercle bacilli have been injected into this animal's veins on seven occasions In all cases the bacilli used were proved by control experiments to be highly virulent, and on some of the occasions the number of them introduced into the veins was enormous. The animal is alive at the time of writing, and it has never developed any sign of ill-health.

The subject of Case 2 was a Hereford heifer, healthy, and a year old when the experiment was begun in May, 1899. In this case the first intravenous injection was made with bacilli from the liver of a tuberculous pheasant, and twenty-one days after injection the heifer reacted to tuberculin. During the next four months it was tested weekly, and it gradually ceased to react. Between November, 1899, and July, 1901, the intravenous injections of bacilli were repeated eight times, and on the later occasions the number of bacilli introduced was enormous. At the beginning of October last the animal appeared to be in good health, and it was resolved to submit it to severer tests than any previously employed. On the 5th of that month 10 c.c. of a liquid enormously rich in tubercle bacilli was injected into one of the veins, and the operation was repeated on the 24th of the same month. The result was that the heifer died on December 23rd, the immediate cause of death being tuberculous lesions in the membranes of the brain. The fact that the animal thus succumbed to tuberculosis was, in a sense, disappointing, but only those who erroneously believe that immunity against any disease can be made absolute will regard it as surprising, or as evidence that the heifer had not acquired a very high degree of immunity against tuberculosis, for the test that ultimately killed it was infinitely more severe than any to which an animal is ever exposed in natural circumstances.

The third case was very similar to the preceding one, but the animal, a yearling Ayrshire heifer, was already the subject of tuberculosis, naturally contracted, when the experiment was begun. The heifer was purchased on September 30th, 1899, and it reacted to tuberculin on October 9th. It also reacted to the test repeated on October 12th and November 27th, of the same year, and on January 8th, 1900. It received its first intravenous injection of bacilli on January 11th, 1900, and the operation was repeated on five occasions between that date and July 31st, 1901. During the whole period the heifer continued to grow, maintained fair condition, and showed no outward symptom of tuberculosis. As in the previous case, it was resolved to give a larger dose of bacilli than any previously employed, and on October 24th last 10 c.c. of a liquid very rich in tubercle bacilli was injected into one of the animal's veins. The heifer did not subsequently develop any pronounced symptoms until December 17th, when it died very suddenly. The post-mortem examination indicated that in this case also the immediate cause of death was tuberculosis of the membranes of the brain.

The foregoing experiments appear to prove, says Professor McFadyean, that a very high degree of immunity against tuberculosis can be conferred on cattle. The immunity, it is true, was not absolute, since two of the three animals were killed with tubercle bacilli; but, as previously indicated, it was scarcely to be expected that the most highly immunised animal could withstand the very severe test to which these two cattle succumbed. According to all previous experience, the earlier tests through which they had come successfully would have been rapidly fatal to any animal of the same species with only its natural powers of resistance to tuberculosis.

It is not pretended that the experiments foreshadow a practicable method of vaccinating cattle on a large scale against tuberculosis; but it is something to have established that animals of that species can have a very high degree of immunity against that disease conferred on them, and the experiments are being continued.

Sale of Mr. R. Sawkel's Farm Stock.

Mr. R. Sawkel, of West Marden Farm, near Emsworth (situate close to the borders of Sussex and Hampshire), having decided to relinquish business, his live and dead farming stock was recently disposed of by Messrs. Stride and Son, of Chichester. The catalogue comprised a hardy, well-bred Hampshire Down flock of about 250 ewes and rams, eighty ewe tegs, and four rams, eight young and particularly fine cart horses, two well-bred nag geldings, a bay pony, several dairy cows, pigs and poultry, in addition to the usual agricultural implements, machinery, and tools. Although the greater part of the day was very wet and boisterous, a large number of buyers were present, and all the stock, with the exception, perhaps, of the sheep—which were adversely affected by the weather conditions—realised excellent prices, the horses selling especially well. The ewes and lambs in the flock of sheep were sold together, the two-tooth ewes fetching from 31s. to 47s. 6d. apiece; four-tooths, 48s. to 53s.; six-tooths, 51s. 6d. to 54s. 6d.; ewe tegs, 35s. 6d. to 37s.; and the two-tooth rams 32s. 6d. each. The eight cart horses brought in a sum of 407½gs., the highest price paid being 73gs. and the lowest 20½gs. The average worked out at nearly 51gs. Two nag horses fetched 37gs. and 43gs. respectively, and a bay pony £14. There were not many cows brought under the hammer, and the best price paid in this department was £15. Altogether, the sale realised a total of about £1,600.

Sale of Shorthorn Bulls at Ipswich.

Their annual spring sale of Shorthorn bullocks, held by Messrs. R. Bond and Sons at Ipswich on Tuesday. About 30 animals were catalogued, including nearly a score choice bulls, from 10 to 15 months old, bred in Cumberland. Buyers were well represented, and there was good competition for all the best. The highest price realised was 27 guineas for a massive dark roan, 14 months old, which was secured by Mr. N. H. Bacon, of Raveningham, Norfolk. A promising roan calf, 10½ months old, was purchased at 24 guineas for Captain E. G. Pretyman, M.P. The following are some of the principal prices:—

	Gs.
Roan shorthorn bull, 14 months old	16
Roan shorthorn bull, 13½ months old	17½
Dark roan shorthorn bull, 13 months old	15
Dark roan shorthorn bull, 14 months old	27
Dark roan shorthorn bull, 14 months old	21
Roan shorthorn bull, 12 months old	14
Dark roan shorthorn bull, 12 months old	14
Roan shorthorn bull, 12 months old	18
Roan shorthorn bull, 12 months old	19½
Roan shorthorn bull, 11 months old	15½
Roan shorthorn bull, 10½ months old	24
Roan shorthorn bull, 10 months old	14½

Particulars of Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.

There was an average-sized fair at Enniscorthy, county Wexford, on the 21st inst., at which a rather good demand was experienced for cattle with any condition. The moderate supply of sheep met a strong demand. Prices: Calves, first-class, £5 10s. Yearlings, first-class, £8 15s. to £8 17s. 6d.; second-class, £6 to £7 17s. 6d. Two-year-olds, first-class, £11 to £12 10s.; second-class, £9 to £9 10s. Three-year-olds, second-class, £11 5s. to £12 10s.; third-class, £9 15s. Sheep: Over twelve and under twenty-four months old, first-class, £1 16s.; second-class, £1 1s. 6d. to £1 10s. Two years old and upwards, second-class, £1 12s. Young pigs, eight to ten weeks old, sold at from 18s. to 24s. each.

At Kenmare, county Kerry, on the 21st inst., there was a very small fair, composed of third-class, and one and two year old cattle, for which there was slow demand. Prices: Yearlings, third-class, £3 2s. 6d. to £4 7s. 6d. Two-year-olds, third-class, £4 to £6. Springers, third-class, £6 to £8 10s. Young pigs, eight to ten weeks old, sold at from 18s. to 23s. each.

The fair at Westport, county Mayo, on the 21st inst., was a small one, and very few animals were sold. Prices: Calves, second-class, £3 to £4. Yearlings, second-class, £5 10s. to £6 10s.; third-class, £3 to £4 10s. Two-year-olds, second-class, £8 to £9 15s.; third-class, £6 to £7. springers, second-class, £11 5s. to £13. 5s.; third-class, £7 10s. to £9 5s.

Castlerea Fair, county Roscommon, was held on the 21st inst., at which there was a large supply of two-year-old cattle, and those in condition met a ready sale. Yearlings, calves, and springers sold badly. Prices: Calves, first-class, £5 to £5 10s. second-class, £3 10s. to £3 15s. Yearlings, first-class, £7 13s. 4d. to £8 5s.; second-class, £5 15s. to £6 12s. 6d. Two-year-olds, first-class, £10 5s. to £12; second-class, £7 10s. to £9 15s. Three-year-olds, second-class, £12 to £12 10s. Springers, first-class, £17 to £18 10s.; second-class, £12 5s to £13 10s.

Galway Fair, held on the 21st inst., was a very small one, composed chiefly of third-class cattle. The demand is slow, and prices showed a downward tendency except for animals in very forward condition. A good many rough and inferior animals remained unsold. There was a large supply of sheep, and an improved condition prevailed for conditioned aged wethers suitable for export, but hoggets met a slow sale at low prices, and a considerable number failed to find purchasers. Prices: Calves, second-class, £3 10s. to £4 5s Yearlings, second-class, £5 7s. 6d. to £6; third-class, £4 to £4 15s. Two-year-olds, second-class, £7 10s. to £9; third-class, £5 10s. to £6. Three-year-olds, first-class, £14; second-class, £10 5s. to £11 10s.; third-class, £7 10s. to £8 10s. Springers, third-class, £7 10s. to £9. Sheep: Over twelve and under twenty-four months old, first class, £1 8s. 6d. to £1 11s.; second-class, £1 3s. to £1 6s.; third-class, £1 to £1 2s. Two years old and upwards, first-class, £2 4s. to £2 2s. 6d.; second-class, £1 12s. 6d. to £2; third-class, £1 5s. to £1 10s.

The fair held at Fintona, county Tyrone, on the 22nd inst., was an average-sized one, and a good demand prevailed, especially for one and two year old cattle. Good springers were scarce, and in fair demand. Prices: Yearlings, first-class, £7 17s. 6d. to £8 5s.; second-class, £5 10s. to £7; third-class £3 13s. 4d. to £5. Two-year-olds, first-class, £10 15s.; second-class, £7 11?s. 6d. to £9 12s. 6d.; third-class, £6 3s. 4d. to £7. Springers, second-class, £11 5s. to £13 18s.; third-class, £8 12s. 6d. to £10 5s.

A large number of Northern buyers attended the fair at Collooney, county Sligo, on Monday, but owing to severe weather the usual supply of cattle was not on sale. Prices: Calves: first-class, £4 10s. to £5 17s. 6d.; second-class, £3 to £4. Yearlings, second-class, £5 10s. to £6 10s.; third-class, £3 10s. to £5 2s. 6d. Two-year-olds, second-class, £8 to £9 15s.; third-class, £6 to £7 10s. Springers, first-class, £15 to £16 10s.; second-class, £12 to £13 5s.

Contagious Diseases of Animals.

NOTE.—The figures for the current Year are approximate only.

Selling Margarine as Butter.—At Southwark Police Court on Wednesday, Roderick Jones, of 269, Tooley Street, stated to be trading as John Jones, was summoned by the Camberwell Borough Council in respect to offences under the Food and Drugs Acts. There were two summonses for selling margarine as butter, two for selling margarine without wrappers, and one for selling cheese containing 29.2 per cent. of fat other than butter fat. The samples were taken at a branch establishment, 829A, Old Kent Road. Mr. Marsden appeared for the Borough Council, and Mr. Cannot defended. It was contended for the defence that the defendant was not the proprietor of the business, and that John Jones was in existence. A witness, named Annie Williams, who served the samples, said that she had seen John Jones, who was an old man with a beard, and of whom a photograph was produced. Evidence was given that the defendant had represented himself as the owner of the Tooley Street business to Inspector Ashdown, of the Bermondsey Borough Council, and to Miss White, of the Butter Association.—The defendant swore that John Jones, who was his father, was the proprietor. Mr. Fordham said he had no hesitation in saying that the defendant was carrying on the business so as to make him responsible. The defence had been thoroughly lying and fraudulent, and the defendant would have to pay fines amounting to £30 and £6 6s. costs, or, in default of distress, six months' imprisonment.

The Remount Department from Within.

In the course of an article in the "Empire Review," Colonel St. Quintin says that when he landed at Capetown in April, 1900, he inspected 4,000 horses at Maitland Camp, of which between 1,500 and 2,000 were Hungarian, and he considered, as far as appearances went, they compared most favourably with the other horses. Everyone was pleased with their appearance, and those battalions in want of horses were most anxious to have Hungarians served out to them. As a large body of horses, the Hungarian horses were by far the most level lot he had ever seen put together, all running about 15 hands in height, and doing great credit to their buyers. It cannot be denied that horses in South Africa received very rough treatment, and although in many instances this could not be prevented, still in many cases horses fell into the hands of men who had little knowledge of their requirements, and looked upon them as machines. Colonel Quintin cites an instance of Hungarian horses being landed one day and taken over by a certain yeomanry battalion, and the next morning the writer, to his astonishment, finding them out at drill unshod and with feet as soft as pulp and muscles all unstrung for want of exercise. The commanding officer, who seemed to think that he had done very well in getting the saddles on, the men mounted, and the horses out so quick, said that very few of his men knew how to ride, and none knew anything about drill, and that he must get ready to take the field. A considerable number had already been lamed.

Colonel Quintin discusses at some length the formation and constitution of the Remount Department, and mentions that under the registration system, by which a number of owners have contracted to supply a certain number of horses to the Government at a moment's notice, the department can draw in a few hours to various centres the 14,000 registered horses considered sufficient for the First Army Corps. He refers to the problem of providing an adequate supply of horses for the urgent demand which must always occur in times of war, and regrets that it would appear possible that the supply from the omnibus companies may, with the advent of electric locomotion, be before long reduced. He considers that reserves of broken cavalry horses are impracticable, as they would speedily lose their training, and if only mature horses are to work in the ranks it obviously suggests the need of a fifth squadron to be horsed by remounts and old horses partially worn out, ridden, he suggests, by old soldiers and recruits, or the alternative presents itself of leaving the horses to mature at Government farms—a system general in France and Germany.

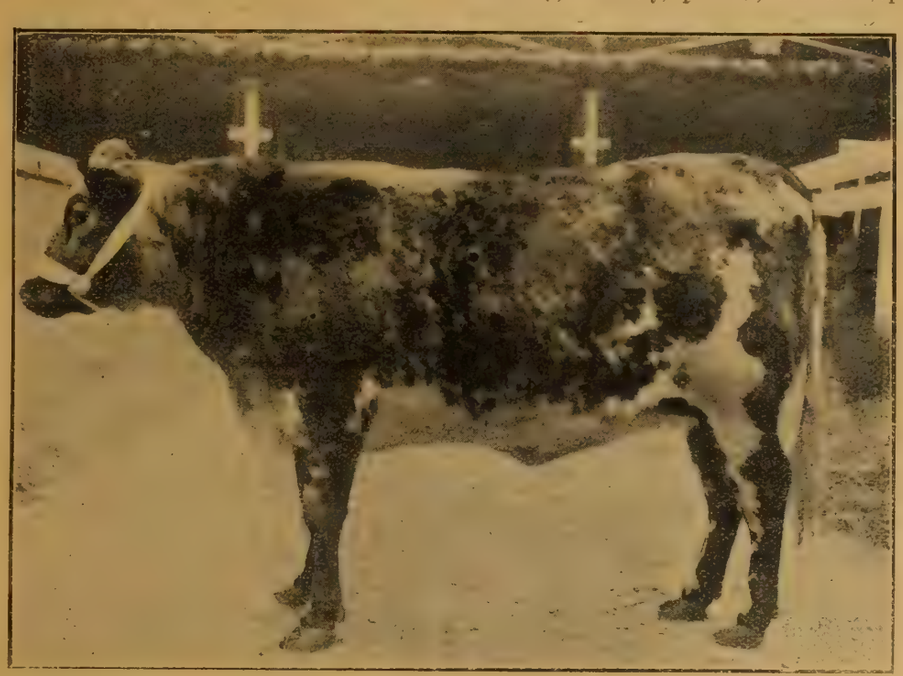
He points out that the buying of broken horses which is going on at the present moment from the farmers in England cannot be accepted as a guide to the future, as most of those now being bought are broken horses originally bought, not bred, by the farmers themselves. It must also be borne in mind that it does not pay, and no man tries to breed a trooper. He mentions that in Ireland he had all sorts of animals brought to him by farmers, who knew the Government price was £40, and who expected to get the full £40, and he had often been unable to obtain ten, and seldom more than 20 to 25 horses from lots of 150 submitted to him. At the Irish fairs farmers and breeders would sooner sell at a less price to a regular dealer than to the remount agent, who only wants a small number of horses. The writer says that the real solution of the questions of horse breeding and as to the Remount Department was touched by Lord Ribblesdale, when he said that the real key of the situation was in the pocket of the Chancellor of the Exchequer, and from their experience of Chancellors of the Exchequer, seemed likely to stay there.

After dealing with incidents, showing how the want of proper means and direction combined in red tape militate against the success of Government enterprise, and citing an instance in which the Government took over two years in settling a small local matter which would have taken him ten days to accomplish, he says the present department has been called upon to buy broken horses in unprecedented numbers and in an impossible space of time, but had General Ravenhill's ideas been carried out the condition of affairs with regard to the department at the outbreak of the war would have been very different. Practically, we know what we want with regard to the horse, but the difficulty is to get him, and in the case of this war, under its very extraordinary conditions, it has been, and, given the same conditions, will always be impossible to obtain what we really want. The Remount Department, he concludes, was practically starved in its birth, and there came, about the same period, an age of extra economy and cutting down which prevented any broad views being advanced, and to-day probably the same thing will happen unless great care is taken that the work of the department is entrusted to men of experience who have studied the details thoroughly.

Sale of Royal Carriage Horses.

Included in the catalogue at Messrs. Tattersall's sale at Albert Gate on Monday were fourteen bay geldings from the Royal stable, Marlborough House, and they naturally attracted considerable attention from the large company of buyers present. All the animals had been driven in harness up to the date of sale, and were a sound clean-limbed lot. The first one submitted was started at 20 guineas, and by slow degrees reached 33 guineas, at which figure he was knocked down. The next one realised 31 guineas, but for a gelding which was more stylish in his paces than those already sold, there was some keen competition. Although started at 20 guineas, the bidding quickly reached 78 guineas, at which figure he found a purchaser. The remainder went to the stables of dealers and job-masters, at prices varying from 31 to 70 guineas, Mr. Percival being the leading buyer. The draft realised 648 guineas, or an average per head of 46 guineas.

Sale of Cart Horses at Ipswich.



At Ipswich on Tuesday, Messrs. Spurling and Sons held their annual spring sale of cart horses and colts. There was a big entry of animals from a wide district, including 10 Suffolk and Shirebred stallions, sent by Mr. W. W. Estaugh, Mr. E. A. Cook, Mr. Geo. Pettit, Mr. Wm. Wilson, Mr. A. H. Moore, and Mr. H. Norman. There was a large attendance of buyers, and a good demand for animals of a good class. The following were amongst the prices realised:—

	Gs.
Chestnut gelding, 6 years old, the property of Mr. Jas. Toller, Blaxhall	30
Bay mare, 6 years old, sent by Mrs. Moore, Crows Hall, Debenham	29
Mr. H. O. Ranson's black gelding, 7 years old	30
Chestnut mare, 3 years old, consigned by Mr. P. P. Pratt, Grundisburgh	30½
Mr. J. A. Hempson's Suffolk mare, Merry, by Hayward's Champion	20
Ditto, chestnut mare	24
Dark bay mare, sent by Mr. W. D. Pratt, Witnesham, 3 years old	30
Bay filly, belonging to Mrs. Moore, Crows Hall, Debenham, 2 years old	24
Ditto, rising 2 years	27
Brown shire-bred filly, rising 3 years old, belonging to Mr. J. Western, Ferry Farm, Sudbourne	28
Black shire-bred colt, rising 2 years old, ditto	29½
Mr. W. W. Estaugh's Suffolk stallion Butley Star, by Estaugh's Sudbourne, f. 1895	25
Ditto, Butley Duke, Suffolk stallion, s. Estaugh's Butley Star, f. 1900	23
Ditto, Butley Conqueror, Suffolk stallion, f. 1900, s. Biddell's Valiant	38
Mr. A. E. Cook's Suffolk stallion Warrior II., f. 1894, s. Everitt's Warrior	20
Mr. W. W. Estaugh's shire-bred Vulcan of Worsley XVII., by Vulcan	35
Mr. W. Wilson's shire-bred stallion Raydon Butler, 3 years old, by Captain X.	41

Sale of Blythwood Shires.

Sir James Blyth, Bart., has, as is well known, placed his Blythwood stud farms at the disposal of the Government for experimental work by the Royal Commission on Tuberculosis, which, it is estimated, will extend over three years. As a result, Sir James has found it impossible to keep on his entire stud of horses, and on Wednesday Messrs. Sexton, Grimwade, and Beck disposed of all the shires, 32 in number, and 15 hunter and polo pony brood mares, with their produce by thoroughbred sires, all being sold without reserve. All the famous brood mares were catalogued, including Blythwood Bountiful, the dam of the celebrated Blythwood Conqueror, Mother Hubbard, the dam of Holker Conqueror, Birthright, by Albert Edward, Ercall Ruth, by Salisbury, Rokeby Rita, by Regent II., and others, and 15 very promising fillies by the best sires of the day. The sale took place at Parsonage Farm, Hockerill, Bishop Stortford, and naturally attracted a very large and representative company of breeders from all parts of the country. The sale was preceded by a luncheon, admirably served in the large barn, which was completely filled with guests. Captain Duncombe, Warlesby, presided, and was supported by the Marquis of Winchester and other noblemen, and a number of influential gentlemen. The chairman apologised for the absence of their host, Sir James Blyth, who, not being in very good health, had been ordered to a warmer climate in the South of France. A telegram had been received from Sir James, stating that his health was improving.

The loyal toasts having been drunk with the utmost cordiality, the chairman gave what he characterised as the toast of the day, "The Health of Sir James Blyth and Success to the Sale." It was quite unnecessary for him to draw attention to the great benefit Sir James Blyth had conferred upon breeders of shire horses, and other choice stock; he had been for many years a most successful breeder of shires, and not only that, but, as the catalogue would show, also of hunters and polo ponies. As most gentlemen present were already well aware, the present sale had been brought about because Sir James Blyth had generously given his stud farm over to the Government for the purpose of allowing full investigations to be made of the subject of tuberculosis. This was a most generous offer on the part of Sir James Blyth, who had thus conferred great benefit, not only upon breeders of stock, but upon the human race as well, as the investigations would, it was hoped, set at rest the question as to how far the disease was communicable to human beings. In concluding, the chairman said he was sure that they, one and all, hoped that in a short time Sir

THE CROSSBRED HEIFER which forms the subject of our above illustration is HEATHER MAID, bred by Mr. Robert Mattocks, The Green, Burlingham, and is by the Shorthorn "Bannockburn," out of the Red-polled "Fancy." At the Fat Stock Show at Norwich last November this Heifer was first in its class for cow or heifer of any breed bred and fed in Norfolk.

James Blyth might be back again to his country home in good health. Sir James was a gentleman who used his money, time, and influence for the good of others, and he (Captain Duncombe) would ask them to give Sir James a good sale on that occasion.

The toast was received with cheering and musical honours.

Mr. Herbert Blyth acknowledged the toast, observing that he should have been glad if his father could have been present to have acknowledged the cordiality of the reception given to the kind remarks which Captain Duncombe had been good enough to make.

The company then adjourned to the sale ring, where Mr. Beck wielded the hammer. In opening the sale, Mr. Beck remarked that the animals were brought up in a healthy, natural condition, and he suggested that it would undoubtedly do Sir James Blyth a great deal of good if he (the auctioneer) could send him a telegram saying that they had a rattling good sale that day. It was, indeed, a good sale, for no fewer than fifteen three-figure prices were realised for the shires, the top price of the day being 330 guineas, given by Sir Oswald Moseley for the three-year-old stallion Lockinge Favourite. The brood mares sold remarkably well. The splendid mare, Blythwood Bountiful, the dam of that capital stallion at Elsenham, Blythwood Conqueror, was knocked down to the bid of Sir Walter Gilbey, Bart., at 250 guineas. Another grand mare, Mother Hubbard, the dam of Mr. Victor Cavendish's Holker Conqueror, was bought by Mr. Victor Cavendish at 240 guineas. Laurel, a choice black, by Maxie, was secured by Mr. Garrett Taylor for Sir Humphrey de Trafford at 155 guineas; while Captain Duncombe gave 270 guineas for Rokeby Rita, a noted prize winner, by Regent II.. The brood mares made the satisfactory average of £139 16s. Prominent amongst the three-year-old fillies was Victorine, by Warlesby Triumph, which Mr. Garrett Taylor also bought for Sir Humphrey de Trafford at 150 guineas. Lord Hastings bought two, one at 60 guineas, and another at 100 guineas, the three-year-olds averaging £93 5s. The two-year-old fillies sold uncommonly well. There was a keen competition for Blythwood Laurel, and she eventually came into the possession of Sir Blundell Maple at 260 guineas. There was a like desire to possess Blythwood Bounteous, and Lord Iveagh was the fortunate possessor at 250 guineas. Blythwood Victorina was another one that caught the eye of the visitors, and Mr. Thompson, of Leicester, had to give 260 guineas before he could obtain her. The two-year-olds made the satisfactory average of £215 5s. A yearling made 165 guineas to the Marquis of Winchester, while Mr. G. Taylor gave 130 guineas for another, the yearlings averaging £84 3s. 6d. The hunters and polo ponies sold at moderate prices. A complete sale list is appended:—

Gns.

BROOD MARES.

After Glow, brown, f 1887, s Royal Spark, d Carol
Mr. A. Gold 30

Blythwood Bountiful, bay, f 1899, s Harold, d Bonny Lady ..... Sir Walter Gilbey, Bart 250

Birthright, brown, f 1890, s Albert Edward, d Queen of the Fairies ..... Mr. Garrett Taylor 75

Mother Hubbard, bay, f 1891, s Hitchin Conqueror d Moonstone ..... Mr. Victor Cavendish 240

Ercall Ruth, brown, f 1891, s Salisbury, d Ercall Diamond 2nd ..... Mr. James 56

Blythwood Whim, bay, f 1894, s Norman Conqueror d Mountain Fantastic ..... Mr. James 85

Laurel, black, f 1895, s Maxie, d Blossom
Sir Humphrey de Trafford 155

Rokeby Rita, bay, f 1895, s Regent 2nd, d Lady Wynn ..... Captain Duncombe 270

Stewton Flower Girl, bay, f 1896, s Golden King, d Stewton Wildflower ..... Mr. Garrett Taylor 60

Blythwood Aglow, brown, f 1886, s Blythwood Conqueror, d After Glow ..... Marquess of Winchester 110

Sopwell Morecambe, bay, f 1898, s Mormaer, d Sopwell Duchess of Cambridge ..... Mr. Part 120

FOUR-YEAR-OLD MARE.

Desford Bonny, bay, s Nailstone Rising Star, d Bonny ..... Mr. Johnson 57

THREE-YEAR-OLD FILLIES.

Victorine of Waresley, bay, s Waresley Triumph, d Boro' Quality ..... Sir Humphrey de Trafford 150

Fashion of Waresley, bay, s Duke of Worsley, d Nancy ..... Lord Hastings 60

Princess Bulbo, bay, s Bedwell Lad, d Stuntney Angelica ..... Hon. Ralph Neville 80

Hendre Mistress, brown, s Prince Harold 1st, d Derlis Mistress ..... Lord Hastings 100

Girton Duchess, brown, s Markeaton Royal, d Scropton Princess ..... Mr. Oakley 54

TWO-YEAR-OLD FILLIES.

Blythwood Laurel, bay, s Ercall Wynn, d Laurel
Sir Blundell Maple, Bart., M.P. 260

Blythwood Bounteous, bay, s Blaisdon Conqueror, d Blythwood Bountiful ..... Lord Iveagh 250

Blythwood Sparklet, bay, s Blythwood Conqueror, d Sparklike ..... Mr. Williams 50

Blythwood Victorina, bay, s Hendre Marksman, d Blythwood Victoria ..... Mr. Thompson, Leicester 260

YEARLING FILLIES.

Blythwood Nellie Bly, grey, s Blythwood Conqueror, d Hargate Nellie ..... Mr. Cross 105

Blythwood Beggar Maid, bay, s Blythwood Conqueror, d Princess ..... Lord Southampton 80

Blythwood Rachel, bay, s Dunsmore Combination, d Ercall Ruth ..... Mr. Williams 34

Blythwood Highest Possible, black, s Hendre Marksman, d Blythwood Whim .. Marquess of Winchester 165

Blythwood Queen's Prize, black, s Hendre Marksman, d Blythwood Victoria ..... Mr. Nicholson 37

Blythwood Forbidden Fruit, bay, s Hendre Marksman, d Holker Eye ..... Lord Southampton 60

YEARLING COLT.

Blythwood Red Pottage, bay, s Blythwood Conqueror, d Birthright ..... Mr. Garrett Taylor 130

THREE-YEAR-OLD STALLION.

Lockinge Favourite, brown, s Lockinge Albert, d Moonshine ..... Sir Oswald Moseley 330

SHIRE GELDINGS.

Bay gelding, 3 years, by Norman Conqueror
Mr. Hill 55

Brown geldng, 3 years, by Homer 2nd .... Mr. Hill 40

HUNTER BROOD MARES.

Palm Sunday, brown 6 years, s St. Serf, d Palmiste
Mr. Bishop 21

Queen Bee, brown, aged, by King John, d by Roman Bee ..... Mr. Pigg, jun. 18

POLO PONY BROOD MARES.

Fine Fleur, chestnut, aged, by Wildair, d by Boracus
Mr. Midwood 30

Mistletoe, brown, aged, winner of several races
Mr. J. Barker 30

YEARLING HUNTERS.

Hands Off, brown colt, by Senanus, d Palm Sunday
Mr. J. Thurgood 16

Templeton, brown colt, by Senanus, d Queen Bee
Mr. F. Stacey 19

Yearling Polo Pony, Perfection, chestnut colt, by Rosewater, d Fine Fleur ..... Mr. Paisley 16

Ditto, Rosy Lips, chestnut filly, by Rosewater, d Mistletoe ..... Mr. Midwood 12

HUNTER AND POLO PONIES

Ma Honey, brown filly, by Senanus, d Queen Bee, two-year-old hunter ..... Mr. G. Gold 27

Two-year-old Polo Pony, Hands Off, brown colt, by Senanus ..... Mr. J. Barker 12

Three-year-old Pony Stallion, Peau d'Espagne, brown by Rosewater ..... Mr. Clark 26

Four-year-old Hunter, Scattery, chestnut gelding, by Senanus ..... Mr. Spencer 27

Five-year-old Hunter, Beetle, bay gelding, by Limekiln ..... Mr. Lewin 18

Hackney, Royalty, bay gelding, 7 years, by King
Mr. Hill 54

Hackney, Prince, bay gelding, 5 years, by Hedon Squire ..... Mr. A. Golf 37

Lynn Horse Show,

The annual show of shire, hackney, and hunter stallions, promoted by the King's Lynn Horse and Foal Show Society, was held at Lynn, on Tuesday, in very cold, windy weather. Owing to the adverse climatic influences, attendance was rather short, but entries of stallions were very good.

His Majesty the King secured first prize in Class 2 for shire stallions foaled in 1899, and champion prize and silver medal, open to the shire stallion classes, with Premvictor, bay, sire Bury Victor Chief, dam Solace, bred by exhibitor; a fine animal, which was exhibited for the first time. His dam Solace when sold fetched 570 guineas.

In Class 1 for shire stallions foaled in or prior to 1898, Madresfield Thumper, grey, foaled 1896, sire Maxie, dam Lady Weston by Bar None, belonging to Mr. R. Allen, of St. Germans, Lynn, secured the prize of £5 5s. offered by the society. This finely proportioned stallion, which was bred by Samuel Curtis Weston, Newark, was also reserved for the championship. Mr. John Rowell's Bury Napoleon, brown, foaled 1895, sire Bury Victor King, dam Bury Hawthorn by Blyth Echo, bred by exhibitor, was reserved in this clases, and Mr. Hugh Kirkham, of Terrington, Lynn, was commended with Royal Prince VIII., bay, foaled 1896, sire Crown Prince VI., dam Moss Rose.

In Class 2 Blythwood Rag, belonging to Mr. T. J. Cresswell, of Aldeby, Beccles, which took the championship at Norwich, was beaten by His Majesty's Premvictor; but in Class 3 for shire stallions foaled in 1900, Mr. Cresswell was successful in securing the prize of £5 5s. with Redlynch Blue Blood, brown, sire Iron Chancellor, by Chancellor, dam D'Arcy Vesta, by Duncan III., by Albert Edward, bred by Mr. A. P. McMullen, Hertford, which has already won seven or eight premier honours at county shows. Nailstone Certainty, bay, sire Rocks Hydro, dam Mettle, belonging to Mr. Watson Failes, of Tilney, St. Lawrence, was reserve.

First at Norwich on Saturday, Mr. E. C. Chapman, of Alethorpe, Fakenham, gained a like distinction at this show in the class for hackney stallions foaled in or prior to 1898, by winning the prize of £5 5s. presented by the Mayor (Mr. T. E. Bagge), president of the society, with Manifred, chestnut, foaled 1893, sire Connaught, dam Minnie by Cadet, bred by Mr. G. Jackson, King's Heath, Worcestershire; a splendid type of hackney and a good goer, which also carried off the champion cup, presented by Sir Walter Gilbey, Bart., for the best stallion in the hackney stallion classes. Scoresby Swell, brown, sire Pilot II., dam Victoria by Denmark, belonging to Mr. R. G. Heaton, of Chatteris, a right type of animal for double harness, obtained a reserve, and was also reserved for the silver medal. Mr. A. Lewis, of Heacham, Lynn, was commended for Leyswood Speculation, chestnut, foaled 1897, sire Speculation IV., dam Miss Doncaster by Doncaster, a stallion with plenty of substance and the possessor of a fine action. Home Gabriel, belonging to Mr. Walter Warren, of Holme Park, Downham, a good Norfolk hackney type, was also commended in this class.

In the class for hackney stallions foaled in 1899, the society's prize of £5 5s. was won by Mr. J. Proctor's Nordelph Danegelt, and Creake Bardolph, belonging to Mr. Richard Allen, of St. Germans, Lynn, was reserved. Mr. H. V. Sheringham, of South Creake, Fakenham, obtained first prize in the class for hackney stallions foaled in 1900, with Creake Matchless, chestnut, sire Moncrieff Emperor, dam Maidie by Silvio, bred by exhibitor, which first won a prize in London as a yearling, and has since grown into a big strong horse, and goes well. Heacham Electric, belonging to Mr. Alfred Lewis, of Heacham, Lynn, an animal with good action, which this year took a champion prize in London, was placed as reserve.

In the hunter class for stallions, two-year-old and upwards, qualified and likely to get hunters, Mr. Robert Greenacre, jun., of North Runcton, carried off the five guinea prize with Crest Hampton, echestnut, foald 1889, sire Southampton (TB) by Hermit, dam Silvercoat by Silvester. Mr. G. J. Curtis' (Lynn) The Shaughraun was reserve. Judges: Shires, Mr. A. H. Clarke, Moulton, Eaugate; hackneys and hunters, Sir Gilbert Greenall, Bart.

COMING SHOWS.

Ayrshire.

The gentlemen who will officiate as judges at the Ayrshire Agricultural Association Show at Ayr on April 29th and 30th are as follows:—

CATTLE.—Ayrshires, milk stock: A. Y. Allan, Croftjane, Thornhill; John Cochrane, Nethercraig, Kilmarnock; John Torrance, Deadwaters, Lesmahagow. Ayrshires, bulls and yeld stock: James Wallace, Auchenbrain, Mauchline; R. Young, Knockrioch, Campbeltown; William Murray, Borrowmoss, Wigtown.

MILKING COMPETITIONS.—Commercial points: Hugh Taylor, Seafield, Ayr; milk points, John Speir, Newton Farm, Newton, and Wm. Smith, jun., Dairy Supply Company, Limited, Belfast.

HORSES.—Clydesdales, females: William Clark, Netherlea, Cathcart; James Weir, Sandilands, Lanark; John M'Caig, Challoch, Stranraer. Clydesdales, males: John Kerr, Red Hall, Wigton, Cumberland; Alex. M'Intyre, Dunallan, Rothesay; James Crawford, Floshend, Gretna. Hackneys: Nathaniel Morton, Brookville, Ballymena. Driving and riding, etc., classes: Robert Wilson, jun., Burnhouse, Dunlop; Nathaniel Morton, Brookville, Ballymena; William Scott, Gilfoot, Carluke. Trotting class 22, and jumping competitions A, B, D, and E: William Imrie, Oakwood, Ayr; W. J. P. Beattie, Annan. Hunters and jumping competition C: William Forbes, Callendar, Falkirk; Charles W. Ralston, Garscube, Bearsden; William Taylor, Park Mains, Renfrew.

SHEEP.—Leicester and cross-bred sheep, also polled Angus cattle, fat stock, and pigs: Archibald Whyte, Inverquharity, Kirriemuir; Joseph Lee, Markle, Prestonkirk; Robert Wood, Carnoustie. Blackface sheep: Robert Buchanan, Lettre, Killearn; J. Anderson, Greenockdyke, Muirkirk; Wm. Murray, Auchenworth, Penicuik.

MISCELLANEOUS.—Pigs bacon curers' prizes: Andrew Mitchell, Ayr; David Whiteford, Stewarton. Old cheese: Andrew Mitchell, of Water Mitchell and Sons, Ayr; Andrew Cameron, High Street, Ayr. Implements: Quintin Dunlop, Morriston, Maybole; John Taylor, of Messrs. J. and A. Taylor, Ayr.

SHEEP.

Southdown Lambing Season.

The "Southern Weekly News" of Saturday published a special article on the Southdown lambing season in Sussex. "Lambing," it says, "which commenced, in a few cases, as early as the beginning of February, is not yet over. Up to and including Sunday last, the weather had been about the finest on record, the freedom from strong winds, frost, and cold rain being remarkable. Only one or two rough nights had given the shepherds any anxiety; and although Monday and Tuesday of the present week brought a very disagreeable change, which may somewhat increase the mortality returns, the season will on the whole stand out as an exceptionally fine one in every respect. The majority of the reports we have received speak of unusual productiveness, very few losses from death, a hardy and healthy lot of lambs, and encouraging prospects for feed. As the last few years have been marked by disastrous lambing seasons it is gratifying to be able to record so substantial an improvement."

SOCIETIES.

Bath and West and Southern Counties.

At a council meeting of the above-named society, held at the Grand Hotel, London, on Tuesday, there were present:—The Earl of Morley (president), Captain J. C. Best (vice-president), and Sir E. Strachey, Bart., M.P., with a number of other members. Several new members of the society were elected.

Mr. Hobhouse, M.P., as chairman of the Agricultural Education Committee, presented a report from the committee, which stated that arrangements had been made for the cheese school, carried on by the society for the Somerset County Council, to be opened for the season on April 5th, at a farm, in the occupation of Mr. J. Peters, at Mark, near Highbridge, and that Miss Emily Cannon had been re-engaged as teacher. The County Education Committee had undertaken to offer 20 studentships, enabling the holders to attend the school for a month's instruction, with board and residence, at half the fee payable by ordinary pupils. Applications to attend the School had been received from as many pupils as could be provided for at present.

The committee were continuing their investigations into the origin and cause of flavour in dairy produce undertaken by the society in conjunction with the Board of Agriculture and the Somerset County Council.

The report further stated that the committee had been in communication with the Board of Agriculture with respect to the continuance at the experimental station at Butleigh of the research work in cider-making, hitherto carried on by the society, with the pecuniary assistance of the Board of Agriculture. The committee, believing that important developments, in connection with the bacteriology of the subject especially, were in sight, viewed with much concern the possibility of the work being dropped owing to financial considerations. The committee therefore asked the council to allow them to make an offer to the Board of Agriculture that the society would find £50 a year for two years if the Board would supplement this with a grant sufficient to defray the balance of the cost for the period named.

Mr. Hobhouse moved the adoption of the report, which was seconded by Mr. Latham, and supported by Mr. Napier. Mr. Martin J. Sutton suggested that, before any further steps be taken, the finance committee be requested to consider that portion of the report relating to a grant being made by the society for cider research and report thereon to the council. This was accepted by the mover and seconder of the report, and the report with this alteration was then agreed to.

A communication was read from Mr. W. H. Fowler, notifying his resignation as steward of horticulture, and on the motion of Captain Best, seconded by Sir J. Shelley, the council expressed its thanks to Mr. Fowler for his past services and its regret that he felt unable to continue them. On the motion of Mr. Fowler, seconded by Colonel Best, it was resolved that the Rev. A. T. Boscawen be appointed steward of horticulture.

Sir E. Strachey, Bart., moved, and Mr. Hobhouse, M.P., seconded, "That this council, while willing to accept the 16 per cent. limit of water recommended by the Departmental Committee of the Board of Agriculture, regrets the suggestion of the committee that butter containing a higher percentage of water can be sold as butter if the amount is disclosed." This was supported by Messrs. T. Latham, G. E. Lloyd Baker and others and agreed to.

On the motion of Colonel Best, seconded by Mr. Latham, the following were appointed as a deputation to approach the Board of Agriculture upon the subject, should it be considered desirable, viz., the Marquess of Bath, Sir C. T. D. Acland, Bart., and Mr. Hobhouse, M.P.

East Sussex Farmers' Club.

A meeting (the last of the session) of the East Sussex Farmers' Club was held at the White Hart Hotel, Lewes, on Tuesday, when Mr. W. F. Ingram presided. The first matter discussed was introduced by Mr. Sandford, and was with reference to the desirability of supporting the action of the Warwickshire Association of Farmers in disapproving of the use of any preservative in milk. Mr. Sandford pointed out that the matter had been continually before the Chamber of Agriculture, and the general opinion was that the addition of preservatives to milk was a very grave danger to the health of the public, especially to children. He mentioned that the Tunbridge Wells Farmers' Club had supported the action of the Warwickshire Association in this matter. He suggested that it would be desirable for their own Club to adopt a similar course. It was eventually agreed, on the proposition of Mr. Killick, that the Club support the action of the Warwickshire Association, and that the latter body and the Central Chamber of Agriculture be notified accordingly. The next question on the agenda was that of railway rates. Mr. Sandford said he had received a letter from the Central Chamber, which stated that the points at which they wanted to arrive were:—(1) What railway companies had done to encourage traffic in small parcels? (2) Whether there was still cause for complaint as to excessive railway rates? (3) Whether rates had been reduced for short distances? (4) If there was any other information that might be given; or any other complaints. On the suggestion of the chairman, this matter was referred to the committee to deal with, in order that they might furnish the answers required by the Central Chamber of Agriculture.

Considerable discussion then took place with regard to the question of army remounts, concerning the supply of which, in time of war, the Government had asked for opinions from the Central Chamber as to how these might be obtained. The chairman said the principal matter which concerned them was the price of the animals, because if their members were going to supply army remounts the question really amounted to, What was the army going to pay them? From the report of a committee as to horses purchased in Austro-Hungary in 1901, he noticed that cobs up to 15 hands were purchased for the Yeomanry, and the number that was originally bought averaged £33 16s. 8d., but the price that was afterwards given was £26. The price at which the report stated they could have been bought was £8 to £12 per head. It seemed to him that the British farmer could never supply the requirements of the army. As far as one could tell, from what the Government bought in Hungary, they could purchase plenty of horses at £26, and from the committee's report, apparently, if they had had plenty of time, they could have bought them at considerably less—say, £20. Was the British farmer prepared to supply a quick, active cob, six years old, for £20? Unless the farmer was prepared to breed, from patriotic motives, he thought the Government would never get horses at that price.

He noticed that Mr. Lindsay Hogg, M.P., in his maiden speech, proposed that the Government should help the Agricultural Societies, and, personally, he thought the Government must encourage the breed of light horses if they wished to get army remounts in the county of Sussex. Mr. Alexander gave some interesting details of his own experience of cavalry work in South Africa, in the course of which he said the horses which best stood the work were those with "blood" in them, and with free, easy action. Mr. A. Wadman thought the matter should be dealt with on business lines, and on his proposition the following resolution was then passed:—"That this Club suggests to the Central Chamber that it would be advisable for the War Office to send agents down to certain centres, say four in Sussex, to purchase remounts, and in this way test the capabilities of the county. To prove this, it would be necessary to continue this arrangement for at least three years."

On the motion of Mr. E. J. Wadman, it was decided to support the Warwickshire Association of Farmers in the resolution which they passed, recommending that a tax be placed on imported flour and meal in view of the loss which was being occasioned to the milling industry in this country. An amendment by Mr. A. Wadman, that the object of the Warwickshire Association would be achieved equally as well by the institution of national granaries was defeated by a large majority.

Gloucestershire Chamber.

A meeting of the Gloucestershire Chamber of Agriculture was held at Gloucester on the 22nd inst., when a discussion took place on the notice of Mr. D. McIvor, M.P., of motion at the next Budget to reduce the income tax to one-half, and to put an ad valorem duty of 3 per cent. on raw material and 10 per cent. on manufactured goods, such as flour, from those countries which do not reciprocate our free trade, so as to drop a one-sided free trade, and to have a sliding scale for such as do admit our goods free.

The subject was introduced by Mr. J. G. Hawkins, who said his object in calling attention to this matter was not to get relief for the income-tax payer, but to urge the necessity of obtaining equality of opportunity for the British farmer with his foreign competitors. This want of equality was, in his opinion, the cause of all the troubles of which they heard so much in connection with agriculture. If they took the case of a Cheshire farmer, they found he had to pay 50s. a ton to send his meat to London, whereas the rate to the foreigner was only 25s.; and it was the same in other parts of England. He moved a resolution strongly approving of Mr. McIvor's motion.

Mr. C. E. Machen, in supporting, expressed the opinion that it was little short of a scandal that foreign meat should be carried at half the rate of British.

The chairman (Mr. J. D. Birchall) did not think the prospect of a protective duty on imported corn at all promising. Looked at from a historical point of view, they found that in the years when there was such a duty agriculture was more depressed even than at the present time. He did not think it had been shown that protective duties would help the farmers. So long as they were only for raising revenue there would be no objection to import duties, but before being imposed for the purpose of protecting home-grown produce he thought it must be proved more conclusively than it had been proved so far that farmers would benefit. He did not think any system of taxation which would increase the price of food would have any chance of becoming law. Other speakers followed, and the discussion was ultimately adjourned to the next meeting.

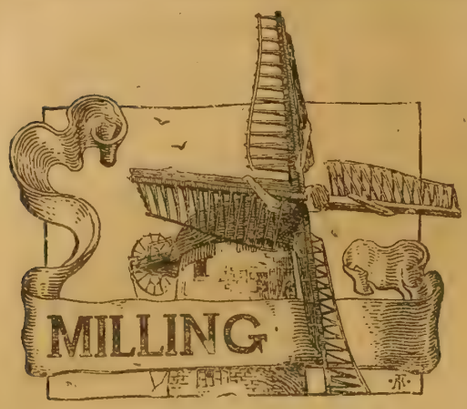
The subjects of railway rates, and "the advisability of approaching the Minister of War with a view to the provision of remounts for the Army," were also adjourned.

Dorchester.

The annual meeting of the Dorchester Agricultural Society was held at Dorchester on the 22nd inst., Lord Digby presiding.

The hon. secretary read the following gratifying letter which he had received from Mr. Franklin Simmons, secretary of the Royal Counties Agricultural Society: — "Basingstoke, November 29th, 1901. My dear Sir,—I have the honour to convey to you the following resolution which was unanimously passed at the annual general meeting of the society held here on Wednesday last, under the presidency of Lord Baring, namely, 'That the best thanks of the Royal Counties Agricultural Society be tendered to the Dorset Local Committee and their hon. secretary, Mr. H. A. Huxtable, for the admirable way in which they met all the requirements of the society, and for their generous contributions towards the expenses of the show.'"

The financial statement presented shows a balance of £58 1s. 4d. in favour of the society. A balance was brought forward from the last account of £24 12s. 10d. Members' subscriptions came to £119. The total of the receipts was £145 3s. 10d. The expenses amounted to £87 2s. 6d. The chief disbursements were £21 voted to the Royal Counties Agricultural Show at Weymouth last year and £50 given as local prizes to be awarded at the show. Colonel Williams observed that it was very satisfactory that, after giving £71 to the Royal Counties Show, there remained a balance to the society's credit of £58. The report and statement of accounts were unanimously adopted.



Mr. John Chick proposed the re-election of Lord Digby as president, and Mr. R. B. White seconded the motion, declaring that they could not have a better man as their president. The motion was carried unanimously.

All the vice-presidents were re-elected, with the addition of Lord Stavordale. Mr. Ensor proposed, and Mr. Combn seconded, the reappointment of Colonel Williams as hon. treasurer. This was carried unanimously, and acknowledged by Colonel Williams.

The noble chairman said he had much pleasure in proposing that Mr. Huxtable be re-appointed hon. secretary. They all knew how efficiently Mr. Huxtable did the work, and he did not know that they could very well get on without him. Mr. John Chick said he would second the motion with equal pleasure, as since Mr. Huxtable had been their secretary he had done his utmost for the good of the society, and given them valuable assistance in every possible way.

The motion having been carried unanimously, Mr. Huxtable thanked the members of the society for again re-electing him as their hon. secretary. It was quite true that it was always well to go to a busy man to fill appointments like this; but the busy man as a rule had many kind helpers, and that was what enabled him to do the work. He himself was particularly fortunate in that respect, for besides the large committee who helped him so ably, Mr. Miles and all the other gentlemen in his office took a great interest in the society. Indeed, they seemed to think it an integral part of the office, and it was quite a matter of *esprit de corps* with them that the show should be a success. And if it was not successful they felt it, he believed, almost more than the committee themselves. Therefore he himself had little work to do; but the work that he and the staff of his office did was done with hearty good will.

We are glad to be able to state that Mr. John Parnell, of Rugby, the well-known Shire horse breeder, is progressing satisfactorily, and on the high road to recovery, his recent accident in the hunting field, fortunately, having proved to be not anything like so serious as at first feared.

Grinding in Theory and Practice.

The trade during the past few weeks has been dull and lifeless, which, naturally, the holiday feeling at the present time has made worse, and in many cases 6d. less per sack has had to be taken to effect sales of flour. For a long time bakers have only been buying from hand to mouth, and complain, as well as millers, of bad trade. It seems as if the general public eats less bread than formerly, a fact which can, no doubt, to some extent be accounted for by the larger amount of cheap meat, bacon, rabbits, etc., which are now consumed, as well as by an abundance of potatoes and other vegetables, to say nothing of the large import of cheap tinned goods generally. At any rate, bakers complain of less consumption of bread, while millers, on the other hand, feel the pinch more than ever, as offals are in much less demand, while prices have, in most cases, fallen. This, however, is to be expected at this time of the year. While offals of all sorts were making so much money, millers did not mind the low prices of flour, because these bye-products generally kept the balance on the right side of the book. In fact, many millers ground more wheat than they need have done for the sake of the offals, and stocked the flour, which would improve by keeping.

In some parts, however, especially at the ports, broad bran, pollards, and sharps are still in good demand, and continue to go off at high prices, especially bran. There is still a good demand for this article on the Continent and abroad, one of the best markets being Holland. Some of the bran which goes from the north-eastern ports is sent in

Sacks Marked with Particular Brands.

thus showing the mill at which it was made. Some of these broad brans are well known on the Continent, just as millers' patent flour brands are known in this country. As much as £6, and even £6 10s. per ton, has been asked and obtained for the broadest brans which British millers manufacture. It will quite be understood that they are only made by making particular arrangements in the mill; otherwise the covering of the endosperm would be cut up, as are many brans on the markets. A general rule may be found in the fact that the same grinding which results in the best-shaped middlings for purification will also secure the broadest bran. These two conditions go together. Sometimes the bran will be found to bear the impressions of the corrugations on its surface.

This is either the result of setting the rolls too closely, or there is some other fault in the grinding. At any rate, a comparison of the bran with the corrugations on the different break rolls will soon find out the offending pair, and the evil can then be remedied. There is a point in the setting of rolls when better work can be done than at any other point, and this point affects the bran as well as the more desirable portion of the wheat berry. This point will vary for different kinds of stock, and it is for the intelligent roller-man to find out where it is in individual cases. In theory every portion of the broken wheat should be touched on each side by each roll; in other words there should be a feed of single particles only. The writer is quite aware that this result is never achieved, but the nearer the miller gets to the theory in practice the better will the products of the mill be.

Over-Grinding on Breaks and Reductions.

Again, the evils of over-grinding are bad, and they refer equally to the breaks and reductions. In cases where the rolls have too heavy a feed, the yield of middlings cannot be so large as under more favourable conditions—the deleterious portion will be mixed with the desirable portion. In other words, it is a conglomerate. The bran will be lumpy, and unevenly cleaned; a part will be cut up as fine as sawdust; another portion will be clean; while another part will be rich and unfinished. These are the evils of over-grinding as regards middlings and bran. The only way to obtain uniformly broad, clean bran is to make sure that the grinding surface is properly proportioned throughout the whole break system. The evils, too, are quite as bad in smooth roll reductions. The result will be a soft, spongy mass. In other words, the particles are mashed together instead of being separated by grinding. All previous work, including grading, dusting, and purification will have been performed in vain, and the middlings might just as well have been reduced on the lines of the old system.

One of the most deplorable things in connection with flour-milling at the present time is the closing of so many small mills even in cases where they are steam-driven. Most of the windmills disappeared some time ago, but those driven by steam and water power

Survived the Competition of the Large Mills.

and the altered conditions of milling and trading for a time. Now, however, it seems that many of them are doomed. Week by week one sees them advertised for sale in the trade press, or learns that they are to be dismantled of flour-milling machinery, and used for some other purpose than manufacturing "the staff of life." Most of the large establishments have either enlarged or are enlarging their output, with the view of cheapening the cost of manufacture, and this naturally results in a large amount of surplus flour, which is not wanted in the district in which the mill is situated, for which distant markets must be found somewhere, even if it be sold at a loss. Small millers cannot compete with this state of things, and the consequence is that every week sees mills shut down, never to be started again. It is a pity, but it appears to be inevitable.

The writer once more advises the occupiers of small mills to go more into the provender business and also become agents for some of the more popular flours manufactured by the large mills rather than fight against fate. It all depends, however, upon the location of the mill, and other circumstances. Some of the small mills flourish, it is true, and will continue to flourish; but they are mostly in the hands of millers who trade in other goods besides flour, such as oil-cake, feeding cake, and manures. There is a great demand for feeding cakes at the present time, and as about one-third of all the offals made in the mill, and the bulk of the refuse seeds, can be utilised in their manufacture, the trade is a very profitable one, while the cost of putting down a plant is quite reasonable. The reduction of the materials for the manufacture of feeding cakes would be performed on the millstone or on some sort of grinding or attrition mill. That the millstone nowadays is more useful to the small miller than the roller-mill is the opinion of

MILLER-FARMER.

Value of Land Required for Railway.—The result was announced on Wednesday, at Yarmouth, in an interesting railway arbitration. A new line is being constructed between Lowestoft and Yarmouth, and 4a. 0r. 18p. have been taken from an agricultural estate at Gorleston, belonging to Mr. George Wills. His valuers held he was entitled to from £10,756 to £15,211, but the experts for the Norfolk and Suffolk Joint Railway put it at from £1,400 to £1,650 only. A special jury, which viewed the site, found £800 was a fair price for the land, but awarded £3,800 for severance and consequential damage. The Norfolk Under Sheriff, before whom the arbitration was conducted, certified accordingly.

A Hertfordshire vicar, who has been fourteen years in a country parish, and therefore knows a good deal about the agricultural labourer, sends the following interesting communication on overcrowding in the villages:—"Much is being said about the worker in the fields. How many a household sighs for an assured combined income of over £100 a year? Yet that is what is being done in some villages. In a Cambridgeshire village, at the present moment, the father makes 13s. a week, one son 12s., another 9s., another 6s., another 5s. 6d. The rent of a five-room cottage and a barn is £3 per annum. This rent includes a garden with fruit-trees. Another labourer in the same village, living in a farmhouse for the same rent, makes 35s. a week. Extra money is made on piecework, and in the hay and wheat harvests. In the same village—so hard is it to change habits—a shepherd and his wife, living in a farmhouse with several bedrooms, allow a grown-up daughter to sleep in their bedroom. In a cottage with four rooms the husband and wife and a grown-up daughter use one bedroom, a grown-up son using another. What is needed in the village is some wholesome inspiring influence from without to cause people to take a higher view of life. There is something in what Mr. Justice Grantham said at Huntingdon, in January, when, on hearing a country publican say Sunday was his best day, he suggested the establishment of good, respectable reading rooms where drink was not allowed."

MONDAY (March 24th).—Rainy and unsettled weather prevailed in most parts of our Islands, and a large and important storm area was spreading over us from the Atlantic. Rain was measured in the morning, as the result of the fall in the preceding 24 hours, in the north and west, and in Ireland the amounts were large. The temperature remained low for the time of year. There was a slight frost again in London in the early morning, and the fore part of the day was very fine. The sky became cloudy in the Metropolis shortly before noon, and rain soon followed with an increasing south-west wind. The highest temperature in London was 46 degrees, and the thermomenter fell briskly in the afternoon.

TUESDAY (March 25th).—Strong north-westerly winds and gales were blowing at many places on the English coasts, and the weather was generally cold for the time of the year. The large cyclonic storm area which was over the western portion of our Islands on Monday morning, had travelled quickly across England, occasioning heavy winds and a high sea in the English Channel, and its centre in the morning was near the Dutch coast. Rain was measured in the morning, as the result of the fall since the previous day over nearly the entire kingdom, and rain, snow, or hail again fell during the day in the north. Frost occurred in Scotland during Monday night, and the thermometer was generally low over England.

WEDNESDAY (March 26th).—Fine weather was experienced in most parts of our Islands, bnt showers occurred again at several places in the West. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, in the north and west, but the amounts were not large. The cyclonic disturbance which had occasioned rough weather over the United Kingdom had passed away to the eastward, and was too distant to influence our weather. The winds continued generally westerly, and they were still strong on our west coasts. Frost occurred in Scotland and over the central parts of England during Tuesday night, and temperatures during the day were generally rather low for the time of year. The day was mostly dull and cloudy in London, and the highest temperature was forty-nine degrees.

Ploughing Match for the Championship of Scotland.—A ploughing match for the championship of Scotland took place at Motherwell recently, in the presence of a very large company farmers and agriculturists from all parts of Scotland. The contest was the outcome of a challenge by William Waddell (Coatbridge) to plough any man in Scotland for any sum from £20 up to £50. Mr. Hugh Dunlop, of Kilwinning, Ayrshire, whmo took up the challenge for £20, and the arrangements were made to hold the match on Low Motherwell Farm, kindly lent by Mr. Robert Hamilton, farmer. The land was in fine condition for the contest. Both contestants are experienced and able ploughmen, and better work than that done on Saturday has seldom been seen in Lanarkshire. The judges were:—Messrs. Neil, of Torbanehall, Bathgate; Scott, of Langbank; Mackie, Drongan Mains, Ayrshire; Scott, South Threave, Girvan; whilst Mr. Alexander Crawford, of Bowmains, Bo'ness, was referee. The extent of ground ploughed was 1 rood 8 poles 25 yards by Waddell, who accomplished his task in 7½ hours; 1 rood 3 poles 15 yards by Dunlop, who took 7 hours. The match finished amidst considerable excitement, the merits of both being nearly equal. The judges were divided in their decision, and the final decision rested with the referee, who, it is understood, considered that in both start and finish Waddell was superior, and also his work was better pointed. Waddell was accordingly declared the champion.

Messrs. Alfred Mansell and Co., the well-known live stock exporters, Shrewsbury, have received advice from Mr. R. H. Gardner, of Tasmania, of the safe arrival, in good condition, of the choice selection of shearling ewes purchased at the famous dispersion sale of Mr. A. E. Mansell's Shropshires.

Final Report of Local Taxation Committee.

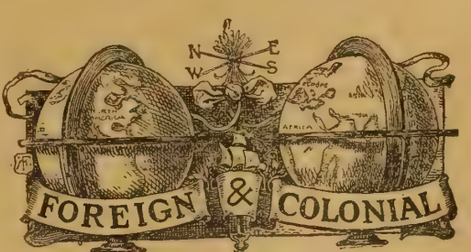
A paper on the above subject was read by the Rev. F. Salmon before the Blandford Farmers' Club.

Mr. Salmon, in the course of his paper, said the object professed to be sought from the labours of the Commission was a basis for a reasonable and just reform of taxation for local purposes. The Commissioners were first directed to inquire into the present system under which taxation is raised for local purposes; secondly, they were directed to state whether in their opinion all kinds of real and personal property contributed equitably to such taxation; and if not, what alterations in the law were desirable in order to secure that result. The final report of the Commission had been issued. The unjust manner in which the landed interest had been treated in respect of local taxation was recognised fully by the Commission; and now it was for that and kindred clubs to see that the ball was kept rolling until they scored. They did not want temporary doles, but they required the whole system of local taxation to be revised and put upon a fair and equitable basis. Then they would get justice, which was what they demanded. All impartial minds were, he believed, agreed; and Parliament, by the Agricultural Rating Act of 1896, recognised the truth that the occupier of the land was paying far more than his fair share of rates.

Owing to a powerful clerical agitation, the Commissioners were induced to issue an interim report in respect of tithe rent-charge, and what was thought in 1836 to be an impossibility became in 1899 a reality, and the clerical tithe owners were placed on the same footing as the occupiers of land. Not only did they want the Acts of 1896 and 1899 to become permanent, but they wanted a still further relief of realty at the expense of pedsonalty. The present system was an anachronism, and obsolete. Every circumstance in the problem to be solved had changed. They must look back to the past history of local taxation, otherwise they would fail to grasp their present position. The poor rate was created in the reign of Elizabeth, 1601, when, of course, the great bulk of property consisted of land. The properties mentioned in that Act as liable to pay poor rate were lands, houses, tithes, coal mines, and underwoods, to which more recent legislation had added other mines besides coal mines, woods and plantations, sporting rights, and land used for the exhibition of advertisements. Railways, gasworks, breweries, and so forth, fell under liability to rates as land or houses. Under the Act of Elizabeth it was for a long time a moot point whether personal property, or, at all events, certain forms of personal property, were or were not liable to assessment. It was the introduction of the word "inhabitants," as well as "occupiers" into that Act, coupled with the injunction that the rate was to be raised according to the ability of the parish, which gave rise to the controversy. The question of rating personal property was not finally settled until 1840, when an Act was passed which was to be in operation but one year, in order to give time for further consideration, but which had been kept in force ever since, without any consideration whatever, by the Expiring Laws Continuance Act. The effect of this Act was to relieve from liability to local rates all property other than immovable property. This was a most inequitable piece of legislation. But, inasmuch as the landed interest had then the advantage of protective duties on agricultural produts, the burden was not so keenly felt as in these days.

There was only one advantage that he was aware of in the present system of local taxation. It was beautifully simple. It was so easy to declare that all rates shall be raised on immovable property. But they must now consider the injustice of it; and first of all, a point of great importance to be remembered was that when the poor-rate was first imposed in 1601, it was a poor-rate only. Now it covered a multitude of charges, including such heavy items as lunatic asylums, education, roads, police, criminal prosecutions, vaccination, etc. Originally, there was only one public body which imposed the rates, but now the rural ratepayer might have to pay rates, for the imposition of which no less than five independent authorities might be responsible—viz., county councils, district councils, parish councils, boards of guardians, and school boards. Needless to say, that the burden at length became unbearable. Rates were heaped upon the land, Protection was abolished, and every encouragement was given to the foreigner to the destruction of British agriculture. In 1900, he believed, the land, including tithe rent-charge, was paying 82 per cent. of the rates.

Briefly stated, the position at Lady Day, 1899, was this. The gross estimated rental of immovable property assessed to the poor rate was 207 millions, and the rateable rental 172 millions. The total amount received in poor rate was 25¼ millions, or more than a seventh of the total net rental. At the same date 480 millions of non-rateable property was assessed to the income tax, the possessors of which were deriving an equal benefit from the expenditure of the 25¼ millions without contributing anything themselves directly. And yet many of the purposes were national, on which local authorities had to spend money; and as such should they not be paid for out of the Imperial Exchequer? He referred to such charges as poor relief, maintenance of lunatic asylums, education, main roads, police, and all matters connected with criminal procedure. Main roads were included in this list, because, with the increase and expected further development of bicycle and motor car traffic, roads were beginning to regain the national importance which they once possessed as the highways of traffic before the introduction of railways.



None of them objected to pay their fair proportion for benefits in which they shared; but here he would remind them that the population engaged in agriculture was not more than, if as much as, five per cent. of the whole. This small proportion lived almost entirely in rural districts, many on the farms they cultivated, detached from public sewers, water supplies, and other useful services possessed by inhabitants in towns and large villages. So far as these services were concerned, the owner of the farm had to provide them out of his private capital. Yet the farm was paying rates for improvements elsewhere which were not beneficial to it. The occupier might be assessed at a lower rate than the owners and occupiers of houses and business premises, yet the basis of his assessment was so much higher than theirs that the rate levied was out of all proportion to theirs when compared with any benefit that either he or his farm could possibly derive from the tax he had to pay.

This was the merest outline sketch of the injustice under which the land suffered with regard to local taxation. The method which Government had adopted to redress in some degree their wrongs was by means of subventions out of the general revenue of the country. But the Agricultural Rates Act of 1896, and the Tithe Rent Charge (Rates) Act of 1899 looked like gifts, or bribes, or doles on the part of the Government to their friends the landlords, the farmers, and the parsons, instead of looking like what they really were, simple acts of justice. What was the plan and policy advocated by the Royal Commission? In answering this question, they must answer another—viz., should not all these charges, which might be termed national, be paid for out of the national revenues? The Royal Commission decided against the transference of these heavy charges from the local rates to the Imperial Exchequer, as undesirable on the following grounds:—(a) the Government had already got plenty of work on their hands, and decentralisation, not centralisation, should be the keynote of their policy in these matters; (b) even if the Imperial Exchequer provided the whole of the money, management would still be to some extent local, and all inducements to economy would be removed if none of the money were raised locally; and there would be a violation of the wholesome maxim that those should pay the piper who called the tune.

Then the Commission had to answer the difficult question, "Why not rate personalty as well as realty?" Some of them perhaps were sanguine enough to hope that this question could have been answered satisfactorily, but that hope must now be abandoned finally. As Sir Edward Hamilton and Sir George Murray said in their report, the more the question was thought out the more obvious would it become that personalty could not be taxed by rating authorities, because it could not be localised. Besides the two above-mentioned remedies for the present inequitable state of things, other partial ones had been suggested in various quarters; but after being discussed they had been dismissed as impracticable and undesirable.

After enumerating these remedies in his paper, Mr. Salmon went on to say that the majority report was signed by 12 out of the 15 Commissioners. One of the three remaining members made a separate report, which need not be further described. The other two dissentients, Sir E. Hamilton and Sir George Murray, presented an extremely complicated and ingenious plan, which deserved to be described, and which seemed preferable to the majority report. Their report was a most valuable one, but must be passed by because its political importance was lessened by its only receiving two signatures. As practical men, they must deal with the report of the large majority. Their recommendations were these:—(1) The perpetuation and development of the present system of contributions from the Imperial Exchequer—an immediate increase of two millions was recommended; (2) the perpetuation of the Agricultural Rating Act of 1896 and the Tithe Rent Charge (Rates) Act of 1899; (3) the perpetuation of the differential rating of land at a quarter or one-third of its net annual value (a) for special sanitary expenses of rural district councils, (b) for water rates, (c) for lighting rates, (d) for public library and reading room rates.

These proposals were not ideally perfect, but they were as good terms as the landed interest was likely to get. In conclusion, Mr. Salmon said that he would once more enjoin them, not only as a matter of self-interest, but also as one of national importance, to wake up, and keep awake. It was a matter of national importance that the land of the British Isles should continue in cultivation. It could not so continue if the ever-increasing burden of local taxation was to be thrust out of all proportion upon one class of property, and that the least valuable. They could afford to be long-suffering once, when their industry was protected; but now it was madness. Lord Harris, speaking lately to the East Kent Chamber of Agriculture, blamed the agriculturists as a body for not protesting with sufficient clearness against the inequitable imposition of local taxation. He warned them to keep their eye upon the Bill which was shortly to be introduced for the improvement of secondary education, for he apprehended that provision will be made for the imposition of a rate for the purpose. Secondary education was a matter of national importance, and should be a national charge. The landed interest would benefit less than any other by improving secondary educating. He (Mr. Salmon) would also warn them to keep their eyes upon the Old-Age Pension question. The provision of the necessary funds was the main obstacle in the way of passing an Act having this object in view. It was a national question, and they should see to it that no solution of it was obtained at the expense of the rates.

The World's Flax Crop.

The flaxseed crop of the world for 1900, the latest year for which comprehensive figures are available, amounted to 64,466,500 bushels, against 61,726,600 bushels in 1899, and 72,938,500 bushels in 1898, says the American "Crop Reporter." Upward of 95 per cent. of the 1900 crop was produced in four countries, viz., the United States, Russia, India, and Argentina; less than 5 per cent. of the total crop being produced in all other countries of the world combined. In 1900 Russia produced 32.06 per cent. of the world's crop; the United States, 31.02 per cent.; India, 18.61 per cent.; Argentina, 13.75 per cent.; and all other countries combined, 4.56 per cent.

The world's commercial crop of flax fibre is practically all produced in Europe, none of the great flaxseed-producing countries outside of Europe being engaged in this phase of the industry. The flax fibre crop of the world in 1900 amounted to 1,312,709,000 pounds, against 1,139,077,000 pounds in 1899 and 1,780,693,000 pounds in 1898. Upward of 77 per cent. of the total in 1900 was the product of Russia, the remaining 23 per cent. being the combined production of the rest of Europe.

The prices made upon flaxseed in the United States in the crop year 1900-01 were the highest in twenty years, the highest Chicago quotation having been in July, 1901, when the price of seed reached 1.90 dols. per bushel. The exports of flaxseed in the fiscal year ended June 30, 1901, were 2,755,683 bushels, valued at 4,319,102 dols.; imports during the same year were 1,631,726 bushels, valued at 2,098,207 dols., leaving an excess of exports over imports of 1,123,957 bushels.

Under average conditions the quantity of oil that may be manufactured from a crop of seed like that of 1900 (20,000,000 bushels) is about 50,000,000 gallons; the quantity of oil cake or oil-cake meal from such a crop would be about 760,000,000 pounds. As is well-known, the linseed oil manufactured in the United States practically all enters into home consumption, the average annual exports not exceeding 100,000 gallons. The greater part of the oil cake and of the oil-cake meal, on the other hand, is exported,

the exports of this product in the fiscal year ended June 30, 1901, having been 455,154,866 pounds, which may be accepted as approximately representing the exports of the oil cake and meal made out of the 1900 crop. The principal customers for linseed-oil cake and meal are Germany and the United Kingdom, Germany in the fiscal year ended June 30, 1900, taking about 33 per cent. and the United Kingdom 28 per cent. of our total exports.

The growing importance of Denmark as a purchaser of this valuable cattle food is attracting great attention. From being a customer for less than 8 per cent. of our total exports in 1895, her takings have steadily increased until in the fiscal year ended June 30, 1900, almost 23 per cent. of the total United States exports were consigned to her. The increase in the use of oil cake by the Danish people is attributable to the remarkable development of the dairy industry of that country. From the foregoing it is apparent that in the fiscal year 1899-1900 about 84 per cent. of the exports of oil cake and meal from the United States were directed to three European countries —Germany, the United Kingdom, and Denmark. The only other European customers for this product were, in the order of their importance as purchasers, Holland, Belgium, and France, and these countries absorb almost the entire remainder of the United States shipments. Exports to other countries constitute a comparatively neglible quantity.

It is notable that of the four countries which produce annually 90 to 95 per cent. of the flaxseed crop of the world the United States is by far the most important as a manufacturer of oil and oil cake. The great bulk of the flaxseed produced in Russia and India appears upon the markets of the world as raw material and is converted into manufactured products in the oil mills of Europe. Argentina usually manufactures from 10 to 15 per cent. of her annual crop, chiefly for home consumption, and the surplus is consigned to Europe for manufacture in European mills. The Russian crop of flax fibre, also, which constitutes such a heavy proportion of the entire world's crop, is exported to France, Germany, England, and other European countries, to the extent of three-fourths of the entire quantity raised for textile uses. It should be noted, however, that the production of flax fibre in Russia, as given in the table published in this number of the "Crop Reporter," includes the entire production of flax fibre in the empire, of which a considerable portion is not adapted to manufacturing purposes, but is used for fuel in Russia or allowed to go to waste.

We have received from the South-Eastern Agricultural College, Wye, a copy of the February number of the journal of that institution. The number contains some interesting reports on experiments and investigations carried out on the college farm, several illustrations being given.

Alleged Starvation of Stock.—At Samford Petty Sessions, at Ipswich, on Tuesday, J. Welham, farmer of Brantham, was charged with ill-treating farm stock by withholding sufficient food. Inspector Brian, R.S.P.C.A., deposed to visiting defendant's premises and finding the stock in a very emaciated and ravenous condition, while several were suffering from severe injuries, much aggravated by neglect. Evidence having been taken on both sides, the Bench retired, and on their return the chairman said they convicted only with regard to a cow with the eye out. They imposed a fine of £5, with costs, £1 15s. 4d.

Ipswich Horse Parade.—Despite the piercing and blustering wind on Tuesday, half-a-dozen stud horses were paraded on Ipswich Cattle Market, the Suffolk breed preponderating in the ratio of two to one, and, without exception, looked in prime condition. The Bentley stud, owned by Mr. E. F. Quilter, was represented by Bentley Warrior, while Mr. C. H. Cordy, of Walton, showed another dark chestnut, Homocea. Mr. Willia mEveritt, of Levington, paraded Butley Marquis. The fourth Suffolk was Sunshine. Coming to the shire sires, Mr. H. W. Packard, of Shotley, exhibited Rokeby Peleus, while the sixth animal was paraded by Mr. W. W. Estaugh, of Butley Abbey, namely, Birdsall Moulder.

Birmingham Dairymen and the Price of Milk.—The dairymen who distribute Birmingham's milk supply have resolved not to follow their usual custom of reducing the price with the commencement of spring, but to maintain throughout the summer the usual winter charges. Their decision is attributable to the fact that the farmers are demanding more. During the past exceptionally severe winter the milk trade is said not to have been profitable to the farmers, owing to the limited supply and dearness of roots and other kinds of fodder, and the farmers are seeking to recoup themselves. They are the better able to do so because the increasing requirements of London cause larger demands to be made on this district, and the farmers have a greater market for their supplies.

The Largest Manufacturer of Incubators in the World.

Comb Disease.

We have found that this disease has been very prevalent in many parts of the country during the last month or two. There are usually outbreaks of it during the spring, as the birds get fighting and they do not receive attention, and the small pecks which they receive quickly fester and spread until the fowls look very unsightly. People are inclined to think that it is only the weak birds which fight, but this is not so; the hens frequently fight each other, and after a few days large spots are seen on the heads of some of the birds, and these spread over their heads and necks, and frequently extend to their bodies. The disease is called chicken pox in the South African and Australasian colonies, and it is unfortunately very contagious. It is advisable that they receive attention as soon as it is noticed.

If birds that have been fighting are carefully washed at once in water in which some Condy's fluid has been placed, and wiped quite dry, and they have a dose of Epsom salts given to them at once, an outbreak is generally avoided. If the birds are dark in the combs, or go off their appetite, give about one ounce of the salts to every fifteen birds. Should there be any little spots coming upon their combs, give one ounce to every ten birds; this will not hurt them, but do them good.

When the disease takes the birds, we find the blood is very dark and overheated. The fowls may look quite well, eat a proper supply of food, and even lay one day. The next morning there will be found small spots upon their face, comb, and wattles, and very often on their eyes. When the latter is the case, the eyes close at once. We should advise those poultry keepers who have unfortunately got the disease amongst their birds, and have any very bad cases, their eyes being closed, and the mouth full of a cheesey matter, and smelling very badly, unless they are very valuable birds, kill and bury them at once.

In cases where the spots are only just coming give the Epsom salts as described, and paint the spots with iodine. Give the affected birds roup powder, those which can eat, in their soft food. It should be given in quantities as follows:—One teaspoonful for every five birds.

When a sudden change in the weather comes on, it is always well to give the birds a little roup powder, as it will often prevent any disease coming on, besides causing them to be less liable to take a chill. When the birds are not really ill, a teaspoonful to every eight or nine birds will be sufficient.

We notice when birds have been fighting, and losing a lot of blood, they are the first to take the disease. It is not only at one certain place where the comb disease has broken out, but on farms where there are only a few kept, as well as where the fowls are kept in large numbers. It will sometimes break out where there are from fifteen to twenty-five fowls, and they have twenty acres of ground to roam over.

It is a very serious matter at this time of the year when a disease of this kind breaks out amongst fowls, especially where the pens of birds are mated up, as very often valuable birds are lost, and that means great expense. Turkeys are affected just in the same way in various parts of the country, many of which have just commenced laying. Unfortunately, a number of people do not notice the disease coming until it is too far advanced, and it is not very pleasant to lose a turkey hen worth from £2 to £3. This is what many of our breeders are having to put up with, however.

If birds mope about or do not look as sprightly as usual, no matter whether turkeys or fowls, the attendant should catch them at once and look in their mouths, as well as examine their heads. As the old saying goes, "Take a bull by the horns at once," so should the owner or attendant be on the look out for the first approach of this disease. By doing this many valuable birds may be saved, if they are seen to at once. Once again we would remind our readers that "A stitch in time saves nine."

Last season we knew several places where this disease broke out on farms, and the farmers took no notice of it. The consequence was they had not more than from six to eleven birds left out of one hundred. Then, again, when they are left to run about while they have this disease, they contaminate the ground, besides giving it to the other birds. As soon as ever the symptoms are noticed, isolate the birds at once; put them on peat moss, dust, or chaff, and when attending to them the attendant should take care to have a large apron on, which should be kept specially for the purpose and left in the place where the birds are doctored. The attendant should also have some warm water by him, and wash his hands after seeing to the birds; then the others are not likely to take the disease among the other birds which are all right.

Disinfectant powder should be spread about the fowl-house and round the door, and a little piece of camphor put in the water which the fowls drink. If this is done, it prevents the disease from spreading.

The Care of Chickens.

One very general, but sadly mistaken, idea leads many people to suppose that after the chickens leave the hen they are ready to take care of themselves, and so the little things are allowed to herd with the larger fowls, and in some cases go to roost with the hens, all of which is very bad for them, as growing chickens should never be allowed

to run with the older birds. We have often noticed that chickens have a tendency to crowd together in one place, so as to keep warm. Even if they are allowed two or three sleeping places for a large flock they will often all crowd together into one of them. This is one of the worst things for growing chickens, as it has a tendency to check the growth and undermine the constitution, causing colds, and, possibly, disease to break out, as a result of the extremes of temperatures to which the birds are exposed. Of course, the remedy for all this is obvious.

The chickens should be divided into flocks, and put out so that they run in separate pens, being separated from each other; and provision should also be made for keeping them away from the older birds, both by night and day. Farmers are terrible transgressors against the laws of prudence in connection with the maturing of the chickens. Another matter that should engage the attention of poultry keepers, especially those who rear for the markets, is the shape and size of the perches on which the chickens roost. Where round perches have been used the pressure caused by them upon the breast bones of the chickens has caused an indentation, which, by turning the breast bone, leaves this crooked, a deformation which grows up with the fowl and lessens its value as an adult bird. Great care should be taken to provide flat perches, not less than two inches wide, from which it will be well to strip off any bark which might remain upon the wood, as this only harbours vermin, which, in their turn, collect upon and irritate the fowl.

It is important in the case of persons who rear for the market that the chickens have straight breast bones, as when killed and exposed for sale at the poulterers, or when put upon the table, the crooked breast lessens the selling value of the fowl in the first instance, and causes great inconvenience to the carver in the other. As soon as chickens leave the hens, or are strong enough to do without heat in the foster-mothers, some out of every brood seem to take a start and grow right away from the others. These chickens are usually big-boned, big-bodied, and, what old fanciers call promising birds, and soon it becomes apparent to all those who observe their rapid development that these individual chickens are marked out for future excellence. When this is noticed in the case of chickens, all these finer specimens should be gathered into one flock and treated generously, so that full opportunity be given them for rapid growth and development. Attention to these little details constitutes the spring of all success in rearing chickens, and we warn poultry keepers of all classes against the direful effects of overcrowding and injudicious management.

The Royal Counties Show at Reading.

Entries for dairy herds close on Saturday, April 5, and in all other departments of live stock on April 19—excepting entries for butter, which may be made up till May 10, and special jumping, driving, and turn-out competitions, which may be made up till the time of the show. The society are again fortunate in anticipating a visit of H.R.H. the Prince of Wales to the show, who has graciously signified his intention of attending on the third day.

New Agricultural Patents.

Specially compiled for *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son, and Co.), patent agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

5,838.—Robert Teasdale and John Thomas Teasdale, of Stockton-on-Tees, for "An improvement in self-binding reapers, adapted to prevent the entanglement of sheaves with each other as they leave the knotter."

5,950.—William Shepard, of Sheffield, for "Improvements in grinding, crushing, pulverising, and the like machines."

6,011.—George Foster, of Chancery Lane, London, for "Improvements in agricultural Implements."

Patents Sealed.

20,965.—E. Hanburger and H. Kallmann, of Germany, for "Food for animals."

21,187.—R. J. Wyatt, of Merriott, for "Food for animals; chaff cutters, cutting, and slicing roots."

The annual report for 1901 of Professor J. McFadyean, principal of the Royal Veterinary College to the Council of the Royal Agricultural Society, has been issued in pamphlet form. In it the health of our live-stock during the past year is interestingly reviewed, and the results of some experiments given.

A VALUABLE ASSET.

Two hundred per cent. per annum interest on outlay represents the average additional income conferred on farmers and dairymen by "ALFA-LAVAL" Cream Separators, compared with what is physically attainable with old-fashioned "setting" systems.

Remember that it is not merely a question of increased turnover for the present twelvemonth, but of a clear and steady cash gain in your annual balance sheet both for the next year and each succeeding year to come.

What other investment on the market can offer you so prompt, so sure, and so remunerative a return?

An illustrated catalogue—free for the asking—will give you full details. Drop a postcard to "ALFA-LAVAL" Agents:—

THE "SVEA" SEPARATOR

The "SVEA" Separator is the Cheapest because it is

THE SIMPLEST, THE STRONGEST,
THE MOST DURABLE, THE EASIEST TO TURN,
A PERFECT SKIMMER, and
HAS THE GREATEST CAPACITY.

The **"SVEA" Separator** being thoroughly up to date, embodies the following improvements:—

1.—**The Short Bowl Spindle** replacing the usual long one, which so soon gets damaged if not handled with great care.

2.—**The Patented Top Bearing** by means of which the bowl is supported at **both** top and bottom.

This is a special feature of the "SVEA," and is considered a great advantage as contributing to the smoother and easier running of the bowl, also preventing all accidents.

3.—**The Simplicity** of the skimming arrangement consisting of only a few rings or discs (in the small sizes 4) instead of the usual large number.

4.—**The Bowl is easy to take to pieces and clean.** This fact and the small number of the parts to clean will be much appreciated by every one used to Separators.

5.—**The Conical Lugs** on the inside of the Bowl Top make it **impossible for the Bowl to get out of balance** by reason of the threads becoming worn.

6.—**The easy and noiseless motion** effected by the use of Conical Gearing instead of the usual cylindrical one, thus permitting the

7.—**Reduction of friction and wear** obtained by the position of the worm wheel, at an angle of 45° to the worm, instead of the usual right-angled gearing.

8.—The **extraordinary strength** and good workmanship of the machine throughout.

"CUNDALL'S" PATENT OIL ENGINE.

THE Most Perfect Power for Threshing, Grinding, Chopping, Pulping, &c.

Contractors to His Majesty's Government.

Portable or Stationary.

THE CHEAPEST POWER FOR ACRICULTURISTS.

WHAT USERS THINK AND SAY:—

"I cannot speak too highly of your Oil Engines, and consider them far the best Engines for Farmers' use."

"You will be pleased to hear that the Oil Engine you supplied me with last May is giving every satisfaction, both as regards work done and cost of running, which latter bears no comparison to the cost of the steam engine which it replaced."

"I do think this is the cheapest and far the best Oil Engine in the market. I fixed on the 'Cundall,' not only as the steadiest running Engine, but also in having more control over it in altering speed and power."

"The 20 B.H.P. Oil Engine we bought from you about a year ago is working satisfactorily. We were fortunate in our decision in selecting your Engine."

ALSO PARIS AND BERLIN.

VESTA CREAM MEAL.

This, our latest al Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used a'one.

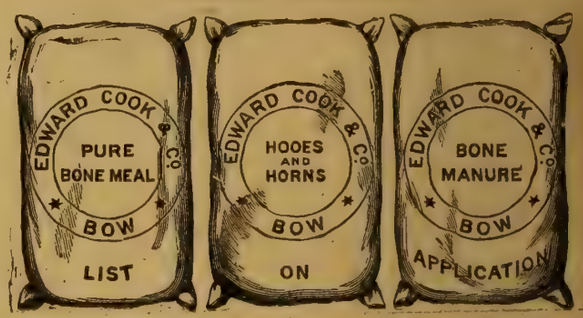
It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute*.

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal I consider it excellent in every way"



15s. per cwt. Carriage Paid to Nearest Station.

SOCIETIES.

CORN EXCHANGE BENEVOLENT SOCIETY.

NOTICE IS HEREBY GIVEN, that in the month of June next ensuing the Society will bestow certain Pension or Pensions annually renewable. The persons eligible as candidates for such benefactions are members of not less than three years' standing, who have been established, either as principals or clerks, for not less than five years, in the corn, seed, oilcake, hop, malt, or flour trades, within 12 miles of the General Post Office, London, and who have fallen into decay, their widows, fatherless children, and such other relatives as may have been actually dependent upon them at the time of their decease. Bakers and pastrycooks are not considered dealers in flour. Candidates must apply by letter only to the undersigned before April 27th, giving full particulars of their former and present circumstances, and referring to such respectable persons as can vouch for the accuracy of their statements. Members of the corn trade and its branches are earnestly requested to support the Society, which is in active operation under the management of leading firms in Mark Lane. Rules and all particulars may be obtained from the undersigned.—By order of the Board of Directors,

J. H. MITCHINER,
Secretary.

COLEMAN, Seed Grower, Sandwich, Kent.

MISCELLANEOUS.

MILK CONTRACTS.—If you are wanting reliable Refrigerator or Railway Churns, we offer splendid value in both lines and invite inquiries. Prompt despatch.—R. A. LISTER & CO., Ltd., Dursley.

GALVANISED SHEEP AND WIRE NETTING.—Best quality; cheap; Barb Wire, Fencing Wire, Strand Wire, Galvanised Cisterns, Wire Arches, and all kinds of Wire Work for Gardens, Conservatories, &c.; Galvanised Corrugated Sheets; state wants and write for prices.—W. FOX & CO., 550, Mile End Road, London, and Rochford, Essex.

SPECIAL OFFER.—Galvanised Wire Netting, 50 yards, 3ft. wide, 3in. mesh, 4s. 4d.; 2in., 5s. 3d.; 1½in., 7s. 2d.; 1in., 9s. 8d. Poultry Houses, Roofing Felt, Galvanised Corrugated Iron, Garden Seats, &c.; lists free.—JOHN ADAMS, Iron Merchant, Leicester.

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines, Thrashing Machines, &c., second-hand, for Sale, cheap, or to be Let on Hire-purchase. Full list free. Inquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions.—HENRY LEWIS & SONS, Thames Bank Iron Works, Reading.

ASHWORTH'S MANURES are the best and cheapest. All strengths of Superphosphates, Dissolved Bone Compound, Pure Dissolved Bones, Bone Meals and every other Fertilizer. Special terms to wholesale buyers on application. Agents wanted where not already represented. Also makers of the famous Ashworth's Cakes, Meals, Linseed and Cotton Cakes, Calf Meal and Condiment, &c., &c.—ASHWORTH'S, LIMITED, Manure and Oil Cake Works, Frodsham Bridge, via Warrington.

POWDER FOR DESTROYING LICE in CATTLE and HORSES, a sure remedy, simply sprinkled, and no washing required, and quite harmless, 1s. per lb., over 3lb. post free.—E. RUMSEY WILLIAMS & CO., Rhuddallt Fawr, Carnarvon.

BASIC SLAG, or Thomas' Phosphate Powder. The cheapest and most efficacious fertilizer for grass land. Analysis guaranteed. Apply early.—THOMAS BRADBURN, Wolverhampton.

BASIC SLAG, Kainit, Bones, Bone Meal, Superphosate, &c. State quantities required and station, when prices, analysis, &c., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

HORSES. — PEDICURA, for horses' feet, cures thrush, canker, seedy, brittle, shelly hoof, corns, cracked, greasy heels, foul smell of feet, itchy mane, tail, or legs, harness or other sores. Tins 2s. 6d., of agents, or post free,—GREGORY & CO., Temple, Bristol.

WIRE NAILS, Mixed, 9s. per cwt.; 28 lbs., 2s. 6d.; Screws, Mixed, 34s. per cwt.; 28 lbs., 9s.; wire, cut, wrought and malleable nails, tacks, shoe nails, rivets, &c., wholesale prices.—MIDLAND NAIL WORKS, 25, Rea Street, Birmingham. (John Pyne, Proprietor.)

SULPHATE OF AMMONIA.—Farmers and cultivators of the soil should give this valuable fertiliser a trial. It is the best artificial manure for grass, wheat, barley, roots, potatoes, &c. One ton of Sulphate of Ammonia contains as much nitrogen and will go as far as 25½ cwt. of nitrate of soda. It is not washed out of the ground by rain, and is not so readily exhausted from the soil as nitrate of soda. Pamphlets of instructions for its use will be forwarded, post free, on application. Present price (free on rail at Sheffield), 11s. 9d. per cwt.; larger quantities specially quoted for. Cheques and post office orders to be made payable to the Manager, THE SHEFFIELD UNITED GAS LIGHT CO., Sheffield.

BEST & CHEAPEST MANURE for all farm and garden crops, "NATIVE GUANO," a safe and reliable fertiliser, and an effectual remedy for fly, slug, wire-worm, &c.; price £3 10s. per ton in bags, 2 ton lots carriage paid, 1 cwt. paid to any station in England on receipt of P.O. for 5s. Extracts from 26th annual collection of reports: Native Guano for Grass, Grain, and Root Crops. G. Dickson, Selby: "Oats and barley did well Heavy crop of cattle cabbage. Highly satisfied." E. Stanford, Warnham: "Clover good. Stopped fly on turnips. A good manure." H. O. Habberfield, Forestfach: "Oats 60 bushels per acre. Mangolds, best crop I ever had. Very pleased." W. Price, Hardwick: "A cheap and good manure for clover and swedes." J. Knight, Wisbech St. Mary: "Very good crops of mangolds and potatoes. Biggest and finest potatoes I ever had." W. Allsopp, Bloxwich: "Mangolds the finest crop ever seen on the farm. Swedes excellent." G. W. Gilbert, Boultham: "Cannot speak too highly of it for wheat; answers well for grub and wire-worm.' J. Powell, Lulsley: "Hops, a very good crop.'—Orders to the NATIVE GUANO CO., LIMITED, 29, New Bridge Street, London, E.C., where TESTIMONIALS FROM ALL PARTS AND FOR ALL CROPS MAY BE OBTAINED. AGENTS WANTED.

RATS CAN BE AT ONCE KILLED by laying down SANFORD'S POISON! They take it readily, and are found dead. "I found 42 rats dead with it in my wheat stack.—JOHN HALL, Morden." Cats and dogs won't touch it. Farmers who have used it say it is the best they ever tried. Also POISON FOR KILLING MICE in corn stacks, and POISON FOR KILLING MOLES on land. Post free 1s. 2d., 2s., and 3s., of SANFORD & SON, Sandy, Beds.—Sold by chemists.

MISCELLANEOUS.

OIL ENGINES.—"CUNDALL'S PATENT ENGINES" are the simplest to work.—Sole Makers, R. CUNDALL & SONS, Ltd., Shipley, Yorks, London, and Paris.

CORRUGATED GALVANISED ROOFING Complete Roofs, Iron Fencing, Gates, Netting, Tubes, Felt, Troughs, Cisterns, and every Farm Requisite. Catalogues free.—J. A. REEVE, Stony Stratford.

FARMS, ESTATES, MILLS, BUSINESSES, &c.

FARMS.—Rents from 10s. Acre; prices £7 Acre. Monthly List 2 stamps. RUTTER, 10, Norfolk Street, Strand, London.

BAXTER, PAYNE, AND LEPPER, LAND AGENTS, FARM AND TIMBER VALUERS, SURVEYORS, HOUSE AGENTS, AND AUCTIONEERS, Undertake valuations of FREEHOLD and LEASEHOLD ESTATES, and all kinds of PROPERTY for SALE either by AUCTION or PRIVATE CONTRACT.

A MONTHLY Register published of Country Houses and Estates to be Let or Sold (Furnished or Unfurnished) in the Home Counties and elsewhere, free on application; SEPARATE LIST OF FARMS.

Auction dates are fixed as may be required. London office: 69, King William Street, E.C. Country offices: Bromley, Kent; and at Beckenham.

CHICHESTER, Sussex (within three miles of Goodwood).—TO BE SOLD or LET, a desirable RESIDENCE, standing in its own ground, and containing sixteen rooms, three dressing-rooms, and domestic offices; approached by a drive, with charming grounds attached, consisting of archery and croquet lawns, tennis lawn, shrubberies, and shady walks, with miniature lake; kitchen garden; stabling for four horses and double coachhouse; the whole containing about 8a. 3r. 23p., being about fifteen minutes' walk from the cathedral and twenty minutes from the railway station, lying to the north of the city. With the Residence can be Let about thirty acres Meadow Land.—For further particulars, apply to Messrs. WYATT & SON, Auctioneers, Valuers, and Estate Agents, East Street, Chichester.

SUSSEX.—A very desirable FARM TO LET, with immediate possession, about 12 miles from Brighton, and five miles from two stations, consisting of 170 Acres of very productive old grass in first-class condition, thoroughly drained, having been in owner's hands for several years. The fields are of convenient sizes and well-watered. There is a fine old-fashioned Farmhouse, which could be made suitable for a gentleman; it stands on high ground and commands extensive views. The Farm buildings are commodious and sufficient for the holding. The Shooting is included with the Farm. Rent £250 per year. For further particulars and to view apply to Mr. KAY, Estate Agent, Methurst, Horsham.

BAKERY, CORN & FORAGE.—Very genuine old-established BUSINESS FOR SALE, owing to ill-health of proprietor. Practical monopoly of high-class residential district in Surrey, 14 miles from London. Excellent House and Premises, Stabling and Paddocks, 12 acres, long lease, low rent.—Apply, FULLER, MOON AND FULLER, Auctioneers, No. 83, High Street, Croydon. (2,106.)

TO BE LET, at Michaelmas next, in ESSEX, Good MIXED SOIL FARM, 300 Acres, one-third good old Meadow Land; capital Water Supply, excellent Farmhouse and Premises, with Covered Yards and Six Cottages; close to Village, and 3 miles from Market Town.—Particulars, apply A. BLOMFIELD, Orange Hall, Gosfield, near Halstead, Essex.

AUCTION SALES.

CONTINUED FROM FRONT PAGE.

AT THE AUCTION MART.

EDWIN FOX & BOUSFIELD. On WEDNESDAY NEXT, APRIL 9th, at TWO o'clock, in lots. Samuel Kidd & Co., Ltd. Isleworth Mills, and 37, Mark Lane, E.C.—500 £5 ORDINARY SHARES (fully-paid). Last year's dividend 5 per cent. The Company carries on the old-established businesses of Millers and Corn and Flour Merchants; is in a most prosperous condition, as the net profit for 1901 was nearly equivalent to paying a dividend on the Ordinary Shares of 9 per cent., and the Shares offer to investors a thoroughly sound investment, with every prospect of increased dividends in the near future.

Particulars at Messrs. EDWIN FOX & BOUSFIELD'S Office, 99, Gresham Street, Bank, E.C.

EAST & CO.'S HORSES. SPECIAL NOTICE.

The SALES by AUCTION, at 7, Curzon-street, Mayfair, this day, MONDAY, and to-morrow, TUESDAY, April 7 and 8, will comprise—

170 HIGH-CLASS Seasoned HORSES that have just come in off job under the option of terminating the contract given by Messrs. East & Co.

Messrs. W. & S. Freeman beg to draw special attention to these sales of grand harness horses, in condition, with quality, manners, and free from engagements, to be sold, without reserve, at ELEVEN o'clock each day.—On view.

Catalogues of W. & S. Freeman, Aldridge's, St. Martin's-lane, and Messrs. East & Co., 7, Curzon-street, Mayfair.

EAST & CO. VALUABLE HORSES by AUCTION. Messrs. W. & S. FREEMAN desire to draw special attention to the SALES by AUCTION, next THURSDAY and FRIDAY, April 10 and 11, at ELEVEN o'clock each day, at Dudding-hill Farm, Willesden, without reserve, of

187 CARRIAGE HORSES, mostly purchased in Ireland, 5 yrs old and upwards, 15.3 to 16 hands and over, of exceptional value, style, all-round action, quality, and bone, bought by Messrs. East with the greatest care, broken by them for their business, are ready to go to work, and comprising Match Pairs of Landau and Barouche Horses, Stylish Victoria Pairs, Brougham Horses, State Carriage Horses, Teams, and Single Harness Horses.—On view.

Dudding-hill, Willesden, is within easy drive of the Marble Arch, and there is a frequent service of trains from Baker-street Station, Metropolitan Railway, to Willesden-green Station. A four-horse coach will leave 7, Curzon-street, at two o'clock next Wednesday, April 9, and a coach and break on each sale day at 9.30 a.m. for Dudding-hill.

Catalogues of Messrs. East & Co., 7, Curzon-street, Mayfair; Messrs. Rollit & Sons, Solicitors, 3, Mincing-lane, E.C.; Messrs. G. H. Barber & Son, Solicitors, 13, St. Swithin's-lane, E.C.; and the Auctioneers, W. & S. Freeman, Aldridge's, St. Martin's-lane.

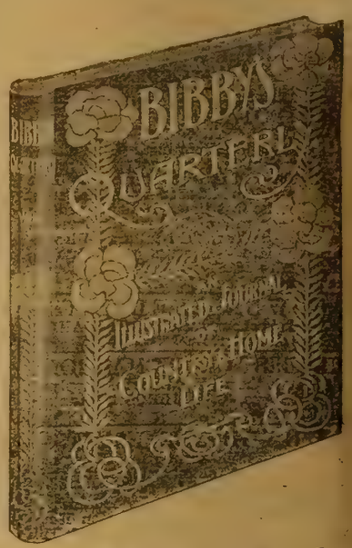
BIBBY'S QUARTERLY

AN

Illustrated Journal

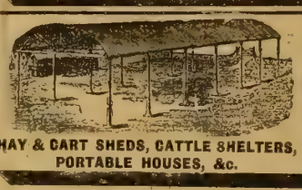


OF

COUNTRY & HOME LIFE.

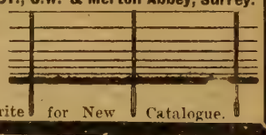
THE SPRING NUMBER of BIBBY'S QUARTERLY, completing Vol. IV., is now ready, and will be sent postage paid to any address on receipt of nine penn stamps, or it may be had at this office or at the office of any of our agents for 6d.

We have been trying to make BIBBY' QUARTERLY the most interesting and useful journal that a farmer can buy, and the present number is the best we have yet turned out.



The complete volume, carefully indexed and neatly bound as below, will be ready on the 1st of April, and will be forwarded after that date to any address on receipt of 3s. 6d.

Vol. IV. of BIBBY'S QUARTERLY make very handsome volume, and is, we believe, the best book of its kind on the market.



Orders may be given to our local representatives, or to the Publishers,

THE TRUCK ACTS.

The object of these Acts is to prohibit the payment in certain trades of wages in goods or otherwise than in the current coin of the realm. The Acts only apply to artificers, workmen, labourers, and persons engaged in manual labour. Originally they did not extend to agricultural labourers, but the provisions have been extended to them in recent years, with this important proviso—that nothing in the Acts shall render illegal a contract with a farm servant in husbandry for giving him food, drink (not being intoxicating), a cottage, or other allowances or privileges, in addition to money wages, as remuneration for his services. But for this modification, the convenient practice of boarding and lodging the lads on a farm would have been knocked on the head. With this exception, wages must be paid in cash, without any stipulation as to the manner in which they shall be spent, and payment in produce or other goods is illegal.

The application of the Acts to agricultural labourers has just received a singular illustration in the Courts, under the following circumstances: In March, 1899, a man named William Cooper applied to a farmer for a situation, and was engaged as waggoner, at 14s. a week, with a cottage and garden rent free. Cooper alleged

that it was also arranged that he should have three quarts of cider a day, but this was denied by his employer. A written agreement had been entered into between the parties, but had been lost, and it was not very clear what it contained. The farmer said that the cider was not a term of the contract, and was not mentioned in the agreement, although, as a matter of fact, it had been supplied. Cooper, on the other hand, was not sure whether the allowance of cider was put into black and white or not, but he was sure that it ought to have been, inasmuch as there was a verbal arrangement concerning it, but for which he would not have taken the situation. Twice subsequently Cooper proposed to leave, but was induced to stay by an increase of wages. No fresh arrangement was made about the cider, but its supply seems to have been continued as a matter of course. In June, 1901, Cooper was dismissed, and thereupon he sued before the justices for wages alleged to be due to him, and for 6s. 8d. on account of cider. It is not clearly stated how the claim for cider arose, but presumably it was for so much cider in lieu of notice. He got an order for the wage, but the amount claimed for cider was disallowed, on the ground that the justices found as a fact that the written agreement had not included the cider, and they could not go outside it.

But the matter did not end there, for the justices went on to fine the farmer for a breach of the Truck Acts, through having supplied cider in part payment of the wages. It will be noticed that the provision allowing food and drink to be taken into account in remunerating farm servants only extends to non-intoxicants, and therefore payment in cider, beer, or other alcoholic beverage is prohibited. It appeared from the evidence in this case that most of the men employed on the farm were supplied with cider, but those who did not have it did not receive any additional wages in consequence, and the farmer contended that the supply could have been discontinued at any time. It was also proved that Cooper usually had three quarts of cider a day, but atht if he did not take his allowance he received no equivalent in money or otherwise. In these circumstances, the justices came to the conclusion that the cider supplied to Cooper was given in part payment of wages, under a verbal arrangement or understanding existing between the parties, and they convicted the employer of a breach of the law.

A question, however, was reserved for the opinion of the High Court, viz.: whether the justices were right in receiving and acting upon evidence of a verbal arrangement to supply cider in part payment of wages, and in allowing such evidence to prevail, in spite of the existence of a written agreement of hiring which was wholly silent on the subject of cider. But the High Court upheld the decision of the justices, declining to accept the contention that where there was a written contract as to wages to be paid, the Court ought not to look at a verbal arrangement made between the parties, even if it were found to be an undertaking to supply something other than money in payment of wages. The result would be to reduce to a nullity the following words of the Act, viz.: "Within "the meaning and for the purposes of this "Act any agreement, understanding, device, "contrivance, collusion, or arrangement what-"soever on the subject of wages, whether oral "or written, whether direct or indirect, to "which the employer and workmen are "parties, or are assenting, or by which they "are mutually bound to each other, or "whereby either of them shall have en-"deavoured to impose an obligation on the "other of them, shall be and be deemed a "'contract.'"

The importance of the decision to farmers can hardly be over-estimated, for it strikes a staggering blow at the very prevalent, and almost unavoidable, custom of giving casual labourers their "'lowance" at hay time and harvest. It will still be lawful for a master to stand his servant an occasional drink, for a genuine gift made by an employer out of kindness cannot be treated as payment of wages; but it will be almost impossible for a farmer to contend that the customary "'lowance" is not a part of the bargain. If he thinks he can do so, let him try it by stopping the beer, and see how long his "datal" men will stop with him. He will soon find that he must give them a drink or its equivalent if he expects them to work; and, as it is illegal to give them intoxicants in part payment, he will have to give an increase of wage corresponding with the value of the beer or cider which would otherwise have been allowed for each man. The only alternative is to become a disciple of total abstinence, and deprecate the value of his barley and apples by substituting teetotal beverages for the natural products of his grain and fruit.

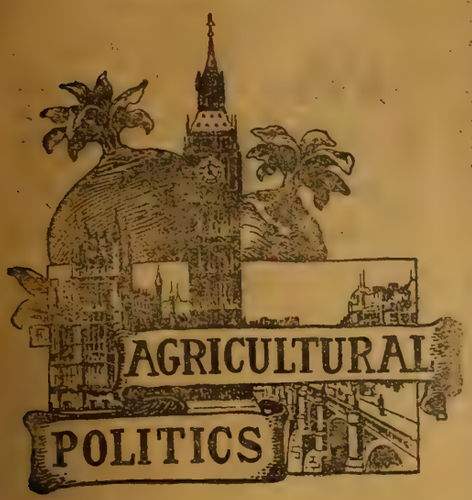
Fortunately, the Acts do not apply to domestic or menial servants, so the charwoman may still quench the thirst of spring cleaning with a glass of beer.

By a Man of Mark Lane.

The annual Local Taxation Returns for Scotland for the year 1899-1900 were issued last week as a Blue-book. They show that, excluding loans, the revenue of the various local authorities during the year under review amounted to £11,082,392, of which £4,599,243 was derived from assessment (representing £1 0s. 9.3d. per head of the estimated population), £1,965,038 from imperial subventions and payments, £1,111,824 from tolls, dues, fees, and fines, and £3,404,282 from miscellaneous sources. The expenditure of local authorities not defrayed out of loans amounted to £11,102,682; the receipts from loans came to £4,072,118, and the expenditure out of loans £3,740,370. The loans outstanding at the close of the year amounted to £42,638,363, equivalent to £9 12s. 7d. per head of the estimated population.

I have received a copy of the second memorandum on the wheat crop of the Bombay Presidency for 1901-1902, issued by the Bombay Department of Land Records and Agriculture. The information given relates to the condition of the crop up to February 20, and it states that the wheat area in the Presidency, including Sind and Native States, is is 16.7 lákhs acres, or 13 and 37 per cent. respectively below last year and average. The decrease is general, and due generally to deficiency of late rainfall in Presidency and to low floods in Sind. Substitution of jowár and other crops also accounts for some decrease. The crop suffered from insufficiency of moisture everywhere, and particularly in Gujarát and eastern parts of Deccan and Karnátak. Rats have further done extensive damage to surviving crop throughout Gujarát and Khándesh. Here only a very low outturn is expected; elsewhere the crop will yield somewhat better.

According to the second general memorandum on the winter oilseed crop of India, issued by the Statistical Department of the Government of India, the reports concerning the crops are uniformly unfavourable, the failure of the winter rains having induced a condition of drought which restricted sowings and afterwards injuriously affected the growing crop. In the Punjab and the Frontier Province the crop of rapeseed on unirrigated land will perhaps hardly yield a harvest, and about four-fifths of the crop is grown on such land. In Sind, also, the crop is not good. In the North-Western Provinces and Oudh, and in Bengal and Madras, conditions are better, and a fairly good crop is anticipated. But in the Central Provinces, Bombay, Berar, and the Nizam's territory the drought, rats, and insects have combined to reduce the yield to a level very much below the average.



The Hull Corn Trade Association have decided, after experiments, that repeated handling, for testing the weight per bushel of wheat, adds to the natural weight, and they recommend that the first test shall be decisive.

The Revenue Returns for the financial year ending on Monday last have been issued. The amount of Revenue paid into the Exchequer was £142,997,999, being a net increase of £12,613,315, as compared with the financial year ending March 31, 1901. The Chancellor of the Exchequer, in his Budget speech, last April, estimated that the Revenue for the year would be £142,455,000, so that the Revenue exceeds the estimate by more than half a million. There was a decrease in receipts from Excise of £1,602,945; in Crown Lands of £45,000; in stamps of £25,000; in Land-tax of £30,000; and in miscellaneous of £252,243. The following increases for the year are shown: Customs, £4,713,893; Property and Income-tax, £7,880,000; estate duties, £1,309,720; Post Office, £500,000; house duty, £55,000; telegraph service, £40,000; and Suez Canal shares and loans, £39,558.

Revised estimates of the New South Wales Government statistician on the wheat yield have reduced the area under crop to 1,390,000 acres, with an actual yield of 14,705,000 bushels, equal to 10.6 bushels per acre.

James McMillan, a son of one of his Majesty's cattle minders at the Flemish Farm, Windsor Great Park, for rescuing from drowning a few weeks ago three boys, aged fourteen, eleven, and nine years respectively, was presented with the vellum testimonial of the Royal Humane Society by Prince Christian at Cumberland Lodge on Thursday. The children fell through the ice on a pond in Windsor Great Park during the skating season, and were gallantly rescued by McMillan.

Sale of Diseased Meat.—At Worship Street Police Court on Friday, Frederick Hardy, cattle dealer, Barnes Farm, Hillingdon, Middlesex, was summoned for having sold to Walter Bridger the carcase of a cow in such a condition as to be liable to be seized under the Public Health Act.—Mr. W. T. Ricketts, solicitor, prosecuting for the Borough Council of Finsbury, said that the case arose out of the prosecution of a retail butcher named Bridger, of Lever-street, St. Luke's, where some 200lb. weight of pieces of beef had been seized as diseased, suffering from kidney disease to such an extent that it had evidently been killed at the last stage. That was the medical evidence on which Bridger was convicted; but the Act under which the proceedings were taken made the person who sold the carcase to the retailer equally liable. The history of the carcase had been traced since the proceedings against Bridger, and it was found that it was the body of a cow which, in the possession of a milk dealer named Wakely, was found to be wasting, and in that condition was sold to a dealer and carcase knacker named Dance for £4. The cow was then down, and unable to rise, and Dance, having failed to get it to rise, killed it at Wakely's farm and removed the carcase in his cart to his place at Stanmore, where, apparently, it was dressed in the usual way for food. Dance, it appeared, then sent a telegram to Hardy, who was a carcase dealer in an extensive way of business, sending hundreds of sides of meat to Smithfield, and therefore a man with full knowledge of his trade. He, it seemed, inspected the carcase at Dance's; it was removed from there, and next found in the shop of Bridger.—The Magistrate said he was satisfied the meat had been sold by Hardy, and fined him £20, and five guineas costs.

By a Lobbyist.

The one talk in political circles is as to the character of the forthcoming Budget. Of course, Sir Michael Hicks-Beach is a Free Trader; of that there is no doubt. He might have been a direct descendant of Richard Cobden, so unswerving is his fidelity to the faith. Yet there is talk to-day of a tax upon imported corn. When the Devil drives need's must, and Sir Michael is confounded by the fact that he has exhausted most of the avenues of taxation. An added tax upon incomes, an added tax upon beer, an added tax upon estates, would mean an eternity of protests and a strong revulsion of feeling against Toryism. Hence it is that there is a strong belief that Sir Michael will proceed to delight the heart of Mr. James Lowther and to inflict a tax upon imported cereals. If this be so, it means infinitely more than appears on the surface. It means—if I may be grandiloquent—the first invasion of the domain of the Free Trade fetish.

Of course, Sir Michael has many antagonisms to battle. He has the antagonism of Toryism, first of all. This is more serious than the antagonism of Liberalism. A man loves to fight his enemies, but to be compelled to war with his friends is disconcerting. This is what Sir Michael will have—I am assuming that his reported intention is true—to do. This antagonism will not be the less rigorous or vehement because it is inspired by men who formerly worked with him in friendship. I suppose few comprehend how strenuous is the feeling in favour of Free Trade among a section of the Tories. These men may be said to be the lineal descendants of Sir Robert Peel and of the small throng of Conservatives who attached themselves to his fortunes. If Sir Michael has resolved to fight them he has resolved upon a deed of heroism.

I do not know how far the MARK LANE EXPRESS has influence with the advocates of pure beer, but if it has any, I strongly advise them to abandon their present measure. The Pure Beer Bill is simply conciliation, run to silliness. In the desire to reconcile opponents, its authors have robbed the original Bill of every element of determination and of every fibre. Of what will it avail if the Bill be passed? Whom will it hurt? For the life of me, I cannot say or perceive. True, the Bill does restrict the quantity of substitutes which may be used; but apart from that it does nothing. The Bill is thus foredoomed ere it has passed its first reading; it is foredoomed by reason of its insincerity, its lack of manliness, its endeavour to conciliate men who are inevitable enemies. This new Bill is a bad, weak, and insincere proposal.

For the life of me I cannot comprehend how the leaders in the agitation consented to this measure. No one doubts the sincerity of these men. Sir Cuthbert Quilter has made it the subject of his ambition, and—what is of quite as much value to him—his best quips and quirps. Mr. F. W. Wilson fought his first election on this issue, and he made the Norfolk electors writhe in anguish as he depicted the tragic possibilities of the tied house system. Mr. Purvis, the member for Peterborough, gave to the agitation all the advantage of his legal training, and all the wisdom of a singularly astute mind. What could be the intention of men of this character in presenting the tepid Bill that was sent out to legislators last week? I am in favour of the principle animating the pure beer agitation, but, frankly, I should vote against this measure, and that because, from my point of view, it would achieve nothing.

The last Bill was opposed with bitter vigour by the members for several Northern constituencies. I do not for a moment impugn their motives. That Bill, but for their vigilance, would have passed into law. Ill-drafted as it was, it was yet direct enough in its intention. It meant to have pure beer. It might have got it in an indirect and undecided fashion; but, still, there was the intention. If they are wise, the opponents of this principle will accept this Bill. There is an unwritten law of the House of Commons that once a Bill has been accepted, dealing with a specific question, it is "bad form"—I know no other phrase—to introduce within a given period another measure assailing the same grievance. This Bill can do them no harm and its acceptance would prevent another measure dealing with the same quetsion being introduced. I have described the Bill as tepid. It is worse. Tepidity has a certain element of strength associated with it; this has none.

Sir Wilfrid Lawson on Protection and the Discontented Farmer.

A meeting of the Cumberland and Westmoreland Chamber of Agriculture was held at Carlisle on the 29th ult, when the various resolutions and amendments on the subject of "Rural Depopulation," brought forward at the last two meetings, were voted upon, and the debate brought to a conclusion. Mr. Tinniswood, Rosebank, presided, and there was a good attendance including Sir Wilfrid Lawson, of Brayton. The chief motions included protection as one of the remedies.

Mr. Elliot, Clappers, who proposed the original motion, submitted that nothing contrary to the terms of his resolution had been advanced as to the cause of country people crowding into the towns, where they found rivers of whisky, hills of tobacco, and mountains of money.

Mr. Savage, Lingeycloseheed, said his argument was to attach the labourer to the land by providing a suitable home and granting certain perquisites.

Sir Wilfred Lawson: The amendment is protection.

Mr. Watt, Ravenglass (Lord Muncaster's agent): The motion is protection as well.

Sir W. Lawson: It is all protection. He said he must be very careful not to be led awayby metaphors, which were ruining the statesmen of this country (laughter). They were perfectly muddled in metaphors. They should endeavour to speak in a manner in which they could be understood. He had read a discussion on this subject by the Central Chamber of Agriculture, and found they did not talk any better sense than they did at Carlisle. Whatever was done, farmers always remained in a depressed and distressed condition (hear, hear). Yes, "Hear, hear." He never knew the time when it was not so. He did not expect if he lived to be a hundred that he would ever see the farmers contented. Three-fourths in that room wanted protection. (Hear, hear, and "No! No!") Mr. Watt (Knowefield) was the arch-apostle of protection. (Laughter.) He would tell Mr. Watt what it was. Protection was artificial scarcity. It was making a thing more difficult for the consumer, and that was not a proper thing for a Government to do. He knew he was looked upon as a territorial blackleg. He read the other day that his style of oratory was a mixture of Jeremiah and Joe Miller. He had never read anything better than that. (Laughter.) It gave him great pleasure. Jeremiah was a worthy man, and above all things he spoke the truth. As to Joe Miller—he would much rather be Joe Miller than Joe Chamberlain. (Laughter.) As regards protection, he did not know what the people of this country would do. He had come to the conclusion that there was no folly they would not commit. It was within the bounds of possibility that they might go back to Protection. Why should we return to the old system of fifty years ago? If they read history they would find that before the repeal of the Corn Laws there were as many commissions, committees, inquiries, complaints, groanings, moanings and jeremiads as there were now. (Laughter.) The wretched farmer was as ground down and miserable then as he is now.

Mr. Lamb, Cumrew, speaking in favour of a readjustment of taxation, instanced his own household, and said he found he had been paying 19s. indirect taxation on tea in the last twelve months. If that tax was taken off the tea, which we did not produce, and put on the 9 quarters of flour he had consumed in the same period, the British farmer would gain and the consumer would lose nothing.

Mr. James Watt, Knowefield, spoke strongly in favour of inter-colonial trade and protection against foreign countries, and said that though Britain had flourished greatly since the Corn Laws were abolished, other countries had done the same, and our prosperity could not be credited entirely to the abolition of those laws.

Mr. Watt, Ravenglass, replied on his amendment, and said he would like to see the old system of the labourer's cow revived; it was a stepping-stone to the small farm. The experience of other countries showed that assisted farming was not an illusion.

As a result of discussion, the subject was brought to a conclusion by the passing of the first part of Mr. Watt's amendment, affirming the necessity for such measures as will lead to a discontinuance of the present disastrous conditions affecting agriculture in this kingdom. The second part of the resolution concerning the grant of monetary assistance and the desirability of protective measures was abandoned.

OUR LIST OF SHOWS.

The Mark Lane Express

POCKET BOOK

AND

LIST OF AGRICULTURAL SHOWS

Our list of Agricultural Shows is this year issued in the form of a pocket book, of a convenient size, which, in addition to containing the Show Fixtures for 1902, includes a considerable amount of useful information, consisting of Railway Rates for Stock, tables, etc. The Pocket Book consists of 72 pages and cover, and is of a size eminently suitable for the purpose for which it is intended. A vacant page for memoranda faces each page of the Show Fixtures, and this arrangement will be found of great use, enabling readers to easily and quickly make a note of any prospective engagements.

Copies of the "Mark Lane Express Pocket Book and List of Agricultural Shows" may be obtained free upon application to 1, Essex Street, Strand, London, W.C., the only stipulation being that ½d. stamp for each copy required is forwarded to cover the cost of postage.

COMING SHOWS.

Bath and West at Plymouth.

The following is a list of the gentlemen who have agreed to act as judges at the Bath and West and Southern Counties Society's Show at Plymouth on May 27th and four following days:—

HORSES.—Agricultural: W. Crosland, Estate Office, Buscot Park, Farringdon. Hunters: Mr. Angas, Manor House, Whissindine, Oakham. Hackneys and Ponies: J. Griggs, South Creake, Norfolk. Harness Horses and Jumping: G. Gordon, Wincombe Park, Shaftesbury; and H. Lewis, Green Meadow, Cardiff.

CATTLE.—Devon: W. S. Perry, Crelake, Tavistock. South Devon: B. W. Coaker, Old Newnham, Plympton St. Mary Shorthorn: R. L. Angas, Blenheim, Woodstock; and J. Peter, Berkeley Castle Estate Office, Berkeley, Glos. Hereford: C. Williams, Glenthorne, Holmer, Hereford. Sussex: A. Heasman, Court Wick, Littlehampton, Sussex. Red Polled: A. D. Bruce, Estate Office, Elvetham Park, Winchfield, Hants. Abereen Angus: Rev. C. Bolden, Preston Bissett, Buckingham. Jersey: J. H. Shore, Whatley House, Frome; and E. Matthews, Chequer's Mead, Potters Bar. Guernsey: H. J. Gibbs, Milford, Salisbury. Kerry and Dexter: F. N. Webb, Babraham, Cambridge.

SHEEP.—Cotswold: W. T. Garne, Aldsworth, Northleach. Devon Long-woolled: W. Greenway, Manor Farm, Halse, Taunton. South Devon: B. Butland, Leigham, Plympton. Southdown: H. Senior, Tarrant Rushton, Blandford. Hampshire Down: E. Lyne, Hillus, Compton, Winchester. Shropshire: T. S. Minton, Montford, Shrewsbury. Oxford Down: C. Bryan, Southleigh, Witney. Exmoor: R. J. Stranger, Court House, North Molton. Dartmoor: R. S. Luscombe, Wisdone, Cornwood, Ivybridge. Somerset and Dorset Horned: J. Kidner, Nynehead, Wellington, Somerset.

PIGS.—Berkshire: E. Burbidge, South Wraxall, Bradford-on-Avon. Large Black: W. Orchard, Trethorne, St. Thomas, Launceston. Large, Middle, and Small White or Black, and Tamworth: J. Barron, Elvaston House, Borrowash, Derby.

POULTRY.—W. B. Tegetmeier, 16, Alexandra Grove, N. Finchley; and P. Percival, Somerset Court, Brent Knoll, Somerset.

PRODUCE.—Cider: J. H. Hill, New Take, Staverton, Totnes. Cheese: Francis Meade, Langport. Butter and Cream: Prof. Carroll, Royal Albert Farm, Glasnevin, Dublin.

WATERPROOF SHEETS

FOR

THRESHING MACHINES,
PORTABLE ENGINES,
MILLER'S, CARRIERS,
LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

J. H. PECK & CO., LTD., WIGAN.

Established 1808. *Telegrams*—"Peck, Wigan."

The Labelling of Margarine.

The Leeds Stipendiary Magistrate (Mr. C. M. Atkinson) delivered judgment on Thursday at the City Police Court in a case of considerable importance to a large class of traders. The case was one in which Henry Wales Walker, grocer, of Somerby Street, Leeds, was summoned for a breach of the Margarine Act in respect of the exposure for sale of certain margarine known to the trade as "Churno."

In the course of his judgment his Worship said it was alleged that the defendant neglected to conform to the statutory regulations as to the disposition and surroundings of margarine when exposed for sale by retail. Section 6 of the Margarine Act, 1887, provided that if margarine be so exposed, "there shall be attached to each parcel thereof, in such manner as to be clearly visible to the purchaser, a label marked in printed capital letters, not less than one and a half inches square, 'Margarine.'" In the case under consideration a special description of margarine known as "Churno" had been supplied to the defendant in a wooden box or package properly branded on the top, bottom, and sides as required by the Act. The box contained 24lb. of "Churno," in 1lb. and ½lb. packets ready for delivery to purchasers, each of them being enclosed in a paper wrapper on which the word "margarine" was printed in capital block letters of the prescribed size, unaccompanied by any other printed matter.

In all other respects it was conceded that there was a strict compliance with the statutory regulations. It was, however, charged against the defendant that there was a breach of the provision cited as to the attachment of a label. As the package lay on the shelf, or counter, the lid was open and fastened in a vertical position. To the inner surface of the lid, exposed to the gaze of the customer, was affixed a placard or label on which was printed in capital letters the word "Margarine." It might possibly have been contended that the label was not in strictness "attached" to the parcel; that there should have been a separate label attached to each packet, and that the letter "I" was not 1½in. "square." But Mr. Jolliffe, who represented the local authority—very properly, as he (Mr. Atkinson) thought—did not raise those issues, but rested his case solely on the one point of substance as to which a decision was sought, namely, that the label, in addition to the word "margarine" contained other printed matter—the word "Churno" in prominent capitals, followed in smaller type by the words "a new and perfect substitute for butter."

He failed to find any statutory prohibition against the introduction of the matter imported. The addition might be such as to obscure the label, or it might defeat the whole object of the label, as if the words were, "This is not margarine." However small might be the words "this is not," and however large the word "margarine," the addition would clearly constitute a violation of the Act. But he saw nothing in the Act to forbid the use on the "label" as distinguished from the "paper wrapper" of a laudatory adjective, or even, as in the case under consideration, the addition of a fancy name. He must confess that he was glad to be able to arrive at such a conclusion, as customers and the public generally had the fullest possible notice that the substance to be sold was not butter, and was, in fact, margarine. In his opinion, the legislation was intended to protect the public against imposition and fraud, not to expose traders who sell a perfectly wholesome and nutritious article of food, to harassing proceedings, undertaken at the instance or in the interest of rival traders who were concerned in the production or sale of butter.

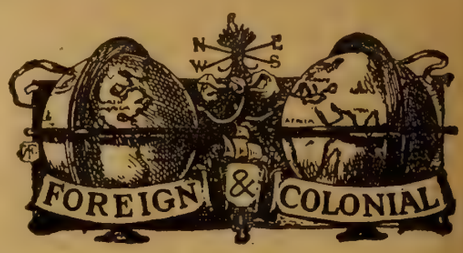
His Worship then stated that he would simply dismiss the summons.

Prices of Foreign and Colonial Milk.

In reply to a question put in the House of Commons, Alderman Joyce, M.P., received from Mr. Hanbury, Minister for Agriculture, on Thursday, a communication giving details of the price paid for milk in Denmark, Canada, and Australia. In Denmark the average price paid to farmers by co-operative dairies ranged from 5d. to 5⅓d. per gallon. In Canada the price is about 4⅜d. for milk supplied to cheese factories. With regard to Australia the accounts of 13 co-operative dairies show that 3⅛d. to 4⅜d. per gallon was paid for milk delivered to dairies last year.

Gainsborough Cheese Fair.

The cheese fair in connection with the annual Easter Mart and Fair was held at Gainsborough on Tuesday. There was a fair trade all round. The general run of prices was as follows:—Choice dairies of Cheshires and Trentsiders, 6d. to 8d. per lb.; Cheddars (English), Leicesters, and Gorgonzolas, 7d. to 8d. per lb.; Derbys, 6d. to 7d.; Americans, 5d. to 6d.; English Stiltons, 9d. to 10d. per lb.



Nantwich Cheese Fair.

At the monthly cheese fair, held at Nantwich, on Thursday, there was a pitch of 22 tons of cheese. There was a large attendance of buyers from the principal centres, and the market was fairly brisk, though quotations were slightly lower than a month ago. Best Cheshire made from 68s. to 72s. 6d.; medium, 63s. to 66s.

The death has occurred, at his residence, Hacconby Manor, near Bourne, at the sixty-six, of Mr. James Measures, one of the best-known agriculturists in South Lincolnshire, and a member of the Kesteven County Council. In addition to occupying a large acreage, much of which was under the Earl of Ancaster, he was also an extensive landowner. The deceased gentleman was a member of the Kesteven County Council, and his services in public matters were frequently requisitioned, he holding many offices of trust and responsibility.

Huddersfield Cattle Fair.—This annual fair was held on Monday, and was very largely attended. Toll was taken for 537 horses, 385 beasts, and 95 pigs. Some good stallions were shown. Best draught horses sold fairly well at 65 to 70 guineas, while secondary qualities realised 30 to 40 guineas, better class Hackneys £30 to £45, and secondary animals £25 to £28. A good business was done in cattle, best milch cows selling at from £14 to £18, secondary £9 to £12, and fat cattle at 5d. to 6d. per pound. Among pigs things were less animated, prices ruling from 40s. to 50s. for strong stores, and 20s. to 30s. for small stores.

Sleaford Easter Monday Fair.—At this old-established fair there was a large attendance from all parts of the county. A large show of fat sheep met with a brisk sale at an advance of 2s. per head. Large numbers of hogs in wool were penned, and realised 37s. to 44s. per head. Good supply of beasts, fresh bullocks (yearlings) made £8 to £12, two-year-olds £13 to £16, and three-year-olds £16 to £18 each. Thirty-two pedigree shorthorn bulls from noted herds were sold by Messrs. Hincks, Shakespear, and Lawrence at £10 10s. to £26 10s. each. The first prize bull, the property of Mr. Atkinson, Weston St. Mary's, sold for 26 guineas, and the second prize winner, the property of Mr. Casswell, Laughton, made 20 guineas. Agricultural horses sold at 25 guineas to 35 guineas each.

A Year's Agriculture in Canada.

How The Government Aid in Profitable Farming.

The annual report of the Minister of Agriculture for the Dominion of Canada, for the year ended October 31st last is a budget of interesting matter, in which all the salient features of national agricultural and horticultural products are portrayed. How gratifying it is to be reminded that at the Pan-American Exhibition, at Buffalo, N.Y., in the competitions for live stock, Canada carried off an extraordinary number of prizes, much larger in proportion to the number of animals entered than the United States, which was the only other competitor, with the natural result of stimulating more than ever the trade in live stock between Canada and the United States.

In the section devoted to arts and agriculture there is an instructive review of Canada's agricultural requirements, coupled with a not altogether exhaustive description of how they are being met. Cold storage, and its developments, naturally present a bold front in this volume, for next in importance to the production of foods for export comes in natural sequence the necessity for their preservation while waiting, as well as while actually in transit. The most fastidious grumbler could not find a peg in this regard on which to hang even the flimsiest of complaints. The Minister of Agriculture has not wearied the reader with superfluous statistics; and with characteristic generosity he has not taken to himself all the credit for increased prosperity in his Department of State, liberally crediting the officers of the Department with the parts they have respectively taken in bringing about these excellent results.

The farmer views progress not only by enhanced production, but also by augmented profits, and under each of these headings he shows up well. The value of some Canadian farm products exported last year showed a phenomenal increase in volume when compared with 1896, such as peas, which had risen from $1,299,491 in the latter year to $2,674,712 in 1901; flour, which had risen from $718,433 in 1896 to $4,015,226 last year; and oats, which in 1896 amounted to $273,861, had risen in 1901 to $2,490,521.

In the butter trade the value of the exports in 1901 was $3,295,663, having increased from $1,052,089 in 1896, or over 200 per cent., while from the port of Montreal alone the number of packages carried in cold storage increased from 227,863 in 1900 to 410,893 in 1901. Canadian butter is certainly winning a better relative place in the markets of the United Kingdom than it has occupied at any previous period.

The bacon trade also manifested phenomenal progress. In 1896 the value of the exports of pork, bacon, hams, etc., was only $4,446,884, whereas at the close of the last fiscal year it had risen to $11,829,820.

In cheese, while in 1896 the exports valued $13,956,571, in 1900 they exceeded $19,800,000, and in 1901 reached $20,690,951. There has been a threatened falling off in the export of cheese this year, but it is expected that this will be more than counterbalanced during the current twelve months by the establishment of consolidated curing rooms.

It is satisfactory to learn that Canadian eggs are favourites in Great Britain; and, as importers have distinctly stated how they can be successfully put at best rates on the English markets, Mr. Fisher has taken this opportunity of instructing poultry-keepers how to prepare, pack, and despatch.

The special fattening of chickens for old-country markets has passed beyond the trial stage; and here, again, the spirited enterprise of the Minister has redounded to the profit of the poultry-keeper.

Work at the experimental farm has been phenomenally prolific of information profitable to the dairyman, to the horticulturist, to the agriculturist, and to the poultry-keeper; while researches in the entomological section have been of great service.

Some important chemical investigations are chronicled, and this division of the report is of special interest to Nova Scotia farmers residing on the borders of the Bay of Fundy.

The continued systematic testing of promising varieties of agricultural crops obtainable in different parts of the world has placed Canadian farmers in the van as to knowledge of the best and most productive sorts of agricultural products. They have learned to observe the characteristic

differences in varieties, and, their powers of observation thus awakened, they have been led to bring these faculties to bear on other problems in their business to their individual advantage and profit. Their neighbours, in time, have become interested in this work, and have benefited thereby, and the good influence has thus been rapidly extending through all sections of the farming community. The new feature in the annual distribution of seed, introduced under the instructions of the Minister of Agriculture three years ago, has made this work increasingly beneficial. Under the new arrangement larger samples than those hitherto sent have been forwarded, the seed sent out being sufficient for one-tenth of an acre. In this way the relative yield per acre of the varieties under trial has been ascertained and reported on by practical farmers in every agricultural constituency in the Dominion.

The Proposed Duty on Wheat.

The Cobden's Club View.

The annual report of the Cobden Club for the year 1901 has been issued as a pamphlet, in which is also given a list of members and other particulars relating to the society, which, as most of our readers are aware, was founded in 1866 with the object of encouraging the growth and diffusion of those economical and political principles with which Cobden's name is associated. Its principal work consists in the advocacy of free trade, and its funds are mainly devoted to the printing and circulating of books, pamphlets, and leaflets in support of free trade principles.

The Club has also issued a pamphlet entitled "How to Increase the Public Revenue," in the course of which some remarks are made concerning the proposed tax on wheat, and as they may be interesting as showing the free trader's point of view, we reproduce them:—

"A tax on imported wheat would necessarily increase the price not merely of the corn directly taxed, but of the corn indirectly protected, and so would impose on the taxpayer a burden greater than the benefit derived by the Exchequer. It is sometimes argued that such a tax would benefit one of the poorest classes in the community, namely, agricultural labourers, by increasing the profits of farming, and so increasing their wages. Even were this true, we see no reason why a poor man working in a town should be compelled to pay more for his food in order to put money in the pocket of another poor man in the country.

"It is, however, not true, and never has been true, that agricultural labourers have derived any benefit from the high price of corn. Nothing is more certain than that the rate of wages of agricultural labourers does not rise or fall with the rise and fall of the price of corn. Their wages are fixed, not by the profit that one particular employer can make out of their labour, but by the general operation of the law of supply and demand upon the whole labouring population. In counties such as Durham, where there is a brisk demand for labour outside agriculture, agricultural wages are high; in counties like Dorset, where no such alternative employment exists, agricultural wages are low. The agricultural labourer is, in fact, more interested than any other class in the community in the cheapness of bread, because relatively he spends a larger amount of his income upon bread than correspondingly poor persons living in towns.

"How greatly agricultural labourers, even in corn-growing districts, have profited by the cheapness of foreign wheat is shown by the following figures taken from the report of the Board of Trade on the wages and earnings of agricultural labourers in the United Kingdom. In the year 1850, on six farms in the eastern counties, the average cash wage per week for ordinary labourers was 8s. 11d. The average price of British wheat was then 40s. 3d. per quarter. In the year 1899, on the same farms, the wages were 12s. 7d. per week; and the average price of wheat had fallen to 25s. 8d. per quarter. Thus an eastern counties labourer in 1850 would have had to give four and a half weeks of his life to buy one quarter of wheat; in 1899 he could buy the same quantity of wheat with the wage earned in two weeks.

"The only class in the community that can permanently benefit by a rise in the price of agricultural produce is the class that owns agricultural land, and whenever in our history corn has risen over a series of years, rents have risen also. It is sufficient to quote an illustration taken from Porter's 'Progress of the Nation.'

"In the year 1790 farms in Essex were letting at 10s. an acre. Wheat then stood at 53s. 2d. a quarter.

"In the year 1818 the price of wheat had risen to 122s. 8d. a quarter, and the rent of Essex farms had risen to 45s. and 50s. an acre. Thus doubling the price of wheat had more than quadrupled the rent of land.

"Incidentally we may remark that both in 1790 and in 1812 England produced the bulk of the wheat she required for her own consumption, a fact which did not prevent a famine rise of price in time of war."

The pamphlet concludes as follows:—"We see no reason to doubt that the sources of taxation upon which previous Chancellors of the Exchequer have relied are still sufficient to meet the necessities of our public expenditure. We condemned last year the imposition of the coal tax and the sugar tax, and nothing has occurred to make us modify that condemnation. These taxes tend to restore a fiscal system which was deliberately abandoned by the nation after prolonged experience of its injurious effects; they reimpose upon our industries fetters which we hoped were for ever broken, an dthey tax the necessary food of the poor, while they spare the wealth of the rich. We hold that on political grounds it is desirable to broaden the basis of direct taxation by extending the Income Tax to all incomes over £100, or by extending the Inhabited House Duty to all houses above £10 in annual value, or by both these measures. Any further revenue required should be raised by increasing the rate of the Income Tax, or by increasing the Death Duties upon the larger estates, or by adding to the taxation of tobacco and intoxicants."

Staffordshire Agriculturists Discuss the Question.

At a meeting of the Staffordshire Chamber of Agriculture, held at Stafford, on the 29th ult., some considerable discussion took place on the question of the desirability of levying a tax on all imported manufactured goods. Mr. Morris, who introduced the subject, said he thought they would be sorry as farmers to see the raw material taxed, and what they had now principally to consider was the importation free of taxation of manufactured articles. In 1901 the wheat imported to this country through Liverpool was upwards of 5,000,000qrs., of 480lb. to the quarter, and of flour there were imported 1,896,886 sacks of 280lb. each. Where this flour was imported they were short of the offals for feeding purposes. If they could have a tax put on this flour they would again see the country mills running. What was now the position with regard to these mills, as compared with years ago, in their own immediate district? At Newport there was formerly a mill which turned out some thousands of sacks a week. At Stoke they had a mill which turned an immense lot of flour out, and at Stone there were two good going mills. At Newcastle one had been closed down in the last few years. At Stafford, too, a large mill had been closed down in the last few years, and this was simply on account of the manufactured flour that came from abroad, the local millers being unable to compete with the foreigners at present prices. If there was a tax put on imported flour, the country mills would again employ the labour of the country-side, and he did not think there would be much difference to the consumer, while the farmers would get the bran and sharps for feeding purposes, which would enable them to produce meat cheaper than they could at present. He moved:—"That, in the opinion of this Chamber, it is desirable to levy a tax on all manufactured foreign goods."

Mr. Leighton, in seconding the motion, said that, in his opinion, the principle of free trade had been shaken a good deal of recent years by the prosperity of protected countries. The Germans, French, and Americans seemed to think that they could always find a market for their goods in this little free-trading country of ours. In addition to flour, there was the importation of tinned goods on a large scale. Instead of the money being spent on good English beef, people bought these things with a concoction of jellies made from they did not know what, and it was, perhaps, as well that they did not know. He believed the physique of the country deteriorated through the consumption of these abominable tinned meats, and he thought they would all agree that the money would be much better spent on home-produced beef, farmers then receiving some benefit from money spent in the country. Of course, there was the argument that it was against the general interest to raise the price of any food; but what was the use of a cheap loaf if they had not the money to pay for it? His idea was that with plenty of money a small increase in the price of a loaf would make little difference. Now the poorer people were deriving all the benefit, and he did not see why they should not be called upon to pay their share of the cost of the war. So far, only the duty on sugar had touched them. Now was the time to consider whether a duty should not be imposed on manufactured foreign goods and all imported goods.

Mr. H. Toon (vice-chairman) thought the resolution went rather too far. He was of opinion that they should deal with the subject that interested them most closely. There was a trades union connected with almost every trade except farming, and as other trades were quite capable of looking after themselves he did not think it would be wise to go into these matters too widely. He had believed for many years that a tax on flour would be a great boon to the agricultural community of this country as well as to the millers, as it would lead to the employment of a great deal more labour, and would enable the farmer to produce fresh pork, beef, and mutton at a considerable reduction upon present prices. He would also get a better profit if he could get his offals cheaper. English wheat was now about £6 to £6 10s., and English bran and pollards were about the same price. That he thought, was entirely wrong, and he believed that if they had the wheat coming in instead of the flour they would be able to benefit greatly without doing any harm to the community at large. With regard to tinned meats, he did not know much about them except that they had become a wonderful institution in this country. An argument, to his mind, was that if they had cheaper cattle foods they could supply cheaper fresh meat, and so might avoid the tinned meats in that way. He proposed, as an amendment, that the resolution should relate only to imported flour, and should not take any other imported articles into consideration.

Mr. Tomlinson seconded the amendment.

Mr. Lamb said the present was, no doubt, a rather suitable time to consider this subject, as they would have one friend at Court in the Chancellor of the Exchequer, who seemed to be looking round everywhere to get a little more money. If they had a tax put on foreign manufactured articles, it would be only making the foreigner pay a small portion towards the advantages which he as well as ourselves might derive from the war in South Africa. Wherever British enterprise had opened out a country, the foreigner had the same chance as our own people. Mr. Morris had said that if flour had a duty put upon it, they would have again working those mills which had gone out of use. One thing which should not be lost sight of in this connection was that the more mills there were in the country the greater would be the stock of flour held in the country. He did not think the stocks at the ports would be as great as would be the case if the country mills were at work, and in that way we would be better supplied with foodstuffs in case of war. He was afraid we did not realise the danger in which the country might be placed in regard to its food supply. About 55 per cent of our wheat and flour at present came from America, and if we were at war with the United States the supply would be stopped, while if the war was with another country they might see American financiers buying up the market and greatly increasing the price. Other countries could see our danger in this respect. A French Minister, the other day, expressed his conviction that the English would yet bitterly rue the day in which they first neglected to cultivate their home-grown wheat. In America, too, the President, in his address, had strongly upheld the policy of Protection. In point of fact, everything pointed to the time when we should have to have Protection in this country, in the case of some articles at any rate. He did not say that our Colonies should not receive a certain amount of consideration, especially if they would allow us to send our goods to them either at reasonable rates or free. This question of Protection had been like the proverbial red rag, and people who mentioned it had been jumped on; but he did not think it should be so. One of the first laws of nature was the protection of ourselves, and in protecting our food supplies we should protect ourselves. The weak point in Free Trade was that we could not make other countries adopt it also. If the foreigners did not protect themselves he thought we should have the best end of the stick.

Several other members spoke, and Mr. Morris, in replying on the discussion, said he could wish the resolution to include all manufactured foreign articles. With regard to the Colonies, as they had rallied to us in the war, if there was any chance of helping them as against foreign countries he should be only too glad.

The amendment having been voted upon and declared lost, Mr. Lewis moved an addition to the resolution providing for the exemption of the Colonies in regard to import duties. Mr. Lamb seconded this, and the resolution was eventually passed with the addition of the words, "Except from our Colonies where reciprocity is recognised."

Bridport Fair.—This well-known Dorset fair was held on Wednesday, when between 2,000 and 3,000 sheep were penned, besides a large supply of horned stock. Buyers from over the Devon and Somerset border were well represented, and a good tone pervaded the sheep trade, and also for anything useful in horned stock, heavy milchers, and good fleshy barreners, for which there was a quick trade at full prices. We may quote couples, horns and Downs, as making 50s. to 60s.; ewes, 38s. to 46s.; wethers, 36s. to 44s. (these rates referring to animals soon coming into mutton); fat wethers, 42s. to 62s. (or about 8d per lb.); lambs, 25s. to 38s. Good dairy cows sold from £15 to £19 each, and barreners £18 to £26 per pair.

By Hordeum.

Produce Returns.

The Board of Agriculture has published as a separate volume the Returns showing the produce of the principal crops divided into counties. This plan permits much earlier publication, and is far in advance of the date it will appear in the Annual Volume. Everyone interested will gladly welcome its appearance in time to be of practical use to farmers. The information about produce is first given in two totals—one each for Great Britain and Ireland—but the acreage is omitted. In the later tables both acreage and amount yielded per acre, with total amount, are given for each separate county.

This plan adds much to the practical value of the large amount of work done in order to show the results recorded. The variations in yield between each country and more especially between various counies seem very remarkable, Dealing with barley only one Engl sh county

Yields Forty Bushels Per Acre,

whilst the average for the whole of Ireland is no less than 40.42 bushels per acre. How this astonishing average is divided out amongst the counties is not shown, nor is the average given for a series of years, as is done in the case of the English, Scotch, and Welsh counties. Omitting Ireland, this total average has stood at 33.1 bushels, and it is singular to find that the County of London exceeds this figure by 7 bushels. Six other English counties grew over the average last year, and the average of the whole for the year fell more than 2 bushels. Only seven counties exceeded the average, 37 falling below it.

The lowest of all is Bedford, at 24.7 bushe'ls, closely followed by Berks with 25.0. It is very evident the farmers in both counties are not working to the best advantage, and so deficient a yield is a very serious matter.

In Wales the whole average is 29.6 bushels, but here again we find that in Anglesey it is over 42.5, and Carmarthen shows only 23.8, and Montgomery 27.7 bushels.

In Scotland

the lowest average of all is found in the case of Sutherland at 22.4 bushels, closely followed by Inverness with 23.7 bushels; yet the whole average for Scotland is 36.3 bushels, and no less than fourteen counties produce more, the highest of all being Linlithgow with over 47.5 bushels. In this country there is therefore a difference of over 15 bushels per acre.

Taking the counties in the order of area of barley grown in 1901 we find they stand thus:—

Name.	Number of acres.	Yield per acre, 1901. Bushels.	Yield per acre 10 years. Bushels.
York	209,053	30.6	34.9
Lincoln	207,940	31.3	34.9
Norfolk	200,014	29.5	34.2
Suffolk	134,971	30.1	32.1
Essex	82,679	33.7	34.1
Cambridge	53,895	31.7	33.4
Shropshire	52,832	28.9	32.8
Devon	44,922	29.3	26.9
Northampton	42,164	27.6	32.0
Oxford	41,886	27.2	31.4
Hants	40,706	29.4	31.3
Wilts	39,606	32.0	30.9
Notts	36,735	26.9	32.9
Kent	36,165	33.3	36.8
Northumberland	34,848	37.4	36.1
Cornwall	32,347	33.5	29.6
Forfar	30,474	41.4	36.8
Dorset	29,521	31.9	32.9
Gloucester	28,919	26.7	29.3
Somerset	28,408	30.3	32.8
Hertford	27,749	29.7	31.0
Aberdeen	27,628	33.2	34.3
Berks	27,422	25.0	29.3
Fife	23,132	41.5	34.5
Berwick	20,885	37.3	35.2
Huntingdon	20,445	27.2	30.3

The above are all the counties cultivating over 20,000 acres of barley per annum. Of those growing under 20,000, but over 15,000 acres, there are only the following nine:—Bedford, Buckingham, Hereford, Durham, Stafford, Cardigan, Pembroke, Haddington, and Perth.

Of counties growing over 10,000 acres, but under 15,000, there were:—Leicester, Sussex, Warwick, Carmarthen, Denbigh, Elgin, Kincardine, Roxburgh, and Ross.

These details show very clearly how very urgently

More Skill is Needed.

We must have improved methods of cultivation in several particulars, as the above are eminently unsatisfactory. Soil and climate are stubborn factors to fight, but anyone acquainted with the physical geography and geology of Great Britain knows perfectly well that methods of farmers are the chief thing to cultivate.

Anyone using these tables must feel too grateful for the information given and the way it is arranged to wish to appear to find fault; but in the six rows of figures one is so much more distinct and legible than the other five it would be a boon to have all equally distinct, if it could be so arranged in the future; and also it would be of use in several ways if we could have the counties in Ireland shown separately. It will come as a surprise to many people to learn that that country grows better or larger crops than the rest of the Kingdom, not in barley only, but in wheat, oats, beans, peas, turnips, and hay, whilst it produces a smaller quantity of potatoes.

The New Beer Bill.

Mr. Ernest Flower, M.P., writing from 6, Upper Phillimore Gardens, Kensington, to the "Standard," on the subject of the New Beer Bill, says:—

"For many years a movement, supported in the House of Commons by several members who represent agricultural constituencies, has been on foot to secure legislation in favour of beer brewed from barley malt and hops only, as distinguished from beer in which a proportion of substitutes are used. That materials other than malt and hops have ever been used in brewing is due to Mr. Gladstone, who, in the year 1880, by the Finance Act, 42 and 43 Victoria, chapter 20, inaugurated what is known as the "Free Mash Tun" system, under which, for the consideration of an extra duty, amounting at that time to £400,000, he gave leave to the brewer to brew from what he pleased, having absolute choice of his materials and his methods. The system then established is that which still exists, and which, since 1885, has been assailed by those who profess to represent the interests of agriculture.

"In 1825 a Beer Adulteration Bill was introduced into the House of Commons, which provided that every person who sold any beer containing any ingredients other than hops and malt made from barley, should have conspicuously posted a legible notice that other ingredients were contained in that beer. But, beyond a general discussion raised on the Budget, the Bill went no further. Before and after the General Election of that year, however, a so-called "Pure" Beer agitation was fostered outside Parliament, aided to a large degree by a misconception, carefully engineered, that the use of substitutes was injurious to health, despite the most conclusive proofs to the contrary.

"In the year 1896 a new "Pure" Beer Bill was introduced which was a departure from that brought forward previously, and of a more drastic kind, in that it proposed to forbid the sale, under the name of beer, of ale, stout, or porter which was not made exclusively of barley malt, hops, water, and yeast, with the exception of a minimum of 3 per cent. of substitutes for priming purposes; the Bill also contained penal clauses as to distinctive labelling. The second reading of this Bill was moved on March 25th by Mr. (now Sir Cuthbert) Quilter, the two main points aimed at by the promoters of the measure being to secure "pure" beer for the consumer, and to raise the price of barley. No serious endeavour was made in this debate to prove noxious adulteration by substitutes, the real attack on the use of sugar and flaked malts being on account of their supposed detrimental effect on the demand for British barley. The Chancellor of the Exchequer, however, during the course of the debate, undertook to provide an expert inquiry into the necessity for any measure to prevent the use of deletrious substances in the manufacture of beer, and also to ascertain whether it were possible and desirable to define the materials of which beer is composed, without undue interference with the freedom of brewers to use any wholesome materials in its composition. The Bill was accordingly withdrawn, and a Beer Materials Committee was appointed with this object in view. The findings of this committee (from which Mr. Clare Sewell Read, representing agriculturists, alone dissented) on every point justified the opposition which had been offered to the so-called Pure Beer Bill. The Committee were of opinion that it could not be admitted that liquor made from malt, hops, yeast, and water only had an exclusive right to the name of beer, and considered that a person who demanded beer, and was supplied with beer brewed with a proportion of malt substitutes, was not thereby prejudiced. They also found that the latter beer was not distinguishable from, and was not inferior to, all-malt beer. The Committee were also satisfied that no deleterious materials were introduced into beer by way of substitutes.

"In November, 1900, what is now known to history as the 'Arsenic Scare" was developed, which was found, after most careful and independent examination, to be confined solely to some contaminated sugar which had been supplied by a firm of sugar manufacturers in the north, and which was due to the use in the manufacture of impure sulphuric acid. This gave a further fillip to the so-called "Pure Beer" agitation, and during last year another Bill, similar to the previous one, was introduced, and passed its second reading, and was referred to the Grand Committee on Law, until it was withdrawn But though the interim report of the Royal Commission, which was appointed in January last year to make investigations with reference to this epidemic, has clearly removed any suggestion that the brewing trade in the manufacture of the national beverage use any materials which are not, with ordinary precautions, as pure as, if not purer, than barley malt, another Beer Bill has been introduced into Parliament this Session, and comes on for second reading on the 23rd of this month. This is a totally different measure from any of its predecessors. There is no question of differentiating between beer brewed from barley malt or beer brewed from barley malt with a proportion of sugar, flaked maize, or flaked rice, but it proposes to limit the use of these materials to 15 per cent. If, as was so clearly proved before the Beer Materials Committee, these two forms of beer are chemically indistinguishable, the ordinary student will wonder why this change of front, and why, if 15 per cent., not 30 or 50 per cent? Surely, this seems to be but a childish way of infringing the privileges of the Free Mash Tun Act of 1880, hampering brewing operations, checking any further advance on the part of science, certainly not giving to the consumer a better or more wholesome beer, and benefiting no one, as far as I can see.

"It may be urged that the compulsory use of 85 per cent. of barley malt will tend to raise the price of British barley, but I venture to think that this will be found not to be the case, as the brewer, who, after all, has to provide an article which is palatable and acceptable to his customers, will, if we are to rely upon the expert evidence which has been given before the Beer Materials Committee and the Royal Commission of 1901, be compelled to use a far larger quantity of foreign barley malt, which has advantages over English barley malt which from time to time have been clearly demonstrated. The promoters of former Beer Bills had some chance of catching public opinion by demanding that a man should know when he was drinking his beer that it was brewed from barley malt and hops only, if he preferred it. By this Bill no such distinction will be established, but a limitation will be set up, tending not only to unfairly harass the brewing trade, but going a long way to destroy kindred interests, by placing a restriction on manufacture never before even suggested or proposed in the numerous inquiries on the subject.

New Agricultural Patents.

Specially compiled for *Mark Lane Express* by Mr. G. D. Howard (Hughes, Son, and Co.), patent agent, 38, Chancery Lane, London, of whom all information relating to patents, designs, and trade marks may be obtained free of charge.

6,757.—Nikolaus Kauten and Ignaz Bailony, of Hatton Garden, London, for "An improved method and apparatus for husking and grinding cereals and separating the husks or bran."

6,919.—William Wake, of Leeds, for "Improvements in or relating to machines for digging, sorting, and delivering potatoes."

6,963.—Edmund Ernest Bentall, of Chancery Lane, London, for "Improvements in chaff cutters."

Patents Sealed.

21,751.—A. Shuttleworth and R. Ganble, of Lincoln, for "Thrashing machines."

21,795.—N. Mayer, of Kingston-by-Sea, for "Food for poultry."

Darlington Easter Fair.—The Easter Monday Horse and Cattle Fair at Darlington was well supplied with horses, but the quality was somewhat higher than at the first Monday in March fair. There were a few very fine agricultural horses, but these were mostly kept in the hotel stables, and £60 or £70 were asked for some of them. The figure for the ordinary cart horses ranged from £35 to £40, and £20 to £25 for aged and inferior animals. Cobs were scarce, but were pretty readily picked up, making £25 to £35 each. Ponies of best quality sold at £15 to £18 each, and secondary £10 to £12. The supply of lean cattle was fairly good considering the season, but sold very slowly. Bullocks fairly forward in condition made up to £14 10s., geld cows £13 to £14, two to two and a half year olds £10 to £11 10s., and one to one and a half years £6 10s., to £7 10s. Irish cattle were in fair supply, smaller kinds making £6 to £7, and larger £10 to £12 each.

Home Notes.

The Borough.

The holidays, although nominally over, still continue to exercise their influence upon our trade. Business reopened on Wednesday, to the extent of the return of traders to their offices, but since they have arrived they have hardly commenced action. In a listless manner merchants have strolled round, and although their previous frequent visits have fully acquainted them with the hops on offer, they have again occasionally looked them over, and borrowed some samples in readiness for their travellers, who will be on the road this week. A few transactions are recorded at about the same rates as were current before the recess, but the general tone of the market is most uninteresting, and provides very little of a practical character for me to deal with.

Meetings of Growers.

have been held at Tewbury, Hereford, Ledbury, Leominster, Bromyard, and Worcester in connection with the formation of the association proposed for these counties. The various speakers emphasised the necessity for local combination and action for the protection of local interests, and thus far the object of the promoters is legitimate and sound. The weak point of the arguments advanced seems to me to be discoverable in the want of recognition of the identity of the interests of the whole of the English industry. However superior may the the soil of the Midland districts for the growth of hops, as alleged, when compared with that of some districts in the south, it must be remembered that the latter have enjoyed a reputation for many decades, which continues to give them preference with modern brewers. After all, it is the judgment of the practical consumer that must decide which district produces hops that are best suited for his use in the copper.

I do not for a moment object to the Midland growers making the best of their special claims; it is well they should persevere in doing so, and I trust their perseverance will be duly rewarded. But the greater power, based both upon the proportionate acreage and the yeld, as well as the old repute, is in the hands of the Southern men, and there is the possibility that if Hereford and Worcester competition is unduly pressed the Kent, Sussex, Hants, and Surrey may be aroused to assert themselves, and any such battle between the two sections is certai nto be detrimental to both, and especially, I fear, to that which has issued the challenge and thrown down the gauntlet.

The testimony of ale expert observers is unanimous in declaring that Worcester and Hereford growers have been their own foes, in producing too many hops, with too large a proportion of poor sorts, and that they have not acted wisely in marketing their crops. They seem to cling to the isolation which was necessary in olden days, but which is out of place now. Their latest movement tends to confirm them in the position they have held for many years, with reference to the great central market, which is found in London. To benefit their industry permanently they must recognise the facts which the altered times are teaching, and, as I have previously said, fall into line with their brethren in the South, competing with them as intelligently and actively as possible in the matter of quality and submitting their produce to buyers under the same conditions. This course will, in my humble opinion, advance their interests much more rapidly and surely than any independent action, such as is now proposed. I desire by any and all means to assist my friends in attaining their commendable objects, and trust my remarks will be accepted as from this point of view.

Foreign Notes.

Nuremberg.

The holiday season has affected this market in common with all others, but despite this unfavourable influence business has remained fairly active, and with the exception of the very poorest qualities, values are firmly upheld. It is estimated that stocks have not been so small at this period for many years, and the normal demand which usually accompanies the opening of spring must speedily absorb every bale held by dealers, whose reserves, not being replenished by arrivals, are already being seriously diminished. Hops have been taken to a small extent for export to America and England, and there are indications that this trade will be further developed. Should this prove to be the case, the tendency to higher prices will be accentuated, and the general outlook is distinctly in favour of the establishment of much improved value in the course of the next two months.

Bavarian Crop.

The figures recently published by the Statistical Bureau of the Bavarian Government show that although there has been a small increase in the hop area, the yield has fallen off considerably. Hops are grown in Bavaria in 819 communes, and the total area cultivated for hops therein was 22,623 hectares (about 56,500 acres) in 1901, compared with 22,280 hectares (about 55,600 acres) in the previous year. The most important district is Mid-Franconia, which includes nearly half of the whole. The yield for 1901 is put at 46,499 metric quintals (about 93,000cwt.), against 105,574 quintals (about 211,000cwt.) produced in 1900. The averages are therefore approximately only 1.65cwt. per acre in 1901, and 3.80cwt. per acre in the previous year. As less than half of the last crop was classed as "very good" and "good," the remainder being described as "medium" and "poor," the growers have not profited by the small crop. In Franconia especially the results have been comparatively disastrous prices having been kept at a lower level than was justified by the deficiency, in consequence of arrivals of hops from other countries.

The German Empire.

has also generally suffered from an exceptionally small yield, according to the official returns, from which I take the following details, showing the estimated crops in the years given:

1901—114,050 met. quintals, about 228,000cwt.
1900—198,695 ,, ,, ,, 397,000cwt.
1899—206,285 ,, ,, ,, 412,000cwt.

It is therefore not difficult to understand the reason of the firm position of the chief Continental markets during the past season, which would have been further strengthened had not the general depression of commerce and manufacture caused a reduced consumption of beer, with consequent smaller demand by brewers for hops.

Belgium,

There has been no practical change either in the Brusseis or the country markets. The holidays having temporarily suspended business, there is, perhaps, a slight indication of weakness in quotations, but this will doubtless disappear with the resumption of demand that will speedily be felt when warmer weather is experienced.

America.

The firmness of holders of 1901 growths has induced brewers to look after yearlings, of which such small quantities remain that their value has improved. Even old olds are being bought up at increased figures. In sympathy with this business, the lower grades of last year's crop are worth more money, and there is great strength evident when choice or prime hop are dealt with. Pacific Coast growers and dealers are agitating for the reduction of freights to the East Coast. The freight rate is at present 2 cents per ton, and a reduction to 1½cwt. is being sought for. This being equal to about 4s. per bale, will give the Oregon, Washington, and Californian traders important facilities in competing with the produce of New York State, but it must not be forgotten by English growers that every such advantage gained by our opponents on the other side may ultimately be detrimental to our interests, and when we know that these concessions are only accomplished by the pressu e arising from united action on the part of those who desire to be benefited it behoves us to take note of such proceedings and to follow their excellent example.

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interes and benefit to the member of the society.*

Show of English Sheep Dogs.—The annual show of the Old English Sheep Dog Club was held at the Royal Acquarium, Westminster, on Thursday, Friday, and Saturday. When it is remembered that this variety of dog has not many exhibitors, the entry of 98 must be considered as very satisfactory, in fact it created a record for this show, and the quality of the dogs being somewhat above the average the judge, Dr. Macgill (chairman of the late Manchester Dog Show) had some difficulty in making his awards. The chief centre of attraction in the dog section was Mr. W. F. Clayton's champion Victor Cavendish, a very well-known winner, and he was very rightly awarded the championship of his sex, amongst the crack specimens of the breed which he defeated being Mr. Macbeth's Cupid's Dart and Mr. T. H. Shout's Telford Tatters, both of which have won many prizes. Another dog which did well was Mr. W. Rees' Welsh-bred youngster Baden Powell, a correctly made one, but far too big, both of which criticisms apply to Mr. H. Dickson's Rosebery. The best of the bitches was undoubtedly Mr. Macbeth's Bouncing Lass, and though she is quite big enough, she was justly entitled to the championship of her sex, her formation being perfect. She also defeated Victor Cavendish when the pair met to compete for the special prize offered for the best specimen of the old English sheep dog of either sex in the show.

THURSDAY (March 27th).—Cloudy weather prevailed over our Islands, and rain fell in many places. Rain was measured in the morning, as the result of the fall since the previous day, over the entire kingdom, and in the western districts the fall was very heavy, the measurement at Valencia exceeding an inch in the 24 hours. The winds were chiefly south-westerly, but they were shifting to the north-west in parts of Ireland in the rear of the disturbance which was passing over us. Temperature had generally increased, although the thermometer was still low in Scotland and in the north of England.

FRIDAY (March 28th).—Over the southern parts of the country the weather was most favourable for the first holiday of the year. In London the sky was occasionally cloudy, but in the intervals the sun shone with considerable vigour, the thermometer in the shade rising to a maximum of 56 degrees. Very similar conditions prevailed over our southern and eastern counties generally; but at some of the coast stations a thick sea fog prevailed during a portion of the day. In the western and northern parts of the kingdom the weather was affected to some extent by shallow cyclonic disturbances moving outside the Irish and Scotch coasts, and in most parts of these districts a little rain fell some time during the day.

SATURDAY AND SUNDAY (March 29th and 30th).—On Saturday, when a small cyclonic disturbance came down from the north-westward, rain fell in all districts, and in the course of the afternoon and evening stiff squalls from north-west swept over most parts of Great Britain. Over our midland and southern counties, however, the day, though wet, was fairly mild, the thermometer in the shade rising to a maximum of 55 degrees, or a trifle above it. Sunday's weather was more depressing than Saturday, and much colder. In London the sky was heavily overcast all day, with steady rain in the morning, and a slight occasional drizzle in the afternoon and evening. The highest temperature registered during the day was only 45 degrees, being 10 degrees lower than Saturday's maximum, and about eight degrees below the normal for the end of March. On some parts of our south and south-east coasts the weather was slightly colder even than in London, an entire absence of sunshine being reported in most places.

MONDAY (April 1st).—The early morning was dull and threatening, though much milder than on Sunday. Towards mid-day, however, the clouds gradually dispersed, the afternoon being fair and sunny, with a very agreeable temperature. In London the thermometer in the shade rose to a maximum of 60 degrees, the reading being about seven degrees above the average. A cyclonic area lay all day off the north of Scotland and occasioned very strong westerly winds on our north-west coasts.

TUESDAY (April 2nd).—The weather was generally fine over the southern and eastern portion of our Islands, but rain fell again in the north and west. The winds were westerly, and on our north-west coasts a moderate gale was blowing. Monday night was warm, except in the north; and in many parts of England the thermometer did not fall below 45 degrees. In London, the lowest temperature during Monday night was 47 degrees, which is 10 degrees above the average, and the mid-day reading was 56 degrees.

WEDNESDAY (April 2nd).—Fine weather prevailed in most parts of our Islands, and very little rain had fallen anywhere since Tuesday. The winds were chiefly light to moderate from the north-westward, except in the south of England, where a north-east wind was blowing. Temperature had fallen over the whole kingdom, and there was a slight frost in places during Tuesday night; but the mid-day readings touched 50 degrees in places. In London the thermometer in the shade fell to the freezing point early in the morning, and the exposed thermometer on the grass indicated eight degrees of frost, while the highest day temperature was 51 degrees.

THURSDAY (April 3rd).—Cloudy weather prevailed generally in our Islands, and rain fell at several places in the west. Rain was measured in the morning, as the result of the fall since the previous day, in Scotland and Ireland, but the weather had remained dry over England. The winds were chiefly between south-west and north-west under the influence of a cyclonic disturbance which had its centre to the north of the British Islands, and was travelling eastwards. The night temperatures were rather low in most parts of Great Britain, and the exposed thermometer indicated a frost early in the morning in several parts of the country. The mid-day temperatures exceeded 50 degrees in the south of England, but the weather was generally cool for the time of year.

FRIDAY (April 4th).—A strong and rather keen north-west wind was blowing over our islands, and a moderate to fresh gale was experienced at several places on our coasts. Showers of cold rain, sleet, or hail had fallen generally since Thursday, but the amounts measured in the morning were not large. Rain again fell at the western stations during the day, but the weather was mostly fine in the south and east of England. Slight frost was experienced during Thursday night in the north and east, and the day temperatures were generally low for the time of year. The day was fine and bright in London, and the sheltered thermometer registered fifty-three degrees.

SATURDAY AND SUNDAY (April 5th and 6th).—Changeable weather was experienced over our Islands during these two days, and the temperature was low for the time of year. On Saturday a cyclonic disturbance was approaching from the Atlantic, and it subsequently traversed the southern portion of England, the central area, being situated over the North Sea yesterday. As the disturbance was approaching rain was experienced over nearly the whole of our islands, and the fall was heavy in parts of England. As the storm area passed to eastward of our coasts, the barometer rose, and the wind became northerly. There was a slight frost in many places during Saturday night, and on both days the midday temperature in parts of the country did not rise much above forty degrees. In London the highest temperature on Sunday was forty-eight degrees, which is eight degrees below the average.

GARDEN.

March did not go out so boisterously after all, as it usually does when it comes in so softly as it did this year. Indeed, as a whole, the month was of a quite exceptionally mild and genial character, with very few of the strong gales and cold winds that usually mark its course, the chief feature of the month being the frequent and dense fogs that occurred during the first half.

The planting of potatoes ought to be pushed on vigorously now. Get the whole of the seed under ground, if possible, by the middle of the month, except, perhaps, in late or cold districts, where frosts in May and even June are often troublesome. On the Wealden claylands of Sussex I have seen the potatoes cut right down to the ground when June was nearly a week old, and often during the latter half of May, and under such circumstances early planting cannot be recommended, as nothing whatever is gained by it.

Early-planted sets in sheltered positions will be appearing through the soil very shortly, and should have a little soil drawn up on each side the rows as soon as these can be plainly seen, but do not bury the growing points unless the night threatens to be frosty, and even then a little dry litter or fern thrown over them will be better.

Look well after early-sown peas coming through the soil or already up, drawing up a little soil on each side the rows, dusting them occasionally with soot or dry lime to deter slugs, and putting the sticks to them as soon as possible. Even the dwarf kinds should have some small spray stuck in on each side to keep the haulm off the ground and the pods clean. Sow more seed of second-early and main-crop kinds, in deeply-worked and well-manured ground. I am still very partial to peas of the old Fillbasket type, certainly for home use, as the pods are so well filled and they consequently "shell out" much better than those of the Duke of Albany class. Gradus, fine though it is in other respects, has the same fault—the pods are seldom full until the peas are getting old, even if then.

Broad beans should be sown at once for the last time; on light soils it is probably too late for the plants to do any good even now. A few rows of French or dwarf beans may be sown next week on some very warm and sunny border, or, failing this, sow some seed in pots or boxes, to be transplanted outside presently.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read, 70th edition, 6s. and 7s. 6d. post free. JARROLD'S IMPERIAL FARM ACCOUNT BOOK, 3s. 6d. JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d. List of Game and Dairy Account Books post free of JARROLD AND SONS 10 and 11, Warwick Lane E.C.—[ADVT.]

Cornwall.

We are now nearly to the end of March, and never do I remember such a favourable one for agriculturists following a short supply of winter food, especially for stock-raising farms. At the present moment Mid-Cornwall is glowing in such radiance as May month can seldom boast of. The copious showers, interspersed with a fair amount of heat, has caused the grass to shoot up rapidly and sufficiently to fill the stomachs of the sheep and thereby setting their minds at rest and causing cattle to be disinclined to return to their sheds. Some people tell us that we shall of a certainty be paid out for the good time we have just had, but I for one shall be quite satisfied to make the best use possible of the present, and trust Providence for the future. The lambing season is now about finished, and I think the crop of lambs fairly prolific. The mortality in ewes has not been great, excepting in certain cases, where they have been allowed to gormandise themselves with roots a short time before lambing, and not having been accustomed to roots all through the season. Young fat sheep have sold very badly this season, 7d. per lb. as they have had to be sold has not remunerated the feeder. Beef has kept up to a fairly good price. Fat lambs are not very plentiful just yet, and are, as a consequence, selling well. Now we are beginning to think it is high time for the weather to clear again, in order that we may finish planting our cereals; very little has been done to it during the past three weeks. Oats were nearly all sown in good condition, and have come up well. Barley sowing will no doubt have to be deferred a while, as it is absolutely necessary to have a dry seed bed, and I have always found it better to withhold a while, if the land is not thoroughly dry, as it will invariably pay better (if it must be one of the two evils), to be a little out of season rather than out of condition. If we get a fairly wet season we shall not hear so much about the enemy wireworm.—M. D. (Mar. 29th).

Cumberland.

April 1 and 2, oats sowing, but 3 and 4, snow, hail and rain, some farmers therefore acting on the saying: "Corn is best in the sack yet a bit." Lambs are many and healthy, and green grass now gives suitable food for the ewes. Herdwick lambs not yet. Turnips are over and mangolds plentiful. Early potatoes are being planted on sandy soil in time to grow leases to shelter the ground from a too drying sun. The Board of Agriculture figures for 1901 show that Cumberland holds high place in average acre production, viz.: Oats, 33 bushels, i.e., 2 1-5 plus average; barley, 36, 5 7-10 over average; oats 39, 2 over average; highest of any county in peas, but the area small. Beans heavy; turnips are also above average; so are potatoes, but Wiltshire holds the palm. Since last report the C. and W. Chamber of Agriculture held its 3rd and final meeting in re Protection Mr. James Watt, called by Sir W. Lawson the Arch-Apostle of Protection led the assault and asserted that with Mr. Chamberlain in power the measure would be carried, and fair trade established with our colonies. The Vicar of Plumpton, however, in opposition, had his amendment carried by a small majority. Mr. Kennedy's contentions were that the colonies looked well after themselves, charging high for men and horses, and exacting tariff from England's exports; that Parliament's time was fully occupied already, and would be for years, and that only legislation of any value was such as landlords would never agree to. The Vicar suggested several means of self-help. A few are mentioned in the following extract from a letter of his, which appears in the "Daily News" of 4th inst.:—

1. Co-operation.
2. Cottages at the rate of one per 100 acres for farm labourers' dwellings.
3. Reform of railway rates.
4. Model villages of the Cadbury type.
5. County Council breweries, distilleries, and hotels.
6. Inquiry as to the methods of self-help prevailing in other countries.

On the sixth our representative in the Central Chamber informed us that they have asked for a Royal Commission to make full inquiry in Europe, and I hope also in America and the Colonies.

This gentleman (Mr. James Watt), who is prominent in Carlisle at all agricultural meetings, Royal shows, etc., is a most persistent advocate of Protection, and a great admirer of the Colonial Secretary. And yet, as I told the meeting on Saturday, the Colonies tax all we send them, and charge us for their unemployed seven and a half times more than we pay our own soldiers for fighting any foe in any climate. But "all's well that ends well." Cumberland and Westmoreland Chamber stands alone in vetoing "Protection."—H. M. Kennedy (April 3rd).

Devon.

The spring corn, which was tilled early in March, came up well, and is looking all that can be desired. Owing to the wet and stormy weather since there has been a stoppage of sowing, and it was only yesterday that it could be again proceeded with. The land now works well, and with dry, sunny weather arrears will soon be made up. Swedes are not yet finished, which is fortunate, as other keep is not very plentiful, although there is a fine lot of mangold left on most farms, which will greatly help to carry on the live stock.

Wheat looks well, both autumn-sown and that sown after root crops. Clovers vary a good deal; on some farms they are fairly good, and on others they are very thin, owing to the severe drought of the early part of last summer. Rye, and vetches for spring feed are very promising.

Grass will soon grow if we get some warmer weather; it is rather too cold just now. Owing to the partial failure of last season's hay and straw crop, pastures have been stocked too early.

The past lambing season has been a very good one, and stock of all kinds are healthy. In the markets, prices are improving.—L. B. G. (April 3rd).

Dorset.

In reply to your inquiry as to agricultural prospects as far as I can see, the growing crops are looking well. The wheat a short acreage. The spring-sown wheat is looking better than the autumn-sown—that is rather thin. The early-sown barley and oats are looking very well indeed. Barley-sowing is rather backward, as the early part of March it was frosty and at times very foggy; the latter part of the month, one day wet and one day fine; till the last few days, which has been very fine, with a slight frost nearly every morning. The young clovers and the autumn-sown vetches, where the land is farmed well, is looking extremely well. As far as I have heard, both the Horn and Down men have had good luck with their flocks, with a large number of twins, so there will be a good crop of lambs, except in a few cases, where there has been very bad luck indeed, but only a few. All kinds of dairy and store stock are doing well, and there has been plenty of keep, so that all stock have been making fair prices all round. Dairy produce is selling fairly well. Pigs, both fat and store, are selling well. I seem to hope that the tide has turned, and we as farmers will have a better year than we have had for some years. One thing is certain: I think we shall not have a dry summer this next summer. I am sorry to say the labour question is still the bugbear for farming, as they are still scarce in many parts—so much extra work going—so all the young men are off, so that they can have some amusement after the day's work is over. If the land-owners and the powers that are wish to keep the labourer on the land, first they must give them better cottages; not only that, they should take more interest in the working-man, not think he is not worth looking after. After all he cannot be done without. Get up different kinds of amusement, so they may have something to think about in their spare time.—H. S. (April 3rd).

Gloucester (North West).

Not much of the traditional dust this year. Most of the oats, beans, and peas left over from January were planted at the beginning of this month, since which (although the rainfall is below the average) frequent showers have kept the surface of the land too wet for barley to go in as we like to have it, and very little have been sown; but if we get a few fine days drills will be busy, as the land is all ready. Turning to growing crop, wheat look well on the clays, but have lost stock considerably on the light lands. Winter oats (especially the choice black variety) are weak and backward, but beans and vetches stronger than usual. Meadows look green, but nightly frost don't allow much growth. Live stock have wintered well. They are healthy, seeming to thrive on short rations, and come on better than they sometimes do when keep is abundant; but perhaps we were not hit so badly last summer in this district as some, most farmers having a little hay or straw to sell. The lambing season just over, with a fair crop of healthy lambs and ewes, with plenty of milk, but the price of mutton keep very disappointing, and the value of stores follow as a matter of course. Not much gold about the sheep's foot this year to pay for cake or corn.—J. H. W. (Mar. 28th).

Glamorganshire.

The first part of March was favourable for farming operations, and a considerable area of oats and barley was sown under favourable conditions. The latter half of the month has been showery, and rather hindered the completion of spring sowings. The early-sown is now showing in the drills. The hard frost of February has had the effect of somewhat thinning the wheat plant, more especially those fields sown later in the autumn, where a few blank patches are observable. The young clovers are also rather thin on the ground, which is not to be wondered at after the dry season of last year. There was a nice bite of grass in places, but the cold nights we have experienced lately have checked its growth, and keep is very scarce. Both hay and roots are disappearing fast, and have altogether vanished in some places. Still ewes and lambs are doing well, and a fair average of couples is the result. Farmers are now getting the ground ready for mangold sowing, and a larger area of this valuable root will probably be drilled this spring.— C. J. S. (April 4th).

Hampshire (East).

The sowing of Lent corn, though hindered by inclement weather on all but the lighter lands, is now proceeding rapidly.

Wheat, as a rule, looks well and promising, and there appears every present indication of an early season.

Lambing records have been generally above the average, and both ewes and lambs are thriving and healthy, though the approach of spring feed is being eagerly watched, and in many cases any set-back in its growth will mean short commons for the flocks.

The demand for mutton is better than was the case a few weeks back, but the large supply forced upon the market by the necessities of feed prevents much advance in prices.

There is little to record about beef, and the corn trade is in its usually disappointing state.—G. S. M. (April 4th).

Oxon (North).

Corn planting has been hindered somewhat by rain the last few days. Previous to that a good deal had been got in in good order on some farms, whilst others have hardly done more than make a start. Wheats and vetches have stood severe winter pretty well, but winter oats have considerably suffered, and look to want re-drilling or patching up mostly. The lambing season is about over, with luck of various degrees. Lambs are strong and fairly numerous, but some people have lost a good number through the milk, for some unknown cause, curdling in the lambs, and causing scour and death. Fat tegs are rising in price a bit now, after having been very low. Keep has all gone, and numbers will be short in the markets, probably now. Prices for corn have been at a low level, and for potatoes wretchedly bad, and no signs of improvement in either. Despite the few sharp nights lately, prospects seem to point to a forward spring, which will be a great blessing, as hay, straw, roots, etc., are all about vanishing point. Young clovers are in a good many cases dying off, an don some fields I know that have not been in clover for eight or ten years, so it can hardly be clover sickness; on digging round the dead roots I find at each several white maggots, about the size of a sheep maggot, but whiter. It is hard to say they are the cause, but it looks like it, as I can find none around the healthy, strong roots of clover, and it is equally difficult to find a remedy.—J. A. (Mar. 31st).

Somerset.

It seems likely at present to be a fairly early spring. The meadows and pastures are looking green, and there will be some good pieces of grass in the course of another fortnight. This will be very acceptable, as hay is scarce and roots will not last a great while longer. The wheat-plant is looking very healthy and strong, as also barley (the greater part of which has already been sown). This has been an exceptional season for getting in the spring crops. I suppose the land has never worked better, and the crops been put in at so little expense. Winter beans are also looking well, and bid fair to be good crop. Farmers are at present very busy planting potatoes; this will not be a very profitable crop if prices are not better next season than in the one now almost come to a close. Prices are very low at the present time, not more than from 5d. to 6d. per score, on rail.—J. B. (April 3rd).

Wilts (West).

There is every prospect for an early spring, which would be a relief to most dairy farmers, as hay is running short, some few having already had to buy. Last year's crop on the pastures on a great many farms was quite 50 per cent. below the average. Arable land farmers were much better off. Clover and sanfoin was a good crop, and made well, which enabled many to sell hay at satisfactory prices, a great help and very needful, with the low price of corn, mutton, and wool. The lambing season has been favourable, a good number of healthy lambs and less loss of ewes than usual. Autumn-sown crops are looking remarkably well, especially wheat, as may have been expected. There is a very small acreage sown, prices being out of all proportion to the cost of production. With both beef and store cattle selling well, and somewhat better prices for milk, makes the prospect for pasture farming more hopeful.—T. P. (April 4th).

Foreign Prospects.

FRANCE.—The appearance of the autumn-sown wheat and rye is still the theme of congratulatory comment. The early spring crops have come up well, and even in the late districts sowing is almost completed.

RUSSIA.—Latest advices from Odessa say that the condition of the crops in that district and in the neighbouring governments is good.

HOLLAND.—Nothing fresh to hand about crop prospects, therefore it may be assumed they are satisfactory.

HUNGARY.—Weather changeable, but not inimical to the development of the cereal crops.

GERMANY.—Lower temperature with alternations of rain and snow have not caused uneasiness as to the well-being of the crops.

ITALY.—Weather is favourable for Spring sowing and good progress has been made. Autumn-sown wheat looks well except in some parts of Venetia.

SPAIN.—Latest advices state that the cereal crops present a fine appearance and promise an abundant harvest.

ROUMANIA.—Recent rains have proved of great benefit to cereal crops which are in good condition.

ASIA MINOR.—Dull cold weather has checked the advance of the crops, but so far no injury is apparent.

UNITED STATES.—Wheat crop is fully maintaining its fairly good condition, and the weather is favourable. Oats are starting well and the spring is opening with the agricultural outlook of an encouraging character. In California the crop outlook is deemed satisfactory, the rainfall to date being 17 in. against 18¾ in. same time last year.—*Dornbusch.*

Concerning Apple and Pear Growing.

Mr. Goring, lecturer for the Technical Education Committee of the East Sussex County Council, gave an address on the cultivation of apples and pears at the last meeting of the Rye and District Farmers' Club. In opening, he said there was no excuse in saying that good fruit such as apples and pears would not fetch a good price. They went on in the old-fashioned lines, and that was where the foreigners had the advantage. They must start on sensible lines. Regarding the site, the man who chose that nearest a group of towns would stand the best chance. He suggested a ground not too low down on a slope, and not too fully exposed to the wind as the most suitable land that would grow good apples and the commoner kind of pears. Proper drainage was necessary, and they should cultivate at least 20 inches deep, the work to be done thoroughly.

No matter what the price, good fruit trees should be bought in the first instance, and these gave the best results. For these they should go to a firm of repute, for the odds and ends found their way to the auctioneers. The lecturer fully described the growth of the trees, and the various times at which attention to them was necessary, in the way of pruning, etc. He urged that a better system of packing was necessary to enhance the sale of good fruit, more on the lines adopted by foreign growers. He explained the treatment which should be adopted for the extermination of the various insects, etc., with which the trees were liable to be attacked, and he also compared fruit grown at Uckfield with that he had purchased at Rye, stating that the latter was a standing disgrace and no recommendation to the grower at all.

Suffolk Farmers are waging war on the sparrow on account of the damage done by that bird to their crops. At Wickham Market a club was recently formed to encourage, by the offer of prizes, the capture and killing of these birds, and already the secretary has returned a total of 8,583 sparrows destroyed in this way.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—A small attendance and the market for wheat ruled quiet; English unchanged; American 3d to 6d lower on the week. Flour slow, unchanged for all kinds. Maize quiet trade at late rates. Barley steadily held, but without change, and very little doing. Oats quiet trade at steady rates. Beans and peas quiet.

Mark Lane, Friday.—Although the Corn Exchange markets at present preserve a somewhat state of idleness—due ina measure to the time of year—there was no actual giving way in currencies, but in most directions buyers had the advantage. English wheat continues scanty and very steady, while town millers pay good prices when necessary, country resorts, on the other hand, being in small supply and well held. White range at 29s to 30s; reds at 28s to 29s per qr., delivered up according to sample. Foreign unchanged, while buyers contend that requirements to Europe during the remainder of the season will be met without obstacle. Russian and Indian remain above the views of buyers. Australian very scarce, and held for 31s 6d ex store, 496lb. New Zealand Tuscan is also wanted, 30s to 30s 6d being the general range. Flour was no worse, but the market still lacks confidence amongst consumers, despite granaries not being overstocked. Of fancy patents, Mayblossom quoted at 23s, and among firsts, Pillsbury 22s 6d. Bakers, 18s for Gilt Edge, with Iron Duke ruling at 18s 6d ex store; Cascadias, 22s 3d ex store. English generally unaltered. Top price town made 28s net; No. 1 households, 21s 3d cash, ex mill. At the London Millers' Association, town households, 23s, and whites 3s per sack extra delivered to the baker. Hungarian up to 33s for best. Whole meal, 170s per ton. Grinding barley rather more firmly held. Odessa, 18 9d ex quay; Danubian, 18s 3d ex ship to arrive, and 18s 6d ex quay. English malting unaltered, requirements being now well satisfied, while what small attention is now paid in the country continues chiefly for seeding. Oats maintained. English very firm and scarce, as of late. Black Winters, 24s 42lb; and choice, 24s 6d; grey ditto, 23s to 24s. Maize fairly maintained, flat remaining out of the market. Mixed American nominal. Of round corn, Odessa, 20s 9d ex ship, 21s 3d ex quay. The market for imported beans and peas denotes nothing fresh. Egyptian splits, 23s; Mazagans, 22s ex mill, 320lb; New Zealand, 37s to 38s ex store, 504lb. Canadian white peas remin out of supply. White Indian, 34s 6d to 35s ex store, 504lb.

COUNTRY.

Ashford, Tuesday.—Wheat: Trade quiet, with little variations in quotations. Barleys: Limited enquiry at low rates. Oats fully sustained recent prices. Beans and peas quite as dear. White wheat, 27s to 30s. Brown ditto, 27s to 29s. Malting barley, 26s to 32s. Grinding ditto, 22s to 25s. Black oats, 18s to 22s. White oats, 20s to 24s. Old beans, 33s to 37s. Grey peas, 35s to 36s.

Banbury, Thursday.—Wheat, 27s to 28s per qr.; barley, 27s to 30s per qr.; beans, 34s to 35s per qr.; oats (black), 19s to 21s per qr.; peas, 32s per qr. Small show of wheat. Trade firm at full prices of last week.

Birmingham, Thursday.—The market had not recovered from the holidays, and business generally was quiet. In wheat, values were unaltered, and few English samples were offered, the prices ranging from 10s 6d to 11s per bag. Russians made 5s 8d, soft reds 5s 7d, and No. 2 Northern Manitobas, May-June, 5s 9d per cental (Liverpool). Maize unaltered; round, 21s 6d to 22s per qr., at Sharpness and Liverpool; and Plate, 4s 8½d per cental (Liverpool), and 22s to 22s 6d per 480lb., at Sharpness. No change in grinding barley, and values varied from 18s to 18s 6d at Sharpness, and 18s 9d to 19s at Liverpool; English oats, 3d per qr. dearer; blacks, 21s 6d to 22s 3d; and whites, 22s 6d to 23s 6d per qr. at Birmingham; English beans made 3d per bag more, at 14s to 14s 3d for new, and 15s 6d to 16s for old samples.

Boston, Wednesday.—Wheat, 27s 6d; grinding barley, 22s; oats, 21s to 22s; peas, 55s to 65s; beans, 33s; maize, new, 22s to 23s 9d (old); malting barley, 28s to 32s per qr; linseed cake, £8 15s; cotton-cake, £5 to £5 5s per ton.

Braintree, Wednesday.—A quiet trade at previous prices.

Brighton, Thursday.—New white wheat, 28s 6d to 29s 6d; new red ditto, 28s to 29s; barley, 28s to 33s; grinding ,ditto, 21s to 22s; English oats, 21s to 24s; peas, 35s to 36s; maize, 24s to 26s. Wheat, 6d per qr. dearer. Quiet trade and small attendance.

Bristol, Thursday.—The holidays having intervened, trade has been very small since our last. There was but a very small quantity of English wheat offering on market to-day, and values may be quoted as unchanged. Foreign the turn in buyers' favour. Maize and oats without alteration. Grinding barley firm. Flour trade very slow; bakers, still holding off from purchasing, are working out stocks.—GRACE BROTHERS.

Bury, Wednesday.—Wheat: Supply below average; trade firm, at last week's prices. Reds, 27s 6d to 28s 6d; whites, 27s 6d to 29s per 504lb. Oats, beans, peas, and other feeding corns, with small supplies, fully maintain their value. Maize the turn dearer, at 23s to 23s 6d per qr. Oil cakes quiet, but steady on the week. Bran scarce and very firm, at £5 15s per ton.

Canterbury, Saturday.—Rather better trade price firm, thus:—White wheat, 28s to 30s 6d; red, 27s to 29s; malting barley, 28s to 33s; grinding, 22s to 24s; white oats, 20s to 24s; black, 19s to 22s per quarter.

ambridge, Saturday.—During the week trade has been steady, and prices exhibit very little change. Supplies are not abundant, and millers can only supply their wants at the full rates of last week. At this market to-day there was a small supply of wheat, which sold readily at about 28s. on rails, and 28s. 6d. to 29s at mills. Barley trade about over. Oats and beans falling off in supply, and prices quite as dear.

Chester, Saturday.—Little trade passing in English grain. Wheat was unchanged. Oats and beans were steady at late rates, and full prices were made for barley. Quotations:—Wheat, white and red, 4s. 5d. to 4s. 6d. per 75 lb.; malting barley, 4s. to 4s. 1d. per 60 lb; grinding barley, 3s. 4d to 3s 6d. per lb; beans, 5s. 6d. to 5s. 8d. per 80 lb.; oats, new, 2s. 10d. to 3s.; old, 3s. 4d. to 3s. 6d. per 46 lb.; Indian corn, 12s. 6d. to 13s. 6d. per 240 lb.

Carlisle, Saturday.—Small supply of oats in our market to-day; fair sale at unchanged prices, 22s to 23s 6d per 336lb.—THOMAS ROBINSON.

Chichester, Wednesday.—There was a fair attendance, but business generally was quiet. Wheat was in small supply, and showed no change in prices. In other directions, also, quotations remained about the same.

Colchester, Saturday.—Very little wheat offering. Prices firm, at fully last week's rates.—FRANCIS AND CO.

Devizes, Thursday.—There was a small supply. Wheat commanded fully last week's prices, the trade being very firm. There was no alteration in the price of other descriptions. The following were the quotations:—Best wheat, 13s to 14s 6d.; secondary, ditto, 12s 6d to 13s; grinding barley, 20s to 24s; malting ditto, 29s to 34s; rye, 23s to 25s; winter oats, 21s to 24s; beans, 16s to 20s; fine flour, 21s to 23s; extra fine, 24s to 30s; best bread, 8s 9d. Milk, butter, wholesale, 13d to 14d; ditto, retail, 14d to 15d. Eggs, 20 to 22 for 1s.

Glasgow, Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat 3d cheaper on the week. Flour quiet and unchanged. Flat corn nominally unaltered, and round corn 1½d. per 280 lbs. cheaper on the week. Other articles quiet and nominally unchanged.—GIBSON AND CLARK.

Ipswich, Tuesday.—Wheat: Supply was rather below average, and trade was firm, with a fair demand, at fully last week's prices. Good reds or whites, 29s to 29s 6d per 504lb, delivered at Ipswich. Oats were a small trade, but, being scarce, made fully late prices, at 22s to 25s per qr; foreign a small but steady trade. Maize rather dearer, at 22s to 22s 3d per qr. Other feeding corns firm. Linseed cakes quiet, but steady, at £8 10s to £9 per ton. Cotton cakes unchanged, at £5 per ton. Bran steady, £5 5s per ton.

Leeds, Tuesday.—Quite a holiday feeling pervades the market, the attendance of buyers being limited, and their requirements evidently small. All kinds of foreign wheat are firmly held at last week's rates. English, from scarcity, is the turn dearer. Maize 3d lower. Beans steady. Oats firmer.—DANNS AND CO.

Leeds, Friday.—Very little demand for either English or foreign wheats at barely Tuesday's prices. Beans, peas, oats, maize, and flour without change.

Leicester, Saturday.—Good average attendance of Buyers and dealers. Small supplies of home-grown wheats, trade sluggish at 27s. to 31s. per 36 stones. Barley quiet. Fine oats very firm.

Lewes, Tuesday.—New white wheat, 28s to 30s. New brown ditto, 27s to 29s. Malting barley, 32s to 36s; grinding ditto, 20s to 24s. Oats, 21s to 24s. Beans, 35s to 38s. Peas, 32s to 35s per qr.

Leith, Friday.—A steady business has been transacted since last report, with little change in prices. Wheat, Scotch, steady sale. Oats, Scotch, 3d up; foreign oats, 19s to 21s 6d. Barley, Scotch, small supply; foreign feeding, 21s 6d. Hard white Calcutta peas, 35s 9d; hard white Canadian peas, 38s. Beans, 34s. Maize, 22s 6d to 23s 6d for guaranteed sound; parcels with very slight heat, 21s to 22s; damaged 19s. Millet seed, 19s. Urhur, 25s 6d per 520lb. Mill Offals.—Higher prices are still being paid for prompt delivery. Broad bran, 120s to 125s; medium bran, 100s to 102s 6d; sharps, 95s to 97s 6d; parings, 102 6d to 105s; cummings 80s to 85s; dried grains, brewers', 97s 6d; distillers', 102s 6d to 105s; oat husks, 45s; meal seeds, 67s 6d; all sacks included.—WILLIAM MACLAY.

Lincoln, Friday.—Small supply of English wheats. Trade slow, with no change in prices. Reds, 28s 6d to 29s 6d; whites, 29s to 30s; foreign quiet. Oats and beans remain a slow sale at late rates. No change in maize.

Liverpool, Friday.—The market has had a moderate attendance of millers, and wheat experiences a quietly steady trade at a general decline of ½d from last Tuesday. Pacific sorts are more plentiful and fully 1d lower. Flour—Liverpool millers make no change in prices, and there is an improved demand. Foreign sorts show no change, with a quiet trade. Maize—Mixed is very quiet, the turn lower for old, new unchanged. European sorts are occasionally ½d lower, with a quiet consumptive trade. Plate rules very steady, white sorts being the turn dearer, owing to scarcity, with a moderate trade doing. Barley—There is more inquiry for malting, but prices are unchanged. Feeding is in fair demand at ½d advance. Beans steady, but quiet at unchanged prices. Peas are firmly held, with a fair inquiry; Canadians ½d dearer. Oats are steadily held, with a fair inquiry at late rates for English. Foreign sorts are very steady, with a slight improvement in the inquiry. Oatmeal—Quiet trade at quotations. Oilcake steady, with a moderate inquiry at last Tuesday's prices. —SEGAR AND TUNNICLIFFE.

Manchester, Thursday.—Not much business, but decidedly more inquiry for wheat at this morning's market; prices about ½d to 1d. per cental lower than last Thursday. Maize, beans, peas, and oats unchanged, and met a quiet, consumptive demand. Barley firm, owing to scarcity. Flour unchanged to 6d lower.

Newcastle-on-Tyne, Saturday.—At our to-day's market wheat was in buyers' favour. Maize quiet, and, to induce business, a slight reduction in the price had to be accepted. No change in the price of barley. Beans and peas scarce and dear. Oats steady at late rates.—JOSEPH POLLARD AND CO.

Newport, Wednesday.—There was little business done, prices being rather in favour of buyers. Maize a slow trade, and rather cheaper. Other grain unchanged. Flour, fines, 22s 6d per sack.

Northampton, Saturday.—Usual attendance, with a moderate show of farm produce. Wheat was in limited request, and in most cases lower, about 26s being the general figure for good wheat, and at that figure buyers not anxious to operate. Oats scarce and dearer; flour trade dull, and difficult to sell. White wheat, 28s to 29s; red, 26s. to 27s.; grinding barley, 22s. to 24s.; oats, 19s. to 23s.; old fine, 25s.; beans, 33s. to 40s.; peas, 26s. to 40s. Flour, 20s to 22s.; fine, 25s.

Norwich, Saturday.—There was more wheat offering at our market to-day, with a firm trade and an occasional 6d per qr advance. Gloomy and showery weather prevails. Wheat, red, 28s to 28s 6d per qr, weight 63lb per bushel imperial. Corn inspector's return for the week ending 31st April, 1902:—Wheat, 1,360, 27s. —J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat in small supply, and values well supported. Malting barley nil. Grinding steady demand at unaltered rates. Oats and beans scarce, and prices in sellers' favour.—ROBT. HUBBLE.

Peterborough, Saturday.—With a continued small supply, wheat to-day has been firm, and made about 3d per qr more money. Oats were in better demand than of late, and these also were rather dearer. Barley trade over.—THOMAS HILL AND SON.

Plymouth, Thursday.—Average attendance at our market here to-day. Barley turn dearer. Oats, 3d. cheaper. Wheat trifle easier. Maize quiet, late rates. —ORLANDO DAVIS AND CO.

Reading Saturday.—Business exhibited a most welcome improvement here to-day. The attendance was much larger than usual, and the inquiry for corn proved more brisk than for several weeks past. The quantity of wheat on offer was by no means large, and a firm trade prevailed at from 27s. to 29s. per qr. Very little doing in barley, but oats sold fairly well at recent quotations.

Ripon, Thursday.—A slow market. Business done at last week's rates. A thin attendance. Wheat, English, 28s 6d to 29s 6d; ditto, foreign, 28s 6d to 32s 6d; Barley, grinding, 22s 6d to 23s 6d; ditto, malting, 26s to 31s; oats (new), 22s to 24s; round maize, 23s 6d to 25s 6d per qr.; beans, 1s per stone; bran, £5 15s. to £6 5s per ton.

Romford, Wednesday. — Wheat trade firm at last week's prices. Very small supply. Red wheat, 28s to 29s; white wheat, 29s to 30s per quarter.

Shemeld, Tuesday.—Holiday market, very poor attendance. Prices are nominally the same as last week. Scarcely any trade to test business. Wheat, white, 23s 6d to 30s 6d; ditto red, 29s 6d to 30s 6d per 504lb; oats, new white, 21s 6d to 22s 6d; ditto new black, 20s to 21s per 336lb; barley, grinding, 22s to 23s; ditto malting, 28s to 32s per 448lb; peas, grinding, 32s to 34s; ditto blue, 53s to 80s per 504lb; beans, Egyptian, 35s 6d to 36s; ditto English, new, 37s to 37s 6d per 532lb; Indian corn, small, 23s to 23s 6d; ditto American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—Holiday market, and a small quantity of corn offering. Wheat, 28s; oats, 22s 6d. Other grain at recent quotations.

Stamford, Friday.—Only a few samples of wheat showing, and prices showed a slight decline. No malting barley; seed barley at low rates. Oats 1s. dearer. No beans or maize on offer.

Sunderland, Saturday.—Limited show of grain at this day's market. Wheat quiet, and with a lower tendency. Barley dull. Oats firm. Arrivals coastwise:—Wheat, 101qrs; barley, 669qrs; foreign nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—There is a very slow trade passing in wheats to-day, and prices are unchanged. Malting barley still offering, with but few buyers. No alteration in feeding stuffs.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—The market here to-day is extremely lifeless. Foreign wheat must be quoted rather lower, though by no means pressed by holders. English in small supply and fully as dear. Maize, beans, and oats quiet and unchanged.—DUNNS AND CO.

Wisbech, Saturday.—A short supply of grain. Wheat maintained late rates, 28s 6d to 29s. Oats, 22s to 24s. Beans, 34s to 38s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—The market was of a holiday character. Quotations:—Wheat, new, 12s 6d to 13s per 216lb; oats, old, 15s 6d to 16s; new, 13s to 14s; beans, old, 15s 6d to 16s 6d; new, 14s per 196lb; barley, 31s to 32s per 448lb; maize, new, 25s to 26s; old, 27s 6d per 480lb.

Worksop, Wednesday.—Poor attendance. Very small show of grain. Malting barley trade practically over. White wheat, 28s to 29s; red ditto, 27s to 28s; grinding barley, 26s to 28s; white oats, 23s to 25s; black ditto, 22s to 24s; round maize, 24s to 25s per qr.

Worcester, Saturday.—Wheat trade very quiet, and the business done was at the rates of last week. There was no alteration in values of feeding corn, for which the demand was of a very limited character.

York, Saturday.—Small attendance of farmers, and a moderate supply of wheat, which sold slowly at rather under last week's prices. Fine white, 28s 6d to 29s 6d; red and mixed, 28s to 29s per quarter of 36 stones. Oats scarce and firm. Rye, 8d per stone; beans, 11d to 11½d per stone

FOREIGN.

Paris, Wednesday.—The attendance at the weekly market was not very numerous, as farmers are busily engaged in their field work, and, moreover, the provincial exchanges, deranged by the holidays, are at present sparingly supplied with wheat, and the elements of business were consequently wanting. Native wheat.—Trade was still tedious, holders displaying the same resistance as of late to abate their prices, while millers evinced much reserve in their purchases, owing to the difficulty in placing their products, the consumptive demand continuing limited to daily requirements. In the little business done, prices on an average were 5d. per quarter lower than last week's. Choice Reds, 36s 11d to 37s 5d; Ordinary, 36s 6d to 36s 8d; and White, 37s 5d to 37s 10d per 480lb. Rye is still quiet, and prices feebly supported at 25s 8d to 26s 1d, but no buyers over 25s 3d to 25s 8d per 480lb. In spite of the good accounts of the growing crop, prices of oats have not varied in the provincial centres being generally supported at their previous level, though with a weaker tendency. Here, transactions were difficult, holders reluctantly granting the concessions demanded. There is nothing passing in barley, but provincial advices report a firm tone. Beauce corn being worth 24s 3d to 25s per 400lb., according to quality. Here prices ranged from 21s 9d to 23s 3d for feeding, and 25s 4d to 25s 9d for malting sorts. The situation of buckwheat is rather satisfactory, there being a good run of trade at a slight improvement in values.—*Dornbusch*.

Hamburg, Saturday.—Weather wet and stormy, with chilly nights. There is some business doing in all descriptions of grain at prices tending slightly in the buyers' favour. The imports during the week amounted to 18,438 tons wheat, 2,474 tons rye, 1,794 tons barley, 8,250 tons maize. Wheat meets a limited demand. Several cargoes of Walla Walla arrived, undisposed portions of which are offering at 30s, later arrivals at 29s 3d per 500lb. hard winter 2 prompt is held at 28s 3d; Northern spring 3 at 27s 3d; Manitoba No. 2 May shipment has been sold at 27s per 480 lb. cif. Hamburg. Rye is selling at unaltered prices, 9⅛ South Russian Shipment, middle of April, at 22s 9d per 480 lb cif Hamburg. Nothing doing in malting barley, and the season may be considered as closed. A fair quantity of middling quality is left over. South Russian feeding barley on the spot is selling at 18s, April-June delivery at 17s 6d, August-October at 16s 9d per 400 lb. Maize in good demand. Danubian and Odessa on the spot 21s, August-December, 20s; Turkish prompt, 21s 6d, all per 480 lb; mixed American prompt is offering at 24s 6d - 24s 9d per 480 lb.—JOHN TATLOCK.

HOPS.

Canterbury, Saturday.—No material change in the market. Kent fleeces, 5½d; lamb wool, 4d; cross-breds 6d per lb.

Worcester, Saturday.—The trade on our market is steady, and a few lots change hands every week; the best qualities find the readiest sale, but some of the cheaper sorts are in fair demand, and prices cannot be quoted any easier.—PERCY AND CO.

SEEDS.

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., write that a steady sowing demand now prevails for grass and clover seeds, etc., under which stocks are rapidly diminishing. Meantime, values generally show no change of importance. Fine samples of red clover-seed are getting scarce, and command full prices; but ribby, foul, and inferior parcels remain difficult of sale. Alsyke and trefoil continue firm; white cloverseed, however, favours buyers. As regards perennials, the total decline from this season's top prices is now very considerable. Italian ryegrass is also sympathetically weaker. For cocksfoot, sainfoin, and especially lucerne, the market is very strong. Tares are in meagre request, whilst mustard and rape seed likewise attract but scant attention. Linseed is easier, and bird seeds of all descriptions move off slowly. Last week's rates are asked for blue peas and harlcot beans.

Saturday.—Appleby: 16 to 18 for 1s. Berwick: 8d to 9d per dozen. Carlisle: 15 to 17 for 1s. Grantham: 16 to 18 for 1s. Howden: 18 for 1s. Lancaster: 12 to 15 for 1s. Malton: 17 to 19 for 1s. Pontefract: 15 to 16 for 1s. Retford: 1s 3d to 1s 6d per score. Richmond: 15 to 16 for 1s. Stokesley: 14 or 16 for 1s. Whitby: 16 or 17 for 1s. York: 6 for 1s.

CHEESE.

Dorchester, Wednesday.—Good ripe blue cheese in request at from 46s up to 58s and over; secondary qualities from 20s to 40s.

Glasgow, Wednesday.—The market was somewhat of a holiday character this week. Good lots commanded extreme prices. Stocks are about finished for the season. Cheddars and Dunlops were quoted from 56s to 62s per cwt. New Zealands and Canadians were 2s up on the week; they were in fair demand.

Newport, Wednesday.—There was a fair attendance, and a good business was done. Quotations:—Caerphillies, 56s to 60s; fancy dairies, 62s to 64s; Derbys, 57s to 68s; Cheddars, 63s to 65s; truckles, 63s to 68s.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Good supplies of greenstuffs on offer this morning experienced a better demand. A moderate quantity of potatoes sold slowly. Arrivals of fruit were on a fair scale, and met with a generally steady support. Greenstuffs:—Cauliflowers, 7s 6d to 12s per tally; Brussel sprouts, 1s 3d to 2s per half-sieve; parsnips, 2s 6d; turnip tops, 1s 6d to 2s 6d per bag; carrots, 3s to 4s; parsley, 5s to 6s; leeks, 2s to 2s 6d per dozen bunches; horseradish, 1s 3d to 1s 9d per bundle; forced rhubarb, 1s to 1s 3d; field, 2s per dozen bundles; Valencia onions, 4s 6d to 5s 6d per case. Potatoes:—Main crops, 70s; Reading Giants, 35s; Up-to-dates, 40s; Gartons, 35s per ton. New: Canary, 14s; Teneriffe, 15s per cwt. English apples, 7s to 10s per bushel.

GAME AND POULTRY.

Smithfield, Saturday.—Supplies fair, a quieter demand, business being rather slow. Quotations:—Fowls: Yorkshire, 3 to 3s 8d; Essex, 3s 3d to 3s 6d; Bostnn, 2s. 9d to 3s; Surrey, 3s 9d to 5s; Sussex, 3s 6d to 4s 6d: Welsh, 2s 0d to 3s; Irish, 2s 3d to 2s 9d; turkeys (cocks), 8s 6d to 10s; hens, 4s to 5s; goslings, 6s to 7s 6d; Aylesbury ducklings, 5s 6d to 7s; country ducks, 4s to 4s 6d; pigeons, 10d. to 1s 4d; wild rabbits, 6d to 8d; tame, 11d to 1s 3d each. Dutch: Wild ducks, 2s 6d; widgeon, 1s 2d; pintail, 1s 4d; teal, 1sr golden plover, 1s; black, 9d each; plover eggs, 2s 9d pe; dozen. Russian game:—Capercailzie, cocks, 2s 6d to 3s 6d; hens, 1s 9d to 2s; partridges, 1s 2d; blackgame, 1s to 1s 2d: ptarmigan, 10d to 11d; brown hares, 1s 3d. to 1s 6d; white, 1s 3d each.

FOREIGN CORN TRADE.

The shipments of grain from the chief exporting countrie last week were as follows:—

	Wheat. Qrs.	Flour. Sks.	Maize. Qrs.	Barley. Qrs.	Oats. Qrs.
United States	275,000	90,000	17,000	—	—
Russia	105,000	—	224,000	67,000	96,000
France	—	5,000	—	—	—
Austria-Hungary	—	5,000	—	—	—
Roumania	20,000	—	140,000	19,000	—
Argentina	121,000	—	—	—	—
India	—	—	—	—	—
Australasia	21,000	—	—	—	—
Miscellaneous	20,000	10,000	10,000	20,000	5,000
Total	562,000	110,000	391,000	106,000	101 000

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The rainfall of the first quarter of the year is decidedly below the average, and the deficiency in sunshine has been marked. This has possibly something to do with the fact that, despite an over average temperature for two out of the three months, the growth of vegetation shows no precocity, but is only about up to the mean for the time of year. Actual records are as follows:—

	Rainfall.		Sunshine.		Temperature.	
1902.	1902.	Avge.	1902.	Avge.	1902.	Avge.
Jan.	1.00	1.85	17h.	27h.	42.5	38.5
Feb.	0.90	1.22	21h.	47h.	39.5	39.5
March	1.62	2.08	40h.	94h.	44.5	41.7

The wheat plant promises a full average crop, but even the most ideal weather can scarcely make it a bumper yield, the plant, though healthy, being rather thin in the ground. Winter tares, oats, and beans are by no means unpromising, but they, like wheat, are not at all over-forward. Seed oats have been briskly inquired after at the markets immediately after Easter; the area sown is regarded as 5 per cent. over that of last season, which would raise an average yield of 20,000,000 quarters to twenty-one millions. Prices fully justify the increased sowings, though the deficiency of moisture in bth surface and subsoil must be admitted to tell rather seriously the other way.

During the last few days of March both the United States and Russia had waves of very cold weather pass over them. The cold in America was attended by a heavy downfall. Milder conditions once more prevail in both regions. Crop prospects do not appear to be unsatisfactory in either of these great producing-districts, and there has been some improvement in the promise, both in France and in Central Europe. The news of bad crop prospects in two American States, Kansas and Oklahama, is authenticated, but the marked improvement in California, which also is confirmed, may be taken as fully balancing matters.

The wheat trade in England since Easter has been dull on spot, but fairly active for the summer and autumn failures. American fine quality red wheat can be secured for delivery any month from June to October inclusive, at 30s. per quarter, and the possibility of making sure of a certain proportion of strong wheat for uniting is one that millers are likely to altogether disregard. The maize trade is a little weaker on the fortnight, but feeding barley is the turn dearer, and an excellent inquiry enables the holders of oats to get 22s. and upwards for the 336 lb. kind. There are buyers of pigeon beans and maple peas at the best prices ruling at the close of March.

Average prices of wheat for 1901 are only now the subject of a Government return which enables us to compare the relative market popularity of home and foreign produce. The following figures are extracted from different reports and ranged for comparative purposes for the first time:—

DEARER THAN ENGLISH.	
German	29.11
Australian	29.0
Californian	28.7
American	28.6
Canadian	28.4
Argentine	28.4
Russian	28.2
New Zealand	27.10
ENGLISH WHEAT.	
London	27.7
Country	26.9
Mean	27.2
CHEAPER THAN ENGLISH.	
Indian	26.7
Roumanian	26.7
Turkish	25.1

These figures on the whole bear out the contention of those British millers who succeeded in getting a committee appointed last autumn to see if the average value of English wheat could not be improved.

Sales of British wheat for the first quarter of 1902 thus compare with those for the same period of 1901:—

	Qrs.
1902	2,032,000
1901	1,860,000
Excess	172,000

The price thus compares, and it is somewhat remarkable that the rise has been obtained in the face of unduly heavy deliveries.

1902	27.3
1901	26.3
Advance	1.0

Evidently had farmers been content to hold only as firmly as in 1901 the present position of the market would have been much better than it is at present.

British barley prices show the following change on the first quarter of the two years:—

1902	26.8
1901	25.3
Advance	1.5

This is gratifying and was hardly to be expected seeing how much of the barley of 1901 was more or less discoloured.

Oats are advancing in value and the comparison with last year is exceedingly encouraging:—

1902	20.4
1901	17.6
Advance	2.10

The arrivals of flour into the chief ports since the beginning of the cereal year have been as follows:—

Sacks	Half year.	March.	7 Months.
Thames ports	2,376,000	290,000	2,666,000
Mersey ports	1,654,000	134,000	1,788,000
Severn ports	425,000	16,000	441,000
Clyde ports	1,193,000	164,000	1,357,000
Firth of Forth	288,000	62,000	350,000
The Humber	109,000	11,000	120,000

The Thames ports are London, Tilbury (mostly for London), Rochester, and Chatham. The American millers are very wrath at the dock charges on the Thames, and the protest signed on 26th ult. is understood to speak for three-quarters of the milling capacity of the United States. It is not easy, however, to see what action the U.S.A. millers can take, even if absolutely unanimous. The key to the situation is held by the London and South-Western Railway, and so long as flour costs more to bring from Southampton to London by rail than the extra dock charges on the Thames amount to, so long these charges would appear to be maintainable. With respect to the expediency of charges which cause London to appear on the foreign shippers' black list there can, we imagine, be but one opinion. The London and Kentish M.P.s might do worse than press for an inquiry into the costliness of Thames charges.

The following comparison of average prices in England and France respectively for the leading cereals during the first quarter of 1902 is not without features of interest:—

	England. s. d.		France. s. d.
Wheat	27 3	..	36 6
Barley	26 8	..	23 3
Oats	20 4	..	22 10

It is doubtful if France, without protection, could grow any of the chief cereals, and barley can hardly be paying its way even now. In fact, we hear that oats are gaining ground on barley in all districts of France, except Maine, Touraine, Poiton, and the Limonsin, which are districts producing fine quality barley.

The following is a comparison of leading staples reduced to "a common denominator," in this case the ton:—

Wheat	£6 6 6
Barley	7 7 6
Oats	7 7 2
Flat maize	6 5 1
Round ,,	5 7 0
Fine middlings	5 10 0
Mixed bran	4 15 0
Feeding rice	7 0 0
Whole meal	8 10 0
Feeding flour	5 12 0
Best hay	5 0 0

The following estimate shows the totals of leading staples on passage on the first of the month:—

Qrs.	Wheat.	Barley.	Maize.
North American	285,000	—	20,000
South American	240,000	—	20,000
Californian	2,500,000	310,000	—
Australasian	760,000	—	—
Indian	100,000	—	—
Russian	35,000	100,000	350,000
Various	10,000	50,000	150,000
Total	3,930,000	460,000	540,000
A year ago	3,370,000	260,000	485,000

The quantity of oats on passage is not known, but is recognised to be much below the average. Imports into the United Kingdom last week were —174,000 qrs. of wheat, 62,000 sacks of flour, 103,000 qrs. of barley, 146,000 qrs. of oats (American), 140,000 qrs. of maize, 1,500 qrs. of beans, and 4,750 qrs. of peas. The quantity of wheat believed to be in farmers' hands at the present moment is put at about 1,824,000 qrs., while stores of foreign wheat in merchants' hands are estimated at about 2,450,000 qrs. The quarterly returns of stocks are extremely behindhand in appearing. It is high time that the Board of Trade took over this important matter from the dilatory market authorities.

LONDON TOP PRICE FLOUR.

(No official change since last date given.)

THIS DAY'S MARKETS

MARK LANE, MONDAY.

[FIRST REPORT.]

The price of English wheat to-day was fully 6d up and buyers had difficulty in getting what they required, even at this advance. Foreign wheat on the other hand was 6d. cheaper on the fortnight for American and 3d. for other kinds. Californian brewing barley was rather pressed on sale at 23s 6d. for ordinary, 24s. 6d for fine, and 27s. for best landed. Screened Onchak touched 30s., while the common unscreened averaged about 22s. 6d. per quarter. Some good Normanian, weighing 416 lb, made 21s. 6d. Turkish oats at 17s. to 18s. are the only sorts of oats at all cheap at the present time, even Libaus making 18s. 6d. per quarter, while 24s. is paid for fine 336 lb. English, and also for Scotch Potato Oats. Maize to-day was 6d. lower for American. Other sorts were irregular. Tares made 44s. for Konigsberg, and as much as 80s. for best Scotch. Ordinary English Winter Tares were scarcely obtainable. Oilseeds are steadier from the last markets before Easter.

THE MARKET CLOSED A LITTLE FIRMER THAN IT OPENED, BUT ABOVE PRICES WERE NOT VARIED, ON THE LATER TRANSACTIONS.

THE FLOUR TRADE.

MARK LANE, MONDAY.

Easter has come and gone, but the leading London makes of flour remain quiet at currencies. There has been no change for nearly a month. Country flour has declined about 6d., but is now hardening. Australian flour having got into the hands of a few strong holders looks like appreciating in value, and Cascadia is also strongly held. The finest north-western patents are worth 24s. on spot, but being offered at 23s. for future shipment, spot value scarcely look like improving. Minnesota first patents outside the select list of the champion brands come at 21s. 3d to 22s. per sack, and make the corresponding price of London Town Households seem high. Kansas flour is not much in evidence here, and is accordingly well held. Low-grade flour makes 14s. to 14s. 6d. for Minneapolis and 12s. 9d. to 13s. 9d. for Red Day. These two sorts are for feeding to stock. There was an improved demand for meal, and the stock on ipot was about cleared at previous extreme rates. The flour market closed with a hopefuller feeling than has been manifest for quite a couple of month. Present prices are generally regarded as the lowest we shall see this month.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	June. s. d.	Aug't. s. d.	Oct. s. d.
April 1 noon.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 2 11 a.m.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 3 11 a.m.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 4 11 a.m.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 5 noon.	5 11	6 0	6 0
To-day noon.			

No wheat is obtainable on the forward market for April or May delivery, so that the current Mark Lane trade is not influenced.

Sales of wheat for March on the forward market were 430,000 qrs. only.

Maize is held at 4s. 3d. to 4s. 4d. for spring and 4s. 4d. to 4s 5d. for summer delivery.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—Trade continues dull, and buyers are still disinclined to purchase, except for immediate requirements. Values on spot are as follows:—1st spring patents, 24s. 3d. to 24s. 9d.; 2nd spring patents, 23s 3d. to 23s. 9d.; American Winter Patents, 24s. 3d. to 24s. 9d.; Extra Fancies, 22s. 6d. to 23s.

Offals.—No special feature in bran; the tendency generally is towards easier prices.—GREENHILL BROTHERS (Belfast).

Flour.—Continues dull, and values 3d. to 6d. per sack in buyers favour. Grain.—Flat corn is about unchanged, but round is slow at a further decline. Beans and Canadian pease are firm and in good demand. Barley and oats steady. Oatmeal 6d. per sack down. Mill Stuffs.—Bran very scarce, but thirds are a slow sale.—MCKINNON AND MCDONALD (Glasgow).

Flour.—Trade to-day has been firm, and a fair business has been done at last week's full prices. Flour on spot commands a premium of 3d. to 6d., owing to scarcity.—T. S. MEDILL & SONS.

Arrivals of wheat have been small, and the stock in London has been worked into small dimensions. The demand, however, is only moderate. Prices remain unaltered. Maize steadily held, but unchanged prices. Oats firmer, but tendency against buyers.—WOOD & Co.

Milling Offals are very firm and in good demand. Co-midds. are 5s. per ton dearer than a fortnight ago. Fine midds are at an advance of 2s. 6d. per ton. Bran and pollard very firm and against buyers. Mills keeping clear of everything.—JOHN BAWCOMB & Co.

FEEDING STUFFS.

London, Monday.—Linseed Cake.—There is no materia change since the holidays. Demand keeps very poor, but prices do not come down in America, so sellers here are firm. Cotton Cake and Meal.—Dull, unchanged. Linseed.—A fair demand for time of year; prices hardening.

ROBERT AND JOHN HEWETSON.

POTATOES.

Borough, Saturday.—Moderate arrivals, but the tone of the market remained quiet. Quotations:—Scottish main crops (Dunbar), 80s; Reading Giant Blacklands, 40s to 45s; Blackland Up-to-dates, 45s; Lincoln Silts ditto, 55s; and Kentish Up-to-dates 45s to 50s per ton.

Goole, Wednesday.—Plentiful supply, and slow trade here to-day. Giants, 5s to 5s 3d per load. Top price for best, 52s 6d per ton. Retail price, 6d per stone.

Great Northern, Saturday.—Supplies were on a lighter scale, but experienced a better demand. Scotch main crops, 85s; ditto Bruce, 60s to 70s; Hebronseed, 110s; Blackland Reading Giants, 35s to 45s; Blackland Up-to-dates, 40s to 50s; Lincoln main crops, 80s to 90s; Lincoln Up-to-dates, 50s to 65s per ton New: Jersey kidneys 6d per lb: Teneriffe, 15s; Maltese 12s per cwt.

Spitalfields, Saturday.—Market not heavily supplied; trade, however, being of a slow character. Quotations:—Lincoln Up to-dates, 60s to 65s; Blackland ditto, 40s; Wisbech ditto, 50s to 55s; Scottish ditto, 60s; Scottish main crops (grey soil), 60s to 70s; Lincoln main crops, 80s to 85s; Reading Giants, 35s to 40s; and Blackland Gartons, 35s per ton.

PROVISIONS.

London, Monday.—The arrivals from Ireland for the past fortnight were 3,376 bales bacon and from foreign ports, 20,855 bales bacon. The demand for bacon last week was rather quiet, trade not being very brisk after the holidays, and although the official rate of best Irish and Danish were unchanged, secondary Danish was 2s lower and Canadian 2s to 3s lower. The selling rates generally of all descriptions of bacon were somewhat easier. Current quotations were as follows: Irish 54s to 60s up to 63s; Danish 52s to 56s up to 58s; Canadian 50s to 54s up to 56s. Butter.—There was a fair demand for finest butter at unaltered rates, secondary descriptions of every sort were in good demand. Quotations—Danish, 112s to 114s. Colonials, 102s to 104s up to 106s. Lard.—A steady market at about 1s. better for American. Irish, 54s. to 60s. American pails and boxes, 49s 9d to 51s.

London, Monday.—We have small arrivals of wheat and flour, there is more firmness in the trade and prices are fully supported. Maize, barley and oats are steady in value.—COVENTRY.

CATTLE.

Metropolitan Market, Islington.

Monday, April 7, 1902

	British.	Total.	April 8, 1901.
Beasts	1,540	1,540	890
Sheep and lambs	11,110	11,110	6,510
Calves	10	10	10
Pigs	20	20	—
Milch cows	40	40	50

Quotations per 8 lbs. (sinking the offal).

ENGLISH.

	Inferior.	Second.	First.
Beasts	2s. 10d. ...	4s. 0d. ...	4s. 9d.
Sheep	3s. 10d. ...	5s. 2d. ...	5s. 10d.
Lambs	6s. 0d. ...	6s. 10d. ...	7s. 8d.
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £22

British arrivals include as follows:—Scotland, 13: Eastern Counties, 1,037; Midland, Home and Western Counties, 162; Devon, 40; Ireland, 288.

As usual on a Monday following a Bank Holiday the supply in the beast market showed a decided increase, 630 to day as against 910 on Monday last; the largest consignments were of sourse from Norfolk, both these and Lincoln Shorthorns met a slower trade, as also did Irish. Amongst the arrivals from that country were 191 stores (heifers and steers), which were quoted at from £10 to £13 10s. per head, rates for fat cattle were practically unaltered, but butchering cows and bulls were firmer in price.

The following are top quotations per 8 lbs. (sinking the offal):—

	To-day.	April, 8, 1901.
Scotch	4s 8d to 4s 9d	—
Devons	4s 6d to 4s 7d	4s 4d to 4s 6d
Herefords	—	—
Norfolks	4s 7d to 4s 8d	4s 4d to 4s 6d
Runts	—	—
Lincolns	4s 3d to 4s 5d	4s 0d to 4s 4d
Irish	4s 4d to 4s 6d	4s 0d to 4s 3d
Canadian	—	—
Fat Cows	4s 0d to 4s 2d	3s 8d to 3s 10d

The supply in the sheep market showed an increase of 5,520, owing to larger arrivals of wethers and lambs. Ewes being very short in number, and consequently being rather dearer. Wether sheep trade was dull and heavy at 2d. per 8 lbs. less money, especially after the chief buyers wants were met. The best Down lambs made last Monday's rates, but all other grades were lower in value by fully 4d. per 8 lbs., at wh ch reduction sales were forced. The supply includ-d 5,020 from the Eastern Counties, 330 from Yor shire, and 450 Scotch.

Undermentioned quotations are at per 8 lbs. (sinking the Offal) and are for the best of each class penned:—

	To-day.	April 8, 1901.
7½ to 8- t. Downs	5s 6d to 5s 8d	5s 10d to 6s 0d
9-st. do.	5s 4d to 5s 6d	5s 8d to 5s 10d
10 st. half-breds	5s 2d to 5s 4d	5s 4d to 5s 6d
9-st. Yorkshires, clipped	4s 8d to 4s 10d	5s 2d to 5s 4d
12 st. Lincolns	4s 10d to 5s 0d	5s 2d to 5s 4d
10-st. Irish	—	—
10st. Down ewes	4s 7d to 4s 8d	4s 10d to 5s 0d
11st. half bred ditto	4s 4d to 4s 6d	4s 6d to 4s 8d
5-st. Down lambs	7s 6d to 7s 8d	8s 0d to 8s 2d
6-st. half-bred do.	6s 8d to 6s 10d	7s 4d to 7s 6d

Pig trade barely worth noting, nominal top value small breeds 4s 8d per 8 lbs, sinking the offal.

London (Central), Monday.—Good supplies. Trade slow. Beef carcases, 4s 2d to 4s 4d; hind quarters, 4s 8d to 4s 10d; roastings, 5s 6d to 6s; sheep ewe, 3s 4d to 3s 8d; wether, 4s 2d to 4s 6d; hind quarters ewe, 4s 4d to 4s 8d; wether, 5s 4d to 5s 8d; pigs (large), 3s 4d to 3s 10d; small 4s to 4s 6d.

St. Ives, Monday.—Beast, 902; sheep and lambs, 578; pigs, 463. Beef, 7s 6d to 8s; mutton 7s to 9s 11d; lamb, 11s; pork 6s to 7s 6d; sows, 5s 6s to 6s 6d; fat and store cattle fair trade; fat and store sheep, lambs, and pigs good demand; Milch cows £14 to £23

FOREIGN CATTLE

Deptford, Monday.—To-day's supply compared with Monday last showed an increase of 24 head and consisted of consignments from the United States, trade for which was of a firm and steady nature both in regard to tone and value, an early clearance being made at following quotations per 8 lbs., offal given in; best to dress, about 680 lbs., made 4s. 10d.; second quality quoted at 4s. 7d No sheep on the market. On Saturday, the supply consisted of 1,603 beasts and 595 sheep, both from the United States, and which met with firm trades at following rates: best beasts, 4s. 10d.; seconds, 4s 6d. to 4s. 7d.; sheep quoted at from 4s. 8d. to 5s. per 8 lbs. The following were the numbers on offer on the corresponding day last year with the current top rates: beasts, 526, 4s. 4d. to 4s. 5d. to dress about 720 lbs. No sheep on the market.

THE BALTIC, 1 p.m.

STATE OF TRADE.

In order to effect sales of Californian wheat, a further 3d. fall is allowed. Round maize is in improved request from Saturday. Barley is firm for feeding but weak for brewing. Oats are steady.

BUSINESS DONE.

WHEAT.—Californian, 29s, arrived; Walla Walla, 28s 6d, arrived; Argentine, 28s 9d, on passage; Australian, 29s 6d, on passage; No. 1 Northern, 28s, on passage; No. 2 Hard Winter, 27s 6d, arrived.

MAIZE.—Galatz, 21s, on passage; Roumanian, 20s 9d, on passage; Caucasian, 21s 9d, on passage; Argentine, 20s, May shipment.

BARLEY.—Roumanian, 19s, prompt shipment; Oregon brewing, 24s 6d, arrived.

OATS.—White Konigsberg, 19s 6d, prompt shipment; White Libau, 17s 9d, prompt shipment; White Canadian, 19s 6d, May shipment.

BEANS.—Egyptian, 23s 3d, May shipment.

COTTON SEED.—Bombay, £4 12s 6d, May shipment.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Owing to the chief market day of the week at Islington falling on a Bank Holiday the trade for fat beasts with a lighter supply was naturally of a slower nature, there being fewer buyers present for both prime and second quality, rates ruling fully 1d. per 8lb. in favour of the buyer, a practical clearance being made. On the other hand, fat butchering cows and bulls were in steady request, and the supply very light, 2d. per 8lb. more money was both asked and obtained. On Thursday this advance was maintained, and more fat beasts changed hands than is usual. At the foreign cattle market there was a full supply, sales being readily effected on all three market days, Monday, Wednesday, and Saturday at an advance of 2d. per 8lb. The total number on offer at both markets was 3,618 (previous week 3,328), consisting of 1,010 British (decrease 300), and 2,608 from the United States (increase 590). The following were the top rates paid per 8lb., sinking the offal:—80-stone polled Aberdeens, 4s. 8d.; 90-stone polled Norfolks, 4s. 7d.; 100-stone Shorthorn ditto, 4s. 6d.; 100-stone Lincolns, 4s. 5d.; 90-stone Irish, 4s.; 90-stone fat cows, 4s. 2d.; 85-stone States, 4s. 9d. to 4s. 10d.; 100-stone fat bulls, 3s. 8d.

The sheep trade at Islington was of a firm, steady nature, the previous week's advance for both wethers and ewes being maintained on both market days, with an early clearance on Monday. The lamb trade ruled slower at less money, as sales were chiefly confined to carcass butchers, which naturally means lower rates. At Deptford trade was also firm. The total number penned was 7,916, of which 6,730 were British and 1,186 American. Best pens made per 8lb. as folows, sinking the offal:—7½ to 8 stone Downs, 5s. 10d.; 8-stone Scotch, 5s. 8d. to 5s. 10d.; 9-stone Downs, 5s. 8d.; 10-stone ditto, 5s. 6d.; 10-stone halfbreds, 5s. 4d. to 5s. 6d.; 12-stone Lincolns, 5s. 2d.; 8½-stone American, 4s. 10d. to 5s.; 10-stone Down ewes, 5s.; 11-stone halfbred ditto, 4s. 6d. to 4s. 8d.; 5-stone fat Down lambs, 7s. 6d. to 7s. 8d.; 6-stone halfbred ditto, 6s. 10d. Only 45 calves and 10 pigs on the market, best of the former were quoted at 6s. per 8lb.

Trade in the West.

The dislocation in business, as the outcome of the Easter holidays, being now at an end, the closing days of the past week were marked by unwonted activity in early all departments of the stock markets, the most marked improvement being the trade in sheep, which have suddenly gone up in price almost beyond the most sanguine expectations, seeing what a depression there has been in mutton now for so long time past. The rise is not confined to any particular class of mutton, but may be fairly described as an all-round advance. For ourselves, we are not so much surprised, for, knowing the general scarcity of sheep in the country, we have been rather expecting a better trade, and, though somewhat tardy in coming, our predictions, we are glad to know, have not been falsified. Wether sheep of a good stamp—principally tegs—are once again touching the old figure, 8½d. per lb. (or from 46s. to 51s. 6d. each), which is a matter of some consequence to flockmasters after they have for so long been selling at 7d., and even a more unremunerative figure (or from 46s. to 56s. each). Even the plainer grades of wethers are making 8d. Ewes are correspondingly dear, a general run now for this class of sheep, at all well finished, being from 42s. to 51s. for ripe Downs. Lambs are likewise making 2s. to 3s. a head more than they were, the best cross-breds making 41s. a-piece at Dorchester on Wednesday (or from 10d. to 11d. per lb.); horns also meeting a good demand, though they cannot touch the daintier breeds by quite ½d. per lb. The transactions in stores are principally in couples, which bring from 43s. to 56s. The few wether lambs now on the market are in the main fit for the butcher, or nearly so. Chilver hogs continue very scarce, and are much wanted. The outlook for the coming spring sales is certainly highly encouraging, and, should the favourable prospect of plenty of keep, after the recent welcome rainfall, be realised, we anticipate a very dear time—that is, if present indications count for anything. That sheep are exceedingly scarce in the country is very well known, and it is also equally understood that in many of the more notable pasture districts sheep will have to be obtained, cost whatever in reason they may. Therefore it is a question whether flockmasters will not be wise in keeping on as long as they can as many of their lambs as is possible in view of eventualities. Going to store cattle, the trade for this class of stock is equally buoyant, milch beasts continuing more than to hold their own at almost every market, from £18 to £21 or £22 being a common quotation for all the better-class heifers or good-character cows; whilst sales are equally ready for the more ordinary runs at varying prices, according to character, some making as low as £11 or £12, and some of a younger age up to £17 and over. The barrener trade, too, has been favourably influenced by the better outlook as regards keep, and graziers are very keen in securing every likely bullock on which they can lay hands at prices in every way up to sellers' expectations—these in some cases being as high as £28, and even £30 per pair, though a more general range is from £18 to £26. With prices of grazing cattle going up it is only natural that fat bullocks should stiffen in value, too, and this they are doing almost everywhere, heifers making up to £21 10s. each and steers up to £24 10s., a prices realised at Wimborne on Tuesday (or from 11s. to 12s. per score for best qualities; fat cows making 10s. to 10s. 6d.). Veal continues exceedingly dear, despite the fact of the Easter demand now being over; and we think we are fully justified in quoting the best calves at 8½d. per lb.; if not over, and seconds 7d. to 8d., the result, it is thought, of the shortened offer at most markets. Pigs of the better type in quality and weight fully hold their own; the ordinary runs of medium weights make 9s. 6d. to 10s. 6d. per score, and anything very choice up to 11s. Coarse heavy pigs are not quite so saleable. On the whole, the business of the past week, bearing in mind the holiday season, has been considerably in advance of either buyers' or sellers' anticipations.

Trade in Scotland.

John Swan and Sons, Limited, give the following as their report on the above for the current week:—The number of fat cattle on offer this week has been large, but the general quality not quite so good. With a fair attendance of buyers, trade has been fairly steady throughout, but the prices on an average just the turn lower, although not to any quotable extent. Fat cows a large show, and they met a good market. A full supply of fat sheep, which as nearly as possible made previous quotations. Ewes coming to hand in small numbers, and selling dear. A large show of lambs, the best selling at from 37s. to 42s., secondary a moderate trade. Fat calves and pigs very dear. There was a large supply of store cattle. Anything of a good class met a moderately fair inquiry, and a good clearance of this kind was effected, but secondary cattle and stocks are bad to sell, and a portion of these descriptions left over. There was the largest supply of store sheep of the season. Owing to the continued barren weather, trade throughout has been quiet, and prices just the turn in favour of buyers. A few secondary left unsold. Milch cows met a quiet trade at slightly worse prices. Quotations:—Best beef, to 8s. 3d. per stone; best mutton, 7½d. to 8½d.

Trade in Ireland.

A big decrease of 520 cattle and 637 sheep in last Dublin Market, as compared with the previous Thursday, and a fair attendance of buyers gave some animation to business, though it cannot be said that there was much improvement in quotations beyond recovering the slight fall of last week. A very marked scarcity of really prime beef caused brisk competition amongst exporters, and home victuallers at the extreme rates of last day, which left shippers a hazardous working margin, when prices on the other side of the Channel are taken into consideration. Medium cattle, too, seemed to meet with a readier sale, and a good clearance was effected.

Prime ox and heifer beef made from 55s. to 57s. 6d., and for extra-finished as much as 62s. and 63s. per cwt. was given; good second-class, 50s. to 54s., and coarse and inferior from 42s. upwards. A nice lot of Wicklow-fed cattle were sold to a Belfast buyer at £23 each.

The trade in mutton was still dull, except for the best qualities of wethers and ewes, which were scarce, and made last week's rates freely. The export trade was very light, and disappointing. For the first time this year some shorn sheep were on offer, and nice hoggets sold well at 7½d. and 7¾d., which was practically the value of best wethers in wool. Best wethers made from 7½d. to 8d. per lb., the latter price being paid for Cheviots; ewes, 6½d. to 7½d.; coarse and inferior, 5½d. to 6d. Small to medium hoggets were worth from 27s. to 40s., and heavy from 42s. to 55s. each. Lambs altogether in excess of requirements, and many of them not fit for market. The consequence was that the range of prices varied from 15s. up to 38s. a head. It was considered that there was a fall of from 4s. to 8s. each on lambs, as compared with last week's prices. Prime veal scarce, and in demand at from 8d. to 9½d. per lb.; coarse calves from 4½d. per lb. upwards.

Good milch cows scarce, and wanted. Choice springers and new milch cows were worth from £18 to £22 each; other sorts from £8 10s. Messrs. Sanly had a large sale of about 800 store cattle, which were disposed of at reasonable rates. With a limited supply of pigs and a fair attendance of shippers the market opened actively, and late rates were well maintained, but as the day wore on buying slackened very perceptibly, and prices became irregular. Choice small hogs made from 48s. to 50s. per cwt.; heavy, 44s. to 46s.; coarse and inferior pigs, 36s. to 40s. per cwt.

Number of cattle in market, 1,193; sheep, 4,188.

LONDON.

Islington, Thursday.—A fair supply of beasts, consisting chiefly, however, of fat bulls and rough cattle. The demand proved somewhat quiet, but prices marked little or no change. Fat bulls, 3s 4d to 3s 8d. A fair supply of sheep was penned, and evidenced fairly good support at firm prices, 7½ to 8-stone Downs, 5s 4d to 5s 8d; 9-stone, 5s 4d to 5s 6d; 10-stone half-breds, 5s; 10-stone Down ewes, 4s 4d to 4s 8d; 11-stone half-breds, 4s 2d to 4s 4d. Lamb trade ruled firm; 4½ to 5-stone Downs, 7s 8d to 8s; 6-stone half-breds, 6s 10d to 7s 2d. Calves moved off quietly, the best on offer making 6s 4d to 6s 6d per 8lb. to sink the offal. Pig trade nominal. Total supplies: 100 beasts, 1,140 sheep, 40 calves, 5 cows, and 10 pigs.

COUNTRY.

Basingstoke, Wednesday.—At Raynbird and Sons' sale yard there was a good attendance of buyers to meet a supply of 35 fat beasts, 65 calves, 497 fat sheep and lambs, and 45 head of dairy and store cattle, which realised the following prices:—Fat shorthorn steers, up to £20; Kerry steers, to £18 15s; Polled steers, up to £20; shorthorn heifers, £22 10s; Devon steers, up to £19; fat calves, 70s to 97s 6d; small, 15s to 50s; dairy cows, up to £18. A short supply of fat beasts, with less demand, but in most cases last week's prices were maintained. A fair trade was experienced for all the best class milk cows and heifers; secondary sorts met a dull trade. Store cattle are inquired for, and make more money. Fat calves are scarce, and meet a firm trade. A full entry of fat sheep and lambs met a good trade, at an advance all round on last week's values, and a clearance effected. Prime quality fat sheep realised from 44s to 54s 6d; 13 months' old ditto, 34s 6d to 51s; fat sucking lambs, 30s to 42s 6d; fat ewes, 38s to 50s. Ruling values. Best quality fat beasts, 6¾d to 7¼d; second ditto, 6½d to 6¾d; bulls, cows, and inferior beasts, 5d to 6d per lb.; best quality fat sheep, 7¾d to 8¼d; second ditto, 6½d to 7¼d; fat sucking lambs, 10d to 12d; old ewes, rams, and inferior sheep, 6d to 7d per lb; fat calves, 7½d to 9d per lb.

Boston, Wednesday.—Strong stores, £12 to £14; young grazing steers, £10 to £12; drapes, £12 to £14; in-calvers, £19 to £21; heifers, £17 to £19; calves, 55s to 60s; hogs, 40s to 44s each; best mutton (wether), 8d; ditto (ewe), 5½d to 7d per lb.

Bury, Wednesday.—At Messrs. Simpson and Son's auction mart there were short supplies of stock all round, as is often the case on the market day following the holidays. Fat beasts met a sharp trade at more money, fresh buyers from the Midlands being unable to obtain sufficient for their requirements. Prices for fat sheep went up to £27. Store beasts also sold well at a trifle more money for all descriptions. Store sheep met with more enquiry. Good supply of pigs, and a brisk trade prevailed at fully late rates.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9	6
Under 10 sc.	Not exceeding 2½ in. ...	9	0

Under 12 sc.	... Not exceeding 3 in. ..,		

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts, 227; sheep, 415; horses, 2. Beef, 7s to 8s; mutton, 4s 8d to 5s 4d. Quite a holiday market. Very few store beasts shown. Fat beasts, a fair show; prices unchanged. Fat sheep, short supply, and trade fairly good. Stores, very few to hand. Hay, straw, and roots, short supply.

Canterbury, Saturday.—The market is closed owing to foot and mouth disease restrictions.

Carlisle, Saturday.—The show of Irish store cattle was about similar to that of a week ago, and consisted of over 700 heifers and stripping cows. A very large number of buyers attended from all parts of the North of England and South of Scotland, and business was brisk. The best heifers changed hands at £10 10s to £14 10s; small heifers £6 10s to £8 10s. There was an excellent show of stripping cows, which met a ready market at £8 10 to £13 10s.

Chichester, Wednesday.—There was about an average supply of fat stock, and trade for beef and mutton was steady, without change. Lambs were plentiful, and much cheaper than of late. Calves of the best quality were still scarce, and realised quite 7s per stone. The store sheep trade exhibited signs of more activity, and the majority of the pens on offer were disposed of at improved rates. There were more than enough store cattle to meet the demand, and trade in this department is not yet at its best. Pigs, however, sold briskly, and prices were higher than a fortnight ago, little porkers being especially dear. The following figures show the number of head of stock on sale and the tolls taken: Cattle, 580; sheep, 3,627; pigs, 601; calves, 123; horses, 79; total, 5,080. Tolls taken, £31 1s.

Dorchester, Wednesday.—Coming so soon after the great Easter sales of calves and pigs, and almost before the holidays are over, there was a considerable falling off in the supplies, compared with that day week; still, there were pretty good offers on the whole, and ample to meet the requirements of all buyers. Trade was steady for beef, but by no means so fast for calves, though lambs met a fairly good inquiry. Mutton, however, was still quiet. Sales were held by Messrs. Enser and Son, and also by Mr. Sampson. Good beef cannot be quoted under 11s per score, which is the general run at most markets, though the more ordinary run of cows may be quoted at about 10s to 10s 6d. Calves were a steadier trade, at a decline in value, 8d being an outside price to-day, whilst the plainer kinds sold from 6½d to 7½d. Best qualities of mutton may be quoted about 7¾d per lb, and coarser lots 6½d to 7d. Best lamb, 9d to 9½d; seconds, 8d to 8½d. Small weights in porkers met a fairly quick demand at 10s 6d per score and baconers 9s to 10s.

Dublin, Thursday.—Numbers in market: Beasts, 1,193, decrease 520; sheep, 4,188, decrease 637; calves, 20, decrease 20. Very choicely finished cattle in the market, and these were in good demand at somewhat higher prices. Other sorts easier sold. Sheep in better demand at a slight advance all round, and a fair clearance was effected. Cattle, live weight (best), 33s to 36s per cwt.;

secondary descriptions, 27s to 32s per cwt. Mutton, dead weight, 6½d to 8d per lb.

Hereford, Wednesday.—Bullocks and cows, 1,480; calves, 198; sheep and lambs, 1,996; pigs (fat and sows), 22; sucking pigs, 25; pigs (stores, not more than ten), 238; pigs (stores, more than ten), 70; horses, 128; colts, 36. Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 7d per lb; veal, 8½d per lb; pork, 5½d to 6d per lb; bacon, 4½ to 5½ per lb; lambs, 1s to 1s 2d per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report shorter supplies of all descriptions of stock. Fat cattle came to hand in excellent condition; a sharp trade resulted at an advance of 6d per stone. Fat sheep were in request, and improved in value from 6d to 1s per stone. Fat lambs up to 37s. Grazing hoggets met with more enquiry; half-breds to 39s 6d; Blackfaced to 29s. Fat calves, with Easter over, were not so dear; the best weaning calves sold well. Fat swine fully maintained the high quotations noticed last week, and stores, which were more numerous, were well competed for. Fat sows dear. Grazing cattle with condition made rather more money. For cows and heifers there was a better demand, and prices ruled against buyers. Numbers at sales and market: Cattle, 429; calves, 29; sheep, 2,338; swine, 1,186; horses, 16.

Leicester, Wednesday.—Very full consignments of home-fed bullocks. Buyers and dealers were well represented. Trade rather sluggish, and prices 10s per head lower. Choice bullocks, 6½d to 6¾d; secondary, 6d to 6¼; cows, 5d to 6d; heifers, 6½d to 6¾d per lb. Sheep were a large supply, and sold slowly at 7¼d to 7¾d in the wool for choice lots; large sheep, 6½d to 7d; shorn sheep, 6d to 7d; ewes, 5d to 6d. Lambs firm at 1s. Calves sold very freely at 9d to 10d per lb.

LIVERPOOL, Monday.—Larger supply of cattle, demand fair, and prices rather better for all classes. Sheep supply also larger. Trade slow, and late rates difficult to maintain. Lambs, owing to old weather, only middling trade. Beef, 7d. to 5d. per lb.; mutton, 8¾d. to 6¼d. per lb.; lamb, 1s. At market—1,265 cattle and 5,223 sheep.

Newport, Wednesday.—A very brisk trade was done, although the supply of sheep and cattle was rather short. Quotations: Best beef, 6¾d; seconds, 6¼d to 6½d; cows, 5½d to 6d; best wether mutton, 8d to 8½d; ewes, 6½d to 7d; lambs, 1s; veal, 8d to 9½d; pigs, porkers, 10s to 11s per score.

Norwich, Saturday.—The supply of store beasts on offer here to-day showed some falling off, and the quality and condition of the lots on offer also left something to be desired. Prices remained at about their former level. There was a larger show of fat beasts and trade was dull, prices being the turn in favour of buyers in the transactions effected; quotations remained nominally unchanged, however, at 7s 6d to 8s. per 14 lb. Store sheep were in large supply and trade was dull at barely late rates; keeping hoggets were quoted at 35s to 42s per head. Fat sheep made 7s 6d to 8s and 8s 6d per 14 lb. Keen prospects are likely to be improved in Norfolk by heavy rains which have fallen to-day.

Romford, Wednesday.—Average supply of fat beasts, trade a little better. Best beasts, 4s 6d to 4s 8d, and middlings, 4s to 4s 2d per stone. Calves in very short supply. Trade about the same, at 5s 6d to 5s 8d per stone. Sheep in short supply; trade a little better. Best sheep, 5s 6d to 5s 8d, and middlings, 5s 2d to 5s 4d per stone. Lambs in short supply; trade fair, at 7s 4d to 7s 6d per stone. Few stores on offer; fair demand. Pig market still closed.

Salford, Tuesday.—The supply of cattle was smaller than last week. A brisk trade was experienced, and sellers obtained better prices. There was a large decrease in the number of sheep and lambs on offer. Trade ruled slow for sheep, but the tendency of prices was in favour of the seller. Lambs met a slow sale at less money. A large show of calves, but best quality rather scarce. These met with a ready sale, but other kinds sold slowly. Cattle, 5d to 7d; sheep in wool, 7d to 9½d; ditto clipped, 6d to 8d; calves, 6d to 8¾d per lb; lambs, 30s to 50s each. Cattle, 2,016; sheep and lambs, 9,243; calves, 186; pigs, 52.

Sheffield, Tuesday.—No quotable transactions in to-day's cattle market, which had a deserted appearance owing to holidays and farm operations.

Spalding, Tuesday.—Small show of beef, and keen demand; best to 8s; cow beef realised 7s 6d. Small show of store beasts, and an improved demand. Cows dear, especially the better sorts. In the sheep market there was a small number offering, and the price ranged from 6d to 7¼d per lb. Lambs sold well.

Thame, Tuesday.—There was a very short supply of stock, which was not equal to the demand, and prices ruled high, a clearance being readily effected. Mr. Bond's sale comprised 19 fat beasts, 119 fat sheep and lambs and couples, 55 weaning calves, and 141 pigs. Fat bullocks made £18 to £22 15s; fat heifers, £14 to £21 12s 6d; fat tegs, 46s to 50s 6d; fat ewes, 38s to 51s; fat lambs, 39s to 44s; couples up to 61s 6d; cow calves, 28s to 54s; bull calves, 14s to 43s; fat pigs, 9s 6d per score; stores, 14s to 32s.

Wakefield, Wednesday.—Good demand for beef and mutton. Beef made 5½d to 7d per lb; young sheep, 7¾d and 8d; others, 5d to 7½d; lambs, 11d to 1s. The good trade for beef and the increased prices were principally due to the smallness of the supply. Numbers: Sheep, 3,417; beasts, 1,164.

Wolverhampton, Wednesday.—Beasts, moderate supply, fair trade. Sheep, fair supply and trade fair. Calves also a moderate supply and trade. Beef, 5½d to 7¼ per lb; a few best, 7½d. Mutton, 6½d to 8¾d per lb. Veal, 7¼d to 9d per lb. Pigs: Bacon, 10s per score; porkers, 10s to 10s 6d per score; sows, 8s per score.

Worksop, Wednesday.—Fair show of stock, and a good trade. Best beef, 7s to 7s 6d; secondary, 6s to 6s 9d per stone; best wethers, 7d to 7½d; ewes, 5d to 6d; veal, 10d to 11d; lamb, 10d to 1s per lb.

FOREIGN.

Deptford, Wednesday.—Beast supplies, 680 head, being an increase of 336 as compared with last Wednesday's figures, and consisted of shipments from United States. Trade firm at 4s 7d to 4s 9d, exceptionally 4s 10d per 8lb. to sink the offal.

Yorkhill, Tuesday.—The usual weekly sale of American cattle was held to-day, when there were penned in the sheds 207 cattle, landed by the "Sarmatian" (s.), from Portland (Me.). The animals, as regards quality, were fully up to those exposed the previous week. There was a fairly good attendance of buyers, and trade was very brisk, values all round being fully up to the rates ruling the previous week, and, if anything, a little higher—a fact due to the small supply. Small, neat, well-fed beasts secured the best inquiry, and sold very dear. The dead weight quotations may be given as follows:—Bullocks, best quality, medium weight, 60s, and a few really choice up to 62s per cwt.; secondary and heavier, 56s to 58s; heifers, best class, 56s to 60s; secondary, down to 54s; cows, 50s to 54s; bulls, best class, to 54s; and secondary and heavier, 50s to 52s.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: There has been more briskness in the New Zealand market this week, especially at its close and consequently prices are, if anything, firmer than they were before Easter. There is every indication that retailers have almost exhausted their stocks and are obliged to come on to the open market to replenish supplies. There is no quotable change in prices, but the tone of the market is decidedly better, and it looks very probable that next week a rise in values may occur. The Danish Committee has left the Copenhagen official quotation again unchanged at 96 kroner, being the same as last year. Cheese: The demand for Canadian and New Zealand cheese continues good. Canadian "Choicest" is selling at 56s, and New Zealand "First Government" grade at 54s, with a few lots at 55s. Stocks in the United Kingdom are very small, while it is reported that in Canada they are unprecedently light.—W. WEDDEL AND CO.

WOOL.

Canterbury, Saturday.—Not much business has been done since the holidays, but the tone of the market is very healthy.

Glasgow and Leith.—There is little or no change to note in the Scotch wool trade in March. There is still a good demand for fine-haired Cheviots, particularly hoggs, while the stronger variety has been neglected. Half-bred and Cross wools have been dealt in to a moderate extent. In Blackfaced there has not been much movement in the home market, but small lots, partly in completion of old orders, have been shipped to the States during the month. At the sales in Leith, on the 25th, and Glasgow, on the 26th, there was a small attendance of buyers, who operated very sparingly at the auctions, but a few lots were disposed of privately—mostly of Half-breds and Crosses. In all classes prices are fairly well maintained, and stocks are low.—J. AND W. GREIG.

MANURES.

Liverpool, Friday.—Fertilisers of all descriptions are in seasonable request, and values are firm, whilst for sulphate of ammonia advanced prices are demanded. Feeding stuffs are only a quiet market, and prices tend in favour of buyers. To-day's rates are as follows: Nitrate of soda, best quality, i.e., guaranteed 95 per cent., pure, in bags, £10 10s; East India bone meal, fair to prime, in bags, £4 2s 6d to £4 7s 6d per ton; kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s per ton; palm nut cake, prime, in bags, nominal; linseed cake, American thin oblong, prime, in bags, £7 1s 3d to £7 3 9d per ton; linseed cake, English, prime, in bulk, £8 10s to £8 15s per ton; linseed cake, foreign, round, prime, soft only, in bags, £8 2s 6d to £8 5s per ton; cotton-seed cake, N.A. decorticated, prime, in bags, £7 to £7 2s 6d per ton; cottonseed cake, English decorticated, prime, soft, in bags, £7 2s 6d to £7 7s 6d per ton; cotton-seed cake, English undecorticated, prime, in bulk, £4 10s to £4 15s per ton; cottonseed cake (crushed) 20 to 25 per cent. oil, prime, in bags, £7 3s 9d per ton; maize germ meal, prime, in bags, £5 16s 3d to £5 18s 9d per ton; rice meal, Rangoon, as imported, in bags, £5 to £5 2s 6d per ton; Indian meal, coarse to fine grinding, prime, in bulk, 12s 6d to 12s 9d per 240lb; linseed, fine bold feeding, in bags, £3 2s to £3 4s per qr, 416lb; D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s per ton, at super depot; D.N.S. brand superphosphate of lime, guaranteed, 30 to 31, in bags, £2 10s to £2 12s per ton at super depot; superphosphate of lime, guaranteed, 35 to 36 sol., in bags, £3 to £3 2s per ton at super depot; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, nominal; basic slag, prime quality, guaranteed, 35 to 40 per cent. phos., in bags, nominal; basic slag, finest quality, guaranteed 38 to 45 per cent. phos., in bags, nominal.

HAY AND STRAW.

Manchester, Wednesday.—Hay, 6½d to 7d; clover, 6¾d to 7½d; ditto Welsh, 7¾d; ditto Lincoln, 8d; straw (oat), 5¾d to 6d per stone.

Whitechapel, Saturday.—The trade ruled quiet at unchanged values. Best clover, 95s. to 110s.; inferior ditto., 80s to 90s; specially picked hay, 115s; good ditto, 100s; inferior ditto. 80s to 90s; mixture and sainfoin, 90s to 100s

THE BALTIC.

The cargo arrivals from March 27th to April 5th were 38 in number, namely, 1 maize, 4 barley, and 33 wheat. The cargoes of the last-named staple represented nearly 400,000qrs., but only 174,000qrs. have as yet had time to unload. The trade at the Baltic has been, naturally, affected by these large supplies, and Californian wheat is pressed on sale at 29s. 6d. per quarter, Walla Walla at 29s. 3d., and Australian at prices varying from 29s. to 30s., according to sample.

Sales of articles unaffected by the heavy cargo arrivals include "parcels," that is, part cargoes, of No. 2 hard winter wheat at 27s. 9d., Calcutta soft red at 29s., and Kurrachee soft white at 28s. 9d. per qr. Spring corn cargoes have fetched 18s. 6d. for Azoff barley, 23s. 6d. for Roumanian rye, 28s. 9d. for Egyptian beans, 29s. for Calcutta white peas, 17s. 9d. for Roumanian oats, 46s. 6d. for Indian poppyseed, 49s. for Argentine linseed, and 37s. for Turkish canaryseed. Of staples sold by the ton Egyptian cottonseed has made £6 15s.; and Portuguese locust beans have realised £4 15s., both for prompt shipment.

The London Corn Trade Association inform us that the following standards have been made up, namely, Maize from Kustendje, January shipment. Maize: Odessa, Danube, Odessa, Varna, Poti, Bessarabian, Gal.-Fox., Danube, Dede Agatch, Novorossisk, Bourgas. Rye: Nicolaieff, 72/73 kilos.; Novorossisk, 72/73 kilos; Odessa, 73/74 kilos. Barley: Odessa, Novorossisk, Danube, Eupataria, Nicolaieff, Kustendje, Theodosia, Baltchick. All January shipment. Samples may be had during April at the Association's offices.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 2,194qrs. from Buenos Ayres, 50qrs. Harlingen, 8,793qrs. Rosario, 4,092qrs. Villa Constitution; total, 15,129qrs. Linseed: With further arrivals of Plate, and Easter Holidays intervening, the market has ruled dull, and prices have declined 1s 6d to 2s per qr. Calcutta has also been more pressed, chiefly by re-sellers, and prices show a fall of 2s per qr on the week, April-June shipment being now offered at 50s. River Plate, 46s 6d accepted for Seed arrived; forward positions quite nominal. Cottonseed: The market is without change in values since our last, and only a moderate business done, as present high prices are unremunerative to the crushers, who consequently buy sparingly. Spot sold at £6 16s 3d; also same paid per steamer near at hand. March and April-June remain at £6 15s, and sellers of new crop November-January at £6 5s. Oils:—Exports for the week ending March 25, 1902: Linseed oil—2 America, 2 Belgium, 2 Denmark, 2 Germany, 8 Holland, 2 Italy, 19 Norway, total 37 toas; cotton oil—192 Austria, 96 Belgium, 2 France, 264 Germany, 279 Holland, 2 Sweden, total 775 tons. The market for linseed oil is flat; for cotton-seed steadier. Linseed oil: 28s. spot, 27s 9d May-August. Cotton oil: 22s 10½d spot; 23s 3d May-August. Crude: 21s 9d spot; 22s May-August. Rape oil: The market is quiet, and there is no alteration in prices.—KEIGHLEY, MAXSTED, AND CO.

London, Thursday.—Linseed.—Continued heavy shipments from the East Indies and the Plate have caused rates to decline steadily, but at the close an improvement of fully 9d per quarter from the lowest point has taken place in forward positions. Spot Calcutta to London has been sold at 50s 6d, passage ranges at 50s 6d to 50s 9d; April-June, 49s 6d, but closing at 50s 9d. La Plata on passage, 48s. Hull has also been lower, but is now steadier. Calcutta, April-June, 51s 3d. La Plata, spot 47s, March-April 48s. To the Continent, Bombay, April-May, 53s 9d; June-July, 54s. Calcutta, April-June, 51s. La Plata afloat, 48s; March-April, 49s. Linseed oil has experienced considerable fluctuations in value, and the recent decline in values has again been followed by higher price. We quote spot in pipes, £29 15; barrels, £30; May-August, £29 10s; Sep-Dec. £28 5s. Hull naked spot, £28, which is also the quotation up to August. Linseed cakes are steady. We to-day quote London made, £8 5s to £8 7s 6d ex mill; American Western, £7 7s 6d to £7 10s; Russian, £7 12s 6d to £8 2s 6d. Cotton cakes quiet; London made, £4 6s 3d to £4 7s 6d. Rapeseed.—Quiet. Brown Cawnpore, April-May, 37s 6d; Brown, Calcutta, April-June, 36s 3d. To the Continent we quote Yellow Guzerat, 42s; Yellow Cawnpore, April-May, 40s; Brown Cawnpore, March-May, 37s 6d; Brown Calcutta, April-June, 36s 3d; Ferozepore, February-March, 37s 6d; Jamba, March-May, to Hull, 31s 6d. Cottonseed.—Alexandria has continued firm, and buyers here have at last come up to something like Egyptian parity. Spot London, £6 15s; passage, £6 17s 6d; April-May, £7. Hull spot to April-June, £6 18s 9d; November-January, £6 6s 3d. Cargoes are held for prices that are a little beyond buyers' views. Bombay to Hull: Business continues to be done at £4 5s for passage; April-May is quoted £4 15s sellers.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed Cakes: The markets during the past week have been more or less of a holiday character, and buyers, beyond filling their immediate requirements are less inclined to operate ahead, at the same time there is certainly no depreciation in values. Russians offer rather more freely the price in mats being unchanged, but in bags about 2s 6d per ton more money. Americans are unchanged in price, both in spot and forward positions. Calcutta made in bags remain good value at at £7 15s per ton. London made are slightly easier, but there is not much response. Cotton Cakes: A fair quantity of Foreign is available in warehouse, and with a very poor demand prices are with difficulty held up. English meet a slow sale at unchanged prices, with Egyptian slightly easier. Decorticated are dull and un hanged, with Meal also unchanged. Rape Cakes: Quiet, and unchanged. Maize Germ Meal: A small quantity of American is obtainable at £5 15s ex ship, while there are sellers at £5 5s c.i.f. for prompt shipment. English is in fair request at 5s per ton less money. Rice Meal: A steamer parcel of Rangoon just arrived has sold at £4 15s ex ship, and some quantity to arrive in about three weeks has changed hands at £4 7s 6d.

HOPS.

London, Monday.—W. H. and H. Le May report:—Business opens after the holidays with a demand for Mid. and East Kent Golding hops, but stocks are exhausted. There is also a fair enquiry on this market for Worcester hops which are now offering at such price that make them the best value obtainable.

SEEDS.

London, Monday.—We had a moderate demand for all farm seeds at to day's markets. Buyers act cautiously, the season being well advanced, but it looks as if stocks left over will be lighter than usual, holders therefore are not pressing sellers, and prices are fairly well maintained.—JOHN PICARD & CO.

WATERLOO ROUND FEEDING CAKES, £6 10s 0d PER TON WATERLOO ANGLO SHAPE 97 PER CENT PURE LINSEED CAKES, £9 7s 6d PER TON; WATERLOO 97 PER CENT. PURE EGYPTIAN COTTONSEED CAKES, £4 15s 0d PER TON. ALL F.O.R. HULL.

MOLASSINE FEEDING MEAL, packed in bags, of 1½cwt., each. Price per cwt., 7s. 6d. Price per ton, £6 15s., on rail at works, Silvertown, Essex, and F.O.R. Liverpool. A sample lot of 6cwt., in 4 bags of 1½cwt. each, delivered free to any station in England on receipt of remittance for £2 11s 0d

STOCK AND SHOW NOTES.

By Herdsman.

I am requested to remind intending exhibitors of horses, cattle, sheep, and pigs at the Royal Agricultural Society's meeting, to be held at Carlisle in July next, that entries can only be received by the society at the lowest rates if they are in the hands of the secretary on or before Tuesday week, April 15. The rates for entries now current are: 10s. per entry to members of the Royal Agricultural Society, and £1 per entry to non-members. These rates will be increased after April 15 and up to April 30 to 15s. per entry to members and 30s. per entry to non-memebrs. From May 1 to May 15, when the entries will finally close, the fees will be: Members, £1, and non-members, £2. Entries of poultry and produce can be made up to April 30 at 2s. 6d. per entry to members, and 5s. to non-members, which rate will be increased after May 15 to 5s. and 10s. respectively. Copies of the prize-sheet and forms of entry for live stock, poultry, and produce, and also for the competitions of shoeing smiths, butter-makers, and horse-jumping, can be obtained on application to the secretary, at 13, Hanover Square, London, W.

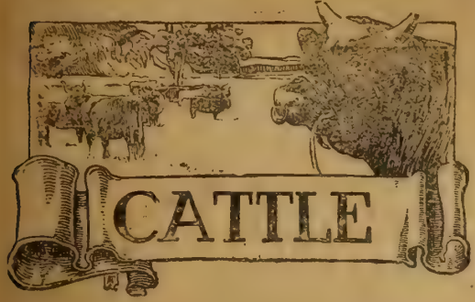
In a recent issue I gave some details of the entries of the cattle and pigs received for the Royal Dublin Society's Spring Show, which opens on the 15th inst. I am now able to supplement that information with the entries of the horses, which closed late, the week before last. They are certainly disappointing, for, notwithstanding the fact that eight agricultural classes are included this year which were left out in 1901, the total entries of horses number but 164, as compared with 165 last year. The agricultural classes have met with but scanty support, no fewer than four failing to receive any entry, whilst in one class there is but one entry, and in the others the numbers are seven, six, six, and four, making a total for eight classes of 24. Hackneys number the same as last year, viz., 12; horses suitable for harness are three less than in 1901, when there were 14; horses in single harness number 13, as against 17; harness ponies, however, show an increase of five, they numbering 17; whilst the entries of made polo ponies total 36, and ponies suitable for, and likely to make, polo ponies number 43, as compared with 37 and 57 respectively in 1901. For the Champion Cup, value £10, open to first prize winners in harness at Royal Dublin Society's Horse Show, August, 1901, or any show in Great Britain during 1901, duly entered for this competition, and first prize winners in classes 78, 79, 80, and 81 of this prize list, if shown in harness, without further entry, no entries have been received, whereas last year there were two.

I have received an artistically-got-up catalogue of the horses for service during the present season in Lord Rothschild's famous Shire stud at Tring Park, Tring, Herts. The horses at stud are Anchorite, 16488, Birdsall Menestrel, 19337, Hertfordshire Lad, 18800, Blythwood Spark, 16532, Duke of Knighton, 17311, Carbonite, 11173, Harold's Heir, Vol. 24, and Chief Councillor, Vol. 24. The majority of the animals have won numerous prizes at the big shows during the past few years, and they are all well known. With the exception of Birdsall Menestrel, whose nominations have all been taken up, the whole of the animals named will stand at stud this season, at certain fees given in the catalogue. Fuller particulars can be had on application to Mr. Richardson Carr, Estate Office, Tring Park.

A catalogue has been forwarded to me of the Shire horses, Aberdeen-Angus cattle, and Berkshire pigs on the Danesfield Estate. The majority of these animals have been bred by Mr. R. W. Hudson, and are from some of the most noted prize-winning strains in the country. Breeders intending to make purchases during the coming season are invited to inspect the stud and farms, and should make application for appointments to Mr. Colin Campbell, Estate Office, Danesfield, Marlow. It is also announced that an unreserved sale of Shire horses will be held at Danesfield on October 8.

Three well-known, prize-winning Shire stallions will stand at the Stud Farm, Norbury Park, Dorking, during the present season, viz., Hendre Champion, Norbury Harold, and Norbury Dane. These are included in Mr. L. Salomon's famous stud, and will serve a limited number of mares at fees ranging from ten to three guineas, special terms being arranged for bona-fide tenant farmers, full particulars of which can be had on application to Mr. John Bastin, Norbury Park Farm, Dorking, Surrey.

THE SHIRE FILLY CHILDWALL CHANT was bred by Mr. W. Cunningham, Gorsey Cop, Cateacre, Liverpool, being a daughter of Harold out of Cephalonia, 17,966. At the Shire Horse Society's Show in February she won First Prize in the class for one year old fillies, being exhibited by Mr. W. Cunningham.



Mr. J. Crawter, Secretary of the Waltham Cross and Three Counties (Essex, Herts, and Middlesex) Horse and Foal Society, informs me that in certain quarters it is stated that his society's show is to be hld on June 19; but this is not so, the date being June 12, as given in a pocket book and list of shows.

Although the show of the Adlington and District Agricultural Society, at Macclesfield, last year, was a success, it was not so financially, it resulting in an adverse balance of £30. However, at the annual meeting of the society, last week, the President (Mr. A. M. R. Legh, of Adlington Hall) stated that he did not like the idea of beginning the arrangements of the show in the Coronation year with an adverse balance on any account, and, in order that they might start free from debt, he would send the treasurer a cheque for that amount. Of course, Mr. Legh's generosity was much appreciated, and it is to be honed that the show to be held at Alderley Edge this year, under that gentleman's presidency, will prove a success from every point of view.

The Council of the Darwen and District Agricultural Association has drawn up a liberal prize list for the show to be held at Darwen on Saturday, May 10, a sum of £500 and about a dozen cups, ranging in value from three to ten guineas, being offered. Several new open classes have been added this year, including one for Hackney colt or filly foaled in 1901, another for Hackney foals of 1902, a harness class under 13 hands, a tandem class, and one for Army horses, and a special class for leapers ridden by ladies only; whilst new classes are added for dairy cattle. Entries close May 3, with the secretary, Mr. J. Ainsworth, Post Office Chambers, Darwen.

Recent cattle sales in America do not call for any exhaustive notice. Good prices were, however, made at a composite sale of Shorthorns at South Omaha, Nebraska, on the 14th ult., although some of the consignments were not in proper condition. The well-bred and well-conditioned cattle sold well, but the thin and mediocre lots sold better. Mr. Ward's imported Rosewood Maid was sold to Mr. C. F. Farrand, Ireton, Iowa, for £20. Jessica, by Golden Star, an imported cow with calf, went to Walpole Bros., Rock Valley, Iowa, at £260. The bulls sold well; in fact, it was one of the very best bull sales of the season. Secret's Strathallan, the fifteen-months-old son of Secret Valentine, was bred and sold by Riley Bros., Albion, Nebraska. He is a massive, thick calf, and sold well, going to O. H. Blakesley, Marne, Iowa, at £160. No female sold under £27, and only two bulls sold under £20.

In the seventeenth annual report of the Secretary and Executive Committee of the Dominion Shorthorn Breeders' Association, dated Toronto, February 3, 1902, it is stated that Shorthorns have been in good demand during the last year at public sales, and especially so at private ones, more pure-bred cattle having left Canada than in any one year heretofore. Most of these have gone across the border to the United States, although a goodly number have gone to the North-West and British Columbia. High honours have been taken by Canadians at the Pan-American and other American shows, and high prices have been obtained by them at American sales; large prices have also been paid by aCnadians at those sales. It has, altogether, been the most successful year in Canada for Shorthorns that was ever known.

Outbreak of Foot and Mouth Disease in Kent.

A rather serious outbreak of foot and mouth disease has occurred on a farm at Chislet, between Canterbury and Herne Bay, 19 lambs having died from the disease, and in consequence the Board of Agriculture have issued an order closing all the live-stock markets in the eastern division of Kent, and prohibiting the holding of sales of cattle and sheep within the infected area. The order not reach Canterbury until Saturday afternoon, and the lean-stock market, at which a large trade had been done in store sheep, was immediately closed. The effect of the order, coming into force just as the spring trade in sheep was opening, will be a serious loss to breeders. Sales had been advertised to take place last week in various parts of East Kent, the entries for which numbered many thousand head of sheep. None of these, however, could be held, and no cattle or sheep will be allowed to be removed from any of the farms in the district. The infected area includes the petty sessional divisions of Ramsgate, Cinque Ports, Liberties, Wingham, Elham, Howe division, and Faversham, with the parishes of Smelth, Wye, Boughton, Aluph, Eastwell, Charing, Ashford, and the boroughs of Sandwich, Deal, Hythe, Faversham, Queenborough, Margate, Ramsgate, Dover, Folkestone, and the city of Canterbury.

Shrewsbury Bull Show and Sale.

There was a very large company of buyers; both home and foreign, at Messrs. Alfred Mansell and Co.'s annual show and sale of bulls at Shrewsbury, and very satisfactory prices were realised. The catalogue comprised pedigree Shorthorns, Herefords, and Aberdeen-Angus from the herds of various breeders, whilst some non-pedigree Shorthorns were also entered. Messrs. John A. Preece, Drayton Home Farm, Thrapston; Mr. Alexander Bruce, South America; and Mr. Allen E. Hughes, Wintercott, Leominster, officiated as judges, and their awards were as follows:—

Best Shorthorn Heifer, not exceeding 2 years old.—1, Mrs L. H. Holland, Wharton Grange, Newport, Salop; 2, Mr. E. K. Bickley, Emstrey, Shrewsbury.

Best Shorthorn Cow.—1, Mr. C. Lea, Yorton; 2, Mr. J. Tetley-Nickels, Day House, Shrewsbury; h.c., Mr. E. K. Bickley.

Best Shorthorn Bull, not exceeding 16 months old.—1, Mr. A. Browne, White House, Leighton, Welshpool; 2, Mr. T. S. Minton, Montford, Montford Bridge: r., Mr. J. Naylor, Leighton Park Farm, Welshpool; h.c., Mr. T. S. Minton, Montford, Montford Bridge; Mrs. L. H. Holland, and Mr J. Tetley-Nickels.

Best Shorthorn Bull, over 16 months old.—1, Mr. J. Tetley-Nickels; 2, Mr. T. S. Minton.

Best Hereford Bull, not exceeding 16 months old.—1, Mr. T. S. Minton; 2, and r., Mr. A. Tanner, Shrawardine, Shrewsbury.

Best Hereford Bull, over 16 months old.—1, Mr. T. S. Minton; 2, Mr. Morgan, Preston-on-Severn, Shrewsbury; r., Mr. W. Groves, Burcot, Wellington; h.c., Mr T. S. Minton.

Best Aberdeen-Angus Bull.—Mr. W. Brocklehurst, London House, Salop; 2, Mr. J. Naylor, Leighton Park Farm, Welshpool.

Best Non-pedigree Shorthorn Bull.—1, Mr. J. Naylor; 2, Mr. E. K. Bickley; r., Mr. W. Howe, Shrewsbury.

The prices realised were as follow:—

SHORTHORN BULLS.—Mrs. L. H. Holland's roan, 19½gs.; Mr J. Naylor's roan (reserve number), 19½; Mr. J. Tetley-Nickels' red and white, 17; Mr. A. Browne's roan (1st prize), 37; Mr. T. S. Minton's red and white, 16; Mr. Watkin Jones' roan, 20; Mr. E. Powell's white, 15; Mr. J. Tetley-Nickels' white, 16½; Mr. J. Tetley-Nickels' white, 14½; Mr. T. S. Minton's red (2nd prize), 34; Mr. W. H. Foster's red, 20; Mr. J. Tetley-Nickels' white, 22; Mr. J. Tetley-Nickels' white, 19; Mr. T. S. Minton's white, 18; Mr. E. Powell's red and white, 13; Mr. J. Tetley-Nickels' red and white, 17; Mr. P. W. Thorniley's red, 15; Mr. J. Tetley-Nickels' roan, 20; Mr. T. S. Minton's red (highly commended), 19½; Mr. E. Powell's roan, 17½; Mr. T. S. Minton's roan (2nd prize), 27; Mr. Heighway Jones' red, 25; Mr J. Tetley-Nickels' roan (1st prize), 34; Mr. W. B. Ledger's roan, 25; Mr. W. Dickins' red and white, 24; Mrs. Ratcliffe's red and white, 24; The Earl of Powis' roan, 29; Mr. J. Lucas' red and white, 18½; Mr. J. Naylor's roan, 25; Mr. P. W. Thorniley's red and white, 22; Mr. A. Mansell's red and white, 18.

HEREFORD BULLS.—Mr. W. H. Foster's, 26gs.; Mr. T. S. Minton's (1st prize), 40; Mr. T. S. Minton's, 20; Mr. T. S. Minton's, 28; Mr. Alfred Tanner's (2nd prize), 30; Mr. Alfred Tanner's, 28; Mr. Alfred Tanner's, 30; Mr. W. Groves, 17; Mr. W. Groves, 18; Mr. W. Groves, 14½; Mr. Wm. Oakley's, 19; Mr. W. Groves', 15; Mr. G. Crane's, 17½; Mr. W. Oakley's, 18; Mr. G. Crane's, 25; Mr. T. Morgan's, 16; Mr. W. Oakley's, 15½; Mr. R. Preece's, 12½; Mr. Lawton Moore's, 23; Mr. R. Preece's, 12; Mr. T. Morgan's, 14½; Mr. Alfred Tanner's, 23; Mr. Alfred Tanner's, 22; Mr. Alfred Tanner's, 20; Mr. Alfred Tanner's, 18; Mr. Wm. Groves', 25; Mr. Morgan's (2nd prize), 26; Mr. T. S. Minton's (1st prize), 41; Mr. J. R. Jones', 23; Mr. T. S. Minton's, 28; Mr. George Crane's, 23; Mr. J. Naylor's, 17½; Mr. A. Tanner's, 22; Mr. W. H. Foster's, 22

ABERDEEN-ANGUS BULLS.—Mr. J. Naylor's, 13½gs.; Mr. W. Brocklehurst's, 20; Mr. W. Brocklehurst's, 15.

NON-PEDIGREE SHORTHORN BULLS.—Mr. E. K. Bickley's roan, 25gs.; Mr. E. Matthews' roan, 19; Mr. W. Howe's red, 17½; Mr. J. Naylor's roan, 17½; Mr. T. Davies', red and white, 17.

Messrs. E. Webb and Sons' Stock Sale.

This annual sale was held by Messrs. H. King and Son, auctioneers, Stourbridge, at Kinver Hall on the 24th ult., when the catalogue comprised 333 wethers and tegs and 49 head of cattle, viz., 34 Hereford bullocks and 15 heifers and cows, and 14 porkets. The stock throughout was of very high-class quality, and reflects great credit on the bailiff (Mr. Abel) for the finished manner in which the whole of the sheep and cattle were brought under the hammer. The highest price realised for Hereford bullocks was £23. The sheep were a very level lot of ripe wethers and tegs. Wethers made up to 64s., and tegs 63s. Prior to the sale the company of buyers from Birmingham, Wolverhampton, West Bromwich, Kidderminster, Halesowen, Old Hill, Dudley, Brierley Hill, Stourbridge, Cradley, and the Black Country sat down to a capital lunch provided in the Dutch barn. Mr. E. Davies very ably proposed the health of Messrs. W. and E. Webb, which was responded to by Mr. E. Webb, who said it gave him great pleasure to meet the company at Kinver Hill year after year, and that he hoped the buyers would be able to buy the stock at a fair market value, and in such a way as to enable them to come another year. Noticeable amongst purchasers of large amounts were Messrs. J. Green, E. Betterton, H. Pattison, H. Sharp, S. W. Richards, R. Wood, S. Arnold, W. Harrison, Rogers, and others. Owing to the stormy weather which prevailed all day the attendance was not so large as usual, but nevertheless it included many influential customers, who bought the stock at full market value.

Border Union Agricultural Society's Bull Show and Sale.

The Border Union Agricultural Society's annual show and sale of pedigree and non-pedigree shorthorn bulls was held at Kelso on the 28th ult. There was a total entry of 78 animals (a considerable increase on last year), pedigree yearlings numbering 23, and one-year-old non-ped grs bulls 5, the remainder of the stock consisting of aged bulls and heifers. Though cold, the weather was dry and seasonable, and there was a very large attendance. Buyers from the English side of the Border, however, were conspicuous by well-nigh total absence, this having its effect on the trade, which was exceedingly stiff throughout, and the hope was expressed that the gathering would not again be fixed on Good Friday. The judges were Messrs. John H. Laurie, Hardens, Duns; and Thomas Richardson, The Wreay, Wigton, the officiating auctioneers being Messrs. Penny and Kay (in whose premises the sale was held), Messrs. John Swan and Sons, Limited, and Messrs Oliver and Son, Hawick.

There was a choice class of pedigree yearlings, the quality generally being much better than for a number of years, and there were half a score in the first selection, four of these being eventually thrown. After careful consideration the judges gave the first and second premiums to Messrs. W. and T. Bain, Legars, well-known local breeders. Bashful Boy, the first prize bull, is only a June calf, but he promised exceedingly well, being by Lord Rosebery's Principal of Dalmeny, 73,324, from the famous Collynie-bred Alexandra III, by Lofty, 64,271. In the ring he elicited some competition, this being the only occasion on which there was stir in the bidding, and at 36 guineas he was purchased by Mr. Lee, Markle. Defiance, the second prize bull, was calved on April 4, 1901, being by the same sire from Agnes by Red Knight, 71,323. With good head and frame, he is also nice in the skin, and he was purchased at 22 guineas by Mr. Scott, Whitehillfoot, Kelso. Master, a nice little red and white May calf of good stamp, secured third premium for Mr. T. R. Barnewell Elliot, Morebattle Tofts. Mr. Inglis, Langtonlees, got him at 17½ guineas. Prince Softlaw, a big 14 months old roan by the Presson-bred Parish Councillor II., from Lady Presson, the second winner at Edinburgh and the Border Union last yearfi, was placed fourth. Bidding for him stopped at 18 guineas, and his owner, Mr. James Scott, Softlaw, East Mains, withdrew him. The sweet roan May calf Duke of Cornwall, shown by Mr. Richard Davidson, Swinnie, Jedburgh, got fifth place. He is by Clarence, 76,359, from Graceful Princess by Graceful's Chief, and at 17½ guineas he was acquired by Mr. Douglas, Spotsmains, Kelso. The commended ticket was carried by Favonius, a very handsome red and little white of good shorthorn character, and shown by an enthusiastic devotee of the breed, Mr. Anthony Fred Nichol, Bradford, Belford, Northumberland. He was purchased for Mr. Barnewal Elliot, Morebattle Tofts, at 21 guineas. Other animals entered in this class sold at prices ranging from 11 to 17 guineas. Altogether 18 bulls were sold, and averaged £16 10s. 2d., as against £19 odd for 15 bulls last year.

Non-pedigree yearlings were relatively the dearest. The leading place was taken by a son of Red Knight, a dark roan of grand substance, consigned by Mr. John Hunter, Lempitlaw. At 18gs. he was secured by Colonel Hope of Cowdenknowes. A useful red-and-white belonging to Mr. Andrew Rutherford, Rumbleton Law, Greenlaw, got the second premium, and he was bought by Mr. Shiell of Hassendean, at 17 guineas. At the same figure Mr. C. J. Cunningham, Kerchesters, got the third prize bull—a heavy roan from Lempitlaw. A dark roan sent forward from Hollybush by Mr. Walter Elliot got fourth place, and he was bought at 15½ guineas by Mr. A. Veitch, Jedburgh. The Rumbletonlaw highly commended bull went to Mr. Henderson, Bailliknowe, at 16 guineas., and the commended bull—a roan of great size, consigned by Mr. Young, Halkburn, Galashiels—was bought by Mr. Pearson, of Otterburn, at 18½ guineas, the best price in the class. Others in the class realised from 8 to 14½ guineas.

A list of the prices obtained for the pedigree bulls together with purchasers' names, etc., is appended.

Sale of Shorthorns at York.

A large number of shorthorn bulls and a few cows and heifers, from the herds of breeders in the North of England, were offered for sale by Messrs. Thornton and Co. at the Wool Sheds, York, on Thursday. Considerable interest was taken in this sale by many breeders, owing to a 100 guinea challenge cup being offered for the three best bulls, eligible for Coate's Herd Book, and calved in 1900 or 1901. Seventeen teams entered, and they were judged by Mr. George Harrison, Gainford, Darlington; Mr. W. J. Hosken, Hayle, Cornwall; and Mr. W. Taylor, Kirkby Lonsdale; Mr. H. Dudding, Stallingborough, acting as umpire. The judges took infinite pains with the animals, and finally awarded the cup to a bull and his two sons rather than to three young bulls. The cup was secured by Mr. Joseph Barnes, Baurgh Syke, Wigton, Cumberland with Stoneytown Pride and his progeny, Baron Bridekirk and Jessamine's Pride. The reserve went to three young bulls the property of Sir John Swinburne—Royal Emperor of Oxford, Emperor of Oxford 9th, and Emperor of Oxford 10th; the second reserve being awarded also to Sir John Swinburne for another trio of youngsters, also of the Oxford family.

Over 140 lots went through the ring, and some good prices were realised. Sir John Swinburn's Royal Emperor Oxford 13th made the top price, viz., 130gs., Mr. J. Harris, of Coatwaite, being the purchaser. Mr. Barnes' Stoneytown Pride, the winner of the cup was withdrawn at 100gs., whilst his progeny realised 50gs. and 27gs. A list of the prices realised, together with the sellers' and purchasers' names, is appended:—

Plague of Moles in South Lincolnshire.—South Lincolnshire agriculturists are suffering from the ravages of moles, and the plague is assuming serious proportions. They are said to abound in thousands, due to the fact that farmers in recent years have neglected to trap them as formerly, and a suggestion is put forward that each Parish Council should appoint a mole-catcher, the cost to be borne by the rates. The Fen Drainage Trustees continue the practice of employing professional mole-catchers, as otherwise the river banks would be undermined; but latteely the farmers have discontinued the practice, the reason given being that it was not sufficiently generally followed to enable them to derive the full benefit of their outlay. The payment now made for destroying moles, in cases where it is still resorted to, is about three-halfpence per head; but it is said that, under contract, the Parish Councils might be able to get the work done for an average of a few pence per acre.

Royal Commission on Horse Breeding.

Arrangements for the Premium Stallions.

The following are the arrangements with reference to the "King's Premium" stallions which will serve fifty half-bred mares (if required) in the various districts during the present season, at £2 each mare and 2s. 6d. to the groom. Applications for nominations, to be made on printed forms only, should be addressed to any member of the District Committees:

DISTRICT A.

ADRIAN.—Location: Travels Bicester and district. District Committee: Mr. James J. Godwin, Troy, Somerton, Banbury; Mr. R. D. Thomas, Red House, Bicester (Corresponding Member); Mr. Henry Tubb, Chesteron Lodge, Bicester.

CHOSON.—Location: Stands at Southcourt Stud, Leighton Buzzard, and travels the district. District Committee: Mr. Charles Py Hall, Park Farm Office, Woburn, R.S.O., Bedfordshire; Mr. Philip Hart, Moor Hills, Wing, Buckinghamshire (Corresponding Member); Mr. Henry G. Lepper, Aylesbury, Buckinghamshire.

PRINCE CHARLES II.—Location: Travels Newmarket, Bury St. Edmunds, and district. District Committee: Mr. Arthur Gayford, Estate Office, White House, East Harling Norfolk; Mr. F. Riley Smith, M.S.H., Barton Hall, Bury-St.-Edmunds; Mr. J. Maitland Wilson, Langham Hall, Bury-St.-Edmunds.

DISTRICT B.

GENERAL GORDON.—Location: Travels Penrith, Appleby, Kirkby Lonsdale, and Kendal. District Committee: Mr. James A. Hogg, Estate Offices, Appleby, Westmoreland (Corresponding Member); Mr. George Hoggarth, Westmoreland and Kendal Agricultural Society, Kendal; Mr. James Hudson, Lowther Estate Office, Friar Street, Penrith.

IMPREVU.—Location: Travels Alnwick, Belford, Wooler, and district. District Committee: Mr. F. W. Hall, Estate Office, Alnwick, Northumberland (Corresponding Member); Mr. Anthony Marshall, Annstead, Chathill, Northumberland; Mr. G. G. Rea, Middleton, Wooler, Northumberland.

TOBOGGAN.—Location: Travels Newcastle, Durham, and district. District Committee: Mr. R. Brydon, The Dene, Seaham Harbour, Co. Durham; Mr. G. Elphick, Newgate Street, Newcastle-on-Tyne (Corresponding Member); Mr. Clement Stephenson, Sandyford Villa, Newcastle-on-Tyne.

DISTRICT C.

ABBOTS LEIGH.—Location: Travels Lincoln, Grantham, and district. District Committee: Mr. Frank Godson, Temple Bruer, Lincoln; Mr. Charles Hartley, 43, Friar's Lane, Lincoln; Mr. James Hutchinson, Manthorpe Lodge, Grantham (Corresponding Member).

BLAKELAW.—Location: Travels Leicester, Melton Mowbray, and Loughboro'. District Committee: Mr. J. Frederic Cartmell, (the Manor House, Kirby Bellars, Melton Mowbray (Corresponding Member); Mr. R. C. Cooper, Waltham, Melton Mowbray; Mr. G. Tempest Wade, Birstall, near Leicester.

OLD COIN.—Location: Travels Peterboro', Stamford, and district. District Committee: Mr. John Crisp, Warmington, Oundle; Mr. H. Edwards, 9, Rutland Terrace, Stamford (Corresponding Member); Mr. L. Fortescue, Barnack Manor, Stamford.

DISTRICT D.

ALVIN.—Location: Travels Chippenham, Hilperton, Biddestone, Malmesbury, and district. District Committee: Mr. T. Henry Fair, Hilperton Grange, Trowbridge, Wilts (Corresponding Member); Colonel F. Henry, Elmestree, Tetbury; Mr. John E. Taylor, Elm Lodge Biddestone, Chippenham.

CHIDIABOS.—Location: Stands at Sanderstead, and travels to Cobham, Guildford, Ockley, Capel, Crawley, Reigate, Godstone, Oxted, and district. District Committee: Mr. Harry Fuller, 83, High Street, Croydon, Surrey (Corresponding Member); Mr. Uvedale Lambert, M.F.H., South Park Farm, Bletchingley, near Redhill; Mr. F. A. White, Oakleigh, East Grinstead, Sussex.

IRISH WAKE.—Location: Travels Cowfold, Horsham, Steyning, Cuckfield, Hayward's Heath, and district. District Committee: Mr. J. Mark Cazenove, Belmoredean, West Grinstead, Sussex (Corresponding Member); Mr. H. Ernest Courage, Bolney Place, Bolney, Sussex; Mr. Hugh Gorringe, Kingston-by-Sea, Sussex.

SPRINGALD.—Location: Stands at Menheniot, Cornwall, and travels the district. District Committee: Mr. A. R. Boucher, Trenean, St. Germans, Cornwall; Mr. E. L. Marsack Haye, Callington, Cornwall; Mr. W. W. C. Marshall, M.F.H., Treworgey, Liskeard, Cornwall.

DISTRICT E.

BURGOMASTER.—Location: Travels Routh, Beverley, Riston, Skirlaugh, and district. District Committee: Mr. Wilfred Harrison, Westwood Road, Beverley, Yorks; Mr. Philip Hodgson, Westwood Hall, Beverley, Yorks; Mr. Frederick Reynard, Sunderlandwick, Driffield, Yorks (Corresponding Member).

CARDONALD.—Location: Stands at Copmanthorpe, and travels Escrick, Easingwold, Rufforth, and district. District Committee: Mr. E. Lycett Green, M.F.H., Ashfield, York; Mr. Frank Green, Treasurer's House, York; Mr. H. E. Preston, Bishopthorpe, York.

FOUR POSTER.—Location: Travels Selby, Rotherham, and district. District Committee: Mr. J. Dymond, Burnt-wood Hall, near Barnsley; Mr. C. Howard Taylor, Middlewood Hall, near Barnsley (Corresponding Member); Dr. G. D. Tod, Selby, Yorks.

DISTRICT F.

FAUTE-DE-MIEUX.—Location: Travels Leamington, Stratford-on-Avon, Warwick, and district. District Committee: Mr. P. Berridge, The Uplands, Banbury; Mr. Philip S. Danby, Church Farm, Offchurch, Leamington (Corresponding Member); Mr. E. P. Wilson, Ilmington, Shipston-on-Stour.

POSTIFEX.—Location: Stands at Copse Hill, Bourton-on-the-Water, and travels the district. District Committee; Captain Daly, Over Norton, near Chipping Norton;

Mr. Edward C. Sewell, The Beeches, Cirencester (Corresponding Member); Mr. R. C. Verney, Stow-on-the-Wold.

RAMPION.—Location: Stands at Marchington, Uttoxeter, and travels to Burton, Stafford, Atherstone, and Tamworth. District Committee: Mr. Milne Barnsley, Field House, Marchington, Staffs. (Corresponding Member); Mr. Gerald H. Hardy, M.F.H., Merevale, Atherstone; Mr. Harry Oliver, Tiescoe, Tamworth.

STERLING BANK.—Location: Stands at Belgelley, R.S.O., Pembrokeshire, and travels the district. District Committee: Hon. Wiliam F. Coventry, Lydstep Haven, Penally, R.S.O., Pembrokeshire (Corresponding Member); Mr. W. Gibbs, Upper Portclew, Lamphey, R.S.O., Pembrokeshire; Mr. B. J. Rees, the Royal Lion Hotel, Tenby.

ACTIVE HAMPTON.—Location: Travels Lytham, Lancaster, Preston, and The Fylde. District Committee: Mr. C. Addison Birley, Bartle Hall, Preston, Lancashire; Mr. James S. Fair, Estate Office, Lytham, Lancashire; Mr. J. Marcus Rea, 8, Winckley Street, Preston.

DISTRICT G.

CURLEY.—Location: Travels Whitchurch, Wrexham, Ellesmere, and district. District Committee: Mr. John Jones, Mossfields, Whitchurch, Salop; Mr. W. R. O. Kynaston, Hardwick, Ellesmere, Salop; Hon. Alex. E. Parker, Deeside, Banger-on-Dee, Wrexham (Corresponding Member).

WOODSTOCK.—Location: Travels Bolton, Blackburn, and Clitheroe. District Committee: Mr. Henry Baxter, The Tower, Rainhill, Lancashire; Mr. Charles Garnett, Higher Dunscar, Egerton, near Bolton (Corresponding Member); Mr. Rowland Robinson, Estate Office, Gisburne, Clitheroe.

DISTRICT H.

GENERAL MAGENIS.—Location: Travels Roxburgh, Berwick, and district. District Committee: Mr. T. Calder, Swinton Hill, Coldstream, N.B. (Corresponding Member); Mr. James Elliott, Flex, Hawick, N.B.; Mr. E. Douglas Paton, Broomhill, Melrose, N.B.

THE POLO PONY MARE MADEMOISELLE shown above is by Loved One out of Madame Angot, and was bred in Ireland. At the London Polo Pony Show this spring Mademoiselle was exhibited by Comte Jean de Madre (winning First Prize in the riding class for ponies five years old and upwards). She was also winner of the Silver Challenge Cup for the best Polo Pony mare likely to breed a heavy-weight Polo Pony, and the Gold Medal offered by the Polo Pony Society for the best mare or gelding in the riding classes.

DISTRICT I.

CORNMINT.—Location: Travels in Fifeshire. District Committee: Mr. W. Blackie, The Stables, Montrave, Leven, Fife, N.B.; Mr. T. Webster, Nisbetfield, Collessie, Fife, N.B.; Mr. W. Weighton, Royal Hotel Stables, St. Andrews, N.B.

DISTRICT J.

SWILLINGTON (late Willie Darling).—Location: Stands at Kilmarnock and travels in Ayrshire. District Committee: Mr. David W. Shaw, County Buildings, Ayr; Mr. David Stevenson, Crossburn, Troon; Mr. J. Harling Turner, Portland Estate Office, Kilmarnock, N.B. (Corresponding Member).

DISTRICT K.

WITHERNAM.—Location: Travels in Moray, Nairn, and Banff Shires. District Committee: Mr. W. Rose Black, Town and County Bank, Elgin, N.B. (Corresponding Member); Mr. Alexander Clark, Blackpark, Nairn, N.B.; Mr. James McWilliam, Stoneytown, Banffshire.

DISTRICT L.

WHITTLEBURY.—Location: Travels in Ross-shire. District Committee: Mr. W. Murray, Kilcoy, Kilearnan, N.B.; Mr. C. J. Ness, Calrossie, Nigg, N.B. (Corresponding Member); Mr. W. Ross, Kinnahaird, Contin, N.B.

Horse Sales at Crewe.

Messrs. Henry Manley and Sons' March sales of horses at their Crewe Repository took place the week before last. About 700 animals were catalogued, and the trade experienced for them was much brisker than at the February sales, and compared favourably with the corresponding sales last year. The sales opened on the Wednesday with 175 single and double harness horses, including several well-matched pairs. The judges awarded the prize for the best harness horse to a bay gelding, the property of Mr. G. Rodgers, Manchester. Mr. Rodgers sold a pair of bays for 160gs.; Mr. E. Bailey's pair of browns fetched 156gs.; Mr. S. McMorran's pair of bays, 100gs; and his bay gelding, 51gs.; Mr. E. Burrows's bay gelding, 60s.; Mr. Button's brown gelding, 57gs.; Mr. T. P. Willis's bay gelding, 70gs.; and his roan mare, 60gs.; Mr. W. Threlkeld's pair of blacks, 105gs., and his brown gelding, 56gs.; and Mr. Sidebottom's brown gelding, 50gs.

Thursday's sale included 275 pedigree hackneys and show horses, small harness horses, and stepping cobs, and ponies. These were a fine selection, and included many well-known winners in the showyard last season. The judges (Mr. R. Hussey, Litchfield, and Mr. F. Bagguley, Moreton-in-Marsh) awarded the first prize in the class over 14-2 to the bay cob Peacock, the property of Mr. Tirrell, Kettering, which was also successful in winning the champion cup, and realised 165gs. in the sale ring afterwards. Mr. W. E. Greenwood won in the class over 13-2 with Lady Horace, and Captain Parker showed a grand pony under 13-2, bred by owner and not previously exhibited. This was an easy winner, and sold for 98gs. The exors. of Mr. Slater sold a pair of bay cobs for 112gs.; Mr. Parke's bay cob, Cassius, realized 65gs. Mr. G. Tyson's bay cob Lord Wiles, 71gs; Mr. Heap's hackney stallion, 67gs.; Mr. Lawson's hackney stallion, 160gs; Mr. Wilson's dun cob, 75gs.; Mr. W. E. Greenwood's Lady Horace, 77gs., and chestnut cob, 60gs.; Mr. Whitfield's bay cob, Lady Norah, 50gs.; Mr. Cockayne's hackney stallion 58gs.

On Friday nearly 300 heavy town mares and geldings, light lurry horses, and Shire stallions, colts and fillies were offered for sale. Trade was excellent, and it may be mentioned that two buyers (Messrs. Watney and Company, Limited, London, and Mr. A. Grindle, Bristol) were purchasers to the extent of over £1,000. The best ten geldings averaged over £82 each. The judging was undertaken by Mr. J. Hill, Smethwick Hall, Cheshire, and Mr. W. Hammond, Ware. They awarded the 15-guinea cup to Mr. E. W. Sankey's gelding, Lord Croft, which was sold to Mr. W. Lambeth, Cambridge, for 170gs., the reserve number being Messrs. W. and J. Thompson's bay gelding, Thorney Duke, which was withdrawn at 100gs. In the class for cart horses not exceeding 16-2 a bay gelding, the property of Miss Caulcott, Wem, won, and was sold for 76gs. Mr. L. Boswell's animal won in the light lurry class, and sold for 63gs. Mr. D. Hollond's animal won in the parcel van class, and sold for 53gs. Messrs. W. and J. Thompson's grand young three year old, Desford Emperor, won in the colt class and was sold for 72gs. Mr. T. Winterbottom's brown gelding realised 90gs., Mr. T. Hodgson's bay gelding 87gs., Mr. J. Humphreys' bay gelding 86gs., Mr. Hy. Lawson's pair of geldings 118gs., Mr. J. A. Preece's bay gelding 72gs., and pair of mares 102gs., Mr. Lea's bay gelding 63gs., many others realising from 40gs. to 70gs.

The Seaham Harbour Clydesdales

The sales of the Seaham Harbour Clydesdales always attract a large and representative gathering of breeders from all parts of the country, and having gained a widespread reputation both under the ownership of the Seaham Harbour Show, Ltd., and the previous possessor, Lord Londonderry, another of the periodical sales took place on Friday in a field near the stud farm, Seaham Harbour, and the usual large company of buyers were present. The animals, which were sold without reserve, numbered 10 brood mares, 4 three-year-old fillies, 1 two-year-old filly, 4 yearling fillies, 7 yearling colts, 7 two-year-old colts, 5 stallions, 12 geldings, 7 trained cobs, etc., and 4 registered pony mares, a total of 61 lots. For the most part the stock submitted was from well-known families, which have been associated with the Clydesdale stud for over a quarter of a century. The catalogue contained the pedigrees of the various animals so far as known to exposers. 3 fillies and 6 colts were by Lord Stewart, by Castlereagh, said to be one of the very best of the breed. In addition 5 of the brood mares were served last year by Lord Stewart. Several of the Clydesdales sired by this horse were from famous dams. High Tide, the dam of Flowing Tide, has a record of 20 prizes and 2 cups; Lady Fair, the dam of Lady Frances, filly, a good show mare; Night Shade, a winner of several prizes; and Garnet, of the Kier Bessie tribe, a remarkably good breeding mare. Nine of the 11 lots of brood mares were heavy in foal, the sires in addition to Lord Stewart being Springhill Baron, Yerburgh; Scottish Crown, and Johnnie's Style. All the brood mares gave promise of breeding good stock. The 5 lots of matured stallions offered possessed great ancestry. Sir Edgar a three-year-old brown, is by Gallant Prince—the Springhill Darnley mare, Blossom. His sire has produced some of the best horses seen during the last decade. St. Anthony, a beautiful black, is claimed to be one of the best big horses in the country. He began his premium career by winning 1st prize at the Northumberland show when a foal, and he has won a prize or premium every year since. His sire was the champion Holyrood, and his dam the beautiful mare Fenella. The trained horses and ponies were a useful lot, several being by the champion pony Little Wonder II. Lottie, a handsome Dales pony, was shown four times last year, and won 3 first prizes.

After a luncheon had been partaken of, the company adjourned to the sale ring, the hammer being wielded by Mr. A. Efrow, of the firm of Messrs. A. S. and E. A. Crow, Sunderland. The highest price of the sale was 250gs., which sum was paid by the Northern Stud Company, Elgin, for the stallion St. Anthony, a noted premium horse, by Holyrood—Fenella. This magnificent animal is at stud in the Bishop Auckland district, and a condition of the purchase was that the buyer must undertake to travel him in the district. Only one other three-figure price was reached, and this 150gs., paid by Mr. D. Riddle for a two-year-old colt, Flowing Tide, by Lord Stewart—High Tide. Details of each animal sold, prices realised, etc., are given below. The result of the sale was a total of £3,116 9s., the totals for the various sections being as follows:—10 brood mares, £559 13s.; 4 three-year-old fillies, £150 3s.; 1 two-year-old filly, £25 5s.; 4 yearling fillies, £129 3s.; 7 yearling colts, £264 12s.; 7 two-year-old colts, £433 13s.; 5 stallions, £480 18s.; 12 geldings, £754 19s.; 7 trained horses and ponies, £203 14s.; 4 registered pony mares, £114 9s.

Prince, black gelding, s. Little Wonder II. .....Mr. Robertson 25

SHEEP.

East Harling Hogget Sale.

The twentieth annual hogget sale held at East Harling by Messrs. Salter, Simpson and Sons, took place on Thursday, and, as usual, was very largely attended. Close upon 6,000 hoggets were penned, this number being some 1,500 in advance of last year; and having regard to the trying character of the past season, which was exceptionally dry, and feed therefore not being over plentiful on light lands, the sheep were brought to the sale in a manner highly creditable to the considerable number of graziers whose names were included in the catalogue. The first lot offered was sixty half-breds consigned by Mr. W. H. Salter, Attleborough, and they were knocked down at 45s. One hundred sent by Mr. J. H. Palmer, Banham, offered in two lots, made 42s. and 37s.; and two lots of 100, belonging to Mr. G. Mortimer, Croxton, fetched 41s. 6d and 38s., while a small lot of black-faced belonging to the same gentleman sold at 38s. A hundred half-breds sent by Mr. T. Buckenham, South Lopham, were knocked down at 43s., and sixty at 38s. Miss Godfrey, Snetterton, sent 150 half-breds, which were bought in two lots at 43s. 6d. and 40s. Sixty black-faced ewes and wethers made 30s. 6d. Mr. J. Downes, Great Ellingham, had about 200 half-breds, the first hundred making 47s. 6d.; a similar pen of 100, belonging to Mr. R. Drane, Eccles, realised 45s., and fifty black-faced ewe hoggets from the same farm 38s. Mr. J. H. Palmer's black-faced made 42s., while fifty wethers went at 39s. 6d. Sixty black-faced, consigned by Mr. S. W. Smith, Larling, fetched 44s. Sir Hugh R. Beevor, Bart., Hargham, had some capital half-breds, which were purchased at 48s. 6d., the top price of the day, a smaller lot going at 44s. 6d. Mr. H. Rix, Eccles, also had some good ones, which made 45s. 6d., while some black-faced belonging to Mr. G. T. Porter, Shropham, went at 46s. 6d. Numerous other lots were sold at prices similar to those already given.

Lancashire Farmers on Sheep Worrying

At the last meeting of the Council of the Lancaster Farmers' Association several resolutions on the subject of sheep-worrying were adopted. One of these impressed on farmers and dog-owners the grave responsibility incurred by allowing dogs to be at large, especially at night, and reminded sheep-breeders that they may help to prevent losses by burying or removing dead lambs, etc., from pastures. It was also resolved to make representations to the Board of Agriculture, the Central Chamber of Agriculture, the Executive Cattle Plague Committee, and the Chief Constable of Lancashire, calling attention to the urgency and importance of more effectual measures for the protection of sheep-owners, especially just before and during lambing time, and urging "that the law in regard to dogs, not under the control of their owners, be much more stringent, and the lax mode of allowing exemption from licences altered or curtailed."

PIGS.

Sale at Bungay.

The triennial sale of Mr. John Wittrick's well-bred pigs was held on Thursday at the Manor Farm, Bungay, and was very largely attended. The auctioneers were, as hitherto, Messrs. George Durrant and Sons, and the good breeding and healthy condition of the 450 head of pigs which came under their hammer were productive of general encomium of the practical care and keen enterprise which Mr. Wittrick exhibits in getting such a fine lot of one description of stock together to disperse amongst the graziers of pigs. As regards the particular plan of breeding upon which Mr. Wittrick relies, it may be stated that the pigs are out of pure white sows crossed by a pure large black boar, and then going back to the white strain again. Several of the pens were pedigree large black, and were secured by Mr. J. B. Dimmock, of Shotford Hall, Harleston, himself a prominent breeder of this type of pig. The store pigs met with a most ready sale at good prices, and it looked as if the young in-pig sows were, if anything, cheaper in comparison. The first lot consisted of 10 store hog pigs, which made 23s. 6d., and three other half-scores, 20s., 17s., and 12s. 3d. respectively. Other lots sold as they grow ranged from 16s. to 7s. 3d., and included a lot of half-a-score pedigree large black, which were purchased by Mr J. B. Dimmick at 12s. 6d. a-piece. Two lots of half-a-score store sow pigs made respectively 25s. and 20s. 6d., and further lots 22s., 21s. 6d., 18s., and 17s., whilst mixed ranged from 14s. to as low as 6s. for very young things. The young sows with litters followed, nine lots totalling £43, the top figure being £5 17s. 6d. and the lowest £4 1s. 3d. Young in-pig sows in two cases realised £5 a piece, and another £4 7s. 6d., and other pens containing three each went at prices ranging from £10 8s. to £4 2s. 6d.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending April 2, 1902:—

NOTE.—The figures for the current Year are approximate only.

Woodbridge Horse Show.

The annual show of horses at Woodbridge is one of the most important of the series in East Anglia coming second to the Norwich Show; in fact, it is to the county of Suffolk what the Norwich Spring Show is to Norfolk, but the two differ, in that at Woodbridge Suffolk horses predominate, whilst at Norwich Shires are the most important. The show on Monday fully maintained its reputation, for the display of Suffolks was excellent, and it is doubtful whether it will be excelled at any other show this year. The weather being favourable, and the day a Bank Holiday, there was a large attendance of visitors to the showyard, most of the well-known breeders of Suffolk being present. Altogether the show was a most successful one. As to the financial result, it may be mentioned that the takings amounted to £66 12s. 6d., as compared with the record total of £69 19s. 10d. obtained last year.

Mr. D. F. Smith (Easton) and Mr. Stanford (Landermere, Thorpe-le-Soken) acted as judges of the cart horses, which consisted exclusively of Suffolks. The first class was for aged mares, that is, foaled before 1899, and some veteran animals put in an appearance. The tussle lay between Mr. E. F. Quilter's Bentley Duchess and Mr. A. H. E. Wood's Sudbourn Trinket. Finally the first prize was given to the latter, who has taken a similar award many times in big contests. Though Bentley Duchess had to be content with second place, she won at the last Suffolk Show at Beccles, in her class, and carried off a special. Then came the three-year-old mares, and here again Mr. A. H. E. Wood scored with his beautiful Wedgewood daughter, who took first honours as a yearling, ditto as a two-year-old, and now again stepped into the foremost place, beating Mr. Alfred Smith's Rendlesham Matchless, a compact Prince Albert mare, Mr. E. F. Quilter's Bentley Humming, by the well-known Mars, having to be content with a reserve, though good enough to take first at the Essex show last year. Mr. Eaton R. White (Bougle Hall) beat several veteran exhibitors in the class for Suffolk Cart Mares foaled in 1900. Both honours went to the Boulge Hall Stud, the first to Boulge Hebe, by Golden Grain, and the second to Boulge Maid, by Prince Wedgewood, though opinion outside the ring seemed rather to favour a reversal of this order of things, on the ground that while the former was undoubtedly the heavier, it rather lacked the fashion and quality of the fair Boulge Maid. Mr. Alfred J. Smith's Rendlesham Lady B.P., by Captain B., was reserved, while Mr. E. F. Quilter's Bentley Christine, by Windsor Chieftain, had to be content with an h.c. ticket. That good Suffolk geldings are still very scarce is evident, for only three put in an appearance. Mr. E. F. Quilter's Cossack, by the Czar, took his old place, beating Prince, by Surprise, a recent purchase from the Bury country, by the President of the show, Sir Cuthbert Quilter, Bart., M.P. The contest for the group of three Suffolk yearlings, colt or filly, by the same sire, but not necessarily the property of the same owner, was a most interesting one. Here the strength of the Rendlesham Stud was manifested, for the first and second honours went to sires belonging to Mr. Alfred J. Smith—Saturn and Rendlesham Cupbearer; but the latter was sold for exportation to Australia last November. Three very nice youngsters by Golden Grain, exhibited by Mr. G. P. Watkins, Mr. W. H. Hewitt, and Mr. John Symonds were reserved.

The class for Suffolk cart stallions formed a grand collection, they including Saturn, who almost as a matter of course took the lead. He was the champion at Woodbridge last year—first at the Suffolk Show at Beccles, first at Richmond, besides taking other prizes during last show season. An animal from the Dennington Lodge Stud, a grand, well-made son of Border Minstrel, a beautiful bright chestnut, with good feet and legs was second in, thus adding to the creditable list of honours which his owner (Mr. E. A. Cook) has been awarded for him. Two prize-winners at Beccles last year, Sudbourn King of Trumps and Sudbourn Lord, both belonging to Mr. A. H. E. Wood, were r. and h.c. respectively. The three-year-old cart stallions also made a good appearance in the ring. Once more a representative of the Rendlesham Stud came to the front, a very promising son of Prince Wedgewood, Rendlesham Lord Grey, a Royal prize-winner, being first, and he was subsequently purchased for exportation to

Australia. Mr. A. H. E. Wood's Sudbourn Count, by the same sire, first last year, was second; and still another son of Prince Wedgewood—Mr. James Toller's Vanguard—a very promising three-year-old, was third. The Hon. W. F. D. Smith, M.P., was awarded a reserve honour for Acme, and Mr. Alfred Smith was highly comended for Rendlesham Prince Royal. There was a good display of two-year-olds, amongst them being several exhibits of great promise. Mr. E. F. Quilter's Bentley Valentine, by Prince Wedgewood, was one of them; he was first as a foal in 1899 at the Suffolk Show. He did not leave his stud last year, but now, at the commencement of another show season he came again into the first rank. Mr. A. H. E. Wood's Sudbourn Hailstone, bred by Mr. W. R. Hustler (Cockfield), by Sunshine, made a good second, while Mr. Alfred Smith's Rendlesham Alberta was third. There was a nice little lot of yearlings, a youngster by Mr. E. A. Cook's Border Minstrel beating the progeny of some of the most noted sires, the entries numbering ten. This was Harold, shown by Mr. James Rose (Laxfield) a very compact little colt. He was good enough to be placed in front of Mr. E. F. Quilter's Bentley Conjuror, a choice son of Rendlesham Cupbearer. Mr. C. H. Berners (Woolverstone Park) was reserved for Sunbeam by Sunshine, and Mr. A. H. E. Wood, highly commended for Sudbourn Shylock by Sudbourn Prince. Much interest was naturally manifested by the spectators in the contest for the championship and silver medal awarded by the Suffolk Horse Society. This went to Mr. Alfred Smith's Rendlesham Lord Grey, who is no wgoing to perpetuate the breed in the far-off land of Australia. The same gentleman's Saturn, the champion winner last year, was reserved.

The judges of the riding horses were Mr. Lionel J. Digby (Woodcroft Castle, Market Deeping), and Mr. Roland Taylor, M.R.C.V.S.L. (The Haye Farm, Fingringhoe, Colchester). There were but few thoroughbreds. As has often been the case, the contest lay between entries from the famed Bull stables at Woodbridge and the equally famous Hasketon Stud. This time the chief honour went to Mr. William Miles for his beautiful chestnut, Stowmarket, standing 16h.h., on short legs, with good bone, the winner of the 2,000-guinea Trial Plate at Newmarket, and many other good races. Stowmarket was reserved for the King's Premium at the recent Agricultural Hall Show. The second prize was awarded to Mr. Eustace Barlow's Privado, which, though only just out of hard training, was placed in front of the same gentleman's fine horse, Deeside, the winner in this class last year, and at the Suffolk Show.

There was but a small show of hackney stallions, owing to some entries not putting in an appearance. Mr. William Miles had entered Woodbridge Swell, a hackney worthy of the Bull stables, but sold him just previously to the show to go abroad, while Mr. E. S. Stock's London prize-winner, Prince Langton, did not turn up. The hackney belonging to Mr. E. F. Chapman (Alethorp Stud Farm, Fakenham, Manifred), by Connaught, had virtually a walk-over. The winner is a very fine animal and created as much attention in the ring on this occasion as he did at Norwich, where he took a first and special. Mr. R. T. Thornton (Middleton Hall, Brentwood) was second for Newington Connaught. Some real cross-country horses put in an appearance for the prizes presented by her Grace the Duchess of Hamilton and Mr. Forster. Mr. Charles Longe was first with Midnight, while Nigger, a mettlesome, lively hunter, belonging to Mr. S. T. G. Heatley, M.R.C.V.S. (Woodbridge) was second. The harness hackneys made a good show, though they were but few in number. There was no getting away from Daglesford King, driven by and belonging to Mr. George F. Johnson (Braiswick Stud, Colchester). He won a pace and action class at New York, and he has taken several prizes since. He is full of quality, with a combination of knee and hock action. Mr. William Miles's beautiful hackney, which has a good reputation, was second. The first prize in the competition for the best hackney mare or gelding shown in harness, the property of a bona fide tenant farmer, was limited to two entries, Mr. Thomas King (Hasketon) taking the special offered by Mr. George F. Johnson with his Pilot. The two jumping contests were watched with a good deal of interest, as were also the "trade turn-outs."

Bolton Horse.

The Bolton Horse Show Society's thirteenth annual Easter exhibition took place on the 19th ult. on the usual show ground at Great Lever. In previous years the shows have been held on Easter Monday, but on this occasion Saturday was tried as an experiment, in the expectation of a larger attendance consequent upon the holiday taking place on the latter day in lieu of Monday. The entries were not so numerous as last year, but this was no doubt due to the early date on which the show had to be held this year, but the animals were of higher average quality. About £160 was offered in prizes, and this drew an entry of 113. The attendance of visitors was very good, considering that the weather was too cold to be pleasant. The judges were Messrs. J. Gould, Lymm, J. Blundell, Kirkham, T. Bell, Carlisle, and S. W. Hackney, Leeds. The principal awards were as follows:—

Brood Mares (Agricultural).—1, R. A. Yerburgh, M.P., Blackburn; 2, T. Wild, Farnworth; 3, S. Hough, Middle Hulton. Ditto (Light Horses) under 15 hands.—1, H. T. Park, Withnell; 2, R. Hartley, Balderstone; 3, E. Tweesdale, Marland. Ditto 15 hands or over.—1, F. A. Boyes, Great Lever; 2, H. P. W. Grimshawe, Poulton; 3, N. Read, Pleasington.

Stallions (Roadster).—1, R. Hartley, Balderstone; 2, W. Lawson, Blackpool; 3, Lees Knowles, M.P., Pendlebury. Ditto (for agricultural or draught purposes).—1, J. Forshaw and Sons, Carlton-on-Trent; 2, R. A. Yerburgh; 3, Clifton and Kersley Coal Co.

Saddle Class for Mares.—1, R. Harrison, Chorley; 2, N. Read, Pleasington; 3, M. Burns, Brinscall.

Pairs (Turnouts).—1, F. A. Boyes; 2, J. Phethean, Great Lever; 3, J. Lomax, Heaton.

Turnouts (under 15 hands).—1, F. A. Boyes; 2, J. Urmston, Bolton. Ditto (over 15 hands).—1 and 2, F. A. Boyes; 3, J. Lomax. Ditto (open, under 14 hands).—1, R. Harrison, Chorley; 2, R. Draine, Blackburn; 3, T. Vickers, Miles Platting. Ditto (over 14 and under 15).—1, L. Fish, Barton, Preston; 2, R. Harrison; 3, F. A. Boyes. Ditto (15 hands and over).—1, W. Harris Thompson, Upholland; 2, H. P. W. Grimshawe; 3, E. Tweesdale.

Jumping.—1, J. T. Heap, Ramsbottom; 2, F. Whowell, Tottington.

THE PEN OF KENTISH SHEEP which forms the subject of the above illustration was bred by Mr. J. E. Quested, the Firs, Cheriton, Folkestone. These animals were exhibited by Mr. Quested at the London Smithfield Club's Show in December, and won First Prize in the class for pens of three fat wether sheep of the Kentish or Romney Marsh breed above twelve and under twenty-four months old. They also carried off the Silver Cup for the best pen of Kentish or Romney Marsh sheep in the show.

County Cork.

The County Cork Agricultural Society's Spring show, which last year was allowed to lapse, was revived last week, and, taken as a whole, it was perhaps the best spring show yet held, under the auspices of the society. Unfortunately, it did not receive the amount of support it deserved, and, financially, the show is hardly likely to prove a Success. The weather was not wholly the cause of the unsatisfactory state of affairs, for on the first day, Wednesday, it was beautifully fine, but the attendance of visitors was not by any means large; whilst on the second day the weather was anything but pleasant, so that a large attendance was not to be expected. Still, it might have been better than it was. As to the quality of the stock, it was not of the best, but the major portion of the awards were of first class quality. One shortcoming, however, is to be noted, and that is, that the dairy cattle did not come up to the expectations, when the dairying properties of the county is considered. In the shorthorn classes some very excellent animals were shown. More than one of these had already figured in the prize lists of the Birmingham and Scottish shows this year. Among the best specimens in this section were the animals sent down from County Tyrone by Mr. Comerford. These stood out well in merit, and figured most conspicuously in the prize list. As compared with the shorthorns, the Aberdeen Angus classes were poorly supported. Another disappointing section was that for Kerries—usually a commanding feature at the Cork shows, having regard to the nearness of the native home of the breed. The display in these classes was very disappointing. Mr Barter was, as usual, the chief upholder of the credit of the county in these classes. Herefords were few in number, but made amends in quality, which was excellent. Most successful in these classes were Colonel Everard, and Mr. Boylan, of Drogheda, each of whom sent down first-rate specimens. The classes for stores and dairy cattle brought out some particularly useful animals, and in pigs the muster was very large and the quality creditable, but not as good as at the previous show. As to the Horse Section, the one remarkable class was that for Thoroughbred Sires, in which the quality was exceptionally good. In this class there were thirty entries, and among these were to be found many of the best known horses in the South of Ireland. The competition for the six premiums of £50 offered by the Royal Dublin Society was very keen. The judge was Mr. Barlow, of Suffolk, and he had no easy task in hand in awarding the palm of merit. His selections, though it was stated they did not receive absolutely general endorsement, comprised a number of animals likely to be of good service to the horse-breeding industry in the South of Ireland, as they are to be let, under the terms of the premiums, at low fees, to tenant farmers and small breeders.

The principal awards were as follows:—

CATTLE.

Challenge Cup, for best Bull Calf, bred by a tenant farmer, born after 1st July, 1901—T. O'Sullivan Cloughduv, Crookstown (Inspector).

Maxwell Gambleton Challenge Cup, for the best Shorthorn in the Show, of any age or sex—Miss Staples, Dunmore, Durrow, Queen's County (Silvery Sparkle).

Challenge Cup, for Irish-bred Aberdeen-Angus Bulls, presented by the Irish Aberdeen-Angus Association—T. W. Gubbins, Annsgrove, Carrigtwohill (Flying Mail).

SHORTHORN.

Pure-bred Bull, calved between 1st September, 1900, and 1st May, 1901—1, W. R. Crawford, The Priory, Tullyhogue, County Tyrone (Master Stephen); 2, Miss Staples (Dunmore General); 3, R. G. Carden, Fishmoyne, Templemore (Stewart Jamieson); 4, Right Hon. Viscount Duncannon, C.B., Bessborough, Piltown (Bessborough Senator); v.h.c., Right Hon. A. H. Smith-Barry, Fota Island, Queenstown (Lord Valentia); h.c., Miss Staples (Dunmore Sentinel); c., R. P. Walshe, Moneyvroe, Cappoquin (Viscount Desmond); R. G. Carden (Count Rubric and Scottish Laird); r., Marquis of Waterford, Curraghmore Farm, Portlaw (Curraghmore Baldwin).

Pure-bred Bull, calved on or after May 1st, 1901—1, W. R. Crawford (Oxford May Boy); 2, Miss Staples (Dunmore Flash, twin); c., Timothy O'Sullivan, Cloughduv, Crookstown (Inspector); r. Right Hon. Viscount Duncannon, C.B. (Bessborough Sensation).

Pure Bred Bull, calved 1901, open to animals located in the Province of Munster, entered in Class 1 or 2.—1, Richard George Carden, Fishmoyne, Templemore (Steward Jamieson); v.h., Denis Healy, Templebryan, Clonakilty (Magnet); r., Marquis of Waterford, Curraghmore, Portlaw (Curraghmore, Baldwin).

Pure-bred Bull, calved in 1900.—1, W. R. Crawford (A1); 2, Ludlow Beamish, Ashgrove, Queenstown (Patrick's Day); Timothy O'Sullivan (Troubadour).

Pure-bred Bull, calved prior to 1900.—1, R. G. Carden, Fishmoyne, Templemore (Dandy); 2, R. G. C. (Drumsloe Prince); v. h. c., Marquis of Waterford (Sandammon); h. c., Marquis of Waterford (Royal Oak); c. William Perceval, Kilmore Hill, Tallow (Prince Forester); c., R. H. A. H. Smith-Barry, Fota Island, Queenstown (Lochinvar); r., Sidney P. C. Vesey, Dunleckney Manor, Bagnalstown (Margrave.)

Heifer, calved in 1901—1, Miss Staples (Silvery Sparkle); 2, R. Hon. A. H. Smith-Barry (Bellicose).

Heifer, calved in 1900—1, R. Hon. A. H. Smith-Barry (Militant III.).

Cow, or Heifer, of any age, in calf or milk—1, Rt. Hon. A. H. Smith-Barry, (Soldier V.); 2, S. T. Beamish, (Ringlet II.); v.h.c. R. P. Walshe, Moneyvroe, Cappoquin (Ely Desmond); Rt. Hon. A. H. Smith-Barry (Militant II.); r. Rt. Hon. A. H. Smith-Barry (Famosa).

Dairy Cow (in milk), any age, eligible for, and entered in Coates' Herd Book, or pedigree sent for such entry previous to show—1, Rt. Hon. A. H. Smith-Barry (Famosa); 2, same (Militant II.)

ABERDEEN ANGUS.

Pure-bred Bull, calved between 1st September, 1900, and 1st May, 1901—1, Marquis of Waterford (Curraghmore Alfred); 2, T. W. Gubbins, Anngrove, Carrigtwohill (Midleton); 3, H. Bland, Kilquade, Greystones (Just II.); v.h.c. T. W. Gubbins, Anngrove, Carrigtwohill (Fermoy); r., Lord Castletown (Sopwell Dasher).

Pure-bred Bull, calved on or after May 1st, 1901—1, H. Bland (Volksrust); 2, Rt. Hon Viscount Duncannon, C.B. (Kilcock).

Pure-bred Bull, calved in 1900—1, T. H. Gubbins Anngrove, Carrigtwohill (Bandar).

Pure-bred Bull, calved prior to 1900—1, T. W. Gubbins (Flying Mail); 2, Rev. Wm. Bell, Kilmeen Rectory, Ballineen, Co. Cork (Nailer); r, H. Bland (Fusilier of Killeaton).

Heifer, calved in 1901.—1, H. Bland (Queenly); 2, R. Hon. Viscount Duncannon, C.B. (Rosie of Bessborough) r. and 1 h.c., T. W. Gubbins (Ruth of Angrove).

Heifer, calved in 1900.—1, T. W. Gubbins (Pride of Anngrove II.); 2, Rev. William Bell (Elma of Kilmeen); 3, Rev. William Bell (Carbery Lass II.)

Cow or Calf, of any age, in calf or in milk (1st and 2nd); T. W. Gubbins (Pride 7th)and (Fenella 4th of Kippendavie).

HEREFORD.

Pure-bred Bull, calved in 1901—1, T. Boylan, Hilltown, House, Drogheda (Royal Duke); 2, Lieut.-Col. N. T. Everard, Randalstown, Navan (Gay Bird); h.c. ditto, (Adonis); r., T. Boylan (Prince Imperial).

Pure-bred Bull, calved prior to 1901—1, T. Boylan (Jolly Tar); 2, Lieut.-Col. N. N. T. Everard (Defence).

Heifer, calved in 1901—1, Lieut.-Col. Everard (Needless 25th); 2, T. Boylan (Winnie 4th).

AYRSHIRE.

Cow or Heifer, in calf or in milk—1, T. O'Sullivan, Cloughduv, Crookstown (Jeannie).

KERRIES.

Pure-bred Bull, any age—1 and 2, R. Barter, St. Ann's Hill, Cork (Aicme King) aw (Aicme Pretty).

Cow or Heifer, in calf or in milk.—1 and 2, R. Barter (Aicme Daisy), aw (Aicme 000).

JERSEY.

Bull, any age—1, A. F. Sharman-Crawford, Lota Lodge, Glanmire (Marcus).

PIGS.

LARGE WHITE BREED.

Boar, entered in Royal Dublin Society's Register of Pigs, farrowed between August 1st, 1900, and August 1st, 1901—1, C. A. Webb, Quartertown Mills, Mallow (Kruger); 2, R. Barter, r., D. Ross, Tweedmount, Blarney (Galway Prince).

Three Boar Pigs, entered in Royal Dublin Society's Register of Pigs, farrowed on or after August 1st, 1901, bred by exhibitor—1, R. G. Nash, Finnstown, Lucan (Lucan Earl); 2, r. and v. h. c., R. Barter.

Breeding Sow, farrowed on or before August 1st, 1901, in pig.—1, R. G. Nash (Lucan Empress); 2, R. Barter, v.h.c. D. Ross (Duchess Albert); r., C. A. Webb (Empress).

Breeding Sow, any age, with litter.—1, W. Roberts, Rigsdale, Ballinhassig (English Lady II.); 2, C. A. Webb (Princess A); 3, D. Ross (Albert Princess); r., Manager Cork Industrial School, Marble Hill, Cork (White Empress).

Three Breeding Sow Pigs, farrowed on or after August 1st, 1901, bred by exhibitor.—1 and 2, R. Rarter; r., D. Ross.

HORSES.

Thoroughbred Stallion.—Six premiums of £50 each offered by the Royal Dublin Society, and six silver medals by the Cork Society:—R. H. Hayes, Bayview, Carrigaline (Kentford); T. Magnier, Fermoy (Toronto); W. Pallin, Athgarvan Stud, Curragh Camp, Co. Kildare (Sir Reginald); D. Stack, Castle Hyde, Fermoy (Rocket); J. Sheehy, Square, Rathkeale, Co. Limerick (Glensterling); J. Bell, Abbey Street, Clonmel (Ballynoe).

R. F. Flannery, Churchtown, Buttevant (Xylophone); W. O'Brien, Ballyvoduck, Midleton (Beware); W. A. Harris, Victor Stud, Kilmallock (Ferdinand); R. Good, Aherlow, Aherla, Co. Cork (Master Bill); J. W. A. Harris, Victor Stud, Kilmallock (Maltravers); T. Love, Ballea, Carrigaline (Lorikett).

Agricultural Stallion, on Department's Register for 1902. Clydesdale or Shire—1, H. Delany, Ballinvinny, Riverstown (Sowerby Victor). 2, R. Hon. Viscount Duncannon, C.B. (Prince of Bessborough); v.h.c., R. Good, Aherlow, Aherla, co. Cork (Cannock Conqueror IV.); r., D. Hassett, Millfield, Cork (Chipping Harold).

Agricultural Brood Mare, from 3 to 6 years old, suitable for breeding purposes; payment of prizes to be withheld until certificate of service in 1902 by a stallion on Department's Register for 1902 is produced.—1, T. O'Sullivan (Gipsy Lass); 2, F. B. Furney, Sarsfield Court, Riverstown (Polly).

YOUNG AGRICULTURAL HORSES.

Three-year old Gelding or Filly—1, Rt. Hon. Viscount Duncannon, C.B. (Bessborough Jubilee); 2, J. Logan, Courtstown (Little Island); 3, J. Mahony, Kilmaney, Carrigaline (Empress).

Farmers' Supply Association of Scotland.—The report adopted at the seventeenth annual meeting of the Farmers' Supply Association of Scotland, Limited, recommended a dividend of 5 per cent. on £2,533 of share capital, after carrying forward a balance of £714 7s. 1d. In moving the adoption of the report, the Chairman said it showed the biggest turnover they had ever had, the sales amounting to over £40,000, and was the more satisfactory in that they had no bad debts. Manure had steadily kept at about £7,000 or £8,000, which left room for improvement. Feeding stuffs had been quite satisfactory, the sales having gone steadily up to £24,000; and the turnover in implements last year amounted to £4,000. Seeds had risen from £1,000 to £4,500, which was very satisfactory. Mr. Alexander Glendinning, Newmains, who seconded, said there were not a few of the large farmers who would benefit themselves if they placed at least a certain proportion of their orders with the Association; and with regard to other farmers who farmed a moderate area, the benefit would be altogether incalculable.

I notice that Mr. John Parr, the Secretary of the National Pig Breeders' Association, has changed his address to Ruddington, Nottinghamshire.

SOCIETIES.

Hackney Horse.—Scottish Committee.

A fairly well-attended meeting of the Scottish Committee of the Hackney Horse Society was held at Glasgow on the 26th ult., Mr. James Hamilton, Aldersyde, presiding.

The Secretary submitted the annual report as follows:—The executive, with the secretary, had a meeting with the Council and its Selection Committee in London in November. The official report of that conference and its results, so far as they affect the Scottish Committee, was submitted. The report stated that the Council of the Selection Committee had considered the present method of the election of members of the council, more especially concerning the representation of Scotland and Wales; and that Mr. MacNeilage had put forward the views of the Scottish Committee. The committee carefully considered these suggestions seriatim, and unanimously resolved to present the following report, recommending:—

(1) That a separate section for Scotland appear on the next voting paper.

(2) That the Council frame the voting paper to endeavour to ensure the election of two representatives from Scotland; but, in face of article 29, and the fact that the ultimate voting power rests with the general body of members, the Council have no power to definitely promise that two members will always be elected from the Scotch section.

(3) That the committee cannot at present endorse the suggested change in the method of the election of council in respect to voting for neither more nor less than ten members.

(4) The committee agree with Mr. MacNeilage that the recommendations of members should be carefully considered by the Selection Committee, but are not prepared to endorse his view that every name suggested by five members should be inserted on the voting paper without first being submitted to the Selection Committee.

The executive have reason to be satisfied so far with what the Council have done, but after deliberation it was agreed that an effort should be made to test the feeling of the members of the society at the annual general meeting on Wednesday, 5th March, on the subject of the rule which compels a member to vote for ten councilmen, neither more nor less, or his paper is disqualified. Mr. MacNeilage was authorised to move in this sense, and did so, with the result that the report of the Council, embodying its finding in November, was only carried by a majority of two votes. The committee are satisfied that the result would have been different were it not that many members did not care to vote for a motion which might be construed as a vote of no confidence in the Council.

Premiums.

During the year the committee expended £46 in subsidising hackney classes, or in paying the expenses of approved judges at the shows held at Glasgow in April, Edinburgh in June, Kilmarnock in April, and Ayr in April. It has been resolved not to do anything further by way of subsidising premiums at these shows, but to continue to defray the expenses of qualified judges for hackney classes if drawn from this committee's list. Such judges had been elected to act at Kilmarnock, Ayr, Edinburgh, and it is expected that a similar selection will be made at Glasgow. Provided sufficient funds are forthcoming, the committee would like to improve the classification for hackneys at county and district shows. A contribution from all the members of the Hackney Horse Society in Scotland should be made to this committee in order that it may be enabled to do its work efficiently. The committee commenced the year with a balance of £20 7s. 0½d.; the subscriptions received amounted to £55 16s.; subsidies and judges' expenses absorbed £46 of this; salaries amount to £20; secretary's expenses to London to £4 3s. 5d.; printing, postage, and commission, to 16s. 3½d,; the balance on hand at date being £5 3s. 4d.

Dr. Wilson, Carbeth, Killearn, moved that the matter of election of councilmen for Scotch presentation be taken up again on the first opportunity, which resolution was seconded and agreed to. ffice-bearers were elected, Mr. R. C. Marshall, of Bruntshields, being president, and Messrs. James Hamilton and John G. Kerr, of Harvieston, being vice-presidents.

Highland.

A meeting of the directors of the Highland and Agricultural Society was held at Edinburgh on Wednesday, Sir Ralph Anstruther, Bart., in the chair.

A letter was read from the Butter Association, London, directing attention to the interim report of the Board of Agriculture Committee on Butter Regulations, where it was recommended that the legal limit of moisture in butter be 16 per cent., but stated that any butter containing a larger percentage of water than 16 per cent. would escape the operation of the 16-per-cent. limit if disclosure were made of the fact to the purchaser before purchase.

The secretary suggested that the society should make a representation to the Board of Agriculture to have the present unsatisfactory state of matters altered. The effect of the report had been to lead to an extensive trade in what was known as watered butter.

The Rev. Dr. Gillespie, Mouswald, said this was a matter of very great importance. It was not simply a case of what was commonly termed milk-blended butter, which contained more than 16 per cent. of water, but of the great extension that had taken place in the trade. The practice, as they knew, was to have inferior butter made up with new milk, the result being that butter which contained from 12 to 13 per cent. of water would be found, in its milk-blended form, to contain 24 or 25 per cent. of water. That had led people to start manufactories or extend existing works for the manufacture of milk-blended butter, and unless a check was put upon that trade, in the interest alike of the consumer and producer, it might assume gigantic proportions. So far as they knew, Mr. Hanbury was willing to protect the interests of the community in the matter, and he moved that they make a representation to the Minister of Agriculture to use his powers under the Foods and Drugs Act to regulate the percentage of water in butter, as he had done with regard to solids in milk and cream.

Mr. John Speir, Newton, in seconding the motion, said if the Board of Agriculture Committee were within their rights in limiting the quantity of water in milk, they would be quite as much within their rights in doing the same as regards butter. It would, no doubt, cause a little hardship to those people who manufactured that extreme class of butter, but in the general interests of the community he thought they should adopt such a resolution as had been proposed, and which was similar to one adopted by the Royal Agricultural Society of England and the Bath and West of England Agricultural Society.

The motion was unanimously agreed to, and power was given to the chairman and Dr. Gillespie to arrange for a deputation to the Minister of Agriculture, if it should be considered desirable.

The secretary stated that he had received a letter from Dr. Macdougal, the society's entomologist, drawing attention to the increasing injury done by maggots to sheep. Dr. Macdougal wrote that he was satisfied that there were flies other than the green-bottle variety which were causing much loss, and only a fortnight ago he had received complaints of great loss in Clackmannanshire from maggots. He suggested that the society should send out a series of questions to sheep farmers with the view of eleciting information as to their experience of maggots among their flocks.

On the motion of Mr. Anderson, Kippenross, the matter was remitted to the Science Committee, the chairman of that committee and the secretary being authorised to issue the queries which Dr. Macdougal proposed.

Royal Scottish Agricultural Benevolent Institution.

The annual meeting and the election of pensioners of the Royal Scottish Agricultural Benevolent Institution took place on Wednesday, in the offices of the Highland and Agricultural Society, George IV. Bridge, Edinburgh, Sir Ralph Anstruther, Bart., presiding.

The annual report submitted by the secretary showed that the subscriptions had amounted to £694, and the donations to £217. Subscriptions, donations, and church collections showed an increase over the amount received during the previous year; £730 had been paid during the year in pensions. The total funds at 31st December amounted to £7,591, being £251 above the figure at the corresponding date in 1900.

Mr. Hutchison (Beechwood), in moving the adoption of the report, said it was satisfactory so far, but he did not think it was creditable to his fellow-farmers in Scotland nor to proprietors that the funds were still so low, and that they had had that day to refuse nineteen pensions. They were greatly indebted to Sir John Gilmour, who h promised to pay a portion of the expenses of representative to look after the interests of t institution at the markets and annual shows. He hoped that by this time next year they would be in such a flourishing state that, instead of having to vote on the various pensioners, they would b able to put them all up.

Mr. Thomas Elder (Bearford), who seconded said he did not think the scheme of having some to advocate the interests of the institution at the markets would have the success they desired. He had more faith in the other sex doing more for the fund. His suggestion was that either the farmer's wife or the farmer's daughter should collect in the parish to which they belonged. The report was adopted.

The chairman intimated, amid applause, that the King had consented to become a patron, up which they had reason to congratulate themselves. The Duke of Buccleuch was re-elected preside , and vacancies on the board of directors were fille up.

British Dairy Farmers.

A meeting of the council of the above society was held at 12, Hanover Square, London, W., on Wednesday. On behalf of the Finance and General Purposes Committee, Mr. S. P. Page reported that the society's accounts for the past month had been duly examined, the balance on current account being £387 8s., against which they recommended payments amounting to £85 7s. 8d. The report was adopted. Upon an application made from the Gloucester County Dairy School it was agreed to arrange an examination there, at an early date, for the society's elementary teacher's certificates. Mr. Carrick presented the report of the Conference Committee, embodying their proposals with regard to this year's Dairy Conference. It was agreed to commence proceedings at Reading, members assembling there on the evening of Monday, June 3rd. The first day's proceedings begin at nine o'clock, by an inspection of the British Dairy Institute, succeeded one hour later by a conference in the hall of Reading College (adjoining), the subjects of papers for reading and discussion being, (1) practical education in dairying, and work at the British Dairy Institute; and (2) theoretical instruction in dairying. The members will be entertained to luncheon by Mr. Martin J. Sutton, and the afternoon will be devoted to a brief visit to Messrs. Sutton and Sons' seed establishment, and an inspection of a farm outside Reading. In the evening a dinner is to be given in the Town Hall, on the invitation of Mr. W. Berkeley Monck, chairman of the Institute Joint Committee. The programme for the second day (Wednesday), now in course of arrangement, will consist of visits to farms between Reading and Oxford, the latter city being the association's headquarters for the nights of Wednesday and Thursday. On the morning of Thursday a conference is projected at Oxford, and on the Friday morning a special train will convey the members to Buckingham for the purpose of meeting local farmers in conference there. Later on the party will proceed to Lord Rothschild's Home Farm, Tring Park, where the four days' proceedings will terminate.

The chairman of the Show Committee (Professor Long) reported that they had commenced their revision of the schedule of prizes to be competed for at the Dairy Show on October 7th, 8th, 9th, and 10th, and hoped to complete it at the next sitting. The council considered a communication from the Reading College, and discussed it with a representative thereof, on the subject of an offer received from the Corporation of Reading for acquiring the present buildings of the British Dairy Institute, and the consequent project for erecting the Institute on another site. The Council decided to sanction the proposed transfer, subject to the necessary legal formalities and the approval of the Institute Joint Committee, confirmed by the Council, of the plans for the new buildings and details of the entire arrangements.

It was resolved to address the President of the Board of Agriculture and others on the subject of the London County Council General Powers Bill, pointing out that in the clauses relating to tuberculosis the wording does not follow that of the model milk clauses hitherto accepted by Parliament and inserted in all similar Bills. The words "tuberculosis of the udder or tuberculous disease" occur, whereas the last three words, "or tuberculous disease," were by agreement eliminated, with the consent of the then Minister of Agriculture (Mr. Long) and the President of the Local Government Board (Mr. Chaplin), from all such Bills. The council expressed a strong hope that the Minister of Agriculture will insist on maintaining the model milk clauses intact, and not allow the words "or tuberculous disease" to be inserted in the Bill.

"Mark Lane Express" Diary.

April.

8. Sale of Mr. McIntosh's Jerseys, at Havering Park, Romford.
8. Meeting of the Council of the Central and Associated Chambers of Agriculture.
9. Royal Jersey Agricultural Society's Bull Show.
9. Meeting of the Council of the Royal Agricultural Society.
9. Sale of the late Lord Rookwood's herd of Jerseys, at Down Hall, Harlow, Essex.
9. 10, and 11. Sale of horses, at Cheshire Repository, Crewe.
10. South Devon Herd Book Society's Show and Sale, at Totnes.
10. Sale of Mr. L. C. Merson's herd of Devon cattle and flocks of Devon sheep, at Bickham Farm, Timberscombe, Somerset.
11. Sale of Captain Duncombe's herd of Shorthorns, at Waresley Park, Hunts.
11. Store Stock Sale, at Shrewsbury.
11. Sale of pedigree Shorthorns, Shropshire sheep, etc., the property of Earl Beauchamp, at Penn Farm, Madresfield, Malvern.
12. Kilmarnock Farmers' Society's Show, at Kilmarnock.

Weeds and Their Eradication.

In the course of a paper read before the Farmers' Club to-day (Monday) by Professor Wrightson, he said that so far as pastures and meadows are concerned there are certain methods which may be relied upon to gradually exterminate weeds and develop the more valuable herbage, as, for example, drainage.

The following weeds and inferior grasses will be found in wet pastures:—Early flowering rush, flea rush, carnation grass, marsh plume thistle, common rush, silver weed, hair grass, floating foxtail grass, cuckoo flower or ladies' smock, marsh marigold, yellow iris, forget-me-not, or scorpion grass.

One of the first effects of drainage is to cause the disappearance of all these plants. If such boggy lands were drained they should be then well manured, and afterwards harrowed and sown with suitable grass seeds. Repeated mowing will destroy rushes. If thistles were mown before frost, they would, in their withered condition, perish after mowing. I know no better course than to persevere in mowing, as a means of preventing seeding. Much depends upon whether a plant is annual, biennial, or perennial in habit, for, assuredly, the first two classes, if kept mown and prevented from seeding, must succumb. Heavy stocking, shripping, and mowing are the best practical means of encouraging the true grasses and discouraging less desirable herbage. Where a large head of stock is maintained there must be manuring, for cake is sure to be fed on the pastures, and the weeds, which as a rule affect the poorer pastures, will gradually be exterminated.

The weeds which affect upland pastures are different from those already mentioned. Many of these weeds are so completely associated with the pastures that no attempt is made to eradicate them, and all that can be done is to stimulate the growth of good grasses, with a view to overpowering them. In some cases stubbing, as in the case of gorse or whin, may be practised, but it must not be forgotten that whin is not by any means useless in a poor pasture. In many cases the wiser plan is to accept the herbage as it is, and make the most of it without troubling about its precise composition. If, however, it is thought desirable to reduce the weedy herbage, the use of active manures will do so, not so much by destroying the weeds as by stimulating the growth of the grasses proper, and, so to speak, elbowing out the intruders.

I now come to a more promising field in which to wage war with weeds, namely, arable land. When land is brought into the proper tilth for receiving seed its surface speedily becomes covered with tiny dicotyledonous seedlings. As this often takes place after the crop has been sown, there is a race between the crop and the weeds as to which shall possess the land. Generally speaking, the crop surmounts the weeds, which continue to exist as an undergrowth, doing considerable damage to the crop by abstracting moisture and fertilising matter, and excluding the air. The difficulty consists in the enormous number of weed seeds in soils, which lie dormant until favourable conditions for germination arise.

One of the most approved methods of exterminating annual weeds is to bring land into tilth a little before the crop is sown, and to thus encourage the germination of all weed seeds which are capable of growing. The seedlings are then destroyed by harrowing, and the crop is then drilled and rendered comparatively clean. If this precaution could be taken, it would prove effective, but there are some serious difficulties, because too often the germination of the weeds is delayed, and the seedlings come up among the young corn. They are, however, still very easily eradicated by harrowing, and one of the best means of dealing with charlock and other weeds which thickly stud the ground after the barley and oats are up is to harrow the ground at the proper time, that is, as soon as the corn will stand the operation and before the weeds have passed beyond the earliest stage of growth. Harrowing stubbles after harvest is also a good means of producing a growth of weed seedlings, which will, in some cases, as in that of charlock, be destroyed by frost or by subsequent tillage operations. In the case of land intended for roots, tillage operations may be relied upon to destroy most of these weeds. Root crops are sown later than corn, and in the balmy days of April and May germination is rapid, and the countless weed seedlings succumb to the ordinary tillage operations.

Hoeing corn is undoubtedly one of the best methods of destroying weeds. It was at one time more generally practised than it is now, but the low price of corn and the scarcity of labour have both tended to diminish the area of corn hoed.

I have known many farmers who relied much upon smothering weeds by stifling them with luxuriant growth; by keeping land as clean as possible, and in the highest condition; by early sowing, and good cultivation, to encourage rapid growth and so choke the weeds. Vetches are a smothering crop, and are well suited for keeping down weeds, but so are heavy crops of almost any kind.

Clean Seed.

One of the most fruitful sources of weeds is foul seed, and of this I have no doubt whatever. From this point of view, farmers have often themselves to blame; but I would here observe that too often the bulk of seed delivered is not in accordance with the sample sold. Our great seed-growing firms possess machinery for cleaning seed, and it is not from them that dirty seed is obtained. They charge a little more than market price, perhaps, but they deliver according to sample. It is by the incautious buying of clovers, sainfoin, seed corn, etc., from men who have neither the botanical knowledge to detect weeds nor the machinery for removing them, that land becomes stocked with weeds. To many farmers cheapness is the first consideration, and they do not appear to mind a few weeds in their grass seeds and clovers. It is in this way that couch, docks, plantain, geranium, dodder, lop, and many other weeds are sown broadcast.

Charlock Spraying.

I believe one of the principal objects in asking for this paper was to ventilate the subject of spraying. I sincerely hope, however, that in the discussion which is to follow, too exclusive attention will not be given to this part of a wide subject. Spraying has now been before the public for four seasons, and the method of procedure is well known. It consists in applying some 40 gallons per acre of a weak solution of 3 per cent. strength of sulphate of copper. The present position of the spraying question as regards charlock appears to be that the process is successful. Success appears to depend largely upon the conditions prevailing at the time of application. These are, mainly, (a) the state of the weather, and (b) of the charlock. The weather should be dry and calm, and not wet or windy, or even frosty. If rain follows soon after application, respraying may be necessitated. All the experiments point to the conclusion that charlock ought to be sprayed in quite the early stages, and before the flower-heads appear.

If a field is addicted to charlock it is just as well down in sainfoin or old seeds. I suggest cropping such a field as follows. Sainfoin mown for four years. Fifth year to be broken up and put into mustard, to be followed with wheat for the sixth year. Seventh year, winter vetches to be fed, and followed with late roots. Eighth year, early roots. Ninth year, wheat. Tenth year, to be sown with clover and grass seeds. Eleventh year, ditto. Twelfth year, ditto. Thirteenth year, wheat. I do not think there would be much trouble with charlock during such a course as this.

The plough is the best eradicator of these deep-rooted weeds. Deep, sound ploughing and hand-pulling, stubbing, and chopping up are the means usually employed, and I know of no other method except what has been previously mentioned in connection with the treatment of such intruders upon grass land. It is, of course, important that they should not be allowed to run to seed, and it is equally important that they should not be introduced in mixtures of grass seeds or seed corn. Good farming—that is, liberal manuring, deep ploughing, vigorous persecution—are effective, and I think we may leave these enemies to be treated as they deserve by skilful farmers without prescribing any chemical specific."

Varieties of Potatoes.

In the spring of 1901 nineteen varieties of potatoes were planted in Cae Ty Newydd Ucha, under the supervision of Professor Winter, of the College of North Wales. The soil was a good medium loam resting on the limestone. The rows were 27 inches wide, and the plots were one-forty-fifth of an acre in size—one row right through the field. The manuring, which was the same in each case, was as follows:—15 tons of farmyard manure, 3 cwt. of superphosphate, 2 cwt. kainit per acre. The following varieties were grown:—British Queen (Findlay), a second early, of kidney shape, with a strong haulm. Cigarette (Kerr), a second early, round in shape, medium haulm. Sirdar (Hurst), a late round variety with a medium haulm. Motor (Webb), a late variety, producing large tubers of a kidney shape. Up-to-Date (Findlay), a strong-growing late variety, tubers

slightly oval in shape. Flourball (Sutton), round tubers of a red colour. Reliance (Sutton), tubers of a kidney shape, haulm rather short, late. Colossal (Fidler), kidney shape, haulm very strong, late. New Main Crop (Fidler), late, tubers of a kidney shape, haulm of medium strength. Farmer's Glory (Findlay), a late growing variety with a large haulm. Windsor Castle (Sutton), a round second early with short haulm. Lord Dundonald (Kerr), a late round with a strong haulm and coloured flower. Good Hope (Findlay), a late variety with very strong haulm. Fame (Fidler), flattish kidney. General Roberts (Kerr), strong-growing variety, tubers oval, late. Reliance (Dickson), haulm rather short, tubers of a kidney shape. Scottish Triumph (Gemmel), strong growing late variety, tubers oval in shape. Reading Giant (Fidler), tubers elongated oval in shape, medium haulm. Charles Fidler (Fidler), a late variety, very strong haulm, tubers round.

The potato crop in Anglesey and Carnarvonshire was probably a record one in point of weight in 1901, and that at Llediwgan was no exception to the general rule. Full particulars of the weights are given in the table below:—

Variety.	Yield of potatoes. Total weight.	Marketable.	Small.	Diseased.
	T. C. LB.	T. C. LB.	T. C. LB.	T. C. LB.
British Queen	16 12 11	13 19 91	2 4 13	0 8 19
Cigarette	19 5 65	17 6 90	1 7 41	0 11 46
Sirdar	8 0 105	7 11 61	0 5 80	0 3 76
Motor	10 16 10	9 10 85	0 17 109	0 7 40

Charles Fidler	15 10 2	14 9 70	0 11 46	0 8 110

Miss E. E. Mann, of the Liverpool Training School of Cookery, tested the cooking properties of the different varieties, and furnished the following report:—British Queen, excellent, floury, white and well flavoured. Cigarette, not very satisfactory, dark and not easily boiled; better when baked. Sirdar, good bakers, but break before soft when boiled. Motor, good flavour when steamed, but bad colour; excellent when boiled, white and floury; good taste. Up-to-Date, dark colour and too sweet. Flourball, white and floury, but rather too sweet in flavour. Reliance (Sutton), inclined to break badly, but well coloured and flavoured. Colossal, when boiled have a rough flavour and bad colour; better flavour when steamed, but colour still bad. New Main Crop, yellow in colour; not floury, but well flavoured. Farmer's Glory, very black and rather too sweet in taste. Windsor Castle, white and good flavour, excellent. Lord Dundonald, very good; floury and good flavour. Good Hope, floury, white, and good flavour, excellent when steamed. Fame, very good, floury and dry; good flavour. General Roberts, difficult to boil soft, break badly before softening; very white and nice flavour; better when steamed. Reliance (Dickson), best when boiled, very earthy taste when steamed; do not bake at all well. Scottish Triumph, very white and floury; excellent flavour, good either boiled or steamed. Reading Giant, very good flavour, but difficult to dry, and dark coloured. Charles Fidler, boil well, inclined to turn black soon; well flavoured; steam and bake very well.

The Destruction of Agriculture.

"To kill agriculture is something worse even than the murder of a great industry," says Mr. Ernest Williams in an article on "Our National Peril," in the April "Windsor." "So intimately bound up with the well-being of a country is that country's agriculture that to kill it is to drain away the country's life-blood, and the nation which kills its agriculture commits suicide. Yet England has deliberately killed her agriculture. In a moment of madness, succeeded by years of thoughtless folly, the Parliament of this country signed the death-warrant of the queen of this country's industries. It committed this crime in the fancied interests of the manufacturing and commercial interests of the country, though these interests were progressing to a degree which was the world's marvel. I say that this act was performed in a moment of madness, and in support of this view that the country's politicians were suffering from a fit of aberration of mind. I may appeal to Gladstone's own words, uttered a year or tw obefore he plunged into the hysterical agitation against agriculture.

"In 1843 he declared: 'I am strictly correct in saying there would be no new labour set in motion by the manufacturers of this country if foreign corn were admitted free, but what would be more than counterbalanced by the displacement of the labour of the British peasantry.' Those were the words of the patriot and the economist in his time of soberness. With his mind as yet clear of the turgid rhetoric of the Repeal League, he saw clearly enough that the evils and losses attendant upon the ruin of agriculture must be greater than any advantage in the way of an increased export trade in manufactures which might possibly accrue from withdrawing the necessary support from agriculture. Yet Gladstone's flash of insight into the real bearings of the matter was soon lost amidst the growth of such doctrines as that tersely and cynically expressed in Thompson's 'Free Trade Catechism': 'It may be information to the home agriculturists to state that there would be no physical impossibility in living without them altogether.'

"And so the deed was accomplished. It was not all at once that agriculture began to die. Just as a man may, by some foolish course of living, sow in his system the seeds of death, and yet continue for some years afterwards in fair and apparent health, so it was with English agriculture. The 'natural protection' of distance, which Cobden promised to the English farmer, did shield agriculture for awhile. The prairies of North and South America were as yet but sparsely employed in arable cultivation, and, apart from the comparative smallness of the foreign wheat supply available, a lack of facilities for transportation, and the high charges for freight, did give the farmer protection against foreign competitors, even after the duties were removed. But all through the intervening years the foreign wheat lands have been developing, railways have made a mesh over them, and the seas are now so crowded with ships that they are carrying grain across the Atlantic for a penny a bushel, and in some cases actually as ballast."

LITERARY NOTICES.

All interested in matters relating to New South Wales would do well to obtain the year book of that Colony, which can be had of the Agent-General, 9, Victoria Street, S.W. Full particulars are here given of the geography, the history, the commerce, and modern life and business of the Colony.

The spring number of "Bibby's Quarterly" is a very creditable production. The articles on agricultural matters are very up-to-date and useful, while the contents of the literary supplement attain a very high standard. As usual, no expense has been spared to illustrate the number beautifully, the coloured plates being exceptionally excellent.

We have received a pamphlet from Messrs. J. Rands and Jeckell, of Ipswich, in which are reprinted extracts from articles showing the importance of, and the advantages to be derived from, providing efficient shelter for lambs and sheep.

The Royal Agricultural Society have issued new editions of two of their well-known pamphlets by Sir George Brown, C.B., viz., "Dentition as Indicative of the Age of the Animals of the Farm," and "The Structure of the horse's Foot and the Principles of Shoeing." The pamphlet on dentition is the fifth edition of a work that was originally written in 1882. It describes the dentition of the horse, the ox, the sheep, and the pig, and includes in a pamphlet of 64 pages, 60 wood engravings, illustrating the various phases in the dentition of the animals mentioned. The pamphlet on horse-shoeing, of which the new edition is the fourth since its original publication in 1888, has been to a large extent re-written, and is considerably enlarged. The new pamphlet consists of 24 pages, with 12 illustrations of horse's feet and horse-shoes, and is intended for the use of shoeing-smiths who are desirous of acquiring an intelligent knowledge of the anatomy of the horse's foot, and of the principles underlying their art of horse-shoeing. The work is divided into three parts, dealing with (1) the anatomy of the foot, (2) the functions of the foot, and (3) the principles and practice of shoeing. Both pamphlets are published by Mr. John Murray, that on dentition at 1s., and that on horse-shoeing at 6d. per copy.

Flowers for Eastertide.—Considerable consignments of flowers for Eastertide were despatched to the London and Provincial centres from the Fen Districts of Lincolnshire and Cambridgeshire, where the growing of bulbs has in recent years received great attention, a large acreage being now devoted to the growth of daffodil, narcissus, and other bloom. Eastertide falling a week earlier than last year, much of the bloom thus far gathered has been brought on under glass, but growers are now beginning to cut the early varieties grown out of doors, and shortly the work will provide employment for a large number of hands. The amount sent from the Fens this Easter is about on an average with last year.

PRACTICE WITH SCIENCE.

Experiments with Mangolds and Swedes.

This year 29 varieties of mangolds were tested at the Agricultural School, Holmes Chapel. The seed was sown on May 4th at the rate of 10lb. per acre. The objects in view have been:—1. To ascertain the yield of various varieties. 2. To see which varieties have a tendency to run to seed. 3. To test the amount of water, organic matter, and ash in each variety, with a view of ascertaining the yield of organic matter per acre. 4. To compare the relative values of each variety according to (*a*) the total yield per acre and (*b*) the yield of organic matter per acre. The soil upon which the experiments were carried out is a clay loam, upon which the rotation of crops has been:—1898, permanent pasture; 1899, oats; 1900, oats; 1901, roots.

Manures were applied in the drills at the rate per acre of 16 tons farmyard manure, 3 cwt. superphosphate (29 to 31 per cent. soluble), and ½ cwt. sulphate of ammonia (24 per cent. ammonia). The artificial manures were sown on the farmyard manure in the drills just before closing them. In addition to the above the crop was top-dressed after singling at the rate per acre of 1 cwt. nitrate of soda (95 per cent. purity) and 2 cwt. salt.

The drills were 27in. wide, and the plants were singled out to about 11in. apart, thus giving 21,120 plants per acre. The crop was pulled and stored on October 14th, 1901. The plots varied in size from 1-25th to 1-17th of an acre, but in each case the same area was weighed.

The yield varied very much in the different varieties, the lowest yield being 28 tons per acre, whilst the highest was 49¾ tons per acre. Some varieties have a greater tendency to run to seed than others. The results this year confirm those of the previous two seasons, as in all three years the same varieties have had the largest and the smallest number of shot plants respectively, while the relative positions of the remaining varieties are practically the same. The amount of ash in all the varieties is about 1 per cent., as was the case in 1900. The amount of organic matter and water varies to a very considerable extent, and thus the heaviest yield does not of necessity contain the greater amount of nutritious matter, and in the majority of cases the variety has given a very similar percentage of organic matter in each of the last three seasons. In analysing the different varieties, samples were only taken from roots that had not run to seed.

This year 24 varieties of swedes were tested. The seed was sown on May 17th at the rate of 4lb. to the acre. The objects in view have been to ascertain the yield of various varieties, to test the amount of water, organic matter, and ash in each variety, with a view of ascertaining the yield of organic matter per acre, to compare the relative value of each variety according to (*a*) the total yield per acre and (*b*) the yield of organic matter per acre. The crop was grown in the same field as the mangolds.

Manures were applied in the drills immediately before sowing at the rate per acre of 16 tons farmyard manure, 6 cwt. superphosphate (29 to 31 per cent. insoluble), ½ cwt. sulphate of ammonia (24 per cent. ammonia).

The drills were 27in. wide, and the plants singled out to about 12in. apart. The crop was pulled and stored on November 4th, 1901. The plots varied in size from 1-17th to 1-6th of an acre, but in each case the same area was weighed.

The yield varies very considerably, from 17 tons 13 cwt. to 3 tons 14 cwt., which produced a very indifferent braird, and never gave a vigorous growth at any time during the season. The land upon which the crop was grown is of a heavy nature, and owing to the dry, cold weather after the seed was sown, none of the varieties grew as well as they might have done under more favourable conditions. The amount of ash was constant, varying between ½ and ¾ per cent., the same as in 1900. The amount of organic matter and water varied to a certain extent, but not so much as in the case of the mangolds. The percentage of organic matter is lower this year than in 1900, probably due to the fact that there was more growth at the end of the season; in fact, the plants were still growing when the crop was lifted. The relative amounts of organic matter in the various varieties has been fairly constant for the past three seasons.

Mr. Martin John Sutton, head of the firm of Messrs. Sutton and Son, seedsmen, of Reading, recently offered to the Reading Town Council a statue of the King in his Coronation robes, as a permanent memorial in Reading of the approaching ceremony. The offer has now been accepted, and the statue will probably be erected in the market place.

CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appoint ent to
H.M. THE KING

The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses all competitors.

Address—CHAS. HEARSON & CO.,

Which automatically supplies itself with oil the whole time of hatching. 4s. extra. Testimonials. Hatching 100 per cent. Over 1,000 Letters of Thanks received for Results. Write for our Catalogue, post free.
W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY
The Largest Manufacturer of Incubators in the World.

Can We Prevent Foreign Imports in Eggs and Poultry?

This is a question that is asked us on every hand. Those who have not given the subject of poultry-keeping any consideration whatever, and who have not even kept fowls, have been struck by the increased sum paid by this country to thrifty people in the Colonies and abroad; and they ask us whether it is not possible for English people to produce the eggs and fowls themselves, and thus keep this large sum of money at home.

We have heard it stated by prominent lecturers on poultry-keeping that the whole of this amount might easily be kept in England, and that every fowl and egg consumed by English people could be produced in the country, thus retaining the money for the betterment of our own people.

To the casual observer it may seem possible to do so, but after giving the subject very careful consideration for many years we have arrived at the conclusion that it would not be to the advantage of the poultry keeper or to the consumer for us to even endeavour to do so. There are many different qualities of meat consumed in this, as well as other countries, and there are purchasers for all grades of it, from the wealthy and middle classes, who pay the highest prices for meat of the best quality, and such prices that well repay the farmers for producing it, and the butchers for handling it, down to the poorest of the world's workers, who purchase meat that is so low in quality as to be almost considered uneatable, just because they have not the money to buy better. If there were only the best and second grades of meat, it is more than probable that these poor souls would never taste meat. The large imports of meat of all grades have made very little, if any, difference to the prices realised by that of the best quality, which still has a ready sale; and when people can afford to have the best, they very rarely go in for anything but that. They acquire a taste for meat of good quality—they can afford to pay for it, and they have it. When considering the question of eggs and table poultry in the same way, we find that thousands of the imported eggs are consumed by people who could not possibly afford to pay the prices which the English producer must charge in order that the cost of production may be covered. There are a good many grades in imported eggs—as every purchaser knows—and these all find customers amongst people who are glad enough to have them. The imports increase each year, just because the demand is on the increase. The same remarks apply to imported table poultry. Many people go in for a roast fowl now who some years ago had never tasted such a thing, just because these imported fowls come within their reach. They could not afford to buy an English-reared fowl, because its price is prohibitive. We contend that we should be doing the poorer classes a great injury if we aimed at taking away from them their cheap eggs and poultry, and as it is not possible for English poultry keepers to profitably produce eggs and fowls to compete against those imported, it behoves us to turn our attention to supplying the ever-increasing demand for eggs which can be relied on, and specially fattened fowls, that is found in every city and town in our country. Now that those who can well afford to pay prices which are remunerative to the producers have been able for some years to get eggs which are really new-laid, and table poultry which is found to be dependable, the demand is far in excess to the supply, and, taking everything into careful consideration, will continue to be so for many years to come. It is within the memory of us all that at one time there was a great degree of doubt as to the contents of the eggs which were called "new-laid," and for which a good price had been paid. Many good customers were thus lost, as they could not afford to risk the shock they so frequently got when opening their breakfast egg, and fowls which were bought at good prices for roasting were frequently found to be of uncertain age, and, consequently, very disappointing. The spread of information as to the proper management of fowls—careful collection of eggs from the nests, so that germination was prevented; the best methods of fattening the young birds, so that they would be palatable and profitable; and the most suitable breeds for both egg-production and table purposes—has at last had effect in every county. Poultry keepers—farmers on a large scale and cottagers who only keep a few fowls—have been some time grasping the subject in all its bearings, but it is now well known that the percentage of those who manage their fowls in a common-sense manner is very large compared with those who still adhere to the old methods. This spread of information on the subject has resulted in an entirely different class of produce being offered to the consumers, and this has been appreciated to such an extent that at the present time in nearly every city and town we find numbers who require new-laid eggs and good table poultry, and who are prepared to pay a good price for them, but are unable to get them. Now it is this class of trade that the poultry keeper should aim at supplying, and we welcome every scheme that is proposed and carried out for the purpose of collecting from producer and conveying to the consumer. There have been a good many enterprising poultry keepers who have advertised and been able to get a connection amongst consumers, and who have had a miniature direct supply association of their own, but in the majority of cases this is not practicable; therefore we are very glad to know that poultry keepers who have not a sale for all their produce can have it disposed of.

For many years the impression that there were large poultry farms abroad which produced the immense numbers of eggs imported by us was strongly held by a great many people in England, who could not see how the eggs were produced unless fowls were kept in great flocks to lay them. Investigation proved that this was entirely wrong—that the eggs were produced by cottagers and small farmers in small numbers, and by a system of collection they were brought to the port of shipment and graded and packed in bulk and forwarded to the different centres for sale. It has been the want of a properly organised system of collection that those in outlying districts have felt; but in time this will be overcome. Many steps in the right direction have been made during the last two years, and the poultry-keeping industry has received the recognition of some of our most influential landowners, who are beginning to realise that poultry-breeding is a branch of labour that is worthy the consideration of those who are on the land. We believe that the next ten years will see quite as much progress in poultry-keeping as the last ten have, and that by the end of that time we shall find the higher and middle classes well supplied with English-produced poultry and eggs, which will be greatly to the advantage of the consumer as well as to the producers. There are many acres of unused land in our country which could profitably be used for poultry, and we have every reason to believe that we shall see them so used when their occupiers find that they are able to dispose of their produce without any difficulty. We do not want to go to work with the object of entirely ousting the foreigner's eggs and birds from our markets, as they supply the requirements of a class which our own people could not touch; but we have need to learn the lesson that there is to be learnt from their systems of collection and distribution, and to aim at supplying the many thousands who have not the time or the inclination to breed their own fowls or produce the eggs for their own tables. Everything in connection with poultry-keeping is on the move, those who have been contented with mongrels are going in for better class birds, and the average egg production is certainly on the increase. Table poultry are of better class than formerly, and prices are well maintained, as, indeed, they will be, if we aim at supplying only good class produce which commands a paying price. We are so much above the average already, comparing the quality of our eggs and fowls with those which are imported, that we do not want to allow this to deteriorate, but rather to go on improving in every direction. Everyone who is breeding from good layers and improving their stock as utility birds year by year is helping to solve the question of competition with the foreigner. If we supply our customers with a superior article they will not care to buy one of inferior quality, so that eggs and birds of the lower grade will be left for those to whom but a small share of success in the battle of life has been given, and who cannot afford to pay more than the price which the foreigner is contented with.

W. C.

Newcastle Hirings.—The Easter hirings for married farm servants or hinds were held at Newcastle on Wednesday. There was a large attendance, but business was not very brisk. Hinds commanded 21s. to 25s. per week, 26s. being agreed upon in exceptional cases where there was a useful family. From 14s. to 16s. was promised wives who were good milk-women, and daughters capable of assisting, and also doing field work, were offered 8s. to 10s. per week.

Doncaster April Fair for the sale of horses, cattle, and sheep was held on Thursday. Of cattle there was a good supply, and the attendance was up to the average, but a slow trade took place, and prices were lower. Good bullocks made to £16; stirks, £6 to £8; young stores, £4 to £6 each. More sheep penned than for some time, and better prices were made. Hogs, 35s. to 45s. each. The supply of first-class horses was meagre, and trade slow except for the best; top prices being about £65 each; others, £30 to £45; hackneys and carriage horses, £25 to £40.

Mr. George Stephenson, instructor in elementary chemistry and mathematics in connection with the Agricultural Department of the Yorkshire College, has been appointed lecturer at the Albert Institute, Glasnevin, the Agricultural College at Dublin in connection with the Department of Agriculture and Technical Instruction for Ireland. Mr. Stephenson, during his connection with the work of agricultural education in Yorkshire, as carried on by the Yorkshire College and the County Councils of the three Ridings, has shown unflagging interest in the work of his department, and will carry with him to the more important post to which he has been appointed the best wishes of all associated with him. Mr. E. M. Leaf, of York, who has recently passed through the full agricultural course of the College, has been appointed instructor and lecturer to the Armagh County Council, and will, in addition be responsible for the superintending of the experiments and demonstration plots authorised by the Irish Department of Agriculture.

S. P. & S. "SAFE & SURE" VETERINARY SPECIALITIES.

"INVICTA BLACK MIXTURE."

For exhaustion and after-pains in foaling, calving, and lambing. A powerful Anodyne and Anti-spasmodic for Gripes, Fret or Colic in Horses; Tonic, Alterative, and Astringent in Scour or Diarrhœa, Dysentery, and Debility in Horses, Cattle, and Sheep. 1s. 9d. per bottle; 1 doz. case, £1.

"VIRIDOLIN." (Regd.)

A powerful Antiseptic for dressing in lambing and calving. Extensively used as a general healing agent for wounds of every description in all animals. Invaluable for Humours in Cows' and Ewes' Udders, &c. 2s. and 5s. per bottle; or ½-dozen 2s. bottles in case, 10s. Ointment may also be had, 2s. 6d. and 3s. 6d. per pot.

S. P. & S. PATENT DUPLEX LAMBING AND FARROWING FORCEPS.

No breeder of Sheep or Pigs can afford to be without them, as they repay trifling cost tenfold first time used.

To Masters of Hounds, &c., will be found equally invaluable for Bitches, and *Hound size of dog generally.* Approved of by eminent veterinary authorities; hundreds were sold last season, and gave great satisfaction.

Nicely Finished and Nickel-Plated, 7s. 6d.; Post Free, 7s. 9d.

VESTA CAKES and MEALS.

In order to enable us to supply clean Cotton Seed and a Cotton Cake of good quality we have taken over a mill lately fitted up with the very best modern machinery, which enables us to sell at the lowest possible and at the same time turn out an Undecorticated Cotton Cake practically free from LINT, DIRT, and SAND.

The Cakes are branded "VESTA" PURE.

Buyers of the "VESTA" FEED CAKES can have the Cottons shipped at same time, thus saving any delay.

FARMS.—Rents from 10s. Acre; prices £7 Acre. Monthly List 2 stamps. RUTTER, 10, Norfolk Street, Strand, London.

SURREY.—TO BE LET, from Michaelmas next, a Capital FARM of about 483 Acres, chiefly a good mixed soil, very suitable for sheep, with Farmhouse, Homestead, convenient Off Premises, and Eight Cottages, adjoining a Station on the L.B. and S.C. Railway (with a siding therefrom), within short distances of several other stations, and in the centre of the great race-horse trainers' quarters; sixteen miles from London. Good hunting district. The Farm has been for many years in the occupation of a first-class tenant, who is quitting on account of failing health.—Full particulars of Messrs. DEBENHAM, TEWSON, FARMER, & BRIDGEWATER, Land and Estate Agents, 80, Cheapside, London, E.C.

TO BE LET, at Michaelmas next, in ESSEX, Good MIXED SOIL FARM, 300 Acres, one-third good old Meadow Land; capital Water Supply, excellent Farmhouse and Premises, with Covered Yards and Six Cottages; close to Village, and 3 miles from Market Town.—Particulars, apply A. BLOMFIELD, Orange Hall, Gosfield, near Halstead, Essex.

SUSSEX.—A very desirable FARM TO LET, with immediate possession, about 12 miles from Brighton, and five miles from two stations, consisting of 170 Acres of very productive old grass in first-class condition, thoroughly drained, having been in owner's hands for several years. The fields are of convenient sizes and well-watered. There is a fine old-fashioned Farmhouse, which could be made suitable for a gentleman; it stands on high ground and commands extensive views. The Farm buildings are commodious and sufficient for the holding. The Shooting is included with the Farm. Rent £250 per year. For further particulars and to view apply to Mr. KAY, Estate Agent, Methurst, Horsham.

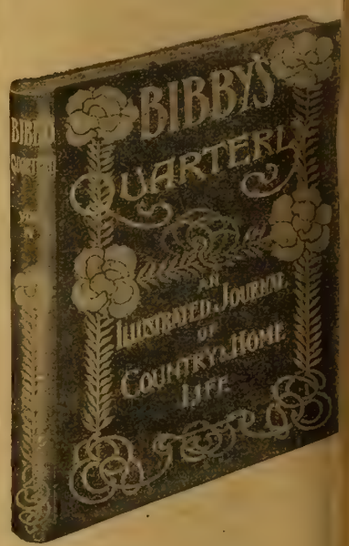
BIBBY'S QUARTERLY

AN

Illustrated Journal

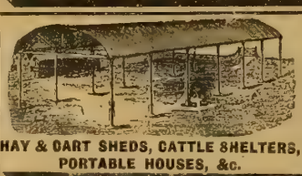


OF

COUNTRY & HOME LIFE.

THE SPRING NUMBER of BIBBY'S QUARTERLY, completing Vol. IV., is now ready, and will be sent postage paid to any address on receipt of nine penny stamps, or it may be had at this office or at the office of any of our agents for 6d.

We have been trying to make BIBBY'S QUARTERLY the most interesting and useful journal that a farmer can buy, and the present number is the best we have yet turned out.



The complete volume, carefully indexed and neatly bound as below, will be ready on the 1st of April, and will be forwarded after that date to any address on receipt of 3s. 6d.

Vol. IV. of BIBBY'S QUARTERLY make a very handsome volume, and is, we believe, the best book of its kind on the market.

Orders may be given to our local representatives, or to the Publishers,

Mark Lane Express Agricultural Journal.

The Only English Journal devoted exclusively to Agriculture.

APRIL 14, 1902.

Correspondents are requested to address all communications for the Editorial Department to THE EDITOR, "Mark Lane Express," 1, Essex Street, Strand, London, W.C.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 1, Essex Street, Strand, London, W.C.

HOW WEEDS ARE PROPAGATED.

The Farmers' Club could scarcely have selected a more fitting subject for discussion at their April meeting than the one chosen: "Weeds, and their eradication." The spring is the season when it forces itself naturally on the minds of farmers, because annuals spring up abundantly among the young corn, and either hoeing, harrowing, or spraying suggests itself. Moreover, it is the period when seed-mixtures of clovers and grasses are purchased or prepared for sowing, and the fact has been notorious that in the past a great many farmers have not been sufficiently scrupulous as to the cleanly character of these seed mixtures. If the truth must be told, there was, in old times, a prodigious propagation of weed-pests owing to the filthy mixtures which were sown by hand. For laying down new pastures or renewing old ones, the sweeping of hay-lofts were utiliesd; while for arable grass-layers "hop and ray" crops were chiefly depended on, which farmers either saved themselves or bought from one another. The seedings of this was often only about two-thirds seeds of plants that ought to be cultivated, and the other one-third seed of twitch and a miscellaneous variety of weeds.

According to Professor Wrightson, who read an instructive paper to the club on Monday last, "one of the most fruitful sources of weeds is foul seed," still. The old "hop and ray" may have largely gone out of fashion, but the mixtures are generally very far from being pure and clean. The following extract from the paper declares this, and, indeed, makes a grave charge of imprudence, amounting to sheer folly; but we fear there is some-truth in it.

"It is by the incautious buying of clovers, sainfoin, seed-corn, etc., from men who have neither the botanical knowledge to detect weeds nor the machinery to remove them, that land becomes stocked with weeds. To many farmers cheapness is the first consideration, and they do not appear to mind a few weeds in their grass seeds and clovers. It is in this way that couch, docks, plantain, geranium, dodder, lop, and many other weeds are so sown broadcast."

The evil result, as above stated, is so very serious, that it might be supposed the evidence thereof would be sufficiently apparent to make every one cautious in buying and scrupulously careful whether the seeds offered have been cleaned by machinery and tested for germinating capacity. Yet, according to the above, these things are little thought of by a great many farmers. Cheapness is declared to be chiefly cared for—how to get anything bearing the slightest resemblance to grass and clover seed at the lowest rate; and the professor even declares that there is a class of farmers who do not mind buying at a low rate stocks admitted to have a few weeds in them. But the few may turn out to be many, quite sufficient to cause fields previously clean to become choke-full of all manner of weed-pests. Yet the risk, nay, the absolute certainty, of running headlong on so gigantic a disaster may be altogether avoided by merely abandoning the desire to buy what is cheap and nasty, and going to one of the leading seedsmen to get served at a higher, but reasonable, price, the seedsman having both the botanical knowledge and machinery which Professor Wrightson points out as so necessary.

The professor pointed out several other ways by which, owing to the want of care, or by reason of slovenly, slip-shod farming, weeds are extensively propagated. Along with the chaff and cavings, winnowed or sifted from grain, the seeds of whatever weeds infested the crop are sure to have place. Prof. Wrightson truly remarks that the cavings of all weedy corn crops ought to be burned. But they are not, because they are good diet for cattle, and the owner thinks it would be wasteful to sacrifice them. But it would be far more economical to do so than to offer them as food for stock. If devoured and made to pass through the stomachs and intestines of animals, they often preserve vitality, and are disseminated far and near. But in most cases they are swept out of the bottoms of feeding troughs with dust, or fall out during the handling of the cavings.

Another fruitful source of mischief is the feeding of hay containing seeds of innumerable weeds. Meadow hay contains most, some idea of the enormous quantities of which may

be formed by noticing their lavish growth, imparting a deep green hue to the spots where sheep-cribs have been filled with hay in the fields. The hay of some meadows, especially those of impoverished, ill-managed farms, always contains a large percentage of weeds with matured seed-heads, and whether such fodder is given to sheep feeding off turnips on arable, or to horses or cattle in stable or stall, the result is the same—a truly disastrous dessemination of the objectionable seeds all over the farm. If the consumption takes place at the homestead the weeds find their way to the fields in the dung. If given to sheep or cattle in the fields, their eating the seed-heads becomes in most cases the propagating agency. Hence, it appears very certain that such wretched fodder should only be consumed in the bad land that produced it.

Of course, if such meadows were cut early, before the seed-heads were ripe, the evil result would not happen, but, in the generality of cases, such is its poverty that it is almost impossible to get even a slight skimming before a great many seeds have ripened; so that the true remedy is the application of manure, or feeding, instead of mowing, for a few years, with the object of promoting an earlier, more lavish growth. Either course being resorted to, the result would not only be that of enabling the grass to be cut earlier, but better grasses and clovers would spring up spontaneously, and crowd out the inferior ones. If then, by ample manuring and high feeding, weeds naturally disappear from grass lands, it is equally certain that arable weed-pests may be got rid of in the same way. The system of cropping has only to be adjusted properly, and sufficient manure applied, and the cultivator will find it natural and easy to realise bountiful produce from the good seed he sows into his fields, without having any difficulty with tares. Thus we perceive that poverty and inferior weed-growths are intimately associated, and in reality that the latter are a natural result of the former. No very attentive observation is necessary to arrive at the conviction that when plants are developed perpetually in vigorous growths weeds seldom do them the slightest injury. Hence, good and clean farming are almost always found associated together; but, on the other hand, if there is inability, through lack of means, to carry out a good system, foulness ensues in numerous ways, and the farmer is almost helpless to prevent it.

THE PRICE OF MEAT.

A prominent topic of conversation and in the newspapers has been the advance in the price of meat. The increase has generally been felt in the wholesale markets, and in a small number of our provincial towns and cities the retail values have been advanced by 1d. to 1½d. per lb. In the metropolis, however, no increase has taken place, and up to the present consumers have not been affected. The cause of the present advance in values has been assigned to the American Beef Trust, which, it appears, has succeeded in gaining control of the markets in the United States. The idea of combine being organised in this country appears to be hardly feasible, and it is stated that middlemen in this country do not fear anything of this nature.

We are inclined to look elsewhere for the true reason of the advance in prices. It will be remembered that for the past year or eighteen months attention has frequently been called to the shortage of beef cattle in the United States. We have no reason to look with suspicion on these reports, and if there is really a deficiency of the finished article in America, this would account for the decreased arrivals at Liverpool. The outbreaks of foot and mouth disease in this country and its alleged prevalence in the Argentine and consequent prohibition of stock from that country, have all had an appreciable effect upon our meat markets. Anyhow, the advance that has taken place in the price of meat in this country from whatever cause it arises, will be acceptable to the British feeder.

By a Man of Mark Lane.

Somewhat late in the day, the Liberals of the West Hampshire Division have decided to make recognition of the plucky fight made by Mr. George Judd at the bye-election at Andover, last September. It will be remembered that he opposed Mr. Beckett Faber, M.P., and although he did not get in, he considerably reduced the Conservative majority. A mass meeting of Liberals is to be held at Andover to-morrow (Tuesday), at which the Earl of Portsmouth will preside, and the presentation to Mr. Judd will then be made.

Mr. E. Flower, M.P. for West Bradford, has given notice of his intention to move, on the second reading of the Beer Bill, "That this House declines to proceed with the consideration of a Bill interfering with freedom in the manufacture of beer in this country, which, whilst it imposes upon the scientific development of British brewing industries arbitrary restrictions that cannot be enforced upon foreign competitors, in no way provides safeguards for the public health, or secures for consumers a guarantee as to the purity of the materials employed."

Major Rasch has given notice to move the rejection of the Education Bill, his motion being based upon his opposition, as an agricultural member, to any additional burdens being cast upon land. The hon. member states that thousands of acres of land in South-East Essex are already derelict, with little or no prospect of again being brought under tillage.

The Board of Trade returns issued last week show that the imports for last month were £40,897,861, against £46,426,056 in March, 1901, being a decrease of £5,528,195. The exports for March amounted to £22,217,238, against £25,021,293 in the corresponding month last year, a decrease of £2,804,055.

In the second forecast of the out-turn of the wheat crop of the Central Provinces of India, issued by the Department of Land Records and Agriculture for the Central Provinces, it is stated that, as far as the district estimates go, the total area reported to be sown with wheat this season is 2,319,027 acres, which, though 13 per cent. larger than the area cropped with wheat last year, is 23 per cent. below the average area placed under this crop during the past ten years.

The crop was generally sown under unfavourable circumstances, and germination in high-lying and poor soils was defective. In some districts the seed was also of bad quality, having been damaged by rain at the previous harvest. The young seedlings were, moreover, much tried by the normal heat of November and the singular absence of the usual dews. Some damage was also caused by frost in some of the northern districts and by insects generally, by white ants in Hoshangabad and Raipur, and by rate in Betul, Nimar, Wardha, and Chanda when the wheat was in ear.

In the rich tracts of Jubbulpore, Mandla, Seoni, and Narsinghpur, the estimated out-turn ranges between 100 and 105. In the other districts where wheat is of importance, the anticipated yield varies between 70 and 85. The prospects are least favourable in Betul and Raipur, where the out-turn is estimated to be 60 and 70 per cent., respectively. In the Bilaspur district the rich lands of the Mungeli tahsil promise a fair out-turn, but the less fertile soils of the Bilaspur and Janjgir tahsils will only yield a crop a little above half the normal. For the province as a whole, the out-turn works out to 84 per cent. of a normal crop.

The same Department has also issued its second forecast of the out-turn of the linseed crop of the Central Provinces, and, according to the estimates, the area sown is 548,625 acres, or 11 per cent. more than that sown last year, land in which earlier crops had failed being subsequently sown with linseed. The area, however, is still 44 per cent. below the average of the last ten years. In Mandla and Narsinghpur, where the rain in January benefited the crop, the out-turn is reported to be 120 and 100 respectively. In the remaining districts of the Jubbulpore and Nerbudda Divisions the yield varies between 50 and 75 per cent. of the normal. In the Nagpur country, where the crop is of importance, the out-turn ranges between 45 in Bhandara and 55 in Chanda. The prospects in the eastern districts are poor, particularly Raipur, where linseed is largely grown and where the out-turn is estimated at 35 per cent. only. The district figures, taken collectively, indicate a provincial out-turn of only 54 per cent. of the normal.

Anglo-Russian Trade.—A large and representative meeting of persons interested in Anglo-Russian trade, convened by the Imperial Russian Financial Agency, was held at the Mansion House on Friday, under the presidency of the Lord Mayor, to consider the most suitable measures necessary for the development of commercial intercourse between England and Russia. Prince Icherbaloff, President of the Imperial Moscow Agricultural Society, delivered an interesting address explaining the different directions in which such intercourse might be increased to the great advantage of both countries. The Prussian Government would favourably consider any suggestions coming from British manufacturers, and would not be indisposed to make the existing tariff more favourable if it were shown that trade relations might be increased. Speeches were delivered in appreciation of the overtures made through the Imperial Russian Financial Agency, and a resolution was unanimously adopted in furtherance of the object of the meeting.

Horse Breeder's Action for Slander.—At the Cardiff Assizes last week a case which excited considerable interest in horse-breeding circles came on for hearing before Mr. Justice Kennedy and a special jury.—The action was brought by Mr. T. D. John, of Cardiff, the well-known and successful exhibitor of horses, against Mr. James Howell, a well-known Cardiff draper, and also a breeder of horses, for slander, and £5,000 damages were claimed.—Mr. Rufus Isaacs, K.C., Mr. S. T. Evans, K.C., and Mr. Arthur Lewis appeared for the plaintiff; Mr. B. Francis Williams, K.C., Mr. Abel Thomas, K.C., and Mr. F. Howell were for the defendant, whilst Mr. St. John Williams and Mr. Ivor Bowan held watching briefs.—The plaintiff's case was that in September, 1899, he exhibited at the Cardiff show a black mare belonging to him named Princess, and was awarded second prize in the Champion Class. The show committee, on the representation of the defendant that the plaintiff was not the owner of the horse, withheld the prize for a long time, but afterwards handed it to him. It was alleged that subsequently the defendant said that the horse did not belong to the plaintiff, and that he could prove it. The defence was a denial of the use of the words, and, further, that if they were used, it was in such circumstances as to make them privileged.—After lasting three days, the case came to an end on Wednesday, when the jury found that the words alleged were not uttered, and judgment for defendant with costs was accordingly entered.

The Mark Lane Express
Seventieth Birthday Number.

The MARK LANE EXPRESS has recently entered upon its seventieth year of publication, and to celebrate its reaching the age of "three score years and ten" a special Birthday Number has been issued. This souvenir number consists of a hundred pages (of the same size as the ordinary number), bound in a very artistic and nicely printed coloured wrapper, on the front of which are a number of miniature views of field operations showing how the work was done in 1832, and the modern *modus operandi*. It is published at 1s. nett. From a short history of the MARK LANE EXPRESS given in the number we see that it has witnessed many changes, and has passed through many hands, but although it has reached the end of the allotted span of man's life it is by no means beginning to decay, but is, on the contrary, more virile than ever and still the leading authority on British agriculture. The journal was started just at the time when the country was in the midst of the agitation immediately precedent to the passing of the Reform Bill, but its foundation had no connection with that. It was started with the fixed idea of advocating the interests of tenant farmers and has continued consistently on that line ever since.

The MARK LANE EXPRESS was more of a trade organ than anything else at first, the object sought to be accomplished, which was a difficult one in those times, being that of supplying farmers throughout the country, or, rather, those who subscribed 7d. for a copy to be sent to them, with an accurate account of the state of trade at the Monday market in Mark Lane, together with a quotation of the prices of all descriptions of corn and seeds sold there, and also similar reports of the Smithfield and Newgate cattle and dead-meat markets. Such early information sent to all parts by the post of Monday afternoon must have been of incalculable value in those dark days, when news was slow a-coming, the only agencies being coaches and mail-carts drawn by horses. The new farmers' organ did not take long, however, to develop into a leading advocate in their just demands for a lightening of the heavy burdens they groaned under.

It was chiefly owing to the reclamation and improvement of barren and poor soil, and the adoption of better systems of farming being advocated in the new journal, and the prominence that it gave to the proceedings of new agricultural societies and farmers' clubs, the movement for the establishment of which commenced at this time, that it encountered opposition from those who taught that farmers should be subservient to their landlords in all things, doing nothing for themselves, and that combination and co-operation were mild forms of sedition. Such sentiments were common in those days, but progress was the aim of the new journal, to be carried out in every possible direction, and it found a worthy director of the advance movement in William Shaw, its first editor.

Solely owing to his persistent efforts in frequent intercourse with Earl Spencer and other public men were they induced to attempt the formation of a National Society in imitation of the Highland one. This fact has been omitted by all those who have hitherto written the history of the Royal Agricultural Society, but there is abundant proof of it. Mr. Shaw performed the duties of secretary for the first year, and at the first show dinner at Oxford in 1839 Earl Spencer, in proposing his health, said:—"We are well all aware of the obligations the Society lies under to its secretary, Mr. Shaw. (Loud cheers.) If the utmost exertions any man could possibly render were at any time required, whether they resulted in inconvenience or at whatever cost of time or work, Mr. Shaw had never scrupled in giving every assistance to the organisation and administration of the Society it was in his power to render."

The extension of the Lincolnshire system of compensation for tenants' unexhaused improvements, and for capital left behind in the soil on quitting, was one of the questions strenuously advocated after the measure of the Repeal of the Corn Laws had passed. The late Philip Pusey was induced by Mr. Shaw to move for the Agricultural Customs Committee, and the seed was sown which produced thirty years after an Agricultural Holdings Act. Tenant right was so strenuously advocated in the MARK LANE EXPRESS that when a vacancy in the representation of North Hants caused a bye-election in 1849 its editor, Mr. Shaw, was invited to come forward in the tenant farmer interest, his platform being security for tenant farmers' capital, repeal of the malt tax, and relief from local taxation. He was the first candidate for a seat in Parliament to represent the tenant farmer interest, and, although not returned, he excited great enthusiasm in the county for the principles he advocated, and at a public dinner at Winchester subsequently, numerously attended, he received an enthusiastic ovation.

As mentioned above, from the first prominence was given to market reports, a well-known man being appointed at the outset to take charge of the corn trade section of the paper. This was Mr. Ruston, a very familiar name on the Corn Exchange in Mark Lane, who was, we believe, succeeded by his son, and then followed by Mr. G. T. Turner. The paper always aspired to be an authority on markets and market intelligence, and in this it succeeded, for, speaking in the House of Commons in 1848, Lord John Russell, when advocating the official collection of statistics on corn and markets, said they had no way of dealing with them beyond going to sources like the MARK LANE EXPRESS.

That the MARK LANE EXPRESS is as virile as ever is evidenced by the number of communications from correspondents in every civilised country, showing the wideness of its reach and touch. The high reputation it holds in this country, too, is well displayed by the very wide extent that its weekly review of the corn trade is quoted, appearing as it does in the principal daily and weekly papers.

To revert to the Birthday Number, it may be stated that the specially-written articles in the number briefly set forth the changes—in some cases for better and in others for worse—that have occurred in the various branches of *the* industry. For instance, Mr. Joseph Darby describes Seventy Years of Farming; "Lobbyist" contributes a retrospect of Agricultural Politics which is accompanied by photos of the present and past Presidents of the Board of Agriculture; English Flour Milling and the Corn Trade are dealt with by other writers and the various agricultural implements produced since 1832 are described, the last article being accompanied by some interesting illustrations of old farm implements. Other branches of farming are similarly dealt with by well-known authorities. A brief history of the principal agricultural societies, together with portraits of their secretaries, and notes on the work of various agricultural colleges accompanied with views and photos of the principals, form two important features.

Our Colonies of late have been receiving much more attention than formerly, and it was a happy idea to include them in the review of agriculture during the past seventy years. Each of the important Colonies has made rapid progress so far as agriculture is concerned, and the strides they have made are described in as interesting a manner as statistics will allow.

The souvenir is veritably a picture gallery containing as it does a very large number of portraits which include some representative breeders of live stock (among them being his Majesty the King and H.R.H. the Prince of Wales) some well known producers of farming necessities, knights of the agricultural rostrum, representative agents of representative estates; and full-page illustrations of the various breeders of horses, cattle, and sheep.

By a Lobbyist.

The most remarkable event of the Parliamentary week has been what I must describe as the revival of Mr. Chaplin. The right hon. gentleman, who has somewhat receded of late, has shown himself once more to be a distinctive Parliamentary force. A piquancy has been lent his re-appearance by the fact that it has been due to a divergence of view from that of his erstwhile Conservative colleagues. I am bound to say, however, that Mr. Chaplin's criticisms have never been malicious or ungenerous. This Mr. Balfour has himself recognised. He has constituted himself one of the champions of the privilege of private members against what he evidently regards as a spirit of Ministerial aggrandisement. There has, however, been no tincture of personal disappointment, no bile of jealousy, in his pungent oratorical performances. The right honourable gentleman has enjoyed the unwonted luxury of Radical cheers—and cheers from the enemy have often induced a malcontent into playing their malevolent game; but Mr. Chaplin has refused the encouragement, and has never been persuaded from the line of courteous opposition. He has thus fortified his very antagonism, and has lent a responsibility to his attack which the House has regarded with some admiration.

Mr. Chaplin has somewhat discarded his old method of oratory. That, it will be recalled, was, in the current phrase, redolent with purple patches. To the modern ear, which has become attuned to the Mosaic-like method of the Chamberlain style, it was flamboyant in character. It was as stately as tse obselete three-decker, and it ploughed its way along with graceful conceptions and flowing sails. However, during this week Mr. Chaplin has abandoned his old love for fine-sounding passages and rhetorical concerts for the compact, epigramatic, direct method of attack, which nowadays is held to be the hall-mark of your real Parliamentarian. The younger men in the House who, in their arrogance, have too often scoffed at the type of Parliamentarian of whom Mr. Chaplin is the best representative, have been surprised into appreciation of his mental agility and Parliamentary adroitness. Of course, Mr. Chaplin's very presence, his suggestion of massiveness, lends in itself an emphasis to his oratory. It is as fine a gift as his voice. To these assistants must, indeed, be partially attributed the fact that this week he has cut a not ineffective figure even in doing battle with Mr. Balfour himself, and that men who once thought themselves equal swordsmen with him have found themselves hopelessly over-matched. The revival of Mr. Chaplin is, in the personal sense, one of the most delightful incidents of the session.

Probably you will be in the possession of the secret of the Budget ere these lines meet the eye. It has been amusing to note, however, the attitude of the various schools of politicians over the suggestion of a cereal duty. A number of Conservatives—not, however, a very large number—have regarded the idea with unqualified approval. The

Lowthers have, in particular, shown themselves ready to welcome such a tax, because it would contain the promise of a realisation of their financial ideals. A larger body of Conservatives have regarded the idea with a certain timorous apprehension. They might not be, economically, in antagonism towards such a tax, but they have feared the weapon which it might put into the hands of an astute Radicalism—they have feared the effect which the pictures of a starved, over-taxed, sorely-afflicted people might have on the minds of sensitive electors. The politicians who have been really enthusiastic over the suggestion are the Radicals. "Such a tax," said one M.P. to me, "acting in alliance with the Education Bill, would do more to unify Liberalism than all the concessions which the Roseberians and the Bannermanites could possibly make one to the other. It would act as a beacon on the political hill-side, and would call every warring section to an united antagonism to the common enemy." "It would," said another legislator, "do more to secure Liberal victories than all the hideous mismanagements of the war. The old cry of 'the big loaf and the little loaf' has not even yet lost its force with a large section of the electors." Having indicated the premonitory attitude of the House towards the suggestion, I am compelled to close this paragraph with a confession of my belief that the Chancellor of the Exchequer will not resort to the policy.

The debate on the Rating of Machinery Bill—a measure which I prefer to describe as the Exemption of Machinery Bill—was, in one sense, painful. I mean that it provided yet another evidence of the existence of the old divergence between ruralism and urbanism. The debate, in fact, was little more than a contest between the manufacturers and the agriculturists. The position which Mr. Walter Long, a typical agriculturist, adopted is the wise and sane one. To deal with the great subject of local taxation in a piece-meal fashion—and the adoption of this Bill would mean this—would be to perpetrate grave anomalies and to systematise serious inequalities. This is, indeed, of infinitely greater significance than the issue as to whether loose machinery in factories should be exempted and only that which is "fixed to a hereditament" be rated. The carrying of this Bill—and pray do not believe that because it has passed its second reading it is likely to pass into law—would, I firmly believe, postpone dealing with the general question of local taxation on a broad and statesmanlike basis. In discussing the Bill with legislators I have refused to consider whether the principle embodied in the measure is wise or not. I have had but one reply to all these contentions; and that is this—to deal with the question of local taxation in a piece-meal fashion is the height of unwisdom. Of course, I have been encouraged in this view by the fact that—as Mr. Walter Long pointed out—the Agricultural Rating Act has operated to modify the agricultural grievance. Naturally, the Bill has its advocates still among the agriculturists. Well, I urge them, in a matter of this kind, to be certain ere they exempt from taxation how the financial deficiency is to be made up.

I have received many remonstrances over my reflections upon the Pure Beer Bill. Well, perhaps in the first flush of my indignation I was rather profuse and emphatic in my adjectives. However, I cannot modify my strong opinion that the Bill is no improvement upon its predecessor, ill-drafted as that was; and that, in the desire to conciliate antagonisms, the Bill has been watered down almost to innocuity. There is, however, little chance of the measure passing this Session; and it is certain that in any revival of the purpose the policy outlined—not too clearly, I admit—in the original Bill will be more faithfully adhered to. One M.P. has accused me of having, in my criticisms, put a weapon into the hands of the Northern brewers. Of course, I have done nothing of the kind. I would remind this critic that if this Bill, which will practically achieves nothing, were passed, it would prevent the question being effectually dealt with. The House of Commons would not stand a second Pure Beer Bill until the next generation.

PRACTICE WITH SCIENCE.

The Utility of Alkaline Phosphatic Manures.

A paper with the above title was recently read by Mr. John Hughes, F.I.C., the well-known agricultural chemist, at a meeting of the Society of Arts. The paper dealt in a practical and comprehensive manner with the properties and values of various phosphatic manures, and the results of their application to different soils. The author pointed out the fact that the two best-known at present alkaline phosphatic manures, basic slag or Thomas phosphate and acid superphosphate were not applicable to all soils under all conditions, in spite of the need existing in such soils for an application of a phosphatic manure.

It occurred, therefore, to the author, after careful consideration in the autumn of 1900, that a new and useful manure could be produced by the careful admixture in suitable proportions of ordinary acid superphosphate with finely ground or slaked lime.

After making numerous trial mixtures the most suitable proportions were decided upon, and a manure was produced which possessed a distinctly alkaline or basic character, and at the same time supplied from 25 to 27 per cent. of phosphate of lime in a form readily soluble in the standard solution (1 in 1,000) of citric acid. The manure so produced was appropriately called

Basic Superphosphate.

because it combined the alkaline nature of slag with the well-known solubility of superphosphate.

The mechanical condition is superior both to that of basic slag and superphosphate. Compared with superphosphate the new material is very much drier, containing only 4 to 5 per cent. of moisture instead of the 14 to 18 per cent. usually found in commercial superphosphate.

Being in a finely-ground, dry powder of light weight and bulky nature, greater uniformity and more perfect distribution can be obtained than is possible with basic slag, which, when sown by hand, is apt to drop between the fingers before complete delivery can be effected.

The manure usually contains from 33 to 35 per cent. of total lime, so that in this respect basic superphosphate supplies fully 10 per cent. more lime than ordinary acid superphosphate.

Basic superphosphate can be applied, indeed has been applied in the season of 1901, with great advantage on soils deficient in lime, such as sand, gravel, granite, peat, and clay. Briefly, it may be stated that all soils containing less than 1 per cent. of lime will be greatly benefited by the application of basic superphosphate instead of slag or ordinary superphosphate.

It is of practical importance to state that, though originally invented to supplement the deficient solubility of slag, which is fully recognised by those interested in its sale (they therefore recommend its application during the winter months), it has been found by actual field results that the new manure is superior also to superphosphate on soils deficient in lime.

It is well known that soils subject to the disease known as finger and toe in turnips, are naturally deficient in lime, containing in fact considerably less than 1 per cent., and on such soils it is reasonable to suppose that an alkaline phosphate manure would naturally be a more suitable dressing than an acid phosphate manure, such as superphosphate.

During the season of 1901 numerous instances were recorded in which basic super has been used on such soils with very marked advantage, the virulence of the disease being materially reduced, and in some remarkable cases in Scotland its application has completely prevented any attack, while other parts of the field manured with ordinary superphosphate had suffered very much from the disease.

A strong argument in favour of the utility of alkaline phosphatic manures is afforded by the fact that all the natural manures hitherto used in agriculture are distinctly alkaline. Thus, farmyard manure, in the efficacy of which farmers thoroughly believe, is alkaline, and its agricultural value depends upon the extent to which the nitrogen compounds are converted by proper fermentation into ammonia salts. Guano, especially the good old Chincha Peruvian quality, is strongly ammoniacal.

Bone dust, dried blood, woollen waste and shoddy, also soot, and, lastly, lime, are all more or less alkaline in their nature, and certainly not acid.

Moreover it is hardly necessary to repeat that basic slag is itself a striking instance of the utility of alkaline phosphate of lime as a manure for certain soils. Indeed it is not natural that manures should be acid, and the reason why the ordinary acid superphosphate has been beneficial to crops grown on good arable land is that the acidity of the manure has been absorbed or neutralised by the abundance of lime usually present in such soils.

Obviously, where the soil is deficient in lime the acidity of superphosphate cannot be immediately absorbed, and harm may be done to the young rootlets of the plant.

It would require a heavy dressing of lime to saturate the soil so completely that every square inch of surface should always contain the necessary quantity of lime requisite to absorb the acid from every particle of manure that may be brought in contact with it. In other words, it is much more economical to add lime in small quantity to the manure for the purpose of immediate and complete neutralisation, than to add lime in large quantities and at long intervals to the soil in order to provide a wasteful excess of alkali for the absorption of a minute quantity of acid.

The necessity of relying upon a sufficiency of lime in the soil is entirely removed when using basic superphosphate, as by the careful admixture of an excess of lime in its manufacture all acidity is removed, and the manure may be applied, mixed directly with the seed without any danger of destroying the vitality of the same.

In conclusion, it should be mentioned that basic superphosphate is not intended to supersede ordinary acid superphosphate upon soils containing plenty of lime nor is it intended to take the place of well-ground slag for application to damp sour land; but it is rather intended to take an intermediate position between these two well-known and most useful manures, and to be employed as a quick-acting alkaline phosphate manure specially useful as a spring dressing for crops grown upon soils that contain less than 1 per cent. of lime, the united acreage of which represent such a large area of the cultivated land in the United Kingdom.

The utility of alkaline phosphate manures when applied to certain soils has already been practically demonstrated by the great success that has attended the use of basic slag, notwithstanding its slow solubility, its frequent defective grinding, and, recently, its reduced percentage of phosphate.

If therefore a material of similar alkalinity, but of greatly superior solubility, can be obtained in an unlimited quantity, and of uniform quality it is reasonable to anticipate that basic superphosphate will prove to be a really useful and most valuable additional fertiliser.

The time has come when manures should be adapted to the soil, rather than that the soil should adapt itself to the manure. Obviously, soils differing so much in their chemical composition and physical character, as chalk and clay, peat and sand, granite and gravel, require different manures, in the same way as they require different cultivation and different kinds of crops.

It is not scientific, it is not economical, and it cannot be to the advantage of the farmer, that one kind of manure should be sold for application to all kinds of soils. Acid manures may with advantage be applied where there is plenty of lime, and alkaline manures may be more profitably applied where lime is deficient.

Downton College of Agriculture.

The winter session of the Downton College of Agriculture ended on Thursday, when the following awards were made:—The certificate of proficiency in practical agriculture to Howard Alexander, of Upavon, Wilts. The prize for valuation of farm stock, N. D. Stewart, Bryn Tirion, Vaynol Park, Port Dinorwic, North Wales; for knowledge of live stock, H. Alexander; for knowledge of farm machinery, T. R. B. Seigne, Grename House, Thomastown, Co. Kilkenny, Ireland; for milking, E. McConnel, Cressbrook, South Queensland, Australia; for butter making, W. A. Stuart, Rosehill, Cheltenham; for wagon driving, T. R. B. Seigne; for practical chemistry, Class 3, H. C. Crowley, Banghurst Rectory, Basingstoke; Class 2, Wilson Strangman, Kinoith, Shanagarry, Co. Cork, Ireland; Class 1, F. G. Bateman, Woodcote, Somerset-road, Ealing, W.; for theoretical chemistry, H. C. Crowley, W. Strangman, and F. G. Bateman; and for book-keeping, F. G. Bateman and D. Garnett, The Grange, Bromley Cross, Lancashire. Prizes were also given for estate management, forestry, building construction, physics, and veterinary science.

"Mark Lane Express" Diary.

April.

15, 16, 17, and 18. Royal Dublin Society's Spring Show, at Ball's Bridge.

15. Sale of the Chapel House stud of Hackneys, the property of the executors of the late Mr. E. Ostlere, at Chapel House, near Kirkcaldy, Fifeshire.

15. Sale of pedigree Red Polled cattle at Ipswich.

16. Hereford Herd Book Society's Bull Show and Sale.

16. Sale of the late Mr. T. Chick's herd of pure-bred Berkshire pigs, at Dorchester.

16, 17, and 18. Sale of horses, at Crewe Horse Repository.

17. Sale of Shorthorns belonging to Messrs. P. A. and G. T. Evans, at Sherlowe.

22. Sale of Mrs. Perkin's Jerseys, at Oakdene, Holmwood, Surrey.

24. Lincolnshire Red Shorthorn Association's Bull Sale, at Lincoln April Fair.

Imported Flour.

Sir,—Four hundred pounds of wheat will produce one sack or 280 lbs. of flour and 112 lbs. of offals, there being a loss by waste during milling of 8 lbs.

During the past twenty years we have imported over 125,000,000 sacks of flour, that is, we have left over 125,000,000 cwts of wheat offals abroad, worth at 4s. per cwt., £25,000,000.

During the past twenty years we have paid £10,000,000 more for the flour imported than the equivalent in wheat would have cost. Thus during the past twenty years we have lost over £35,000,000 by importing flour instead of the equivalent in wheat.

Besides losing over £35,000,000, our large importations of flour have allowed such countries as the United States to obtain an abundant and cheap supply of wheat-offals for stock feeding, while wheat-offals in this country have been at a high price.

Thus we have not kept as much live stock as we otherwise should have, and so much home-made manure has not been produced as should have been, with the result that such large crops are not produced in this country as well might be.

The Chancellor of the Exchequer requires money to help pay for the war in South Africa, and it appears no import duty can be proposed that would do more good than an import duty on flour. Besides helping British agriculture, it would cause many mills that are working half time, and many that have ceased running, to again give employment to our workers.

Almost all imported flour is roller milled.

My experimnts during recent years have shown that roller flour is a fruitful cause of decay of the teeth and of indigestion, as I have discovered that with bread made from roller flour there is an increase of about 40 per cent. in the acidity during mastication, whereas, in the case of bread composed of stone-made flour, the increase in acidity is very slight during the process of mastication, not more than can be accounted for by the acidity of the mouth.

Thus, were we to produce more of our flour the health of the nation would be improved, as the majority of our mills that are idle are stone-mills.

During 1901 we imported 22,575,230 cwts., or 9,030,092 sacks, of flour.

That is, last year we left 9,030,092 cwts. of wheat-offals abroad.

An import duty of 4s. per sack on flour on the quantity we imported last year would have produced £1,806,018 of revenue.

Were wheat still imported duty free there would be no increase in the price of bread.—Faithfully yours,

THOMAS G. READ.

Destruction of Charlock in Corn Crops, 1901.

Sir,—In the place of issuing a third annual report on the Charlock spraying for 1901, it may prove more serviceable if I give a short account of the work done last year, with practical deductions drawn from it.

During the last spring I took every opportunity of observing and inquiring into the operations being then carried on, and in addition to this I gave several public demonstrations in England and Scotland. The results fully confirm the main conclusions arrived at in my second annual report, which are repeated below.

The most important difference I noted was in the age of the Charlock when sprayed, and I am fully convinced that quite 75 per cent. of the operations were late, 50 per cent. were much too late, and probably 25 per cent. were so late that not more than half the advantages to be derived from spraying, were realised. The importance of spraying early cannot be too strongly urged. Arrangements should be made to spray the Charlock soon after the rough leaf appears and whilst the plant is in a soft and tender state.

Under these conditions I do not think a single plant of Charlock can escape destruction, providing it receives its proper proportion of fine spray resulting from 15lb. of pure copper sulphate, dissolved in 50 gallons of water per acre.

In the South the season was cold and late last year and not favourable to the growth of Charlock, but in Scotland the plant was luxuriant.

The suggested use of nitrate of soda in place of copper sulphate has not proved successful on extended trials. Copper sulphate has proved to be altogether best, and is at present the only material worth using. I have added a fifth paragraph to the conclusions previously arrived at which now stand as follows:—

(1) That Charlock can be destroyed in growing corn crops, without injury to the latter, by spraying with 50 gallons of three per cent. solution of pure sulphate of copper per acre.

(2) That generally the corn crops are much improved and give a better yield where Charlock is destroyed.

(3) That spraying early, when the weed is young and in soft fibre, is most successful.

(4) That the large sprayers are more successful than the smaller.

(5) The success of the operation is diminished in proportion to the delay which occurs after the Charlock is in the most suitable condition for being destroyed.

The value of this new and successful agricultural process cannot be made too widely known in Charlock infested districts.

G. F. STRAWSON.

Rhodesian Agricultural Prospects.

There would seem to be signs and tokens about, says "An African Settler" in the "Pall Mall Gazette," indicative of the probability that agriculture and the peaceful pursuits of Hodge may loom largely in the future developments of the Rhodesian provinces. This is as it should be, and none too soon. Climatically speaking, Rhodesia is a country it is possible to "colonise," by which is meant possible to live in, and it would therefore be well that those who prefer a freer life, greater scope for money-making, and more actual "elbow-room," should, in the future, turn their attention to the soil, and away from the cheap vulgarity of the corrugated iron townships, with their dull and tawdry apeing of the worst sides of "Home" civilisation.

Hitherto, as everyone knows, gold-mining has been the first, and, for that matter, the last and only, item on the Chartered Company's programme. So entirely, in fact, had all other possibilities been excluded that there is (or, up to very recent date, was) in the country no legislative security whatever of land tenure or grant of title. There are here and there a few men who have been farming in Matabeleland for many years past; men who traded in the land in old Lo Ben's time, before the coming of the Company. Such men, for instance, as Mr. James Dawson and Mr. "Matabele" Wilson; but what different type of men are these to the average Rhodesian!

It must, however, be borne in mind that the intending farmer or stock-raiser who at the present day comes into the country does so at a disadvantage. At a time when the policy of the moment deemed it expedient "by hook or by crook" to get capital into the land town lots (called "stands" out there) territory was parcelled out with a lavish hand, with the result that the best land of the country is to-day locked up in large holdings, and the new-comer bent on pastoral pursuits must either content himself with the "leavings" or rent his farm at an often ridiculously high rental for virgin soil. This, however, is all by the way, and it is of the soil itself—nf the land and its still almost dormant possibilities—I would say a few words.

There is a very general, but in the main mistaken, idea as to the water supply up country. A rapid current and downward course leave the river-beds often dry for many a month at a time; yet Matabeleland is in reality better off for water than many portions of Cape Colony. Subterranean streams abound in most parts. Irrigation, if systematically carried out, would, there is little doubt, soon advance the agriculturist's prospects materiallly and change the aspect of many a barren acre, even as artificial means have transformed certain portions of Texas and South America. Dams have already to a certain extent been introduced, as witness the fine one on Mr. Rhodes's farm at Westacre, in the Matoppos; and, given water, what is not possible? Even under the primitive methods in vogue with the natives there is proof of the soil's actual worth. In the "Kaffir gardens" (which generally extend over some three acres) the ground will give a poor return for the first year. Then, however, the quality and quantity increase with every future crop until a turning-point is reached, after which, if allowed to lie fallow for a year, the soil will be as good as ever again. This is probably in part due to the very crude mode of cultivation, the land being "picked" over by hand, and only "turned" to the depth of about six inches. In such cases there is no irrigation, yet the Basutos in the Gwanda district cultivate a surprising amount of land after this fashion, while the alluvial soil in the river valleys yields abundant crops under similar treatment. Two of the greatest drawbacks to agriculture in the country are at present the locusts and the white-ants. In the Transvaal the blasting operations on the mines have done much to disturb the latter termites; the locusts in Rhodesia are, however, a terrible source of ruin to the crops, although since 1898 the toxine introduced has been used with very beneficial results.

Some of the finest soil a farmer can possibly wish for is to be found in Matabeleland. There is the heavy, dark loam so adaptable for the growing of grass fodder, while, on the other hand, light sandy soil is not wanting, in which the alfalfa thrives so exceedingly. Cereals can be grown with the utmost success, and while wheat may, for its greater perfection, require a colder climate, mealies, oats, rye, and barley may become, par excellence, the products of the country. There are portions of the country where, given the necessary irrigation, cotton-growing should yield a fine return, and, as has been proven, tobacco, not only of the Transvaal, but Virginian variety, has taken kindly to Rhodesian soil, Mr. Ash, a Port Elizabeth seedsman, having grown some splendid specimens in the immediate vicinity of Bulawayo. This is a plant the white-ant leaves severely alone.

Coming to the more domestic requisites, the homely "kitchen garden" crop, it is almost safe to say that anything will grow, and grow well—in fact, a man once remarked to the writer down at Fontesvilla, "You can see the things grow out here," and that would often seem so, although the above-mentioned spot (over the Mashonaland border and in Portuguese territory, by the way) is hardly as salubrious a place as one would choose, for it is in the high-lying tablelands of South Central Africa that the homesteads of white men and women should be built—homes in the right sense of the word, not mere transitory abodes.

I would fain have added a few remarks on Rhodesia as a stock-raising country, but have already overstepped, I fear, my allotted space. It only remains, however, to say that, given the right class of immigrants, and a less dog-in-the-manger attitude on the part of the present landowners, there is no reason why this territorial Frankenstein evolved by the British South Africa Company should not be developed into something worthy of the name of an "Imperial asset."

The Beer Bill.

It is necessary to refer to this matter again. In less than a fortnight it will be before the House and its fate may be sealed. As soon as the text of the Bill was printed it was published in full (see page 394, *ante*), preceded by some very moderate and patient criticism. This was done as the only available step to secure that some at least of the country members attending the next meeting of the Central and Associated Chambers might have some inkling of its contents, and that there might be a little or adequate discussion of so grave a question.

The true gravity of the position was pointed out. It is the complete reversal of all previous action, and the abandonment of the principle for a paltry compromise. The backers of the measure were asked to show that their new position could be supported by fair argument.

It is a matter in which agriculturists should form their opinion without expert guidance other than to guard them from pitfalls of which they cannot be expected to have

special technical knowledge.

Any commonsense and honest farmer can settle a matter of principle of right and wrong, as well or better than a highly skilled scientific expert. Now is it right to fling aside all previous action and start, not only on a new tack, but to act on principles utterly repugnant to fair trading? Put into plain words, all it means is that if the Bill is sent out to the world as the accepted and accredited wish of the farmers of this country; then they ask that all brewers shall be compelled hereafter in no circumstances to use less than 85 per cent. of barley malt in beer. The producer of raw material admits the defects of his goods, and insists that the consumer must in all cases use 85 per cent. of it. With reference to the balance of 15 parts per hundred, he may use any nostrum he likes.

The Beer Committee

met, and as the result of their deliberation issued a brief report, which has at all events saved the face (as our Chinese friends say) of barley-growers. At the Central meeting the next day this report received much needed emphasis from Mr. Lowther, who, with his usual keenness, noted all absence of reference to the barley-growers' true grievances, and hoped that it will not be thought that the report had been altogether endorsed by the Chamber.

Some points in this report are not very clear, for it was only accepted conditionally that 15 per cent. of substitutes for malt was the extreme maximum permissible. What will happen if the bill goes through and the 15 gets altered to 50, or even 70, no one knows.

Then the report goes on to regret the absence from the Bill of all reference to noxious and deleterious matters, such as sulphuric and salicylic acids, formalin, etc., and especially that again no attempt even is made to bring beer under the provisions of

the Food and Drugs Acts,

as recommended by the Minority Report of the Beer Materials Committee.

After this it is to be hoped the argument will not be used that the Bill is approved by the farmers of the country until there has been time for its discussion. How this can take place usefully between now and the 23rd inst., when it is down as the first order of the day, it is difficult to see. The vital change in principle was practically agreed upon by the backers of the Bill weeks ago, and this ought to have been thrown open to discussion.

An exceedingly important position gained and held, after much labour and hard fighting, is suddenly surrendered with no compensating advantage secured. It would be as fair for all sheep breeders to try and bring in a Bill to compel makers of flannel to use 85 per cent. of wool. to try and bring in a Bill to compel makers of flannel to use 85 per cent. of wool.

It has been incontestably proved over and over again that

substitutes for malt

are quite unnecessary, and that, through the admission of even small percentages of other materials, many things have been added to beer that have made it harmful and dangerous. The consumer would prefer to have beer pure and free from such risks, and nothing has arisen of late to make it so. That the only defender of the drinker should leave him to his fate, and try to snatch an advantage by preventing the use of large proportions of sugar or other substitutes, with a view to making brewers use more barley, is not very commendable.

That brewers should be allowed to use salicylic acid and formalin in beer because farmers are commencing to use it in milk is the best illustration of where we shall drift to when the principles are thrown over for expediency. Much more ought to be said, but it is a farmers' question; let them decide.

The Budget: Will it Provide for a Tax on Imported Corn?

The Budget was to have been introduced on Thursday, but unfortunately Sir Michael Hicks Beach was taken ill on Wednesday, and it was deemed advisable to postpone the introduction of this all-important statement. The Chancellor of the Exchequer expects to be able to be present at the House to-day (Monday), and if so he will bring in his Budget, which has been awaited with keen interest. A large sum has to be raised and new taxes made, and as the Chancellor has kept his secret so well, nothing definite is known as to what they will be. Consequently many guesses have been made, and, naturally enough, some of the prophets have come to the conclusion there is to be a small tax on imported wheat and flour. A correspondent of the "Daily Chronicle" is the most decisive of the lot, for he states that he has reliable grounds for stating that a duty on imported corn and flour will be the main feature of the Budget. Continuing, he says:—"The cost of gathering the new duty is estimated at only ½ per cent. The tax will be worked on lines similar to those followed in collecting the coal duty. On the arrival of a vessel from foreign ports with grain in bulk, security will be required from the importer to a sufficient extent to cover the duty involved as shown by bills of lading before she is permitted to commence discharge. The revenue supervision exercised during the landing of the cargo will be nominal."

In the interest of the importer, grain invariably passes through the scale during the process of discharge. On completion the meters' accounts, with dock or railway companies' receipts, will be demanded by the officials, and on the basis of these documents the revenue account will be raised.

Meal and other goods of a farinaceous nature affected by the duty are usually imported in packages of regular and uniform size. Merchants will thus be in a position to make a declaration of quantity on which duty will be accepted, subject to an occasional revenue challenge of weight as a check.

In the case of grain carried coastwise, production of independent documentary evidence as to the amount of cargo will be required at the port of shipment, official advice being forwarded by the revenue officers to the port of intended discharge.

Grain warehouses will thus be relieved from the inconvenience that would be caused from placing them under Crown locks, as all goods affected by the duty must pay on arrival.

This system will, however, render impracticable payment of rebate on goods shipped as stores or re-exported, as it would be impossible to distinguish between the foreign and the home-grown article.

Hull Spring Fair was held on Tuesday. So far as the show of horses is concerned, it has shrunk to such insignificant proportions that if this spring fair were dropped nobody would notice the omission. Cattle and sheep were penned in the market at Edward's Place, while the horses were ordered off to the fair ground in Walton Street, on the outskirts of the city. The stock on the Walton Street ground was entirely second-rate, with the exception of a few useful agricultural horses. Mr. Charles Reynolds, of London, who bought nine remounts in the neighbourhood for the Government on Monday, was present during the day, and bought some "troopers" at prices ranging from £35 to £43 each. There was a good show of cattle and sheep at Edward's Place, and a fair amount of business was done. Dairy cows sold at £15 to £20, store steers and heifers £9 to £10 10s. per head. The bulk of the sheep consisted of grazing hoggs, for which from 36s. to 40s. each was asked; lambs to 48s. per pair.

Home Notes,

The Borough.

As was generally anticipated, the renewal of business is marked by activity. Inquiries for good hops are frequent and constant, and as choice lots are increasingly difficult to find, lower grades are being taken up, at prices which show some improvement upon those current before the holidays. A fairly considerable trade is also being done in hops at 30s. to 40s., the general tone of the market being extremely firm. Several parcels of "old olds" have been moved from warehouses, where they have been stored for several years, to breweries for consumption. I cannot understand that any practical value can be found in such brown, dried up, flavourless stuff, nor can I conceive any useful purpose to which it can be applied, beyond its return to the soil to act as manure for a following crop. But the fact remains that an outlet for these antiquated hops is found at a price, with the result that a certain quantity of more modern growths is displaced from our beer, to the detriment of the market; and I should suppose also that there is considerable risk of danger to the public health when a decoction, made of such damaged materials, is issued. It appears as if there is good reason for scientific inquiry into this section of the trade. I know of no other supply of food into which decayed substances are allowed to enter, and cannot see the reasonableness of an exception being made with regard to our national beverage.

Our Imports and Exports

for last month are officially returned as follows:—Imports from the United States of America 1,212 cwts., and from other countries 1,547 cwts.; the total, 2,759 cwts., being 1,803 cwts. less than in the corresponding month of last year, and 4,738 cwts. less than we received in March, 1900. The exports of English hops were 1,592 cwts., and of foreign hops only 53 cwts. Deducting the total, 1,645 cwts., from the imports for the month, we find that the net balance against our market is reduced to the insignificant figure of 1,114 cwts., which confirms previous statements of the unimportantinfluence exercised this season by foreign competition, and further establishes the fact that the miserable range of values from which our growers have suffered is entirely attributable to our excessive crops, coupled with our poor average of quality.

Worcester Hops.

A paragraph in a circular issued last week by one of our chief firms of factors seems to throw some light upon my recent remarks concerning the system of selling favoured by midland growers. Usually, at this period of the season, it is difficult to find buyers for Worcester, but we are now told that the prices at which they are being offered has stimulated inquiry for them, and that they are considered to be the best value obtainable. I have always contended that my friends in the midlands can hold their own in the national competition if they will submit their produce to consumers on similar conditions to those on which the business of the southern planters is calculated. So long as they adhere to their ancient customs, they will be in a disadvantageous position. The result is evident to-day. There are considerable quantities of good, sound, coloury Hereford and Worcester hops hanging on hand, and now being pushed forward at prices much below what could have been realised earlier in the season. Had they been dealt with on the same footing as the Kent and Sussex Growths, for which London is the principal central market, they would doubtless have been sold long ago, to the great advantage of their present holders.

All official reports and notices of the National Association of English Hop Growers will be printed in the MARK LANE EXPRESS, *which will also contain all current information likely to be of interes and benefit to the member of the society.*

Foreign Notes.

Nuremberg.

The holidays and the weather have together exercised an unfavourable influence upon the hop trade. Buyers have absented themselves, and transactions are consequently infrequent. On the other hand, the recent reduction of stocks and the paucity of new supplies impart firmness to holders, who evince no anxiety to create business by making any concessions in their quotations. They have complete confidence in the ultimate absorption of the whole of their reserves, and anticipate that, with the resumption of inevitable demand, higher prices than those now current will be realised. The scrupulous care with which German brewers select their hops, necessarily keeps them off the market when it is denuded of the best qualities, and so long as their supplies last, they will not be persuaded to accept the inferior lots, which constitute the bulk of those now waiting for sale. But eventually they will be compelled, by the necessities of the situation, to handle samples, hitherto distasteful, and the deficiency of the yield in 1901, will certainly bring about a clearance concerning which, however, some writers appear to be dubious.

Belgium,

I ventured to express an opinion that, as soon as the holidays had passed, the recent weakness of the market would pass away, and renewal of strength would be evident. This is now the case. Values have definitely recovered, and although the actual business in native hops is not extensive, owing to the limited supply, the tone of the trade is very firm, with a tendency towards further advancement of prices. Work has commenced in the plantations, and it is generally reported that the early signs of growth are favourable.

Imports of hops into Belgium during the first two months of this year were 253,884 kilos (about 5,000 cwts.). This, though a little below the returns of the same months of 1901, is about the normal average for the period. The great bulk is, as usual, received from Germany, but I note that the quantity supplied by England was quadrupled, when compared with last year's supply for the same months. Belgian exports for these months were about 3,000 cwts, the bulk going to France, and about 340 cwts. coming over to us.

Storage of Hops,

is frequently effected in Germany by compressing them in hermetically closed metal cases, and keeping them in an ordinary temperature. But hops cannot be preserved for an indefinite period under these conditions, and attention is being given by Continental consumers to the cold storage system, as practised here and in America. The main objection is the cost of the installation of the necessary plant, and a German inventor, Kleinke, has brought forward a suggestion to meet the difficulty. He has experimented on the preservation of hops by immersion in water, basing his proceedings upon the fact that the aroma of the hops is perfectly maintained in beer. He, therefore, compresses the hops as firmly as possible in receptacles containing a sufficient quantity of water to cover them. Having heated the vessel and its contents to a point that will expel the contained air, he allows them to return to a normal temperature, with the result, as he claims, of perfect preservation of flavour and quality for any reasonable period. Without expressing any opinion upon the value of this system, I would remark that it may safely be accepted as an indication of the tendency which is characteristic of our times. Brewers are seeking to make themselves safe against the fluctuations of prices, caused by climatic uncertainties, and are proportionately creating control of hop values, which must be ultimately detrimental to planters.

America.

Business in New York is by no means brisk, owing to the wariness of brewers, who are fighting their hardest against the inevitable upward movement of the hop market. But the statistical position is too strong for them to contend with, and week by week values advance by half a cent. or so, and the demands of holders are continually becoming bolder. The few growers who have not sold all their hops are especially firm in their insistance upon full prices. Dealers have no choice but to give them what they ask, and the outlook for the summer favours the idea of famine prices as the result of exhausted stocks. This estimate is confirmed by reports from the Pacific Coast that the plant in many old yards are badly winter killed. But whether there is any truth in these reports or not, there can be no doubt that some considerable difficulty will be found by brewers in getting through the next six months. It is therefore not improbable that part of the English surplus may be heard of on the other side, before the new crop arrives.

WATERPROOF SHEETS

FOR

THRESHING MACHINES, PORTABLE ENGINES, MILLER'S, CARRIERS, LUGGAGE CART COVERS,

AND ALL PURPOSES.

Illustrated Price List and Samples Post Free.

Waterproof Oil Sheets at 1/6 and 1/8 per square yard.

Chemically-Dressed "Peck" Cloth at 1/11 per square yard, complete with tie cords, lettering, &c. Thoroughly seasoned, ready for immediate use.

Established 1808. *Telegrams*—"Peck, Wigan."

Competition and Underselling in the Trade.

There is some improvement in the trade in flour, and prices are very firm, with an upward tendency. The anticipated duty is evidently bringing buyers into the market, and if a rush is made to do business, and the expected does not take not place, a depressing effect will be the result.

Offals still continue to go off well, especially bran and sharps, the latter product in some parts, especially in the pig-feeding districts, where it is much in demand, making as much as £6 10s. per ton. But £6 is a common price for both bran and sharps.

English wheat has become very scarce, and country millers are beginning to feel the pinch. It is quite 6d. dearer, too, and in some places more, 29s. per quarter of 504lbs. being quoted in country districts. What has been coming to the mills has been in very good condition for grinding, and makes good, lively flour.

There is still a great deal of competition and underselling on the part of the large port and other millers, and there seems to be

no way out of the difficulty,

as so many have gone to the expense of increasing their output in order to cheapen the cost of manufacture. The consequence of this is that markets must be found for the surplus flour, even if it be sold at a loss. This new, and growing, movement is causing quite a revolution in the trade, and is resulting in the constant closing of small country mills. It does seem strange that flour manufactured in South Wales should be sent to the extreme north of England and that the millers of Newcastle and other large towns in the north should return the compliment, the transactions in both cases being carried on at a loss. This, however, is only one example; instances might be very much multiplied. With such a system of trading it is not to be wondered at that there is plenty of cutting.

Surely some arrangement could be made by which this crossing of mill products could be stopped. Some of the guilty ones feel that it would be well to end such an unprofitable way of doing business. But how? It seems that a change can only be brought about by the whole-country, with the object of becoming affiliated. If this could be brought about in every part of the country

there could be an understanding as to prices,

and every member of the trade in the combination would benefit. But the great drawback to such a scheme is to be found in the fact that many millers, both large and small, prefer to trade on their own lines, and so fight shy of associations. It is a mistake, as will be found out in certain eventualities, which are quite possible. What is there to prevent a combination of American millers fighting the trade in this country? It is being done in the case of tobacco. For this reason alone, if for no other, British millers should be strongly associated. It is true there are several associations, both in this country and in Scotland, which are very useful, and help to mend matters, but they are few and far between, the individual members do not always agree. But it is not only prices which require regulation. There should be fixed rules as to rebates, discounts, cartages, etc., as there is quite as much mischief done in regard to these as there is in cutting the prices of flour and offals. The

Millers' Annual Conference

will shortly again take place, and it will be interesting to see whether any further steps will be taken to amalgamate millers and put matters on more business lines. Anything which would bring about a change of the present state of affairs would be particularly welcome at the present time. According to the trade press, Mr. A. Hutchison, a well-known Scotch miller, is to be the new president in succession to Mr. W. Vernon, and as it seems to be well understood that he is in favour of the association of millers, some movement in the desired direction may be commenced during his year of office. The choice was made at a recent meeting of the Council of the Millers' National Association, and there is no doubt the nomination will be confirmed at the general meeting, which always takes place in April. The place and date of the annual conference will then be fixed. So many important functions are shortly to come off, including the Coronation and the Royal Show, that it may be necessary to hold the conference either a little earlier or later than usual this year.

MILLER-FARMER.

Report of the Crofter's Commission.

The Report of the Crofters' Commission for the year ending December 31, 1901, which has been presented to the Secretary for Scotland (Lord Balfour) was on Tuesday issued as a Parliamentary Blue-Book. In the course of the year the Commissioners have dealt with applications from Argyll, Inverness, Sutherland, Orkney, and Shetland, and have paid visits to each of these counties. In the ordinary discharge of their duties throughout the crofting area, the cases brought under the notice of the Commissioners had reference to fair rents and re-valuations of holdings, enlargement of holdings, resumption, grazing regulations, compensation for improvements, and other matters. These did not, as a rule, present features of unusual interest.

The number of crofting parishes remains the same as at the corresponding date in the previous year. There are 163 civil parishes in the seven counties mentioned in the Act. Of these the Commissioners have determined that 151 are crofting parishes; while, as regards the remaining twelve, the information hitherto brought under notice has not been sufficient to enable them to determine whether they come within the scope of the Act or not. With reference to their labours in the crofting area, the Commissioners have received 10,186 applications to fix fair rents, 3,257 applications for enlargement of holdings, 345 miscellaneous cases, and 1,193 appeals. They have disposed 20,186 applications to fix fair rents, 3,257 applica- of 20,005 fair rent applications, 3,054 enlargement applications, 322 miscellaneous cases, and 1,189 appeals under the Delegation of Powers Act; or, in all, 24,570.

The number of inspections made before disposal of these various cases was 18,328. They have dealt with 92 applications to sist proceedings for removal in respect of non-payment of rent, 706 applications to prohibit the sale of effects on the holding also in respect of non-payment of rent, and 213 applications under the Crofters' Common Grazings Regulation Act. The extent of land dealt with in Fair Rent applications was 196,570 acres in individual occupancy, and 1,308,184 acres in common occupancy. They have assigned 47,235 acres in enlargement of crofters' holdings. The old rents with which they dealt in fair rent applications and applications for re-valuation of holdings amounted to £82,428, and they fixed the fair rents at £60,889, or an annual reduction of £21,539. The arrears with which they dealt amounted to £184,655. Of these, they cancelled £124,007, and ordered the balance of £60,648 to be paid.

MONDAY (April 7th).—A cold easterly and north-easterly wind was blowing in most parts of our islands, but in Scotland the wind was chiefly from the westward. Scarcely any rain had fallen anywhere since Sunday morning, and the weather continued dry during the day. The temperature was everywhere low for the time of year, except in the south-western districts, and frost occurred in many places during Sunday night. The midday temperatures scarcely anywhere touched fifty degrees. The sheltered thermometer indicated a slight frost in London during Sunday night, while the exposed thermometer fell eight degrees below the freezing point. The highest temperature in the metropolis during the day was forty-five degrees, which is eleven degrees below the average.

TUESDAY (April 8th).—The weather was again cold over the greater part of our islands, and frost was experienced during Monday night at several places in the Eastern and Midland districts. Rain was measured in the morning, as the result of the fall in the preceding twenty-four hours, at a few of the western stations, but elsewhere the weather had continued dry. The winds were for the most part easterly or south-easterly in England and Ireland, but they were from the westward in Scotland, and they were chiefly light. The midday temperatures were low for the time of year over the whole country.

WEDNESDAY (April 9th).—Fine and dry weather prevailed over our Islands, and the temperature was everywhere low for the time of year. The winds were easterly in England and Ireland, but light airs and calms were experienced in Scotland. No rain had fallen since Tuesday morning, except at a few places in Ireland and at Stornoway. Frost had occurred during Tuesday night over the northern and eastern portions of the country, and on the north-east coast of Scotland the sheltered thermometer fell seven degrees below the freezing point. The mid-day temperatures rose to about 50 degrees in Ireland, but in England they were generally below 50 degrees. The day was mostly dull in London, and the highest temperature was 47 degrees.

THURSDAY (April 10th).—The cold north-easterly wind was still continuing over our Islands, and it had freshened considerably over the southern portion of the Kingdom. The barometer had fallen generally, but readings were still high, and the conditions remained anticyclonic. There was a slight frost again during Wednesday night at a few of the northern and eastern stations, and both the day and night temperatures remained low for the time of the year. It was only in a few places during the day that the mid-day temperatures touched 50 degrees. The day was, for the most part, dull in London, and the thermometer did not exceed 47 degrees.

FRIDAY (April 11th).—Rain fell in parts of England during the day, and sleet was reported in the Hebrides. The sky was generally cloudy, and the weather was becoming more unsettled than of late, under the influence of a shallow area of low barometer readings which had arrived on our South-West coasts from the Atlantic, and had occasioned the mercury to fall in all parts of our islands, but more especially in the South. Temperature was generally low during Thursday night, and there was a slight frost in many places. The mid-day temperatures were again low for the time of year. In London there was a cold North-East wind, and the weather was dull and rainy; the highest temperature during the day was 49deg.

SATURDAY and SUNDAY (April 12th and 13th).—The weather varied considerably during these two days in different parts of our islands. On Saturday the weather was generally dull and unsettled, and rain fell in many places. On Sunday there was a considerable improvement over the southern portion of the kingdom, where the sun shone brightly for several hours, and the temperature rose higher than on any previous day during the present month. In the northern and western districts the weather continued unsettled, and rain was again experienced, whilst at some of the coast stations the wind was strong from the westward. Saturday was dull in London, and slight rain occurred in the afternoon, but the following night was clear, and the exposed thermometer fell six degrees below the freezing point. Sunday was very fine and bright in the Metropolis, and the thermometer in the shade touched sixty degrees.

This Year's Sunshine.

From an agricultural and also other points of view, it is hardly satisfactory that the year's sunshine in nearly all districts of the British Isles is still much in arrear. Since January 1 the deficiency in Scotland, east and west, is now ten hours and thirty hours. England, north-east, east, and south, are behind by thirteen hours, twenty-one hours, and twenty hours; while England, south-west and north-west, are short by fifty-one hours and five hours. The Midlands are in arrears by sixteen hours. In Ireland, north and south, the defect is thirty-nine hours and thirty-six hours; and in the Channel Isles eighty hours. The only district ahead of the average is Scotland North, which has a balance of eight sunny hours.

GARDEN.

Dull, cheerless skies, bitterly cold winds, with some chilly rain at times, these are the prevailing conditions at present. Just as vegetation was beginning to burst into leaf and blossom once more we seem to have jumped back into winter again, and now all is at a standstill again. If March was unusually mild and genial, April, so far, bids fair to prove just the reverse—a month of winter rather than spring.

We are now close to the middle of April, and by this time seeds of all the hardier vegetables, such as onions, parsnips, carrots, spinach, etc., as well as of peas and beans of the "broad" varieties, should have been sown. Unless very large roots are wanted, little is gained by sowing the main crop of carrots much before the present time. A bed of either salsafy or scorzonera may be safely sown next week, but of these the former is decidedly the better, and both are hardly wanted.

Plant out plenty of lettuces from the sowing made early in the year, and sow more seed of both the cos and cabbage kinds. The former appear to be chiefly in demand at present, and as much as a shilling apiece, and even more, has been the price (wholesale) in Covent Garden for good heads recently. For my own part I greatly prefer the finer, small-growing cabbage varieties; when grown quickly and well they are far more tender and delicious than the comparatively coarse cos, as well as more easily grown. It is too soon to sow any endive yet.

A good sowing of winter greens in variety should be made at once. The early-sown Brussels sprouts ought to be up, and getting strong by this time; and, if not already done, should be pricked out in a bed of good soil, in a sheltered position, at 4in. to 6in. apart. Sow a little more seed for a late or spring supply, also a good batch of savoys of both the large, or curled, and small, or Tom Thumb, kinds. Broccoli, in three or four varieties, early, medium, and late, should also be sown, and a bit of kale, if this is likely to be required at all early; but for spring use the end of the month is soon enough to sow, as a rule.

Established asparagus beds should be cleaned over, if necessary, before the young shoots begin to come through, and if not already done give a good sprinkling of salt. Nitrate of soda is a good stimulant for asparagus, and should be used occasionally for a change, but it must not be applied nearly so thickly as salt. Protect the young "grass" when it appears by placing inverted flower pots over the shoots on cold nights. Young asparagus roots should be planted very shortly now; so get the beds all ready.

Tomato plants for out-door culture ought to be getting strong now, and if sown and treated as advised previously, should be ready for a shift into 5in. pots. If this is done at once they will have a full month in which to make strong stuff and come into bloom before being planted outside. I noticed quite recently someone advising his readers to sow the seed for out-door work now—the middle of April! Unless rushed on in a strong heat, which is very bad practice, they would be about 3in. high when planting time came and the best of the summer be over before they even began to fruit. And this was in a leading gardening paper, too!

Strawberry beds must be mulched with long or littery manure at once, if this has not been already done, but do not disturb the surface at all at this season. Prepare the ground for any new beds at once, and get the plants in as soon as possible.

The raspberry quarter should also have a liberal top-dressing of half-decayed manure; if the old (fruited) canes have not yet been cut away this should be done at once.

IMPORTANT TO FARMERS.—The best farm account books are WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK, with preface by Clare Sewell Read, 70th edition, 6s. and 7s. 6d. post free. JARROLD'S IMPERIAL FARM ACCOUNT BOOK, 3s. 6d. JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d. List of Game and Dairy Account Books post free of JARROLD, and SONS 10 and 11, Warwick Lane E.C.—[ADVT.]

Aberdeenshire.

Owing to unsettled weather sowing has been progressing slowly. Throughout the country the half of the seeds of cereals is deposited in the soil. The ground is nice to harrow, and a good tilth is generally being obtained, even on the stiffer soils. Ploughing being well advanced, the work of sowing would nearly be over by the end of this week in all the earlier districts. Of course, in the later districts, the weather has not been sufficiently good to put the land in condition for the harrow until a few days ago. Stackyards are now getting into remarkably small compass; indeed, on the majority of farms, the bulk is small enough for the 1st of May instead of at the end of the first week in April. Great care will require to be exercised to get the time tided over till grass approaches, which will be a great relief to many sirable. It is well that roots have been plentiful, but they are also disappearing faster than is desirable It is well that roots have been plentiful, as flockmasters have been very dependent on them. In the month of January last year the trade in store sheep began for England, whereas at the present time it is only just commencing, hence a greater amount of roots has been required for sheep. Mutton has been a miserable price during the greater portion of the season. Of late a little sprint in the trade fails to be recorded, but even at the increased price now current feeding sheep is still an unprofitable business, especially if much artificial food has been used. Beef is also firmer in price, and appears now to be getting scarce, locally at least. Store cattle are selling well, too dear, indeed, to be remunerative to finish with beef at present prices.—J. B. (April 8th).

Gloucester.

The spring, so far, has been favourable for all farming operations, the corn has been well planted, and in many instances, where early sown, the young plant is forward and looking well. Mangold planting is also well in hand, the seed bed being perfect, and, with favourable conditions during the present and ensuing months, this valuable crop should be a good one. In many places the whaet plant is considerably thinned by wireworm and other pests, notwithstanding the roller was early on the land. Winter beans looking healthy and vigorous. Again, there are signs of abundant bloom in the pear orchards; it is early yet for the apple, although on some of the early varieties a fair sprinkling of bloom buds are showing. The mild weather during March tended much to favour the small hay stocks, but with the sharp frosts we are now getting much hay is needed for the well-being of the cattle, which are generally healthy and in fair condition. The yeaning season is now practically over; the crop of lambs about an average one, with about 5 per cent. of losses with the ewes. Once again the dreaded foot-and-mouth disease has made its appearance amongst our herds. It is hoped the President of the Board of Agriculture will take the most stringent measures to prevent its further spreading. The, in many cases, unfair and unjust competition the agriculturist has now to contend with is such that no margin of profit is left him to make the least provision to meet the ruinous consequences an outbreak of this disease on his holding would entail.—B. R. (April 9th).

Salop.

Weather keeps cold, but dry. Spring corn is put in well; oats come up very nicely; wheat is looking well; most of the barley is waiting warmer weather. Now is the time farmers have to exercise great care in the selection of seed; while the same principle holds good in reference to all kinds of farm stock—to cattle, sheep, and horses. The present high prices for pedigreed stock show that the best breeders get by far the greatest profits.—J. G. (April 10th.)

Ulster.

Spring.

The time of sowing is with us again, and all Nature appears as if just awaking from a dreamless sleep. The buds bursting into colour, the pastures and meadows taking on their robes of emerald green, the birds twittering and choosing their mates—all outside the farmers' homestead seems filled with joyous anticipations and lusty life.

Inside the Homestead.

But inside the farmers' little circle things appear so different. The stack-yard is empty—how forlorn an empty stack-yard in early spring—the cattle are thin, as if their winter rest sad only been leisure and little food or a troubled dream which had set their hair on end, and it has not yet laid down again. The poultry, no doubt, are making their usual noise, but even the manure heap on which they cackle, crow, and scrape is more poverty-stricken than in past years. The group of busy workers, with their innocent jest and joyous laughter, is not only reduced in number, but as the burden of labour is increased by the reduced number of workers so increase, even in youth, the wrinkles of care, and the heads of the household—father and mother—sigh instead of laugh in response to the youthful joyousness of sons and daughters.

Effects of the Farmers' Struggle.

Yet spring is here, and the necessary efforts to meet its duties dismiss, for a time, at least, thoughts associated with accumulated debts, arising from poor harvests and low prices. There is hope with spring—the lambs have come, and they are abundant and healthy, and the young grass put on an appetising appearance. Eggs are more plentiful, but 6d. a dozen (the price in local markets) requires a large increase to bulk heavily in the purse. Store cattle are lean, and already in large numbers upon the immature pastures; the farmer knows that this early drive upon the young grass will greatly lessen his summer crop. But what can be done? Hay and turnips are eaten, and in many cases purses too low to purchase substitutes.

Climatic Difference in the Same Locality.

Well, success or failure in 1902, farmers in the North of Ireland are all busy, doing their best under the different circumstances in which they find themselves, and deserve success, whether it come or not. In the valleys the spring labour, sowing, and planting, is nearing a close, but on the hill sides and higher ground there is very much yet to be done, and heavy clay soil are, by their wet condition, exciting more than the usual patience. The weather is now bright, and the barometer is steadily high, the whistle and song of the ploughman is heard, so there is music in the field as well as in the hedgerows. Thus is sorrow flung to the winds, and the joy of industry fills the labourer's soul.—W. W. D. (April 10th).

Pembroke.

Cold and wet. Pigs, both fat and store, are selling well. Both hay and roots are disappearing fast. Farmers are at present very busy planting potatoes. Prices are very low at present time, not more than from 2s. 6d. to 3s. per cwt. The lambing season has been favourable; a good number of healthy lambs.—W. G. (April 9th).

Worcester.

We are now having what would be nice March weather, vegetation mostly at a standstill, that had freely started growth after the genial March, but good weather for rolling and harrowing wheat and getting land ready for roots. Cattle in many cases roaming the fields in search of grass, hay having got into very short compass, the trade for store stock being dull in consequence. Beef and mutton a better trade for those few who have been enabled to keep their stock. Agriculturists, anxiously looking forward to the Budget, they trust the Chancellor of the Exchequer will not lose the opportunity of again re-instating the registration duty on all corn, especially flour; in fact, an ad valorem duty on all manufactured articles.—T. R. H.

Foreign Prospects.

FRANCE.—Spring work in the fields is completed. The seed was sown under favourable conditions, and the earlier districts already promise well. Winter wheat came through the winter in fine style, consequently there was hardly any occasion to re-sow. The area under wheat is said to have increased and a large breadth has been devoted to oats, while the cultivation of beets is reduced.

BELGIUM.—Weather unsettled, but not detrimental to autumn crop prospects, although there in some delay in spring growings.

HOLLAND.—Weather dry and cool, after a spell of rain. Spring work is rather behindhand.

GERMANY.—Weather has been cold, wet, and stormy, but no crop complaints are heard.

RUSSIA.—Milder weather and rain in Central, Southern, and Eastern districts has proved beneficial to the spring crops, and somewhat improved the backward state of the winter wheat and rye. A large part of the country in the North and near the Baltic is still under snow.

HUNGARY.—Weather fair and mild, and autumn-sown crops progress satisfactorily.

ROUMANIA.—Fine and mild weather is bringing on the crops in fine condition, but rain would be acceptable for spring-sown fields.

UNITED STATES.—Prospects have not essentially changed for wheat, and the condition is fairly good. There are dry portions of the Western sections, but the crop does not show much suffering. Oats are starting well. No more rain has fallen in California, but the total to date is 17in. against 18¾in. in 1901. The wheat crop condition on April 1st is returned at 93, compared with 100 last season, and 90 in 1900.—*Dornbusch.*

Farmers' Club.

A meeting of the members of the Farmers' Club was held at the Salisbury Hotel, Salisbury Square, Fleet Street, on Monday, Mr. George Street presiding. Professor Wrightson, Principal of the College of Agriculture, Downton, near Salisbury, read a paper on "Weeds and their Eradication," a summary of which, it will be remembered, appeared in our last issue. The paper was listened to with a considerable amount of interest, and Professor Wrightson was accorded a vote of thanks.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended April 5, 1902, together with the quantities imported in the corresponding week of the previous year:—

Animals Living.	1901	1902.		1901	1902.

Farmer Killed on the Railway.—Mr. Gregory, a farmer, of Bickleigh, near Plymouth, on the Launceston branch of the Great Western Railway, was killed on the line on Saturday afternoon. His sister, Miss Gregory, who is advanced in years and very deaf, was crossing the line when a down train to Plymouth approached. Mr. Gregory ran to warn his sister of her danger, and was knocked down, sustaining injuries from which he died. Miss Gregory escaped with slight injuries.

A farm servant, named Amos Hayton, was shot in the back and killed at Wragmire Bank Farm, near Carlisle, on Saturday afternoon. A fellow servant, named John Park, was removing the charge from a gun when it went off and caught Hayton, who was standing about ten feet away. Although the charge caused a gaping wound, the deceased did not immediately fall, but walked out of the house and died in the open air.

The Outbreak of Foot-and-Mouth Disease.—The Board of Agriculture has issued an order, which is published in the current issue of the "Gazette," modifying the present regulations with regard to foot-and-mouth disease in Kent. The order provides for the issue of licenses for the movement of animals between different parts of a farm, or between farms in the same occupation; and also for the movement of cattle from premises in the scheduled district to a slaughter-house also within the scheduled district.

JUDGES FOR ROYAL SHOW AT CARLISLE.

At the Council meeting of the Royal Agricultural Society, held on Wednesday, the names of the gentlemen who will officiate as judges at the Society's forthcoming show at Carlisle were announced, and we give the list below:—

HORSES.

HUNTERS (Heavy Weight).—Captain R. Ker, Montalto, Ballynahinch, Co. Down; Owen C. Wallis, West Haddon Hall, Rugby. HUNTERS (Light Weight and Riding Cobs). Arthur Brocklehurst, Vauxhall House, Nantwich, Cheshire; Hon. Alex. E. Parker, Deeside, Bangor-on-Dee, Wrexham. CLEVELAND BAYS AND COACH HORSES.—F. E. C. Dobson, Dromonby House, Stokesley, R.S.O., Yorks; Colonel A. F. Godman, The East House, Great Smeaton, Northallerton. HACKNEYS.—John Atkinson, Highfield, Garton, Driffield; C. Edward E. Cooke, Hinxton Grange, Saffron Walden. PONIES, SHETLAND, MOUNTAIN AND MOORLAND, AND FELL PONIES, HARNESS HORSES AND PONIES.—Robert Brydon, The Dene, Seaham Harbour, Co. Durham; E. Jones, Manoravon, Llandilo, South Wales. POLO PONIES.—Edward Mucklow, jun., Wood Hill, Bury, Lancashire. (A second judge to be appointed.) SHIRES.—Captain Heaton, Worsley, near Manchester; William Richardson, Eastmoor House, Doddington, Cambs. CLYDESDALES.—John McCaig, Challoch, Leswalt, Stranraer, N.B.; John M. Martin; 5, Drummond Place, Edinburgh. SUFFOLKS.—F. G. Cook, Saxted Lodge, Framlingham; Frank Sugden, Chestall Estate Office, Rugeley, Staffs. AGRICULTURAL AND DRAUGHT HORSES.—(To be settled after closing up entries.)

CATTLE.

SHORTHORNS.—George John Bell, Standingstone, Wigton, Carlisle; Robert Wright, Nocton Heath, Lincoln. LINCOLNSHIRE RED SHORTHORNS.—Peter Dunn, Pasture House Sigglesthorne, Hull; John W. Rowland, Fishtoft, Boston, Lincolnshire. HEREFORDS.—J. W. Smith, Thing, Hill Court, Hereford; William Thomas, The Hayes, Sully, Barry, Glamorganshire. DEVONS AND SUSSEX.—Samuel Kidner, Bickley, Milverton, Somerset; Alfred Stanford, Eatons, Steyning, Sussex. WELSH.—Thomas Jones, Brynmelyn, Llandderfel, Corwen, N. Wales; Owen Price, Nantyrharn, Cray, Brecon, S. Wales. RED POLLED.—D. Abbott Green, Fingringhoe Hall, Coclcehster; F. S. Lewin, Holbrook, Ipswich. ABERDEEN ANGUS.—Arthur Eggington, South Ella, Hull; Robert Walker, Altyre, Forres, N.B. GALLOWAYS.—John Cunningham, Tarbreoch, Dalbeattie, N.B.; Samuel Thomson, Buxley, Duns, N.B. HIGHLAND.—Duncan McDiarmid, Camusericht, Rannoch Station, N.B.; John McGillivray, Ballachrcan, by Kingussie, N.B. AYRESHIRES.—John Murray, jun., Carston, Ochiltree, N.B.; Robert Paton, Trees, Ayr, N.B. JERSEYS.—Herbert Padwick, The Manor House, West Thorney, Emsworth; T. H. Weetman, Rose Hill, Atherstone, Warwickshire. GUERNSEYS.—Andrew Rintoul, jun., 6, Royal Parade, Cheltenham; W. Herbert Fowler, Claremont, Taunton. KERRY AND DEXTER.—R. Tait, Robertson, Church Farm, Babraham, Cambs.; George F. Roumieu, Willey Park, Farnham, Surrey. DAIRY.—William Garforth, Swinton Grange, Malton, oYrks.; Thomas Firbank King, Edgley, Leyburn, R.S.O., Yorks. WHITE SHORTHORN BULLS.—George John Bell, Standingstone, Wigton, Carlisle; Robert Wright, Nocton Heath, Lincoln. POLLED (BLUE GREY) CATTLE.—John Cunningham, Tarbreoch, Dalbeattie, N.B.; Samuel Thomson, Buxley, Duns, N.B.

SHEEP.

OXFORD DOWNS.—John Bryan, Southleigh, Witney, Oxon; W. D. Little, Middleton Stoney, Bicester, Oxon. SHROPSHIRES.—A. S. Berry, Pheasey Farm, Great Barr, Birmingham; Harry Williams, Newton-on-the-Hill, Shrewsbury. SOUTHDOWNS.—E. H. Jennings, Cockfield Hall, Bury St. Edmunds; Richard Relfe Verrall, Falmer, Lewes, Sussex. HAMPSHIRE DOWNS.—Joseph Carpenter, The Manor House, Stratford-sub-Castle, Salisbury; John Pain, Borough, Micheldever, Hants. SUFFOLKS.—D. Abbott Green, Fingringhoe Hall, Colchester; F. S. Lewin, Holbroook, Ipswich. LINCOLNS.—James Cartwright, Pillar Farm, Nocton, Lincoln; Richard Davy, Melton High Wood, Barnetby, Lincoln. LEICESTERS.—George England, Rise Grange, Hull; James Stamper, Highfield House, Nunnington, York. COTSWOLDS.—Robert Jacobs, Eynsham, Oxon; Thomas Thornton, Cavenham House, Wareham, Stoke Ferry. BORDER LEICESTERS.—John J. Bowman, Manor House, Helmsley, R.S.O., Yorks; William Pringle, Branton, Glanton, R.S.O., Northumberland. KENTISH OR ROMNEY MARSH.—Thomas Powell, 120, Victoria Street, Westminster, S.W. WENSLEYDALES.—Thomas Jackson, Netherbeck, Carnforth; Thomas Firbank King, Edgley, Leyburn, R.S.O., Yorks. CHEVIOTS.—G. G. Rea, Middleton, Woolner, Northumberland; John Scott, Borthaugh, Hawick, N.B. BLACK-FACED MOUNTAIN.—Henry Walton, How Burn, Alston, Carlisle; Robert Watson, Culterallers, Biggar, N.B.. LONKS AND HERDWICKS.—William Abbott, Beckstones, Thornthwaite, Keswick; Thomas Jackson, Netherbeck, Carnforth. WELSH MOUNTAIN.—Thomas Jones, Brynmelyn, Llandderfel, Corwen, N. Wales; Owen Price, Nantyrharn, Cray, Brecon, S. Wales. CROSS-BRED.—G. G. Rea, Middleton, Wooler, Northumberland; H. H. Shepherd, Wheelbarrow Hall, Scotby, Carlisle.

PIGS.

WHITES.—John Angus, Whitefield, Morpeth; John Parr, Ruddington, Nottingham. BERKSHIRES.—William Garforth, Swinton Grange, Malton, Yorks; J. Watts, Fairgreen, Chipping Norton, Oxon. TAMWORTHS AND BLACKS. Arthur S. Gibson, Estate Office, Buddington, Nottingham; John Norman, Cliff House, Tamworth.

POULTRY.

Arthur C. Major, Park Farm, Ditton, Langley, Bucks; J. P. W. Marx, Basford, Nottingham; (a third judge to be appointed).

PRODUCE.

BUTTER.—John Benson, Dale Road, Buxton; John Gilchrist, 81, Hope Street, Glasgow. CHEESE.—William McFadzein, Wedgewood, Charles Street, Kilmarnock; George W. Oubridge, 5, Town Hall Buildings, Newcastle-on-Tyne. CIDER AND PERRY.—Thomas B. Richards, Huxham, Shepton Mallet, Somerset. HIVES AND HONEY.—W. Broughton Carr, 17, King William Street, Strand, W.C.; Rev. R Errington, Warden Vicarage, Hexham, Northumberland.

IMPLEMENTS.

MISCELLANEOUS IMPLEMENTS ENTERED FOR SILVER MEDALS.—Walter L. Bourke, The Old Hall, Worsley, Manchester; J. G. Mair-Rumley, The Hammonds, Udimore, Sussex.

COMPETITIONS.

HORSE-SHOEING.—John Malcolm, F.R.C.V.S., Holliday Street Wharf, Birmingham; J. M. Parker, M.R.C.V.S., Moor Street, Birmingham. BUTTER-MAKING.—John Benson, Dale Road, Buxton; John Gilchrist, 81, Hope Street, Glasgow.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: We have no improvement to notice in the trade. Barley unchanged. Wheat firm at fully late rates. Oats steady. Maize dull. Flour continues firm.—NIXON, GOWER, AND CO.

Mark Lane, Wednesday.—The attendance was limited. Wheat and flour held for Monday's full rates, but buyers did not respond. Maize firmly held, but inactive. Barley held for 3d advance, which checked business. Oats, steady trade at about Monday's prices. Beans and peas quiet, unchanged.

Mark Lane, Friday.—There was only a small attendance and very little stirring. English wheat is now out of supply here, or at least may be considered so, while country resorts become more and more bare. Quotations nominal. Good reds, 30s 3d to 30s 6d per qr. delivered up. American reds 3d to 6d firmer, and generally 6d to 9d higher since last Friday, with no pressure to sell, and all landed parcels sharing great scarcity at present. No. 1 Northern Duluth, inspection, quoted at 30s 6d ex ship, 31s 6d landed. No. 1 Northern Manitoba, 31s 3d ex granary. Hard Kansas Winters, 30s 3d ex ship; 30s 9d ex granary. White wheats also continue in short supply. Australian, 31s 6d ex granary. Russian, although offering at rather less of late, remains above United Kingdom parity, and Indian quite nominal for want of exports. Flour 3d to 6d firmer since last Friday for most American brands, fancy patents being almost unobtainable, and up to 23s 6d to 24s. Of first patents, Pillsbury and Ceresota, 23s. Bakers, Iron Duke, 18s 6d. Country flour and town still upheld in sympathy with the strong position of English wheat. Town made, 28s net; and No. 1 households quoted at 21s 6d per sack cash delivered at the mill door. Australian patents, 20s 6d to 21s, 280lb. ex store. Grinding barley unaltered, and Odessa in anything but large supply on spot, at 19s ex quay, with Danubian in same position, at 18s 9d. English malting nominal, and foreign generally supported in value. English malting stationary. Foreign steady. Oats a turn better, and Libaus scarce, more especially 40lb. since late Government purchases. F.a.q., Libau, ordinary, 18s 6d to 18s 9d ex quay 38lb., and 18s ex ship; 40lb Libau, etc., bold, 21s to 21s 3d ex quay; extra ditto, 21s 6d to 21s 9d; good Konigsberg, 21s ex quay 40lb. New Zealand—ordinary bluff, 25s 6d to 26s 6d ex store, 280lb. English very firm and scarce. Black winters, 24s., 42lb; and fancy, 24s 6d; with grey ditto, weighing the same, 23s to 23s 6d, and choice, 24s. Maize unchanged, mixed American remaining out of supply. Market for imported beans and peas denoted nothing fresh.

COUNTRY.

Ashford, Tuesday.—Wheat, supply short; trade firm at full quotations. Barleys, small business at nominal prices. Oats maintain high figures. Beans and peas quite as dear. White wheat, 28s to 30s. Brown ditto, 27s to 29s. Malting barley, 26s to 32s. Grinding ditto, 22s to 25s. Black oats, 18s to 22s; white oats, 20s to 25s. Old beans 33s to 36s. Grey peas, 35s to 36s.

Banbury, Thursday.—Wheat, 27s to 28s per qr.; barley, 27s to 30s per qr.; beans, 34s to 35s per qr.; oats (black), 19s to 21s per qr.; peas, 32s per qr. No show of wheat. Market decidedly dearer for the small quantity on offer.

Birmingham, Thursday.—The market had a quiet tone, but higher prices were asked in most departments. English wheats were offered in limited quantities at 10s 6d to 11s 3d per bag, and foreign 6d to 9d per quarter dearer. No. 2 Northern Manitobas, 5s 10½d; red Calcuttas, 5s 6½d; and Northern Duluths, April-May, 6s per cental, Liverpool. Maize was unchanged to 3d dearer, Plate offering at 21s to 21s 6d at Sharpness, and round at 21s to 23s at Liverpool, and 21s to 22s per quarter, at Sharpness. Grinding barley, 3d higher, making 18s 6d to 18s 9d at Sharpness, and 18s 6d to 19s 3d at Liverpool. For English oats a similar rise was reported; blacks were quoted at 19s 6d to 21s 6d, according to quality; and whites, 21s 6d to 24s per quarter. English beans were up 3d per bag, new samples being 14s to 14s 3d, and old 15s 6d to 16s at Birmingham.

Boston, Wednesday.—Wheat, 28s to 28s 6d; grinding barley, 22s; oats, 20s to 22s; peas, 55s to 65s; beans, 33s; maize (old), 23s 9d; ditto (new), 21s 6d; malting barley, 28s to 32s per qr.

Braintree, Wednesday.—Better supply of wheat and steady trade. Prices: Reds 28s 6d to 29s, and whites 29s to 30s per qr.

Brighton, Thursday.—New white wheat, 28s 6d to 29s; new red ditto, 28s to 29s; barley, 28s to 33s; grinding ditto, 21s to 22s; English oats, 21s to 23s; peas, 35s to 36s. Oats, 6d dearer. Barley firm. Wheat in small supply. Small attendance, and very little business doing.

Bristol, Thursday.—There has been a moderate trade passing since our last. At to-day's market there has been rather more English wheat offering, which makes 3d to 6d more money. Foreign firm and unchanged. Grinding barley, maize, and oats quiet, and without alteration in values. Flour trade continues dull, and without change in price.—GRACE BROTHERS.

Bury, Wednesday.—Wheat, with a small supply, was a strong trade, at 6d to 1s per qr more money; reds or whites, 28s 6d to 29s 6d per 504lb. Oats were also scarce, and very firm at 22s to 24s per qr. Other feeding corns unchanged, with maize at 23s per qr, delivered. Linseed cakes in fair demand, at £8 10s to £9 per ton. Cotton cakes steady, at £5 5s per ton. All milling offals in small supply, with bran especially scarce and firm, at £5 15s to £6 per ton.

Cambridge, Saturday.—During the week the wheat trade has been more active. Farmers hold their wheat for very full prices, and offer very sparingly. At this market to-day there was a very thin attendance, and farmers asked 1s advance, which needy buyers had to pay, but a good many samples went home again. Red, 28s 6d to 30s; mills white, up to 30s per 504lb. Barley trade over. Very few beans and oats offering; prices the turn against the buyer.

Canterbury, Saturday.—Wheat scarce and 1s per quarter and upwards dearer. English oats a little more money. White wheat, 31s to 32s; red, 30s to 31s; malting barley, 28s to 33s; grinding, 22s to 24s; white oats, 24s to 26s; black, 19s to 23s; grey peas, 33s to 35s; tick beans, 36s to 38s; Mazagans, 33s to 34s; round maize, 23s to 26s; flat, 22s per quarter; spring tares, 7s to 8s; giants, 8s to 9s per bushel.

Carlisle, Saturday.—Small supply of oats in our market to-day. Fair sale at late rates: 22s to 23s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—Market was of a quiet character, there being but small attendance. Oats and beans steady at last week's quotations. Wheat and Indian corn held for a little more money. Wheat, white and red, 4s 5d to 4s 6d per 75lb; malting barley, 4s to 4s 1d per 60lb; grinding barley, 3s 4d to 3s 6d per 64lb; beans, 5s 6d to 5s 8d per 80lb; oats, new, 2s 10d to 3s; old, 3s 4d to 3s 6d per 46lb; Indian corn, 12s 6d to 13s 6d per 240lb.

Chichester, Wednesday.—Wheat was in small supply, and trade was firm at 6d. per quarter advance. Other prices showed no material change. Attendance meagre.

Colchester, Saturday.—Very little wheat offering, an advance of fully 7s. per qr was established. Practically no spring clover offering.—FRANCIS AND CO.

Croydon, Thursday.—White wheat, 29s to 31s; red ditto, 27s to 29s. Malting barley, 28s to 36s; grinding, 22s to 24s. Oats, 18s to 22s. Beans, 31s to 33s. Peas, 29s to 31s. A better trade for wheat, 6d per qr. dearer. Oats firm. Beans and peas no alteration.

Devizes, Thursday.—There was a small supply. Wheat a very firm trade, and prices must be quoted 6d. higher. There was no alteration in the price of other descriptions of corn. The following were the quotations:—Best wheat, 13s 6d to 15s; secondary ditto, 12s 6d to 13s; grinding barley, 20s to 24s; malting ditto, 29s to 34s; rye, 23s to 25s; winter oats, 21s to 24s; beans, 16s to 20s; fine flour, 21s to 23s; extra fine, 24s to 30s; best bread, 8s 9d. Milk butter: Wholesale, 13d to 14d; ditto retail, 14d to 15d. Eggs, 20 to 22 for 1s.

Glasgow, Wednesday.—There was the usual attendance at our market to-day. Wheat and flour steady, with small trade passing. Indian corn and round maize quiet at late rates. Grinding beans and Canadian pease firm. Home and foreign oats steady, but quiet. Barley unchanged. Bran and thirds: Quiet trade, with prices about unchanged. Oatmeal slow.—GIBSON AND CLARK.

Leeds, Tuesday.—We cannot report any tendency to improvement in the wheat trade; the consumptive demand continues disappointing, and, with liberal imports and generally favourable crop reports, buyers prefer to reduce, rather than increase, their holdings. Prices are slightly lower on the week. Maize and oats held for 3d advance. Beans unchanged.—DUNNS AND CO.

Leeds, Friday.—Quiet demand for both English and foreign wheats, with a firmer tendency in prices. English make from 29s to 31s, and foreign 27s to 31s. Flour, beans, peas, maize, and all other articles are very firmly held.

Leicester, Saturday.—Good average attendance. Small supplies of wheat and good samples. Better trade at 27s to 31s per 36 stones. Barley steady. Beans firm. Oats sold very freely.

Leith, Friday.—A fair trade has been done in feeding stuffs during the week. Wheat, Scotch, good demand at late rates. Oats, Scotch, good demand, in sellers' favour; foreign oats, 19s to 21s 6d. Barley, Scotch, fair trade at last week's prices; foreign feeding, 21s 6d. Hard white Canadian peas, 38s; white Calcutta peas, 35s 6d. Beans, 34s. Maize, 21s 6d to 22s 6d for guaranteed sound; parcels with very slight heat, 20s to 21s; damaged, 18s to 19s; Urhur, 25s 6d per 520lb. Mill offals:—Top prices still being paid for prompt delivery. Broad bran, 100s to 102s 6d; sharps, 95s to 97s 6d; parings, 102s 6d to 105s; cummings, 80s to 85s; dried grains, brewers', 97s 6d; distillers', 102s 6d to 105s; oat husks, 45s; meal seeds, 67s 6d; all sacks included.—WILLIAM MACLAY.

Lewes, Tuesday.—New white wheat, 28s to 30s. New brown ditto, 27s to 29s. Malting barley, 32s to 36s. Grinding ditto, 20s to 24s. Oats, 21s to 24s. Beans, 35s to 38s. Peas, 32s to 35s per qr.

Lincoln, Friday.—Small supply of English wheats. Trade slow at 6d more money. Reds, 29s to 29s 6d; whites, 29s to 30s. Oats were 6d dearer. Maize has gone up during the week. Beans and peas quiet.

Liverpool, Friday.—The market has had a very fair attendance, and wheat rules firm at ½d to 1½d advance over last Tuesday, with a good demand for Manitobas, Kansas, and white sorts. Flour: Foreign sorts are firm and meet a decidedly better demand, prices being generally a full 6d advance over Tuesday. Local millers have a fair trade, and prices have been advanced 6d per sack. Maize: Mixed is steadily held at ¼d to ½d advance, with a better demand. European is generally ¼d lower, owing to large arrivals, but meets a fair inquiry at the decline. Plate rules steady at unchanged prices, with a fair business passing. Barley: Malting is very quiet, nominally unchanged. Feeding sorts continue firm, with a quiet demand. Beans are steady for round sorts, but flats are firm owing to extreme scarcity. Peas are firm, with a moderate inquiry at Tuesday's prices. Oats are steadily held, with a fair inquiry at late rates for English. Foreign sorts are quiet, but steady. Oatmeal firm, but quiet at quotations. Oilcake steady, with a moderate inquiry at about late rates.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Steady tone in the wheat trade to-day, the supply quite equal to the inquiry for it, and we note the cost to be just about the same as last week. The barley trade is quiet, and oats are not so active as of late. Beans and peas show no change. Maize not a big trade; tendency to decline. In other articles of grain, seed, etc., no alteration of importance.

Manchester, Thursday.—Decidedly better trade done in English and foreign wheat at fully last Thursday's prices, and a full 1d. per cental dearer than in the interval. American offered at 4½d to 6d per quarter higher than on Tuesday. Maize firm, with a fair demand at last week's prices. Oats, beans, and peas unchanged. Barley, ½d to 1d per bushel dearer. Flour met a moderate trade at unchanged prices.

Newcastle-on-Tyne, Saturday.—At our market to-day wheat was held for last week's prices. The demand, however, was limited. Maize slow sale, without any change in values. Holders of oats asked 6d advance. Buyers, however, refused to comply, consequently only a few transactions took place. Beans and peas scarce and 6d per 504lbs. dearer on the week. No demand for barley.

Newport, Wednesday.—Little business in wheat, and prices rather firmer. Maize quiet and unaltered. Oats firmly held. Barley and beans unchanged on the week. Flour, 22s 6d per sack.

Norwich, Saturday.—There was a moderate wheat on offer at our market to-day, with a dull trade, but where business was effected an advance of 1s per qr. was made. The weather of the past week has been dull and cold, with easterly winds, but is now somewhat milder. Wheat, red, 29s to 30s per qr., weight 63lbs. per bushel Imperial Corn Inspector's return for the week ending 7th April, 1902.—J. ARTHUR MILLS.

Northampton, Saturday.—Not a large market; not much wheat, etc., on offer. Prices a little better than last week. No other alteration worth noting. White wheat, 29s to 30s; red wheat, 27s to 28s; barley, grinding, 22s to 24s; oats, 19s to 25s; beans, 33s to 40s; flour, 21s to 22s; fine, 25s.

Nottingham, Saturday.—Wheat: But little offering, and prices advanced 1s per qr. Grinding barley steady, at full rates. Oats scarce, and 6d to 1s higher. Beans firm.—ROBT. HUBBLE.

Peterborough, Saturday.—There were not many sellers of wheat at to-day's market; the few transactions that took place were at 6d to 1s per qr more money. Oats, also, were held very stiffly, and a similar advance was made.—THOMAS HILL AND SON.

Plymouth, Thursday.—Average attendance at our market to-day. Quiet trade generally. Maize quiet unaltered. Oats and barley 3d dearer. Wheat rather better.—ORLANDO DAVIS AND CO.

Reading, Saturday.—At to-day's market there was considerable more life in the trade, and, with a full attendance, business proved much better. There was only a limited quantity of wheat on offer, and sales were effected with an upward movement to the extent, in some cases, of 1s per qr. more money, rates varying from 27s to 30s per qr. The barley trade is over, but other sorts of corn sold steadily, at unaltered values.

Ripon, Thursday.—Only a few samples of local wheat on offer. Oats firm at late rates. Business slow. Wheat, English, new, 28s 6d to 29s 6d; ditto foreign, 28s 6d to 32s 6d; barley, grinding, 22s 6d to 23s 6d; ditto malting, 26s to 31s; oats (new), 22s to 24s; round maize, 23s 6d to 25s 6d per qr.; beans, 1s per stone.

Rye, Wednesday.—White wheat, 28s to 31s 6d. Red ditto, 27s 6d to 31s. White oats, 22s 6d to 25s. Black ditto, 22s to 24s. Grey peas, 33s to 35s; blue ditto, 50s to 60s. Tick beans, 36s to 38s. Mazagan ditto, 35s to 36s.

Sheffield, Tuesday.—The market was moderately attended. The trade in foreign wheat was slow at last week's rates, while English wheat was rather scarce, and the price advanced 6d. Beans were 6d per qr cheaper. Small corn was unchanged, but English oats were scarce, and sold at 6d more. Quotations:—Wheat, white, 29s 6d to 30s 6d; ditto, red, 29s 6d to 30s 6d per 504lb; barley, grinding, 22s to 23s; ditto, malting, 28s to 32s per 448lb; oats, new white, 22s to 24s; ditto, new black, 20s to 21s per 336lb; peas, grinding, 32s to 34s; ditto, blue, 53s to 80s per 504lb; beans, Egyptian, 35s 6d to 36s per 504lb; ditto, English, new, 37s to 37s 6d per 532lb; Indian corn, small, 22s 6d to 23s 6d; ditto, American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—A firm trade for wheats at 28s 6d per qr, being an advance on the week. Oats made more money at 22s 6d to 23s.

Stamford, Friday.—Very little corn showing. Wheat, 28s to 28s 6d per qr. Short supply of oats, which were still dear. No barley on sale. Small show of beans at about 24s.

Stockton, Wednesday.—There was no English wheat showing. Trade in foreign wheat was very dull, owing to larger supplies, and to do business 3d to 6d per qr less money had to be accepted. Maize, 3d and beans 6d dearer; oats unaltered. No malting barley showing.

Sunderland, Saturday. Wheat in small supply, and rather dearer. Little doing in spring corn. Arrivals, coastwise: Wheat, 735qrs; foreign, nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—A marked change has come over the wheat trade since Tuesday, caused by stronger American advices, anticipation of a possible import duty, and, lastly, by the unfavourable American Bureau report. Both English and foreign wheats are firmly held for 6d to 9d over last week's rates. Feeding stuffs held for 6d advance all round, with more business doing.—DUNNS AND CO.

Wakefield, Friday.—We have a very thinly attended market to-day, and only a nominal business has been done. Both English and foreign wheats are quoted 6d per qr dearer, and malting barley is in small supply, with few buyers. All feeding stuffs 6d per qr dearer.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—Small attendance and quiet trade all round. In some cases English wheat made 3d per qr. more money, but foreign wheat unaltered. Business in malting barley at late prices, and no change in feeding stuffs.

Wisbech, Saturday.—A small supply of grain. Wheat held for 1s advance; prices, 29s 6d to 30s. Oats, 23s to 25s. Beans, 34s to 38s.—JAMES FLETCHER.

Worcester, Saturday.—Small supply of English wheat, with a better inquiry at last week's full rates. Foreign more firmly held. Barley favoured sellers. Oats, beans, and maize dull at late rates. Wheat, white, 29s to 29s 6d; red, 26s to 28s per qr.

Worksop, Wednesday.—Large attendance of farmers, but very little grain on offer. White wheat, 28s to 29s; red wheat 27s to 28s; grinding barley, 26s to 28s; white oats, 23s to 25s; black oats, 22s to 24s; round maize, 24s to 25s per qr.

York, Saturday.—Farmers hold wheat firmly, expecting a duty, and generally are able to obtain 6d per quarter advance. The following are the quotations: Fine white, 29s to 30s; red and mixed, 28s to 29s per quarter of 36 stones. Oats rather dearer.

FOREIGN.

Paris, Wednesday.—The tendency of native wheat was still firm in the provincial exchanges; farmers are offering very little for sale, and instances of higher prices are rather frequent. Here offers were equally restricted, and the feeling very firm, with trade almost as quit, as millers, finding a poor outlet for their products, do not evince much eagerness to purchase. The weaker tone abroad and the return of relatively favourable crop-weather contributed to render buyers very reserved; nevertheless, sellers continued to show themselves just as tenacious, and consequently prices were maintained at about last week's rates, despite the rather weaker tendency of the "Marche de Paris." Transactions were, therefore, inactive at the following rates:—Choice Red, 37s 10d to 38s 3d; Ordinary, 37s 6d to 37s 10d; and White, 37s 10d to 38s 3d 480lbs. The flour market opened dull at a slight reduction, but closed a little better at the following prices:—April, 26s 10½d to 27s 1½d; May-May, 27s 1½d to 27s 5d; May-June, 27s 5d to 27s 8d; May-August, 27s 5d to 27s 8d; July-August, 27s 8d to 27s 11d; and September-December, 26s 7½d to 26s 10½d per 280lbs. The appearance of the growing rye crop continues excellent, but for all that prices are well supported, even in face of a slack demand at 24s 4½d to 25s 3d per 480lb. Much more of oats appears to have been sown than of late years, and the young crop looks in good condition. Here trade has again been very difficult, owing to a tedious sale, and prices show no quotable change on the week. Grey Beauce, 25s 3d; White, 23s 2d to 23s 6d; Red, 24s 11d; Black, from the Central provinces, 25s 6d; small Picardy, 24s 4d. In foreign oats there has been a slight depreciation in rates. American is worth 24s 1d to 24s 4d; White Libau, 23s 6d to 23s 9d; Black, 24s 1d to 24s 4d; and Swedish, 25s 3d to 25s 6d per 320lb. There is no change to note in barley values, and trade is wanting in animation, and prices are quoted nominally as follows:—Malting, 17f.25 to 17f.75 (25s to 25s 9d); grinding, 17f. (24s 8d); and feeding, 15f. to 15f.50 per 100 kilos (21s 9d to 22s 6d per 400lbs.). Owing to scarcity of offers and a regular demand, buckwheat is firm at 28s 3d per 480lbs.—*Dornbusch.*

HAY AND STRAW.

Manchester, Wednesday.—Hay, 7d to 7½d; clover, 7½d to 8½d; straw (wheat), 6½d; straw (oat), 6d to 6½d per stone.

Whitechapel, Saturday.—Arrivals experienced an improved demand, values remaining steady. Best clover, 95s to 110s; inferior ditto, 80s to 90s; specially picked hay, 115s; good ditto, 108s; inferior ditto, 80s to 90s; mixture and sainfoin, 90s to 100s; and straw, 28s to 40s per load.

THE BALTIC.

The London Corn Trade Association notify us that the following standards, soft White Kurrachee wheat(December shipment), choice White Kurrachee wheat (December shipment), soft Red Kurrachee wheat (December shipment), Calcutta Urhweseed (December shipment), Kurrachee Jowaree (December shipment), are now made up, and may be obtained, in sample, at 2, Lime Street Square, E.C. The association also announce that nominations for the committee must be sent in by April 30. The retiring members are Messrs. S. W. Keene, M. B. Manuel, J. Mendl, and R. A. Patterson.

Wheat cargoes are held with confidence at 29s. for Californian, 28s. 9d. Walla Wa'la, 28s. 9d. Duluth, 28s. 6d. No. 1 Northern, 29s. 3d. Victorian, 28s. 6d. Argentine, and 28s. 9d. soft White Kurrachee.

Maize commands 20s. 6d. for South Russian cargoes, and 21s. 6d. for Caucasian. The Argentine new crop is offered for May shipment at 20s. 3d., and for July at 20s. per qr. American is held for 26s. 9d. on passage, but buyers offer no more than 26s. Barley cargoes fetch 18s. 6d. for Azoff, and 24s. for Californian. Other prices for cargoes are: 17s. 9d. for Volagda oats, 32s. for Saffi beans, 30s. 6d. for White Calcutta peas, 50s. 6d. for Calcutta linseed, and 45s. 3d. for Bombay poppyseed.

The arrivals of grain and seed-laden vessels at ports of call for the week were: 8 wheat (1 Melbourne, 2 Portland, O., 4 San Francisco, 1 Tacoma); 1 barley (San Francisco); 1 linseed (Rosario); 1 canaryseed (Larache); total, 12.

The sailing of grain and seed-laden vessels from ports of call for the week were: 18 wheat (1 Antwerp, 4 Birkenhead, 1 Bristol, 1 Cardiff, 1 Fleetwood, 3 Hamburg, 1 Havre, 3 Hull, 1 Plymouth, 1 Sunderland, 1 Tyne Dock); 3 barley and wheat (1 Dublin, 1 Grimsby, 1 Sharpness); 1 linseed (Hull); 1 canaryseed (London); total, 23.

Since January 1, 1902, the total arrivals have been: 83 wheat, 1 flour, 13 barley and wheat, 3 maize, 7 barley, 1 beans, 2 linseed, 2 canaryseed; total, 112.

Last year, during the same time, the arrivals were: 60 wheat, 2 flour, 5 barley and wheat, 11 barley, 3 beans, 4 pease, 2 locust beans, 3 canaryseed, 2 valonea; total, 112.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather of the past week has been highly favourable to the completion of spring sowings, as the drying winds have enabled farmers to get on the land, even in districts where surface moisture and stickiness is apt to be most troublesome. A full area of barley, a slight increase in beans and peas, and from 5 to 7½ per cent. increase in the area under oats is the general anticipation of the spring sowings. While this side of matters is satisfactory, the promise of the growing wheat has been reduced, and the plant has undoubtedly suffered from the bitter nights and sunless days.

The American winter wheat, according to the Bureau Report published on Saturday, promises but 787 of a full standard or fifteen-bushel field. On the other hand, the area is 32,000,000 acres, against 28,000,000 last year. The promise at present appears on these figures to be of a yield of 377,600,000 bushels, against 435,000,000 bushels last season, but 330,884,000 bushels only in 1900. The average yield in America may be put at 13 bushels of winter wheat on 30,0000,000 acres, or 390,000,000 bushels; so that the present outlook is for a little under an average result.

Last week's imports into the United Kingdom were large of wheat and fair of maize, but small of all other articles, the comparison being with the past ten years' average. The figures of the first week of April last year thus compare:—

Qrs.	1902.	1901.
Wheat	454,000	291,600
Barley	87,780	54,068
Oats	100,000	80,868
Beans	7,070	3,033
Peas	7,178	10,200
Maize	184,850	222,110
Sacks		
Flour	118,040	171,160

Wheat prices at the chief markets of the international trade thus compare with the opening of the year:—

	12th April.	1st. Jan.	Net Change.
London	28s 1d	28s 3d	2d decline.
New York	28s 0d	28s 3d	3d decline.
San Francisco	23s 0d	21s 6d	1s 6d advance.
Paris	38s 3d	38s 0d	3d advance.
Berlin	36s 0d	37s 6d	1s 6d decline.
Buda-Pesth	34s 6d	33s 6d	1s 0d advance.
Antwerp	29s 6d	29s 6d	No change.

The rise at San Francisco is due to exhaustion of old crop surplus, that in Austria-Hungary to apparent scarcity of grain. The Berlin decline in prices is curious. Probably 37s. 6d. attracted an excess of imports.

London monthly arrivals for the first quarter of 1902 have been as follows:—

	Jan.	Feb.	March.	Total.
Wheat, qrs.	140,000	109,000	111,000	360,000
Barley, qrs.	150,000	66,000	64,000	280,000
Oats, qrs.	411,000	210,000	179,000	800,000
Maize, qrs.	251,000	151,000	118,000	520,000
Flour, sks.	323,000	376,000	230,000	£89,000

Apparently, London supplies are falling off of all staples except wheat. Should the tendency shown by the above figures continue during the next few weeks Mark Lane is bound to be a strong market before May is over.

The markets of the past week have advanced 6d. per quarter for English wheat and 6d. per sack for Norfol kflour, while an upward tendency is manifested in bran, pollard and middlings, in linseed and cotton-seed, in seed oils, in oatmeal and in straw. On the other hand an extensive area of the total trade remains without improvement. One has in this connection to name beans and peas, rapeseed, rice, London makes of flour, and most sorts of foreign wheat. On the 11th the rumour that a duty of 1s. to 1s. 6d. per quarter would be put on imported cereals, and of 2s. to 2s. 6d. per sack on imported flour and meal, was very much in evidence at Mark Lane and until the Budget has been printed, and, indeed, passed, there will now be a certain number of holders not anxious to part with grain not actually in hand. The duty, however, even if imposed, would probably exempt cargoes on the high seas before the day of legalisation.

There are now on passage to the United Kingdom the following quantities of wheat:—

	Qrs.
American	325,000
Californian	2,225,000
Argentine	265,000
Russian	20,000
Indian	70,000
Australasian	800,000
Various	15,000
Total	3,720,000
A week ago	3,£83,000

The total at one time threatened to reach four millions, but the past week has witnessed a decided ebb, and it is not now probable that the record of 3,930,000 quarters at the end of March will be rivalled in the present cereal year.

Of flour the quantity on passage thus compares with a year ago.

Sacks.	1902.	1901.
American	180,000	276,000
Californian	84,000	78,000
Hungarian	30,000	40,000
Various	6,000	8,000
Total	300,000	402,000

Of barley, there are now 360,000 qrs. on passage against 290,000 qrs. a year ago. Present expectations include 260,000 qrs. of Californian and 100,000 qrs. of Russian and Roumanian. Of some small Asia Minor shipments we have no quantitative estimates.

Foreign barley is now rather difficult to quote, owing to the extremely wide range of some of the kinds. Thus there is extra fine landed Californian Chevalier barley, saleable at 31s. new and 26s. old, while there is common brewing barley from California offering at 23s. per qr. Between these values we have good to fine brewing at 24s. 6d. to 25s., and extra fine, landed at 26s. 6d. to 27s. new. The London Chilian barley is hardly in evidence, but at Liverpool 29s. to 33s. is paid for Chevalier, and 25s to 27s. for brewing qualities. Danish in London makes 27s to 29s., Saale 40s. for best, while ordinary malting from New Zealand is at 26s. to 28s. With respect to the 400lb. sorts of foreign barley unscreened Ouchek, which is an Asia Minor type, mostly shipped from Smyrna, is quoted about 23s., with common at a guinea. Yerli is another Anatolian variety, and comes at a guinea to 21s. 6d. Roumania is represented by some excellent 416lb. samples at 21s. to 22s., while common Danubian 400lb. barley is obtainable for 19s. per qr. Russian 400lb. barley is held for 19s. 6d. by some firms, who expect a rise soon in the prices at Odessa and Taganrog. The buyers of crushed barley at 16s. per 304lb. are in fair evidence just now.

A remarkable change in our maize supply is evidenced in the Liverpool stock returns, which in dividing the germ into kinds are far superior to the London publications.

Liverpool	1902. Qrs.	1901. Qrs.
Flat Cone	27,400	77,033
Round Cone	103,215	10,552
Yellow Cone	21,214	23,948
Total	151,£23	111,533

The changes will be seen at a glance. The quantity changes will be seen at a glance. The quantity of maize now on passage to the United Kingdom is 370,000qrs., against 560,000qrs. a year ago. The present expectations include 290,000qrs. of flat, 50,000qrs. of yellow, and 30,000qrs. of flat corn. Maize shipments from November 1st to April 12th were 757,000qrs. from America, 2,872,000qrs. from Russia, 2,941,000qrs. from Roumania, Bulgaria, and Turkey, 561,000qrs. from Argentina, and 5,000qrs. from India. In the same period of last season shipments had totalled 10,615,000qrs. from America, 360,000qrs. from Russia, 810,000qrs. from Roumania, and 680,000qrs. from Argentina. The deficiency in exports from the two Americas has evoked remarkable supplies from South-Eastern Europe. America on the 12th cabled a visible supply of 1,080,000qrs., against 2,850,000qrs. a year ago.

FEEDING STUFFS.

London, Monday.—Linseed cake.—There is no change of note; very little doing. Decorticated cotton cake and meal as before. Undecorticated is distinctly firmer, 1s 3d to 2s 6d per ton. Linseed is a fluctuating market, the tendency now being upwards.

English Linseed Cake	ex mill	8	0	0		
American Calcutta Linseed Cake	ex quay					
American Western	ex quay	7	2	6 to 7	5	0
,, ,,	ex quay	7	0	0 to 7	2	6
Russian Oil Cake	ex quay	7	10	0 to 7	15	0
Decorticated Cotton Cake	ex quay	6	5	0 to 6	10	0
,, Meal	ex quay	6	8	9 to 6	7	6
London-made ,, Cake (best)	ex mill	4	10			
Egyptian ,, ,, ,, (in bags)	ex quay	4	5	0 to 4	7	6
Burton Desiecated Ale Grains (bags included)	on rail, Burton					
Dutch Linseed (in bags), per 416 lbs.	ex warehouse	2	17	0 to 3	0	0
Calcutta Linseed in bags, per 410 lbs.	ex warehouse		11	6		
a Plata do. per 416 lbs.	ex warehouse	2	11	6		
Clean Russian Linseed in bulk, per 416 lbs.	ex warehouse	2	16	6		

ROBERT AND JOHN HEWETSON.

SEEDS.

London, Monday.—We had a fair attendance at to-day's market, and a fair retail demand for all farm seeds at late rates. Stocks are getting very light. Spring tares are nearly cleared, and are 1s. to 2s. dearer. English sainfoin are finished, and French is now inquired for. Birdseeds are dull, and blue peas and haricots more slowly. —JOHN PICARD AND CO.

THIS DAY'S MARKETS

MARK LANE, MONDAY.

[FIRST REPORT.]

The market to-day was more remarkable for conversation than business, and the currencies ruling can scarcely be accepted as "values" for any large quantities of grain. The duty on corn, of which there are such general rumours, is not expected to exceed a "registration" amount; in other words, it is not likely to stop any shipments. At the same time, as surmise will have given place to certainty in a few hours, the general disposition is to wait. The market strongly favours the principle of "the manufactured article," that is flour, meal, and so forth, being charged more heavily than the raw material, such as wheat or barley.

So far as quotations are useful at all in the Budget pause, wheat, oats, and oilseeds may be said to be intrinsically firmer and definitely tending towards a higher level. Barley is firmer for feeding sorts than for brewing, while farm seeds and brewers' grains are offered in retail at some slight reduction. Maize is steady but inquiry is poor.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A NOMINAL ADVANCE OF 1s. ON WHEAT AND 6d. ON BARLEY, OATS, MAIZE. OFFALS WERE DECIDEDLY DEARER, PARTLY IN CONNECTION WITH THE RISE IN THE PRICE OF BEEF AND CONSEQUENT ACTION OF FARMERS IN BUYING FATTENING FOOD FOR STOCK. OILSEEDS FROM THE SAME CAUSE WERE VERY FIRM.

THE FLOUR TRADE.

MARK LANE, MONDAY.

Prices as given below represent values obtainable, and not what is in many cases being asked; for the Budget will have been discussed before another market day, and perhaps half the trade is willing to wait and hear the result before selling at all. It will be noticed that we quote all milling offals as 2s. per ton up, and there are many holders who ask 5s. more money from the prices before Easter. Low grade Minneapolis to-day made 15s., but 13s. 3d. was accepted for Red Dog. Country flour is fully 6d. dearer, without any references to Budget influences. There is also a genuine spot scarcity of best Minnesota flour.

LONDON TERM MARKET.

This market is held twice a day, except on Saturday, when there is no afternoon call. The market is open to elected members only. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 centals. The name of the month stands for guaranteed delivery (if required) on or before the last day of that month, and the following have been the prices per cental recently made:—

WHEAT.—Calls.	June. s. d.	Aug't. s. d.	Oct. s. d.
April 7 noon.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 8 11 a.m.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 9 11 a.m.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 10 11 a.m.	5 11	6 0	6 0
4 p.m.	5 11	6 0	6 0
April 11 11 a.m.	6 0	6 0	6 1
4 p.m.	6 0	6 0	6 1
April 12 noon.	6 0	6 1	6 2
To-day noon.	6 0	6 1	6 1

Maize opened to-day at 4s. 3d. per cental for April and May, 4s. 4d. for June and July, and 4s. 5d. for August and September delivery.

The Term Market standard wheat is No. 1 Northern Spring American sold on the Duluth certificate. Other sorts of wheat can be bought at the above prices plus or minus agreed difference between the other sort and the standard quality. Quotations are by the "true hundredweight" or cental of 100 lb. We do not give fractions of a penny per cental. The maize quoted is fair average quality from the United States.

The deposit required from members of the Term Market has been fixed at £50 minimum and 1s. per quarter margin on any purchases above 1,000 quarters.

The Term Market (while the "Baltic" is rebuilding) is temporarily situated at the Great Eastern Hotel, No. 190, Bishopsgate Street, ground floor.

HOPS.

The market must be described as strong. Golding hops are now almost unobtainable, and Sussex and Worcester are the best value offering.

GRAIN AND FLOUR FACTORS REPORTS.

There was a fair inquiry for both malting and grinding barleys to-day, but stocks of both are small, and most holders are keeping back until result of Budget is known. There is no Californian brewing in London, but there are sellers at East Coast ports at 26s., 26s. 6d.; Chevalier, 30s. to 32s.; London Onchales, 23s., 29s. 6d.—all per 448lb.—WOODLEY, WATNEY, AND RICHARDSON (Mark Lane).

There has been quite a boom in middlings during the past week, and prices have advanecd another 2s. 6d. per ton, making a rise of 7s. 6d. per ton during the past fortnight. Pollard and bran are also dearer, but the demand for these is not so keen as for middlings. Mills are quite clear of all offal.—JOHN BAWCOMB AND CO.

The uncertainty existing as to the Chancellor's Budget intentions hinders business; but in sympathy with the American markets wheat has risen 6d. to 9d. since last Monday. Maize has recovered 3d. to 6d. from the recent depression. Oats, 3d. to 6d. dearer. Barley making 3d. advance.—W. P. WOOD AND CO. (Mark Lane).

Arrivals of wheat and flour are again small. Trade is firm, and wheat is fully 6d. per quarter and flour 6d. per sack higher. Maize 6d., barley 3d., and oats 6d. per quarter dearer.—COVENTRY (Mark Lane).

Trade during the past week has shown a gradually improving tendency. A good business has been done to-day at an advance of 6d. to 1s., both on spot and to arrive.—T. S. MEDILL AND SONS (Mark Lane).

Flour.—Buyers are taking up spot lots freely, anticipating a possible duty. Business for shipment for the same reason is being restricted. Grain.—Flat corn is unchanged; round is again 1½d. to 3d. per boll lower. Beans in brisk demand at 6d. per boll advance. Peas are extremely scarce. Barley unchanged. Lower qualities of Scotch oats in short supply. Oatmeal quiet. Mill Stuffs.—Bran firm; thirds are in better demand.—MCKINNON AND MCDONALD (Glasgow).

Offals.—The demand for bran has rather improved; prices, however, continue in favour of buyers.—GREENHILL BROS. (Belfast).

Flour.—There has been rather more inquiry and prices are firmer; trade, however, is somewhat irregular and unsettled in view of Budget proposals. Values on spot are as follows:—1st spring patents, 24s. 3d. to 24s. 9d.; 2nd spring patents, 23s. 3d. to 23s. 9d.; American winter patents, 24s. 3d. to 24s. 9d.; extra fancies, 22s. 6d. to 23s.—GREENHILL BROS. (Belfast).

BUTTER.

Thursday.—Devizes: 1s 1d to 1s 2d wholesale; 1s 2d to 1s 3d per lb. retail. Brigg: 1s to 1s 1d per lb. Driffield: 11d per lb. Penistone: 1s 3d per lb. Ripon: 1s 7d to 1s 10d per 24 oz. roll. Scarborough: 1s 3d to 1s 4d per lb. Wetherby: 1s 2d to 1s 3d per lb. Birmingham: 1s 3d to 1s 5d per lb. Kidderminster: 1s 3d per lb. Wellington: 1s 2d to 1s 3d per lb.

Friday.—Easingwold: 11d to 1s per lb. Grimsby: Danish, 112s to 115s per 112lb; Dutch, 106s to 110s. Helmsley: 1s per lb. Leeds: Danish, 114s to 118s per 112lb; Irish creameries, 108s to 114s; Colonial, 108s to 114s; York lump, 15s to 15s 6d per stone; ditto long rolls, 1½lb, 1s 10d to 2s; fresh butter, in 1lb prints, 1s 3d to 1s 4d per lb. Leyburn: 1s 6d to 1s 7d per roll of 24ozs. Lincoln: 1s 1d to 1s 2d per lb. Otley: 1s 7d to 1s 8d per roll of 24ozs.

Saturday.—Appleby: 11d to 1s 1d per lb. Carlisle: 1s 2d per lb. Doncaster: 1s 3d to 1s 4d per lb. Grantham: 1s 2d to 1s 3d per lb. Howden: 1s to 1s 1d per lb. Lancaster: 1s 2½d to 1s 3d per lb. Malton: 1s to 1s 2d per lb. Pontefract: 1s 2d per lb. Retford: 1s 2d to 1s 3d per lb. Richmond: 1s 1d to 1s 2d per lb. Skipton: 1s 1d to 1s 2d per lb. Stokesley: 1s 2d to 1s 3d per lb. Whitby: 1s 2d to 1s 3d per lb. York: 1s 2d per lb.

CHEESE.

Glasgow, Wednesday.—Cheddar and Dunlops, 56s to 62s per cwt. A few lots of new fodder cheese have arrived. The quality is fair for the season. The trade are turning their attention to Canadians and New Zealands, which realise late figures.

Newport, Wednesday.—Quotations: Caerphillies, 52s to 58s; fancy dairies, 60s to 62s; inferior, —s to —s; Derbys, 63s to 68s; truckles, 68s to —s; and Cheddars, 65s to 68s. There was a good supply, a fair attendance, and a moderate demand.

EGGS.

Thursday.—Devizes: 20 to 22 for 1s. Brigg: 17 or 18 for 1s. Driffield: 19 or 20 for 1s. Penistone: 14 for 1s. Ripon: 16 to 18 for 1s. Scarborough: 16 for 1s. Netherby: 14 to 15 for 1s. Birmingham: 14 to 16 for 1s. Kidderminster: 1s 3d. per lb. Wellington: 17 to 18 for 1s.

Friday.—Easingwold: 17 to 18 for 1s. Grimsby: Austrian, 5s 1d to 5s 5d per 120; Egyptian, 4s 3d to 4s 7d; Danish, 6s 1d to 7s 4d. Helmsley: 18 for 1s. Leeds: 7s to 8s per 120; Irish, 6s 6d to 6s 10d; Danish, 6s to 6s 9d; Austrian blues, 5s 5d to 5s 7d; ditto reds, 4s 1d to 5s 3d. Leyburn: 17 to 18 for 1s. Lincoln: 16 to 17 for 1s. Otley: 15 or 16 for 1s.

Saturday.—Appleby: 16 or 17 for 1s. Carlisle: 16 for 1s. Doncaster: 16 and 17 for 1s. Grantham: 16 and 17 for 1s. Howden: 17 and 18 for 1s. Lancaster: 11 to 15 for 1s. Malton: 17 and 18 for 1s. Pontefract: 15 for 1s. Retford: 1s 4d to 1s 5d per score. Richmond: 16 and 17 for 1s. Skipton: 14 and 16 for 1s. Whitby: 16 or 17 for 1s. York: 16 for 1s.

CATTLE.

Metropolitan Market, Islington.

Monday, April 14, 1902.

	British.	Total.	April 15, 1901.
Beasts	1,440	1,440	1,040
Sheep and lambs	9,660	9,660	9,690
Calves	5	5	10
Pigs	10	10	25
Milch cows	30	30	80

Quotations per 8lbs (sinking the offal).

ENGLISH.

	Inferior.	Second.	First.
Beasts	3s 0d	4s 0d .. 5s 0d	
Sheep	3s 10d	5s 0d .. 5s 8d	
Lambs	5s 8d	6s 0d .. 7s 4d	

Milch cows, per head, £15 to £22 10s.

British arrivals include as follows:—Scotland, 6; Eastern Counties, 1,100; Midland, Home and Western Counties, 139; Devon, 30; Ireland, 165.

In the beast market to-day, compared with last Monday, there was a decrease of 100 head, though the arrivals from Norfolk were stronger, trade, owing to a light supply at Deptford, was of a brisk nature at an advance of from 2d. to 3d. per 8lb., with an early clearance for fat beasts of both prime and second quality; fat cows and bulls also sold readily at an increase in value. Amongst the Irish arrivals were included 95 stores, for which there was little demand. These were quoted at: three-year-old steers, £12 10s. to £13 per head; heifers, two and a half years, £10 to £11 per head. The following are top quotations per 8lb. (sinking the offal):—

	To-day.	April 15, 1901.
Norfolks	4s 10d to 5s 0d	4s 5d to 4s 6d
Lincolns	4s 6d to 4s 8d	4s 3d to 4s 5d
Irish	4s 8d to 4s 9d	4s 2d to 4s 3d
Fat cows	4s 2d to 4s 4d	3s 10d to 4s 0d
MAG 3		

In the sheep market there was a decrease of 1,450 in the number penned. For lambs, of which there was a large proportion, trade was slow, at a reduction of from 4d per 8lb for best quality and 6d to 8d for seconds, even at which decline a clearance is doubtful. For wether sheep there was less inquiry, at less money; on the other hand, ewes sold readily at a slight advance. The supply included 320 Scotch, 3,450 from the Eastern Counties, and 830 from Yorkshire. Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	To-day.	April 15, 1901.
7½ to 8-st. Downs	5s 6d to 5s 8d	5s 8d to 5s 10d
9-st. do.	5s 4d to 5s 6d	5s 6d to 5s 8d
10-st. half-breds	4s 11d to 5s 0d	5s 0d to 5s 2d
9-st. Yorks. clipped	4s 6d to 4s 8d	4s 10d to 5s 0d
12-st. Lincolns	4s 10d to 5s 0d	4s 10d to 5s 0d
10-st. Down ewes	4s 8d to 4s 10d	4s 10d to 5s 0d
11-st. half-bred do.	4s 6d to 4s 8d	4s 8d to 4s 10d
8st. Down lambs	7s 2d to 7s 4d	7s 6d to 7s 8d
6-st. Half-bred do.	6s 6d to 6s 8d	7s 2d to 7s 4d

London (Central), Monday.—Large supplies; trade very slow. Beef carcasses, 4s 2d to 4s 4d; hind-quarters, 4s 8d to 5s; roastings, 5s 6d to 6s. Sheep: Ewe, 3s 2d to 3s 6d; wether, 4s to 4s 2d; hind-quarters, ewe, 4s 4d to 4s 8d; wether, 5s 2d to 5s 6d. Pigs: Large, 3s 4d to 3s 10d; small 4s to 4s 6d.

FOREIGN CATTLE

Deptford, Monday.—Beasts, 424. To-day's supply, compared with Monday last, showed an increase of 75 head, and consisted entirely of consignments from the United States, trade for which was of a firm and steady nature, both in regard to tone and value, an early clearance being made. The best on offer to dress from 680 to 720lbs. made from 5s to 5s 1d per 8lbs, offal given in. A few beasts were quoted at 4s 11d. No sheep on the market. On Saturday 1,002 States beasts and 655 sheep were on offer, and met with steady trades at the following quotations per 8lbs.: Beasts, 4s 8d to 4s 11d; sheep, 4s 10d to 5s. The following were the number on offer on the corresponding day last year, with the current top rates: Beasts 1,,055, 4s 5d to 4s 6d per 8lbs, to dress from 640lbs. to 720lbs.; sheep, 1,589, 4s 10d to 5s per 8lbs.

Liverpool, Monday.—Demand fair for good quality cattle, at last week's top quotations; middling and inferior also unchanged. Sheep trade slow, but firm, and top quotation more general for handy weights. Lambs also better to sell. Beef 7d. to 5d. per lb; mutton, 8¾d to 6½d per lb; lambs, 42s to 28s. At market, 1208 cattle, and 4,716 sheep.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are held for more money, but maize is not a strong trade. Cargoes of oats are appreciating in value, but there is no improvement in barley. Both beans and peas are out of favour.

BUSINESS DONE.

WHEAT.—Californian, 29s 3d, arrived; Californian, 29s, on passage; Californian, 28s 6d, prompt shipment; Walla Walla, 28s, prompt shipment; Australian, 29s 6d, on passage; Canadian, 27s, prompt shipment; Manitoba, 28s, prompt shipment; Bombay, No. 1, 30s, May shipment; Calcutta, No. 2, 30s, May shipment; Russian winter, 30s 6d, prompt shipment.

BARLEY.—Azoff, 18s 6d, May shipment; Odessa, 18s, July shipment; Californian, 23s 9d, on passage.

OATS.—White Konigsberg, 20s, prompt shipment; white Libau, 18s, prompt shipment; white Canadian, 19s 9d, prompt shipment.

MAIZE.—Caucasian, 21s, prompt shipment; Odessa, 20s 9d, prompt shipment; Roumanian, 20s 3d, prompt shipment.

LINSEED.—Calcutta, 50s 6d, May shipment.

RAPESEED.—Brown Cawnpore, 36s 6d, May shipment.

POPPYSEED.—Bombay, 45s 3d, May shipment.

COTTONSEED.—Bombay, £4 12s 6d, arrived.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Good supplies of greenstuffs were available, and experienced an improved demand. A liberal quantity of potatoes sold to a moderate extent. A fair supply of fruit was on offer, and met a generally steady inquiry. Greenstuffs — Cauliflowers, 7s 6d to 10s per tally; broccoli, 4s; parsnips, 2s 6d to 3s; turnip-tops, 1s. 6d. to 2s 6d per bag; carrots, 2s to 4s; turnips, 3s to 4s; parsley, 4s to 5s; leeks, 2s 6d to 3s per dozen bunches; horseradish, 1s 3d to 1s 6d per bundle; forced rhubarb, 1s; field ditto, 2s per dozen bundles; Valencia onions, 5s 6d to 6s 6d per case; Egyptian, 5s 9d per bag; potatoes, 35s to 80s per ton; New Teneriffe, 12s; canary, 14s per cwt. English apples, 6s to 10s per bushel; Californian, 8s to 12s; Australian and Tasmanian, 9s to 16s per case; English grapes, 2s 6d to 4s; French, 2s to 3s per lb.

LIVE STOCK AND MEAT TRADE REVIEW.

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market trade for fat beast on Monday was of a very slow nature, at a slight decline in value during the morning, but towards midday, and at the finish, was somewhat firmer, a few buyers from Deptford having arrived, enabling a clearance being made. Fat butchering cows and bulls meeting with more inquiry, sold to rather better advantage. On Thursday more sales than usual were made, at a slight advance in value. The Irish arrivals included 191 stores, which were quoted as follows:—Steers, three years old £12 10s. to £13 10s. per head; heifers, £10 to £12. At the Foreign Cattle Market the supply was the shortest noted for very many months; trade, in consequence, was especially firm, at an advance of fully 2d. per 8lb., the best making from 2d. to 3d. per 8lb. more than the choicest quality at Islington. From all reports, consignments from the United States for several months are expected to be very short, with probably a further rise in price. The total number on offer at both markets was 3,571, as against 3,618 during the previous week. The supply consisted of 1,720 British (increase 710) and 1,851 American (decrease 757). The following were the top rates paid per 8lb. (sinking the offal):—80-stone polled Scotch, 4s. 8d.; 90-stone polled Norfolks, 4s. 8d.; 100-stone Shorthorn ditto, 4s. 6d. to 4s. 7d.; 100-stone Lincolns, 4s. 6d.; 95-stone Irish, 4s. 4d. to 4s. 6d.; 85-stone American, 4s. 10d. to 4s. 11d.; 90-stone fat cows, 4s. to 4s. 2d.; 100-stone fat bulls, 3s. 8d. to 3s. 10d.

The sheep trade was practically confined to the Islington Market, and was of a decidedly slower nature, rates ruling 2d. per 8lb. in favour of the buyer. Ewes on Monday were dearer, but on Thursday showed a decline of 4d. per 8lb. Of lambs there was a full supply with a very unsteady trade, particularly so was this the case on Thursday. The total number penned was 13,655 (previous week 7,916), consisting of 13,000 British (increase 6,270) and 655 American (decrease 531). Best pens made per 8lb. as follows:—7½ to 8-stone Downs, 5s. 8d.; 8-stone Scotch, 5s. 8d.; 9-stone Downs, 5s. 6d.; 10-stone ditto, 5s. 4d.; 10-stone half-breds, 5s. 2d. to 5s. 4d.; 12-stone Lincolns, 5s.; 9-stone clipped Yorkshires, 4s. 8d. to 5s. 4d.; 12-stone Lincolns, 5s.; 9-stone clipped Yorkshires, 4s. 8d. to 4s. 10d.; 10-stone Down ewes, 4s. 8d.; 11-stone half-bred ditto, 4s. 4d.; 5-stone fat Down lambs, 7s. 4d. to 7s. 8d.; 6-stone half-bred ditto, 6s. 2d. to 6s. 6d.

Only 60 calves on offer; trade slow; top value, 6s. per 8lb.

Trade in the West.

The bitterly cold nights we are having, coupled with a piercing wind by day, is, in the absence of rain, greatly retarding vegetation of all kinds, and stock-owners are already becoming apprehensive as to keep prospects for the spring, especially on the uplands. Several times rain has threatened, but there it has ended, much as a good day's downpour would be welcomed, now that the sowings are practically at an end. Should the rain hold off much longer its absence is bound to very materially affect not only the trade in store cattle but likewise the great many sheep sales looming in the future. So far trade all round is exceptionally buoyant, and not only for fat things, but equally so for stores. Prices of milch beasts, owing to the keeness in the demand, continue very firm, and wherever milchers are brought out there are the buyers ready to secure them, and that, too, at good prices, ranging from £17 to £21 10s. for the more useful classes of young heifers, and from £16 10s. down to £11 or £12 for older bullocks, that will soon be "weeded out" from the dairy. Barriners, too, are equally inquired for, graziers with plenty of grass on hand being eager, with the firmness evinced in the fat bullock trade, to buy at what many consider a "stiff" price; though in scarcity of beasts making 12s. per score, there is a good margin for profit on most bullocks, dispite the fact that many are paying £20 up to £27 or £28 per pair; the more ordinary runs being an equally saleable commodity at £15 to £19. Future prices, however, will largely depend on the weather of the next week or fortnight. Young stock is also meeting a good inquiry, and at prices on the whole that farmers have little reason to complain of, whilst the demand keeps good. Store things are equally brisk for fat stock, bullocks especially; well-finished heifers and steers, of which a few more are now coming out, selling up to 12s. per score (or from £20 to £24 each); fat cows also quoted at from £14 10s. to £18 each (or 10s. 6d. to 11s). Fat calves, as much from scarcity as anything, have once again taken up their old position of firmness, from £3 10s. to £6 10s. being the ordinary runs for most of those now on sale (or quite 8d. to 8½d. per lb. for the best), and seconds 7d. to 7½d. Rearers are also dear just now compared with the prices that sometimes rule; the best make up to 40s., ranging down to 20s. or 30s. Porkers, too, found a ready sale from 3os. to 58s. (or 10s. to 10s. 6d. per score). Sows sell from £5 to £8 each. The foregoing will afford some indication of the present pulse of the stock market, and, as there is scarce anything left over at any of the sales in this district, we may take it that stock-owners are able to realise at a price that will at present admit of a decent living profit, and enable many to do what they are sometimes unable to do, namely, pay their way.

Trade in Scotland.

John Swan and Sons, Ltd., give the following as their report on above for the current week:—The number of fat cattle on offer this week has been large, and the quality improved with a very full attendance of buyers. An active trade has been experienced, and prices, on an average, about 15s. higher. Fat cows, a very large and good show, and they also participated in the advance. A very large supply of sheep, which met a slightly worse trade, at an average fall of nearly 2s. Lambs have been shown in large numbers, and many of very indifferent quality, the best selling at from 37s. to 40s., but one secondary descriptions down as low as 26s. Fat calves and pigs continue to sell at high rates. There was a large number of store sheep on offer, with the scarcity of turnips, and the barren weather. Trade has been slow throughout, and prices just in buyers' favour, with a portion of secondary sheep left unsold. There was a large number of store cattle. Anything of a good class met an active inquiry, and prices continue high, but secondary descriptions and stirks are difficult to sell, at very moderate rates. Milch cows, an average show, and the best class made an advance of quite a pound ahead, while the secondary descriptions made about the same money as last week. Quotations:—Extreme top price of cattle per live cwt., from 38s. to 40s. 6d.; current from 36s. to 38s. Mutton, from 7½d. to 8¼d. per lb.

Trade in Ireland.

The improvement noted in the previous market was fully maintained on Thursday last, even in fact of a large increase in the numbers of both cattle and sheep. Buyers, both local and cross-channel, were in good attendance, and in the early morning the competition for best quality beef was very spirited at a shade over last week's rates; for good second-class beef there was also a brisk trade, but coarse and lean descriptions failed to participate in the healthier tone of the market. Prime ox and heifer beef made from 56s. to 57s. 6d., and extra finished lots up to 60s. to 64s. per cwt.; second quality beef from 50s. to 55s., and inferior form 44s. to 50s. per cwt. The increase of nearly 800 sheep had a bad effect on the mutton trade, especially as there was a very limited attendance of exporters. For the best qualities of aged wethers and mountain sheep, however, there was a good demand, and no decline has to be noted, but inferior sorts were very hard to turn to cash, and a large number had to be returned unsold. Shorn hoggets were very much in evidence for so early in the season, but in the absence of shippers not much trade was done in them. Sellers sticking fast by last day's prices, prevented any noticeable depreciation in values. Prime wethers made from 7¼d. to 7½d., and cheviots about ½d. more per lb.; ewe mutton 6½d. to 7d., and inferior from 5d. to 6d. per lb. Light and medium hoggets from 27s. to 33s. each, and heavy do. from 42s. to 55s. Lambs were a bad trade, and in the absence of export buying, the number put forward was much in excess of local wants, and prices weaker all round. Small, thin lambs could be bought at from 16s. upward, and large fat do. from 26s. to 34s. each. Choice veal scarce and dear, at from 8d. to 9½d. per lb.; other sorts from 4½d. up. Not many choice cows on market, but large supply of other sorts. Best springers made from £17 to £21; inferior cows could be bought at from £9 up. Only a small number of stores in the market, chiefly yearlings, which met with a slow inquiry at unaltered rates. Country fairs appear to be on the look-up, and, with fine weather, they are sure to improve. Over 1,200 head of store cattle were sold by Mr. Gavin Low at his paddock, North Circular Road. For aged stock in good condition buying was brisk, but young cattle did not go so well. Some Scotch buyers took most of the polled cattle. In the pig market there was an average supply, and buyers were fair attendance. Business was pretty good in the morning, but got very sluggish afterwards, values, however, remaining unchanged. Best light weights from 47s. 6d. to 50s. per cwt, heavy 44s. to 46s., coarse and inferior from 36s. up.

LONDON.

Islington, Thursday.—Fair supply of beasts, and, as usual, the bulk comprised fat bulls and rough descriptions. Demand ruled quiet; prices unchanged. Fat bulls, 3s 6d to 3s 10d. Sheep in fair supply evidenced a slow demand at easy prices; 7½ to 8-stone Down wethers, 5s 6d; 9-stone, 5s 4d; 10-stone half-breds, 5s to 5s 2d; 10-stone Down ewes, 4s 4d to 4s 6d; 11-stone half-breds, 4s 2d to 4s 4d. Lamb trade dull, and prices lower; 4½ to 5-stone Downs, 7s to 7s 4d; 6-stone half-breds, 6s 4d to 6s 8d. Calves quiet, the best on offer making 6s to 6s 2d per 8lb. to sink the offal. Pig trade nominal. Total supplies:—180 beasts, 1890 sheep, 5 cows, 50 calves, and 10 pigs.

COUNTRY.

Basingstoke, Wednesday.—At Raynbird and Sons' sale yard there was a good attendance of buyers to meet a supply of 33 fat beasts, 61 calves, 777 fat sheep and lambs, and 52 head of dairy and store cattle, for which the following prices were realised:—Fat shorthorn steers made up to £19; heifers, £21 5s; and cows, £21; bulls, £16 5s; Welsh runts, £16 15s; polled heifers up to £23; fat Hampshire Down wethers made from 40s to 55s; fat ewes, 41s to 56s; fat sucking lambs up to 40s 6d; fat calves, 65s to £5 2s 6d; small, 20s to 50s; dairy cows, £8 to £17 5s. Biddings brisk, and a clearance made of the short supply of fat beasts, and full prices realised. A good show of fat sheep and fat lambs met the attention of a large number of buyers both from the locality and from a distance; best quality wether sheep maintained late rates; ewes were dearer; the trade for fat lambs was adversely affected by the cold weather, and prices lower. Dairy cattle met a slightly better demand. Store cattle of good quality met with more inquiry. Fat calves are scarce, and very dear. Buling values:—Best quality fat beasts 7d to 7¼d; second ditto, 6¼d to 6¾d; bulls, cows and inferior beasts, 5½d to 6d per lb; best quality fat sheep, 7¼d to 8¼d; second ditto, 6¾d to 7¼d; old ewes, rams, and infirm sheep, 6d to 6½d; three-month-old fat sucking lambs, 9½d to 10¼d per lb; fat calves, 7½d to 9¼ per lb.

Boston, Wednesday.—Store beasts, £15 to £16 10s; young grazing steers, £9 to £11; drapes, £12 to £14; in-calf cows, £19 to £21; heifers, £17 to £19; calves, 55s to 60s each; best beef, 7s 6d to 7s 9d; cow ditto, 6s to 6s 6d per stone; hoggs, 40s to 46s each; wethers, 7d to 7½d; ewes, 6d to 6½d per lb.

Braintree, Wednesday.—Messrs. Balls' had a full market, trade in cattle being brisk, sheep good, and hogs excellent. The pens comprised 57 bullocks, 123 fat sheep, 60 hogs, 400 Londoners, 30 store cattle, and 50 store sheep.

Bristol, Thursday.—There was a fair supply of fat cattle at the market, and trade ruled firm for best qualities at 64s per cwt; secondary animals sold more slowly at 57s. A moderate number of sheep were penned, and there was a fair demand for light wethers at 7¼d to 7¾d per lb; heavy wethers made 7d, and ewes 5¾d. English-fed lambs realised 10d to 11d per lb. Pigs were in average supply, and there was a good inquiry at 9s 6d per score for bacon pigs and 10s 9d for porkers. About 600 store cattle were in the market, but the cold weather and high prices resulted in a dragging trade, and a clearance was not made.

Bury, Wednesday.—At Messrs. Simpson and Sons' auction mart there was a very good supply of fat beasts, mostly of excellent quality. With a full attendance of buyers, a brisk trade prevailed for all descriptions, at a trifle over last week's prices. Large supply of store cattle. Good trade, at slightly higher prices. Ten capital steers, three years old, forward in condition, consigned by Mr. E. Terry, of Tostock, averaged £16 2s. 6d. per head. Ten polled steers, very fresh in condition, consigned by Messrs. J. J. and G. B. Marsh, of Hawstead, went up to £11 5s. Other lots fetched from £10 15s. to £8 7s. per head. Some well-bred Buckinghamshire calves sold at from £7 2s. 6d. to £5 per head. Fair average supply of fat sheep. Good trade for all the ripest hoggets. Medium weight fetched about late rates. Short supply of fat ewes, which were dearer. Rather more store hoggets penned. Black-faced ewe hoggets 41s. 6d. Half-bred keeping hoggets 39s. 6d. per head. Rather smaller supply of fat pigs, which met a sharp trade, at fully late rates.

Calne, Friday.—Present prices for prime pigs, in lots of not less than 10, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of the Back.	Price per Sc. s.	d.
6 sc. 10 lbs. to 9 sc. 10 lbs.	2½ in. and under ...	9	6
Under 10 sc.	Not exceeding 2½ in. ...	9	0
Under 11 sc. 10 lb. ...	Not exceeding 2¾ in. ...	8	6
Under 12 sc.	Not exceeding 3 in. ..		

—C. & T. Harris & Co., Ld.

Cambridge, Monday.—Beasts, 420; sheep, 1,102; horses, 6. Beef, 7s to 8s; mutton, 4s 4d to 5s 6d; lamb, 10½d to 1s per lb. A few good lots store beasts, all sold. Fat beasts: A fair show; trade better at late rates. Fat sheep: brisk trade at more money. Stores: A large number to hand; trade fair; all sold. Lambs: Fair trade. Straw and roots: Short supply.

Canterbury, Saturday.—The market here is not yet permitted to be opened. Movement of stock is now permitted by licence, but the flock of sheep said to be affected has not yet been slaughtered, as graziers strongly urge should be done

Carlisle, Saturday.—There was an exceptionally large show of Irish store cattle, over 900 being offered, but most of them were small heifers, the number of stripping cows and good heifers being smaller than usual. Owing to the cold weather, which has retarded the growth of grass, fewer buyers attended, and trade was quieter. Small heifers made from £6 10s. to £10 10s.; best heifers, to £14 10s.; stripping cows, £8 10s. to £11 10s.

Dorchester, Wednesday.—Good average deliveries came to hand. A full attendance, and, with a quick demand, a steady clearance was soon effected, trade generally ruling firm, with a tendency to higher rates for most things. Good beef made 11s per score; choicest, 11s 6d and over; and contract bullocks, 10s to 10s 6d. The best quality wether mutton made 8d per lb. if not over, and ewes 7d to 7½d. Best lambs sold at 9d to 10d per lb. Good calves sold at 8d per lb; seconds, 7d to 7½d. Light weight porkers, 9s 6d to 10s 6d per score; and heavier pigs, 8s to 9s.

Dublin, Thursday.—Brisk demand for choicely-finished heifers and bullocks at prices in favour of sellers. Other descriptions (easier) sold until local requirements were filled, after which demand slackened off. The very choicest qualities of sheep for home requirements made late rates. Other sorts lower, with a bad finish. Cattle: Live weight, best, 34s to 37s per cwt; other sorts, 30s to 33s 6d per cwt. Mutton: Dead weight, 6¾d to 8d per lb.—GANLY, SONS AND CO.

Hereford, Wednesday.—Bullocks and cows, 593; calves, 261; sheep and lambs, 1,701; pigs (fat and sows), 33; sucking pigs, 11; pigs (stores, not more than ten), 261; pigs (stores, more than ten), 69; horses, 9. Best beef, 6d to 7d per lb; wether sheep, 6½d to 8d per lb; ewes, 5½d to 7d per lb; veal, 8½d per lb; pork, 5½d to 6d per lb; bacon, 4d to 5d per lb; lambs, 1s to 1s 2d per lb.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons

report that the high prices of last week brought out a considerable increase in the number of fat cattle, but all were wanted, and the supply was by no means beyond the demand. The quality of the cattle was excellent. Trade was brisk, and prices very firm, ranging from 8s to 8s 9d per stone. Fat lambs were in better demand, and made up to 47s. The sheep pens were well filled, and included a good proportion of well-finished hoggets; a good demand was experienced. Grazing hoggets were rather more in request. Fat calves dearer. A large entry of fat swine, which again sold well, maintaining recent high prices. Several lots of well-bred stores met sharp competition, and realised excellent prices. Grazing cattle came to hand rather more freely, and there were more buyers. Cows were of indifferent quality. At the Drill Hall, 126 horses were catalogued, and met a good trade. Cart horses, to 48gs; Shire fillies, to 47gs. Numbers at sales and market: cattle, 697; calves, 34; sheep, 2,309; swine, 1,800; horses, 150.

Leicester, Wednesday.—Very good consignments of Lincolnshire and Norfolk bullocks. Buyers and dealers were well represented. Trade ruled brisker at an advance of 10s per head on all choice lots. Choice bullocks, 6¾d to 7d; secondary, 6¼d to 6¾d; heifers, 6¼d to 7d; cows, 5¼d to 6d per lb. Large deliveries of sheep, which met a steady sale at 7¼d to 8d for best; large sheep, 6¼d to 7¼d; ewes, 5¼ to 6d; shorn sheep, 6¼d to 7d; lambs very firm at 1s to 1s 1d; calves, best, 9d to 9½d; secondary, 8d to 8½d per lb.

Newport, Wednesday.—Quotations were: Best beef, 6¾d to 7d per lb.; secondary sorts, 6d to 6¼d; cows, 5¾d to 6¼d; best wether mutton, 8d to 8½d; ewes, 6½d to 7d; lamb, 1s; veal, 8d to 9d. Porker pigs, 10s 3d to 10s 9d per score. A good supply and a brisk trade.

Norwich, Saturday.—The show of store cattle was rather larger here to-day. The demand exhibited some improvement, but prices remained at about their former level. Fat beasts showed considerable firmness at 7s. 6d to 8s. and 3s. 6d. per 14lb. The supply of store sheep was good, but the demand was inactive, keep prospects being indifferent in Norfolk. Keeping hoggets were quoted at 32s. to 45s. per head. Fat sheep made 8s. to 8s. 6d. and 9s. per 14lb. It will be seen that the stir in the meat trade affected the market to some extent.

Rye, Wednesday.—Number of entries: Sheep and lambs, 400; store beasts, 6; fat beasts, 31; calves, 26; pigs, 24. Heifers and steers fetched 4s 8d to 5s; second ditto, 4s 4d to 4s 6d; maids and wethers, 5s 6d; barrens, 4s 8d to 5s; calves, 5s.

Salford, Tuesday.—There was a larger supply of cattle, and a fair trade, and last week's prices were well maintained. The display of sheep and lambs was also larger than last Tuesday. There was a good demand for sheep, and sellers obtained the prices ruling last week. Trade for lambs rather dull, and prices in favour of the buyer, last market day's top figure being obtained only in a few cases. Calf trade dull, and prices lower. Quotations:—Cattle, 5d to 7d; sheep in wool, 7d to 9d; ditto, clipped, 6d to 8d; calves, 5½d to 8¾d per lb; lambs, 30s to 50s each. At market:—Cattle, 2,489; sheep and lambs, 10,673; calves, 207.

Sheffield, Tuesday.—The supply was larger, and the demand was slightly better, especially for the best lots, which had a ready sale at £18 to £22; secondary lots made £14 to £18.

Spalding, Tuesday.—Beef, best, fully 8s per stone; cow beef, 7s 6d. A large show of stores. Trade was slow, some lots not being sold. Cows were in demand, and realised high prices. Sheep a small show, and late rates were well maintained.

Stockton, Wednesday.—There were on offer 128 cattle, 46 calves, 415 sheep, 8 lambs, and 181 pigs. A fair average show of the best cattle, but few customers, the prices realised being 8s to 8s 3d, rougher kinds 6s to 7s 6d per stone; calves 6d to 9d per lb. Big show of sheep, but prices were down; young sheep 8d, ewes 6½d, tups 5d, lambs 32s to 38s each.

Thame, Tuesday.—There was an increased supply of stock at market. Beef met with a very sharp trade, but mutton and lamb was easier, as compared with the last few weeks. Veal continues scarce and dear, and weaning calves sold readily. Bacon pigs met with a good enquiry, but store sheep and couples were in favour of buyers. Mr. Bond's sale comprised 42 fat beasts, 529 fat and store sheep and lambs, 70 fat and weaning calves, and 188 pigs. Fat bullocks made £17 to £24 5s; fat heifers, £16 to £20; fat tegs, 43s to 58s; fat theaves, 44s to 63s; fat lambs, 35s to 40s; double couples, 63s to 70s; store tegs, 32s to 39s; fat calves, £3 10s to £4 2s; cow calves, 23s to 60s; bull calves, 18s to 50s; fat pigs, 9s 6d per score.

Wakefield, Wednesday.—Although there was a bigger number of sheep and beasts, a good trade was done at last market prices. Choice young sheep realised 7¾d and 8d per lb, and other qualities from 5d to 7¼d per lb; inferior sorts from 5½d to 6¾d. Number in market: Sheep, 5,135; beasts, 1,334.

Wolverhampton, Wednesday.—Beasts a fair supply; good trade. Sheep moderate supply; fair trade. Calves moderate trade. Beef, 5½d to 7¼d per lb; mutton, 6½d to 8¾d per lb; veal, 6¾d to 9d per lb; pigs, bacon 10s to 10s 3d per score, porkers 10s to 10s 6d per score, sows 8s per score.

FOREIGN.

Deptford, Wednesday.—Beast supplies totalled 500 head, which is 180 less than on Wednesday last, and again consisted of shipments from the United States. Trade ruled firm, a sharp clearance being effected at 4s 8d to 4s 10d, exceptionally 4s 11d per 8lb, to sink the offal.

POTATOES.

Borough, Saturday.—With moderate supplies, the tone of the market ruled steady. Quotations: Scottish maincrops, Dunbars, 80s to 90s; Blacklands Up-to-dates, 45s to 50s; Lincoln Silts ditto, 55s to 60s; Kentish Up-to-dates, 50s per ton.

Goole, Wednesday.—Good attendance, with a plentiful supply on offer here to-day. There was rather a better demand for best Warps, but prices remained same as last week, from 45s to 52s 6d per ton for best samples. Retail price, 6d per stone.

Great Northern, Saturday.—Good supplies were to hand, and met a moderate demand. Scotch maincrops, 90s; Imperators, 30s to 40s; Hebrons, 80s; Reading Giants, 50s; Blacklands, 40s to 45s; Lincoln Up-to-dates, 60s to 65s; maincrops, 70s to 80s per ton.

Spitalfields, Saturday.—Arrivals were heavier, and the demand, although quiet, proved fairly steady, while rates continued at about recent level. Quotations: Best Lincoln Up-to-dates, 60s to 65s; Blackland ditto, 45s; Wisbech, ditto, 50s to 60s; Scotch, 60s to 65s; Scotch maincrops (grey soil), 70s; Lincoln maincrops, 80s to 85s; Reading Giants, 40s; and Blackland Gartons, 35s per ton.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter—There is more business doing in New Zealand butter this week, but prices have not improved as was expected. It is reported that this is due to some houses who are selling New Zealand butter on the "spot" at low values with a view of causing c.i.f. buyers to be dissatisfied with their purchases. They have not succeeded in breaking the market as they intended, values having remained firm. "Choicest" brands are making 105s to 106s; "finest," 104s. The Copenhagen official quotation remains unchanged, and is now 3 kroner higher than it was 12 months ago. The prices in British markets for "choicest" Danish are 110s to 114s London, 110s to 116s Manchester and other Northern markets. The arrival of Russian butter last week was 8,947 cwts., of which about 6,000 were Siberian, which is selling at 100s to 102s, and in exceptional cases at 104s. Cheese—There is a good consumptive demand for both Canadian and New Zealand cheese, although buyers carefully refrain from purchasing more than will meet their immediate requirements. The shortage of cheese is now undoubted, and the season will finish up with clean floors, and for old cheese high prices. These facts are already operating on makers who are producing fodder cheese for shipment from Canada in a fortnight or three weeks' time. There is no change in values from last week.—W. WEDDEL AND CO.

WOOL.

Canterbury, Saturday.—Kent fleece continue to be quoted at 5½d, and lamb wool at 4d per lb. It is doubtful whether any change will come about before the arrival of the new clip

London, Friday.—English—per pk. of 240lb:—Fleeces, Southdown hoggs, £7 to £8 10s; half-bred hoggs, £6 to £7; half-bred wethers, £5 to £6; Kent fleeces, £5 to £6; Southdown ewes and wethers, £7 to £8 10s; Leicester ewes and wethers, £5 to £5 10s. Colonial—per lb: Victoria, fleece, superior, 1s 7d to 1s 9d; scoured, good, 1s 7½d to 1s 8½d; scoured average, 1s 6½d to 1s 7½d; greasy, average to fair, 10½d to 11½d; New South Wales, scoured, average, 1s 4d to 1s 4½d; greasy, average, 8d to 9d; South Australia, greasy, average, 6½d to 7d; New Zealand, scoured, average, 1s 5d to 1s 6d; greasy, average, 5½d to 9½d; Cape, scoured, superior, 1s 5d to 1s 6d; fleece, average, 7d to 7½d; greasy, average, 6½d to 7d; Natal, scoured, 1s to 1s 1d; greasy, average, 6¾d to 7¼d. Cross-breds—Grs: Victoria, good to superior, 11d to 11½d; New Zealand, fine, 8½d to 9½d; medium, 5½d to 6d; coarse, 4¼ to 4¾d.

MANURES.

Liverpool, Friday.—There is a decided improvement in the demand for nitrate of soda on agricultural account, and spot prices are very firm, at an advance of about 5s per ton in anticipation of small supplies this month. Some inquiry is experienced for sulphate of ammonia, and at present rates of £12 2s 6d to £12 5s per ton for guarantee 24 per cent. the latter is considered by many users of ammoniacal manures the cheaper. The season for basic slag has practically terminated, and the more soluble phosphate, superphosphate of lime, is now in brisk demand at the following rates for the respective and guaranteed qualities. A fair seasonable demand is experienced for East India bone meal and kainit at unchanged values. Feeding stuffs are quiet all round, and in some instances values have declined. Prices as annexed. At auction, 1,120 bags American decorticated cotton-cake meal sold at £5 5s to £6 6s 3d, ex quay:—Nitrate of Soda, best quality, *i.e.*, guaranteed 95 per cent., pure, in bags, £10 15s per ton; East India Bone Meal, fair to prime, in bags, £4 2s 6d to £4 7s 6d per ton; Kainit, prime 23 per cent., in bags, £2 7s 6d to £2 10s per ton; Palm Nut Cake, prime, in bags, nominal; Linseed Cake, American thin oblong, prime, in bags, £7 1s 3d to £7 3s 9d per ton; Linseed Cake, English, prime, in bulk, £8 5s to £8 10s per ton; Linseed Cake, foreign, round, prime, soft and oily, in bags, £8 2s 6d per ton; Cottonseed Cake, N.A., decorticated, prime, new, in bags, £7 1s 3d to £7 5s per ton; Cottonseed Cake, English, decorticated, prime, soft, in bags, £7 2s 6d to £7 7s 6d per ton; Cottonseed Cake, English, undecorticated, prime, in bulk, £4 7s 6d to £4 12s 6d per ton; Cottonseed Cake (crushed), 20.25 per cent. oil, prime, in bags, £7 2s 6d per ton; Maize Germ Meal, prime, in bags, £5 17s 6d per ton; Rice Meal, Rangoon, as imported, in bags, £4 17s 6d to £5 per ton; Indian Meal, coarse to fine grinding, prime, in bulk, 12s to 12s 3d per 240lb; Linseed, fine bold feeding, in bags, £3 2s to £3 4s per qr, 416lb; D.N.S. Brand Superphosphate of Lime, guaranteed, 25 to 27 sol., in bags, £2 5s to £2 7s; D.N.S. Brand Superphosphate of Lime, guaranteed, 30 to 31 sol., in bags, £2 10s to £2 12s; Superphosphate of Lime, guaranteed 35 to 36 sol., in bags, £3 to £3 2s per ton at depot inland; Basic Slag, prime quality, 30 to 35 per cent. phos., in bags, nominal; Basic Slag, prime quality, 35 to 40 per cent. phos., in bags, nominal.—H. JONES LANGAR AND CO.

SEEDS

London, Monday.—Messrs. John Shaw and Sons, seed merchants, of Great Maze Pond, Borough, London, S.E., report a steady seasonable sale for those kinds of farm seeds required for immediate sowing. Fine English red cloverseed having become scarce, holds well its own; low qualities, however, meet with but little favour. There is no quotable change in either alsyke or trefoil, but white, which now shows a considerable drop from top values still tends downwards. As regards both timothy and lucerne, stocks have dwindled to quite narrow limits, and substantially higher prices are consequently demanded. Meantime, last week's rates are quoted for sainfoin and cocksfoot. Rapeseed exhibits no movement in value, as has been the case for many months now. Low quotations prevail for mustard seed. With respect to haricot beans, there is a better business doing; but blue peas continue dull.

GAME AND POULTRY.

Smithfield, Saturday.—Large supplies, dull demand, and business ruled slow. Quotations:—Fowls: Yorkshire, 3s to 3s 6d; Boston, 2s 6d to 3s; Essex, 3s to 3s 3d; Surrey, 3s 6d to 4s 6d; Sussex, 3s 6d to 4s; Welsh, 2s 6d to 3s; Irish, 2s 3d to 2s 9d; turkeys (cocks), 6s 6d to 8s 6d; (hens), 4s to 5s; goslings, 6s 6d to 8s; Aylesbury ducklings, 5s to 6s; country, 4s to 4s 6d; pigeons, 8d to 1s 2d; quail, 10d to 1s; wild rabbits, 6d to 9d; tame, 1s to 1s 4d each; Australian, 8s 9d to 11s per dozen. Dutch wild fowl: Wild ducks, 2s 3d to 2s 9d; widgeon, 1s to 1s 4d; pintail, 1s 3d to 1s 6d; teal, 1s to 1s 2d; black plover, 8d to 9d; plover eggs, 2s 6d to 2s 9d per dozen. Russian game: Capercailzie, cock, 3s; hen, 2s; partridges 1s to 1s 3d; ptarmigan, 8d to 10d; black game, 1s to 1s 1d; brown hares 1s 6d to 1s 9d; white, 1s 2d to 1s 4d each.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 185qrs from Bahia Blanca, 296qrs Bombay, 14,439qrs Buenos Ayres, 15qrs Catania, 25qrs Harlingen, 14,688qrs Rosario, 5,006qrs San Pedro, 2,015qrs San Nicholas, 15,451qrs Villa Constitution; total, 52,120qrs. The week opened quiet, but with small shipments of Plate took a firmer tone, and prices recovered 1s 6d to 2s per qr; but with the heavy Calcutta shipments the improvement has been lost, and the market closes dull and inactive. Calcutta, April-June, closes with sellers at 51s 3d. River Plate, 48s, sellers spot; 48s to 48s 6d afloat, according to position. Cottonseed: There has been more trade in this article since our last, and Old Crop sold at up to £7 spot; £6 18s 9d passage and April-June, which are still the values; and market firm to-day. A little New Crop, November-January, changed hands at £6 6s 3d, but buyers generally not to be found over £6 5s. Oils.—Exports for the week ending April 1, 1902:—Linseed oil: 2 Denmark, 3 Germany, 8 India, 15 Norway; total, 28 tons. Cotton oil: 160 Belgium, 24 Denmark, 30 France, 105 Germany, 142 Holland, 13 India, 2 Norway, 32 Sweden; total, 508 tons. The market is quiet. Linseed oil: 28s 3d spot; 28s 3d May-August. Cotton oil: 23s 6d spot; 23s 6d May-August. Crude: 22s 3d spot; 22s 4½d May-August. Rape oil: Jamba, naked, 24s spot; first quality, 24s 9d spot. Oil seed cakes:—Linseed cakes: Steady, and 2s 6d per ton cheaper on the week; demand rather better. Cotton cakes: Firm, at 2s 6d advance, with steady demand.—KEIGHLEY, MAXSTED, AND CO.

London, Thursday.—There was a considerable decrease in the shipments from the Plate last week, but those from India were heavy, particularly from Bombay. Shippers now appear to be more anxious to realise, consequently prices have declined. Spot Calcutta to London, 50s.; passage, 50s; April-June business done at 50s. La Plata on passage, 48s. Hull has advanced, and since receded about 6d per quarter. Calcutta, April-June, 50s 6d. La Plata, spot, 47s; March-April, 48s. To the Continent, Bombay, April-May, 53s 6d; June-July, 53s 9d; Calcutta, April-June, 50s 9d. La Plata afloat, 47s 6d; March-April, 48s 6d. Linseed oil has not fluctuated so violently as during the past few weeks, and closes at about unchanged rates. We quote spot in pipes, £29 15s to £30; barrels, £30; May-August, £29 5s; September-December, £28 5s. Hull naked spot, £28 7s. 6d., which is also the quotation up to August. Linseed cakes are steady. We to-day quote London made £8 5s to £8 7s 6d ex mill; American Western, £7 7s 6d to £7 10s; Russian, £7 12s 6d to £8 2s 6d. Cotton cakes quiet, London made £4 6s 3d to £4 7s 6d. Rapeseed is firmer, with more demand. Brown Cawnpore, April-May, 37s; Brown Calcutta, April-June, 36s. To the Continent we quote Yellow Guzerat, 41s 6d; Yellow Cawnpore, April-May, 39s 4½d; Brown Cawnpore, March-May, 37s 3d; Brown Calcutta, April-June, 36s 3d. Ferozepore, February-March, 37s 3d; Jamba, March-May, to Hull, 31s 6d. Cottonseed.—Alexandria has continued to advance, and buyers here have been obliged to follow, at the same time the high rates now demanded is restricting business. Passage London, £7; April-May, £7 3s 9d. Hull spot to April-June, £6 12s 9d buyers' November-January, £6 7s 6d sellers. Cargoes, May is held for £7 6s 3d. Bombay to Hull—A large business has been done for April-May at £4 15s, and May-June at £4 16s 3d; sellers now are holding for £4 17s 6d.—THE PRODUCE BROKERS COMPANY, LTD.

Mark Lane, Monday.—Linseed cakes: Supplies of foreign continue light, and with only small stocks in warehouse, the general tone of the market is firm, with a good enquiry for forward shipments. Russians offer sparingly at 2s 6d per ton less money. Americans are in good request, being relatively cheap at unchanged prices. Calcutta, made in bags, may be bought at £7 15s, to arrive. English do not find an active demand, while crushers ask 2s 6d to 5s per ton under last week's quotations. Cotton cakes: In the absence of any fresh arrivals, values remain steady, and with a slightly improved demand, coupled with the high price of seed, there is an inclination on the part of holders to advance prices. Egyptians offer at 2s 6d per ton more money, which is the same in the case of English. Decorticated move off slowly, on slightly easier terms; and meal unchanged. Rape cakes unchanged. Maize germ meal: Very little American offers, and needy buyers are compelled to pay full prices of 5s per ton more money, while English is obtainable at 2s 6d per ton advance. Rice meal: Landed lots of Rangoon make £4 15s to £5, but a steamer parcel due the end of the month is procurable at £4 6s 3d to £4 7s 6d ex ship.

HOPS.

Canterbury, Saturday.—A fair amount of business has been done. Values of the few hops of choice quality remaining have advanced from 20s. to 30s per cwt. from bottom prices, and other better class produce is sharing in the improvement. Selected East Kent goldings are quoted up to 34s per cwt.

Worcester, Saturday.—Hops are firmer on our market this week, and for the better sorts more money is being asked. There is a scarcity of really good, useful qualities, and for these better prices are being asked.—PIERCY AND CO.

STOCK AND SHOW NOTES.

By Herdsman.

H.R.H. the Prince of Wales has intimated his intention if visiting the Royal Counties Agricultural Society's Show at Reading, on June 13. His Royal Highness will be received in Reading by the Mayor and Corporation, presented with an address, and then proceed to the show yard, where he will be welcomed by the reception committee which has been appointed. H.R.H. Prince Christian of Schleswig-Holstein has also promised to visit the show.

The Corporation of Southampton has, in response to a request from the Royal Counties Agricultural Society, decided to invite the Society to hold its annual show on Southampton Common next year.

The rumour that the Beef Trust, which was stated some days ago to have been formed in America, is likely to be followed by the establishment of a similar monopoly in this country appears to be entirely discredited in Smithfield. In the course of a conversation, a manager of one of the largest firms of meat importers has informed a "Daily Chronicle" representative that, not only is the idea of a meat trust in this country absolutely scouted, but it is not believed that one exists in America. "It is true," he added, "that the shipments of dead meat from the United States has been smaller of late, causing a shortage in the London market, together with a rise in price, but that is mainly due to the high price of American corn. This has caused the American farmers to sell corn rather than feed cattle, which take about three years to properly fatten in that country, although a much shorter time in this. Such a state of things is especially felt at this particular time of the year, when we are mainly dependent on America for our supplies of beef. At the end of the London season British meat will be coming in again, and prices will probably be lowered."

The American Meat Trust has, it is alleged, already caused prices to advance considerably. A year ago prime loin roast beef sold for 14c. a pound, while now it sells for 20c.; porterhouse steaks sold for 15c., and now sell for 24c.; bacon sold for 14c., and now it sells for 18c.; veal has increased from 14c. to 17c., and mutton from 9c. to 13c. These are said to be the highest prices on record in the United States. Undoubtedly part of the present advance is attributable to oats and corn shortages and to consequent rise in the price of cattle, but this by no means accounts for the almost prohibitive figures at which fresh meat is now selling. So violent is the outcry from all parts of the United States against the present scale of prices that it seems to be probable that the trust will abandon its intention to maintain high quotations. A legislative inquiry into the case is being demanded on all hands. That Congress can do anything is questionable, but action is looked for by the State Legislatures.

There is every prospect of the 1903 show of the Devon County Agricultural Association being held at Crediton. Mr. E. C. Norrish, a member of the Council of the Association, attended a recent meeting of the Crediton Urban District, by request, to give any information that members might require, with a view to their inviting the Association to hold the 1903 show at Crediton. It was stated that there was a feeling in both the urban and rural district of Crediton that an invitation should be sent to the Association, and an excellent site could be obtained for the show. It was pointed out that there was a sum of about £175 at the bank ready to be used, this being the balance of money, with the interest which had accumulated, that was not spent on the occasion of the last visit of the Association to Crediton. Eventually it was decided to call a public meeting, to be held on April 26—Great Market Day—for the question to be discussed.

A statement of interest to breeders of Highland ponies was made at a meeting of the Inverness Farmers' Society, last week, by Mr. Fraser Tytler, of Aldourie, who was out in South Africa with the first contingent of Lovat's Scouts. He said that the Government was about to take a practical interest in the rearing of the old breed of Higland pony. Professor Ewart has received a free hand from the Government in the matter, and the probable course to be adopted was that the military would purchase their three-year-old unbroken ponies, and thereafter train them at Government establishments. He had seen the Highland pony tried in Africa, and nothing could beat it. While other animals died like flies, the pony he knew refused to succumb till it was shot.

At Kansas City, on March 18, the herd of Colonel Nelson, a well-known Shorthorn breeder on the other side, was put up to auction in its entirety. The average obtained was very satisfactory, while some splendid individual prices were realised. As usual, imported cattle were favoured with most attention. The list was topped by Lavender Lily, an imported cow by Augustin. She was knocked down to Mr. D. R. Hanna for £320. Close on her heels came Miranda, another imported cow, that went for £300 to the same purchaser. Mr. Hanna also purchased the next highly-priced animal, which was Village Belle, a daughter of Prince Victor. The Belle cost Mr. Hanna £216, and was cheap at the price. The highest-priced bull was the imported Bapton Arrow, which was bought by Mr. S. Shelby at £150. The average for 47 females was a trifle over £72, while nine bulls obtained an average of £47. Another large sale of Shorthorns was held at Ireton, Iowa, on March 20 and 21. The only imported animal was Gladys of Dalmeny, and she fetched £240, a very easy price, considering her merits and the fact that her cow calf went in the bargain.

A very satisfactory report was presented at the annual meeting of the members of the Eye Colt Show Society last week. The year commenced with a balance in hand of £31 17s. 4d., whereas at the finish it had increased to £43 4s. 3d., so that the year's working resulted in a profit of £11 6s. 11d. Subscriptions, donations, and entrance fees totalled £129 8s. 6d.; gate money at the show amounted to £20 11s. 6d., and miscellaneous to £7 13s.; whilst all expenses amount to £146 6s. 1d. The date of this year's show was fixed for July 7, and it is to be hoped that it will prove as successful as last year, for it is deserving of success.

Colonel McCalmont, M.P., has offered the Wickhambrook and South Suffolk Colt Show Society the same ground at Newmarket as the County Show was held on a few years back, for their show this year, and, in addition, has given £25 towards the prize fund. As may be imagined, both offers have been gratefully accepted and the donor heartily thanked for his generosity. The date chosen for the show is July 11.

I have received Vol. XXVI. of the Polled Cattle Herd Book. This contains bulls 18682-20037 and cows 31231-33042. In all, there are included the pedigrees of 3,168 animals, of which 1,356 are bulls and 1,812 cows and heifers.

The herd of pure-bred Shorthorns founded by Mr. Raven at The Hydes, near Thanted, Essex, in 1889, is to be disposed of by auction on May 16, Messrs. Thornton being the auctioneers. The herd has, since its commencement, been carried on as a practical dairy, and not exhibited, the young bulls dispersed in the neighbourhood having already begun to improve the general stock of the district. Every animal has been bred on the farm. The stock brought down by Mr. Raven from Cumberland when he first came to Essex were typical animals of the Cumberland Shorthorn, being of large frame, hairy, and of good constitution, with excellent udders and great milking properties, some of the cows giving upwards of a thousand gallons a year. They were started on sound foundations from the stock of Mr. John Hunter, of Moresby Hall, and Mr. J. Bowman, of Sandwith, his famous bull, Borough Member 33186, being one of the earliest sires. Many other well-known sires have assisted in bringing the herd to its present excellence.

Another important sale of Shorthorns to be held in May is the dispersal of the herd belonging to Sir Walter Thorburn, at Orchardmains, Inverleithen, Peebles-shire, Messrs. Macdonald, Fraser, and Co., Limited, conducting the sale. The herd was first founded by the purchase at the Hon. Baillie Hamil-

THE SHORTHORN BULL which forms the subject of the above illustration is "Lord James Douglas," and was bred by Mr. J. Handley. At the Show and Sale of Shorthorns at Birmingham on March 16, "Lord James Douglas" was exhibited by Mr. Handley in the class for bulls over thirty months old, and succeeded in carrying off the premier award.

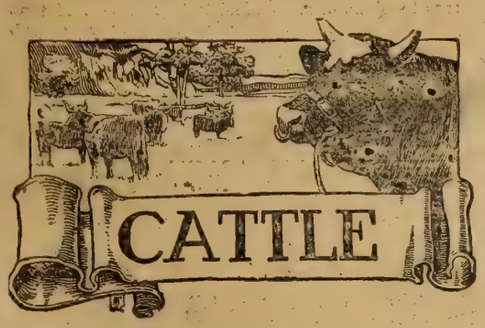
ton's (of Langton) dispersion sale of good breeding cow, Red Rose of Langton 2nd, in the year 1889; the purchase of a select draft of cows and heifers from the old-established herd of Mr. Muir's (Deyhope, Selkirk)) and from the herd of Mr. James Ingram (of Troup, Banffshire), four extra good cows; also a purchase of four selected heifers from the herd of his Grace the Duke of Buccleuch, Dalkeith Park. With the exception of four of the oldest cows, they have all been bred on the farm.

On Friday next Messrs. Mansell and Co. will dispose of a number of Shorthorns belonging to Messrs. P. A. and G. T. Evans, at Sherlowe, Wellington, Salop. The catalogue comprises 70 highly-descended Shorthorns, including a fine lot of deep-milking young cows and beautiful heifers bred in 1900, also 13 young bulls from 12 to 18 months old. The Sherlowe herd was established upwards of 60 years ago by the present proprietor's father (the late Mr. John Evans), who was recognised as a breeder possessed of exceptionally sound judgment. The herd contains many of the choicest families of Bates and Knightley blood, embracing the Oxford, Cambridge Rose, Waterloo, Barrington, Winsome, Sweetheart, Darlington, Craggs, and Foggathorpe tribes, and included in the sale will be the entire rear of two and three-year-old heifers (already prize winners), in showyard form, some of which are closely allied to the R.A.S.E. first prize Newcastle heifer, Lady Oxford Waterloo 5th, sold by the Messrs. Evans for 250 guineas. As is well known, Shorthorns from the Sherlowe herd have taken high honours in all the leading showyards, and it may be remembered that since the last sale—in 1898—no fewer than 19 first and 12 second prizes have been won by the herd. The animals are short-legged, deep-fleshed cattle, principally good reds or roans, in a nice, healthy, breeding state. The sale will commence after 12 o'clock luncheon, and for the convenience of buyers attending, conveyances will be in attendance at Shrewsbury, Wellington, and Crudgington Stations on the day of the sale.

The Edinburgh Show.

The premium list of the show of the Edinburgh Agricultural Association, which is to be held in the Hawkhill Recreation Grounds, on Wednesday, 11th June, has been issued by the secretary, Mr. James Wylie, Royal Bank, Leven Street, Edinburgh. The total premiums offered amount to £661 15s., of which £432 5s. is allocated for horses, turnsout, and jumping; £114 for cattle, £74 for sheep, £6 10s. for dairy produce, and £35 for naval and mounted sports. There are besides two challenge cups, special prizes in kind, silver and bronze medals, etc.

The classes for horses are practically the same as last year, except that two new classes for army remounts have been added, with liberal premiums. A champion prize of £10 is given for the best male Clydesdale, and anthoer of equal value for the best female Clydesdale at the show. The hunter classes are, as usual, liberally provided for. The premiums for hackneys are exactly the same as last year. The special prizes for hackneys are:—Challenge cup and silver medal for best stallion, and silver medal for best hackney mare. The premiums offered for roadsters, ponies, Shetland ponies, turnsout, and jumping are the same as last show, and the premiums offered are liberal. This year, for the first time, a champion prize of £5 is offered for the best Shetland pony at the show.



The usual classes for shorthorns, Aberdeen-Angus, and Jerseys are included, and no alteration has been made in the classes or the prizes offered. In the Jersey section a handsome challenge bowl is offered for the best Jersey. In the sheep section a slight alteration has been made in the classes for Border, Leicesters, that for aged rams having been deleted, otherwise the classes and prizes offered remain as before.

The following gentlemen will be the judges:—

HORSES.—Clydesdale stallions, geldings, and van horses: James Crawford, Floshend, Gretna; James Allison, Claylands, Ratho. Clydesdale mares: James Weir, Sandilands, Lanark; Matthew Marshall, Stranraer. Hunter brood mares and young stock: James Hope, East Barns, Dunbar. Made hunters, remounts, and jumping: William Forbes, of Callendar, Falkirk; J. W. J. Paterson, Terrona, Langholm. Hackneys and turnout: Frank Brough, 1, Margaret Street, Regent Street, London. Roadsters, ponies, and turnsout: R. H. Walker, of Hartwood, West Calder. Shetland ponies: James Duncan, Fern Villa, Inverness.

CATTLE.—Shorthorns: Alexander Robertson, Ballechin, Ballinluig. Aberdeen-Angus: George Bruce, Tochineal, Culen. Jerseys: W. G. M. Townley, Hard Cragg, Grange-over-Sands.

SHEEP.—Border Leicesters: Andrew Smith, Longniddry, East Lothian. Black-faced: James Duncan, Mains, Port Bannatyne, Bute. Half-breds: John Mark, Sunnyside, Prestonkirk.

The Waresley Park Shorthorns.

A sale at Waresley Park, whether it be of Shires or Shorthorns, is sure to attract a large and distinguished company. The sale of the larger part of the herd on Friday proved no exception, for breeders and buyers assembled from all parts of the country. Many of the animals offered are already well known in the prize ring, and others are promising for this season's shows. The first cow to make a good price was Red Robe, a first-prize winner at the Dairy Show, and one of Captain Duncombe's prize family at the Yorkshire shows; she was bought for 75 gns. to join Mr. Greenwell's herd in Kent, her sister, Ruby Rose, going to Lord Barnard at 100 gns. Riby Maritana 2nd, of Mr. Dudding's breeding, brought 62 gns., and goes to the Royal Farm at Windsor. The grand roan cow Warrior Queen, first prize at Cardiff (Royal Show), made, as was expected, the highest price of the day. She met keen competition, and subsequently fell to the bid of 180 gns. from Lord Calthorpe's agent. Acomb Scottish Bride, a beautiful roan heifer, of Bates and Scotch blood, quickly ran up to 150 gns., and was bought as were several of the other best animals, by Mr. Walpole Greenwell. Among the bulls, Manor Victory was considered the pick, and although now in his fourth year, he reached 110 gns., and joins the famous Warlaby herd. Messrs. Thornton and Co. were the auctioneers. The following is a list of the buyers and prices:—

COWS AND HEIFERS.

The Late Lord Rookwood's Jerseys.

The entire herd of Jerseys bred by the late Lord Rookwood was sold on Wednesday by Messrs. Thornton and Co. Unfortunately the pedigrees of some of the animals has been lost, and these, although pure bred, had to be sold without any record of their breeding. The sale included some good milking cattle descended from some of the best English-bred strains, and although no high prices were reached, they met with a ready sale, and the useful average of just over £16 was realised. The following were the best prices, with buyers' names:—

COWS AND HEIFERS.

	Gns.
Dusky 3rd, fawn Jersey cow, c Feb 19, 1902 ..... Mr. Hilliard	28
St. Ronans, fawn Jersey cow, c Jan 19, 1902 ..... Bishop of Colchester	19
Lady Salisbury, whole colour, c July 4, 1892 ..... Colonel Shaw Heller	16
Fancy, fawn, c Jan 9, 1895 ..... Mr. Kinderdine	26
Fussy, whole colour, c October 13, 1895 ..... Mr. Hervey Bathurst	30
Lucy Glitter, whole colour, c April 10, 1898 ..... The Ladies Hope	21
Useful, whole colour, c September 16, 1898 ..... Mr. Hilliard	27
Twilight, grey, c Feb 11, 1899 ..... Mr. Hilliard	19

Show and Sale of Shorthorn Bulls at Gloucester.

Messrs. Bruton Knowles and Co.'s annual bull sale at Gloucester April Fair, held on the 5th inst. in Gloucester Cattle Market, was, as usual, well attended, and good business was done. The entries were not quite so large as last year, but the collection of bulls was generally acknowledged to be one of the best seen at this fair. The catalogue consisted of 66 Shorthorn bulls, chiefly pure-bred, and from some of the most eminent local breeders. Messrs. James Peter, Berkeley, and Richard Stratton, The Duffryn, Newport (Mon.), were the judges, but in the championship the competition was so keen and the relative merit of the animals so nearly equal, that a third gentleman, Mr. Pybus, had to be called into the ring to aid the judges in making final decision.

In the first class a prize of five guineas was offered for the best Shorthorn bull exceeding 21 months old. This was won by Baron Peggles-worth, a roan bull, the property of Mr. D. G. Bingham, Shipton Sollars, Andoversford, which was eventually sold for 48 guineas to Mr. H. Van Beuningen, to go to Holland. This price constitutes a record for Messrs. Bruton, Knowles, and Co.'s bull sales. Ewerby Sirdar, shown by Mr. R. H. Norman, Box Farm, Newnham, was reserve and highly recommended, and was sold to Mr. Prosser, Cardiff, for 28 guineas. Mr. F. C. Ebborn, Northington, Awre, got a highly-commended ticket for Duke of Gloucester II., sold to Mr. John Fowler, Tirley, for 24 guineas, whilst Mr. C. A. Hewitt's Sea King, which was commended, was sold to Mr. Willis for 23 guineas.

The second class was for Shorthorn bulls exceeding 15 and not exceeding 21 months old, and three prizes were given. The first was taken by Weston Lad 2nd, bred by and the property of Mr. John A. Bloss, Burton-on-the-Water. This bull, a roan, calved in September, 1900, took all before it in the championship and special prizes. It gained the prize of £10 10s. given by the Gloucester Traders' Association for the best bull exceeding nine and not exceeding 30 months old, the property of a landowner or tenant farmer farming within the county of Gloucester, or within a radius of 15 miles of Gloucester Cross; the prize of £5 5s. given by Sir John Dorington, Bart., M.P., for the best bull exceeding nine and not exceeding 30 months old, the property of a tenant farmer farming within the county of Gloucestershire; and champion prize of £10 10s. given by the auctioneers for the best bull in any class. Still it did not realise such a high price as the first prize bull in the first class, being sold to Mr. Cullimore, of Mobley, erkeley, for 42 guineas. Other prizes and prices in the class were as follows:—2, Substance, shown by Mr. Charles Bathurst, Lydney Park, and sold to Mr. W. Archer, Morton Court Farm, for 30 guineas; 3, Mobley Prince, shown by Mr. G. F. Cullimore, Mobley, Berkeley, purchased by Mrs. Ind, Matson, for 25 guineas; r. and h.c., Mr. W. S. Dowding's (Longney) Red Robin, sold to Mr. H. Beck, Elmore, for 24 guineas; Mr. B. Read's (Enedgeley) highly-commended Beau Victor realised 30 guineas, Mr. Griffith being the purchaser; whilst the commended Lord Pearl, exhibited by Mr. D. G. Bingham, brought 23 guineas from Mr. W. P. Hill, Slimbridge.

The best Shorthorn bull over 12 and under 15 months old was Standish Beau, exhibited by Mr. H. G. Bush, Keynsham, Bristol, Lionel, shown by Mr. Andrew Knowles, Newent, being second, Mr. Knowles's Lord Rufus was third, a roan bull shown by Mr. Peter Stubs fourth. First Consul, Mr. G. Freeman, Sherborne, Northleach, reserve and highly commend, Angelus, Mr. J. N. Attwater, Cirencester, highly commended, and a roan bull shown by Mr. Peter Stubs, commended. The prices realised by these animals were as follows:—Mr. Bush's Standish Beau sold to Mr. P. Jenkins, Magon Grange, for 33 guineas; Mr. Knowles's Lionel to Mr. Wood, Arle, Cheltenham, for 23 guineas; Mr. Knowles's Lord Rufus to Mr. Dee, Pershore, for 26 guineas; Mr. Stubs fourth prize roan bull to Mr. Heanley, Wychwood, Oxford, for 25 guineas; Mr. Freeman's First Consul to Mr. W. H. Tremaine, Sherborne, for 23 guineas; Mr. Attwater's Angelus to Mr. E. Cullimore for 31 guineas; and Mr. Stubs' commended bull to Mr. W. Paul, Twigworth, for 22 guineas.

Four prizes were also given in the class for bulls over nine and under twelve months old, and they were as follows:—1, Mr. G. Freeman (Fascination); 2, Mr. W. T. Stevens, Ranbury, Fairford (Yeoman) 3, Mr. G. F. King, Chewton, Bristol (Chewton Cornelius VIII.); 4, Mr. Peter Stubs (roan bull); h.c., Mr. A. J. Ponting, Painswick (Phantom's Prince); h.c., Mr. W. S. Dowding, Longney Rufus); h.c., Mr. Wm. Archer, Norton Court Farm (Carlo); c., Mr. W. Archer (Hero); c., Messrs. D. and C. Savage, Wottonunder-Edge (Duke of Gloucester XII.); c., Mr. W. Archer (Red Lord); c., Mr. J. N. Attwater (Edwin). Mr. Freeman's Fascination found a purchaser in Mr. Rheam (on behalf of the committee of Barnwood House) at 29 guineas; Mr. Stevens' Yeoman went to Mr. A. Rymer, Chepstow, for 26 guineas; Mr. King's Chewton Cornelius VIII. to Mr. Pitman, Hill Ash, Dymock, for 20 guineas; Mr. Stubs' fourth prize bull to Mr. Crompton Roberts, Trelleck Grange, for 24 guineas; Mr. Ponting's Phantom Prince, withdrawn at 29 guineas; Mr. Archer's Carlo to Mr. A. L. Critchley, Hunt Court, Cheltenham, for 21 guineas; Mr. Archer's Red Lord to Mr. G. Long, Barnwood, for 20 guineas. The sale was a most satisfactory one throughout, the average price of bulls sold being £21 6s., as against £17 12s., last year and £16 4s. in 1900.

Sale of the Havering Park Jerseys

A large and distinguished company attended the sale of Mrs. Macintosh's herd of Jersey cattle, held on Tuesday at Havering Park, near Romford, Essex, the auctioneers being Messrs. J. Thornton and Co. The cattle had been most successful at last season's show, and were admirably brought out, the fine lot of cows and yearling heifers being much admired. The sale was held under canvas, and everything was nicely arranged for the comfort of the visitors. The older cows met with ready bidders, several of them making up to 40 guineas each. Havering Glarissa 2nd, the first prize heifer at the Royal Counties Show at Weymouth, sold for 87 guineas to Mr. J. Joicey, and the same price was also paid by Lord Winchester for Dusky Jane, who was by a son of Golden Lad. There was a good trade for the bulls, Butterman, first prize at the R.A.S.E. Show at Cardiff, making 66 guineas, to Sir Thomas Gooch, and Camaties Gem 70 guineas, to T. Fisher. Unfortunately several of the younger bulls were a trifle lame, and were passed. An average of £36 14s. was obtained for 43 lots. We append a sale list:—

White Scour and Lung Disease in Calves.

Strong evidence of the usefulness of the Irish Department of Agriculture and Technical Instruction for Ireland is provided in the report of an inquiry conducted under the auspices of the Board by Professor Nocard, the well-known French veterinarian, into the causes of the excessive mortality amongst calves in Munster. It is stated that the experiments were the practical outcome of a conference held in Limerick in December, 1900, in co-operation with the Limerick County Council, relative to the cause of the high annual death rate among young calves in the South-West of Ireland.

We reprint here for the benefit of our readers the net outcome of Professor Nocard's researches as given in the report. He has established the following important results:—

1. That "white scour" and "lung disease"—the cause of the excessive mortality—in calves, in spite of the difference in the seat and symptoms of these maladies, are one and the same disease.

2. That this disease is caused by a specific microbe or "Pasteurella," which Professor Nocard identifies with the microbe which in the horse produces pseudo-farcinous ulcerative lymphangitis, and in the sheep adenitis and caseous broncho-pneumonia.

3. That it is by the umbilicus or navel cord, and at the moment of parturition that the germs of the malady enter.

4. That a prophylactic treatment of the umbilical infection will succeed in stamping out lung disease as well as white scour.

These results, it is needless to say, are of immense importance. They place in the hands of the farmers of Munster the means, by the careful employment of simple preventive measures, of stamping out a disease which has long caused an enormous annual loss amongst their herds. Professor Nocard, in the opinion of the Department, has placed the agriculturists not of Ireland only, but of the entire world, under obligations by the most successful issue of his admirably conceived series of experiments and investigations.

The Department has decided to carry out the preventive methods recommended by Professor Nocard, and the results will be reported on at the end of the season 1902.

A Veterinary Surgeon on Tuberculosis.

In the first number of the "Provincial Veterinary Quarterly," which has recently made its appearance, there is a striking editorial article dealing with the subject of tuberculosis. The writer (Mr. John Howard, M.R.C.V.S., L.H.A.S.S., etc.), hold the same view as Dr. Hock, and, as will be seen from the extracts given below, he gives some strong facts in support of his opinion. After having pointed out that tuberculosis of cattle has been considered highly infectious, and that phthisis in mankind was said to be solely due to the consumption of the flesh and milk of cattle, Mr. Howard says he has been

We have in Hindostan 200,000,000 of Hindus, who by their religion are forbidden the use of beef entirely. No milk can be used from any animal, unless properly cooked. These millions strictly adhere to this rule of their caste, and would rather perish than break it. For thousands of years, even before the days of the Pharaohs, their ancestors rigidly stuck to these religious rules; the Zebu, or Indian ox, being, like the Apis of the Egyptians, a sacred animal, and much reverenced. Notwithstanding this total abstinence from beef and raw milk, we find that the great Hindu nation suffered as much from phthisis as any other under the sun, and in this we must include the Brahmins, or priests, who are not allowed to eat anything that has breathed the breath of life.

The Mohammedans of India, their neighbours, are large consumers of beef and milk. They are the most athletic race of the two; the Mussulman of India being far and away stronger, of greater courage, weight, and stamina; yet, notwithstanding their bovine diet, phthisis is much less frequent among them; thus showing that beef-eating is rather a preventive than a cause of phthisis.

The Jewish nation dwelling with us have in all ages been careful to eat sound beef only, every ox being carefully examined before and after slaughter, and the slightest abnormality condemns the whole animal. When passed sound, the forequarters only are eaten, the joints for consumption being first macerated in salt and water, then thoroughly cooked to juicelessness. Milk is little used, and when used must be cooked. The internal organs are forbidden as food. All mammals that do not divide the hoof and chew the cud are forbidden—tame or wild—and notwithstanding this unfailing supervision we find that the Jews are everywhere suffering from phthisis quite as much as their neighbours the Gentiles, and quite recently a big sum of money, left by a Hebrew merchant for charities, was devoted to the building of a large Jewish hospital for consumptives. Then why blame the ox and his products for phthisis when it is evident that, whether they are used or unused, whether they are absent or present, tuberculosis is always there, on the usual scale, with this never-failing result: that the beef-eaters and milk-drinkers always enjoy the best of it, in strength, stamina, and longevity.

It is certain that human phthisis has been a factor to be reckoned with throughout the ages, even before horned cattle were domesticated as we know them. It is the avenger of outraged structural and functional organisms, perpetuated by artificial conditions, which include all the grades of vice, riches, and plenitude, as well as the miseries of poverty, mal-procreation, and insanitation. Among the lower animals it chiefly prevails where anæmia, mal-nutrition, excessive lactation, exhaustion, insanitation, confinement, and unnatural conditions prevail, and these are general throughout the dairying districts. In cattle-raising districts, where milking for sale is

unknown, the animals live in large open crew-yards, and but little of this disease is seen, and when seen is imported from the fairs in dairy counties. The calves suck until they wean themselves, and are as big at one year old, as the half-starved calves from the dairying counties are at two years.

In concluding, Mr. Howard says:—If mankind has been infected from cattle, how comes it that the disease is rife among hundreds of millions, as I have seen it, who have never eaten of them nor their raw products, for even the butter is cooked and sold as ghee.

Particulars of Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.

The fair at Mullingar, Co. Westmeath, on Monday, was a large one, composed almost entirely of first and second class cattle. The demand was very active for aged bullocks in forward condition, and they were all brought up early; in fact, a good all-round clearance was effected at prices favouring sellers. There was but a small supply of sheep, but enough for the demand, which was slow throughout, except for animals suitable for export. A good many hoggets remained unsold. Prices:—Calves, 1st class, £5 to £5 10s.; 2nd class, £4 to £4 10s. Yearlings, 1st class, £7 15s. to £8 10s.; 2nd class, £6 5s. to £7. Two-year-olds, 1st class, £10 7s. 6d. to £11 15s.; 2nd class, £8 to £9 15s.; 3rd class, £6 5s. to £6 15s. Three-year-olds, 1st class, £14 to £17 5s.; 2nd class, £11 to £13. Springers, 1st class, £15 15s. to £16 10s.; 2nd class, £11 5s. to £12 10s.; 3rd class, £9 10s. to £10. Sheep: Over 12 and under 24 months old, 1st class, £1 12s. to £1 17s. 6d.; 2nd class, £1 7s. 6d. to £1 10s. Two years old and upwards, 1st class, £2 8s. to £2 16s.; 2nd class, £1 16s. to £2 2s.

At Kilmarnock, Co. Limerick, on Tuesday, there was a moderate-sized fair, composed chiefly of young cattle. A good demand prevailed all round, and a satisfactory clearance was effected. Prices:—Calves, 1st class, £5 10s. to £6 7s. 6d.; 2nd class, £3 to £5; yearlings, 1st class, £6 10s. to £8; 2nd class, £5 5s. to £6 5s.; two-year-olds, 1st class, £10 to £12 10s.; 2nd class, £7 10s. to £9 7s. 6d.; three-year-olds, 1st class, £13 to £14; 2nd class, £9 12s. 6d. to £11 10s.; springers, 1st class, £15 to £17; 2nd class, £11 10s. to £14. Young pigs, 8 to 10 weeks old, sold at from 20s. to 25s. each.

There was a large fair at Enniskillen, Co. Fermanagh, on Thursday, at which a good demand prevailed for all classes of cattle in fair condition, especially for yearling bullocks and nice two-year-old heifers. There was dull trade for springers. Prices: Yearlings, first class, £7 12s. 6d. to £8 12s. 6d.; second class, £5 16s. 3d. to £7 3s. 9d.; third class, £4 10s. to £5 5s. Two-year-olds, first class, £11 to £11 10s.; second class, £7 15s. to £10 10s.; third class, £6 10s. to £7 5s. Three-year-olds, first class, £13 to £13 15s.; second class, £10 15s. to £12; third class, £8 10s. to £9 10s. Springers, first class, £16 5s. to £18 10s.; second class, £12 15s. to £15 5s.; third class, £8 10s. to £10.

Sale at Ipswich.

Messrs. Robert Bond and Sons' second spring sale of horses took place at the Drill Hall, Ipswich, on Tuesday, the catalogue comprising 124 animals from the studs of various breeders. They included several cart horses, and nine pedigree Shire fillies foaled in 1899 and 1900, which received a great amount of attention from the buyers, who were forward in large numbers. A brisk trade was experienced for the best animals, and a capital clearance was effected. The nine Shire fillies met a keen demand, and sold at prices ranging from 37 guineas to 45 guineas. The best price of the sale, however, was made by a cart horse sent by Mr. G. S. Clarke, Offton. She was a six-year-old black mare named Brandy, and she realised 48 guineas. Some of the other principal prices were as follows:—

CART HORSES.

From Mr. R. Cubitt, Haughley.

	Gns
Bay gelding, 7 years	25
Bay mare, 6 years	25

From Mr. G. S. Clarke, Offton.

Brandy, black mare, 6 years	48

From Mr. T. Bond, Framsden.

Chestnut gelding, 7 years	20

From Mr. Hy. Hart, Gosbeck

Chestnut mare, 7 years	25
Black mare, 7 years	30

From Mr. E. Johnson, Barham.

Smiler, bay gelding, 6 years	32
Smart, bay mare, 6 years	27

From Messrs. Robert Bond and Sons, Bramford.

Chestnut gelding, 4 years	23½

From Mr. F. S. Lewin, Holbrook.

Chestnut mare	18½

From Mr. G. Blake, Lexden.

Smart, bay mare, 6 years	23

SHIRE FILLIES.

From Messrs. Robert Bond and Sons, Bramford.

Bay, f. 1899, s. Calwich Guardian	42
Greyleg, dark grey, f. 1899, s. Prince of Worsley	45
Emley Depper, dark grey, f. 1899, s. Thornton Fashion	37
Upminster Scylla, chestnut, f. 1899, s. Monroy	45
Flower (32125), bay, f. 1899, s. Farsfield Head Waggoner	39
Roan, eligible for Stud Book, f. 1899, s. Sopwell Lube	45
Bay, f. 1899, s. Markeaton Le Bon	37½
Redlynch Marigold, chestnut, f. 1900, s. Nailstone Royal Highness	45
Brown, f. 1900, s. Marmion Harold	30

CART HORSES.

From Mr. W. Carr, Barham.

Bay gelding, 9 years	25
Bay mare, 5 years	30

From Mr. F. Brook, Henley.

Bay mare, 5 years	30
Bay mare, 5 years	30

From Mr. A. Hutley, Wigborough.

Brock, bay Shire mare, rising 5 years	23

From Mr. T. Grubb, Fingringhoe.

Bowler, bay gelding	16

From Mr. T. Woodward's Exors., Stonham.

Duchess, chestnut Shire mare, 6 years	40
Doughty, chestnut Shire mare, 6 years	42

From Mr. W. Cross, Ixworth.

Bay mare, 5 years	34½
Bay mare, 7 years	39

THE PEN OF LINCOLN SHEEP shown above were bred by Mr. H. Dudding, Riby Grove Stallinboro', Great Grimsby. At the London Smithfield Club's Show last December these sheep won first prize in the class for pens of three fat wether sheep of the Lincoln breed above 12 and under 24 months old. They were also placed reserve for the Silver Cup for the best pen of Lincolns.

SHEEP.

The Lambing Season at the Colonial College.

The weather has continued favourable for lambing, and heavy falls of lambs are commonly met with, a very useful fact, as, owing to shortness of keep, some flocks have been reduced in numbers. The flock at the Colonial College, Hollerby Bay, continues to make a good fall; from the 280 ewes lambed there have been 537 lambs dropped, or nearly 1.9 lamb per ewe. The loss of ewes during lambing has been under 2 per cent, and considering that well over 100 lambs came as triplets, the loss of lambs has been satisfactorily few.—W. J. Malden, Colonial College, Hollerby Bay.

Board of Agriculture Criticised by Warwickshire Farmers.

At a meeting of the Warwickshire Chamber of Agriculture, held at Warwick, on the 5th inst., Mr. Oscar Bowen's recent paper on the "The Board of Agriculture—as it is, and as it might be," was discussed, and the report of the committee appointed to consider the paper was presented. The report was as follows:—"(1) We (the committee), whilst regarding fully the valuable services which have been rendered by the Board of Agriculture, agree with Mr. Oscar W. Bowen that the *personnel* of the Board, as at present constructed, is not sufficiently representative or effective in action.

"(2) As a result of this faulty construction, we consider that the Board of Agriculture does not adequately understand or appreciate the practical difficulties of farmers in carrying out its orders.

"(3) We welcome the desire of the Right Hon. R. W. Hanbury, M.P. (President of the Board of Agriculture)—as expressed by him at a meeting of the Taunton Farmers' Club, and at the annual agricultural dinner of the Central and Associated Chambers of Agriculture, and the Farmers' Club (held on the 10th of December last)—to obtain all the information he can with respect to the practical wants of agriculturists; but it must be obvious to everyone that the present construction of the Board does not materially assist him in obtaining that knowledge.

"(4) We are of opinion that a properly-constituted Board of Agriculture would take a far more active part in organising agricultural experiments, which are at present carried out all over England by isolated experimenters, and which have not the same value to agriculturists that they would have if organised and classified.

"(5) We regard it as necessary that the Board should be a supreme court of appeal for, and national supervisor of, the agricultural community, and that it should be entrusted by the Government with full powers to promote such legislation as might be necessary to enable the Board to achieve the above objects.

"(6) We cordially endorse Mr. Bowen's contention that the Board of Agriculture would be brought into closer touch with the agricultural community, and rendered more effective for good, if the representative element were admitted into the constitution of the Board.

"(7) We are further of opinion that the Rural District Councils might be entrusted with the duty of nominating proper persons connected with agriculture in their districts to sit upon the Board of Agriculture; but we observe that even if each Rural District Council only nominated one representative, the persons so nominated would be far too numerous for any practical purpose. We, therefore, respectfully and earnestly suggest that each County Council should select from such nominated representatives of the Rural District Councils one member only.

"(8) We also consider that the selected nominees of the District Councils would form a very useful body through whom the Board of Agriculture might obtain direct information or thoroughly instructive and reliable advice in regard to any particular locality."

After some discussion it was decided to have the report printed and to send copies, together with Mr. Bowen's paper, to the Central Chamber, to be placed on their agenda.

Lynn Hogget Fair was held on Tuesday, when over 19,000 hoggets were penned, this number exceeding last year's total by some 4,000. The hoggets were uniformly of good quality, but were backward in condition, owing to the lack of feed. The attendance of buyers and dealers was not so large as in previous years, and throughout the day trade ruled very slow. The bulk of the sheep sold were disposed of at rates ranging from 30s. to 40s. a head, prices running up to as high as 53s. in other cases.

SOCIETIES.

Royal Agricultural Society of England.

At the Monthly Council on Wednesday, April 9th, H.R.H. Prince Christian, K.G. (President), was in the chair. The minutes of the last meeting of the Council, held on March 5th, 1902, having been taken as read and approved, the election of the following Governor and thirty members was proceeded with:—

GOVERNOR.

Radnor, Earl of, Longford Castle, Salisbury.

MEMBERS.

Barlow, Frederick, White House, Rothwell, Kettering.
Bickham, Harry S. H., Underdown, Ledbury, Herefordshire.
Cassel, Sir Ernest, K.C.M.G., Moulton Paddocks, Newmarket.
Chirnside, George Thomas, Werribee Park, Victoria, Australia.
Fowler, George H., Basford Hall, Nottingham.
Frost, George Harwood, 63, Queen Victoria Street, E.C.
Gaddum, Arthur, Bowden, Cheshire.
Hargreaves, John, Thorncliffe, Wilpshire, near Blackburn.
Harvey, Harry, Stretton-on-Dunsmore, Rugby.
Haywood, William Matthews, Westfield House, near Hereford.
Holt, Philip Henry, Crofton, Aigburth, Liverpool.
Horton, Henry Anson, Catton Hall, Burton-on-Trent.
Infield, H. J., Sylvan Lodge, Brighton.
Kouleschoff, Professor Paul Nicholaievitch, Smolensky Boulevard, Moscow.
Lloyd, H. C., Mobberley Hall, Knutsford.
Lloyd, Thomas Owen, Budbrooke House, near Warwick.
Lund, Wilhelm, Cromlix, Chislehurst, Kent.
Mackenzie, Kenneth J. J., S.E. Agricultural College, Wye, Kent.
McMullen, Norman, Bengeo, Herts.
Maling, C. T., 14, Ellison Place, Newcastle-on-Tyne.
Norman, Mrs. Nora, Oakley, Bromley Common, Kent.
Page, Herbert, Hertford.
Pulley, Charles T., Lower Eaton, Hereford.
Rickerby, Joseph, 37, Botchergate, Carlisle.
Sanday, Samuel, Knolle Park, Woolton, Liverpool.
Siddle, John H., Crown Hotel, Penrith.
Stanning, John, Broadfield, Leyland, Preston.
Sykes, Captain Harold Platt, Cringle House, Cheadle, Cheshire.
Thatcher, Charles F., Lady's Well Brewery, Cork.
Thompson, William, Inglewood, Penrith.

The reports of the various standing committees were then presented and adopted as below:—

Finance.

Sir Nigel Kingscote (Chairman) reported that the accounts for the month of March, 1902, as certified by the Society's Accountants, showed total receipts amounting to £4,044 2s. 2d., and expenditure to £2,608 4s. 6d. Accounts amounting in all to £1,807 18s. 10d. had been passed, and were recommended for payment. The Committee laid upon the table the balance-sheet for the year 1901, as finally audited by the Society's Accountants, Messrs. Welton, Jones, and Co., and the three auditors appointed by the members, Messrs. Jonas M. Webb, Hubert J. Greenwood, and Newell P. Squarey. This balance-sheet, with the appended statements of ordinary and show receipts and expenditure, would be printed and circulated amongst the members of the Society, with the report of the Council to be presented at the anniversary general meeting to be held on the 22nd May next.

The quarterly statement of subscriptions, arrears, and property on March 31st, 1902, was also laid upon the table. The Committee had made further progress in removing from the registers the names of those members of the Society who had resigned or had from various causes ceased to pay their subscriptions, or who were deceased. The Committee regretted to report the death of Major William Sparks, of Crewkerne, who had been associated with the Society before the granting of its charter in 1840, and was in fact its senior member, having been elected a member of the English Agricultural Society on June 6th, 1838. Major Sparks died at Crewkerne on the 20th March, 1902, having nearly completed his ninety-first year.

House.

The Committee recommended that the thanks of the Society be sent to Miss Emily Dew for her presentation to the Society of an oil-painting of her great-uncle, the late Mr. John Monkhouse, a well-known breeder of Hereford cattle.

Journal.

Sir John Thorold (Chairman) reported the publication of the fifth edition of Sir George Brown's pamphlet on "Dentition as Indicative of the Age of the Animals of the Farm," and of a fourth and enlarged edition of the same author's pamphlet on "The Structure of the Horse's Foot and Principles of Shoeing."

Chemical and Woburn.

Mr. Bowen-Jones (Chairman) reported the Committee's recommendations on the conduct of the Society's field and feeding experiments at Woburn, and stated that both himself and the Society's consulting chemist had given evidence before the Poisons Committee of the Privy Council on March 12th, 1902, with regard to the sale of agricultural and horticultural preparations containing poisonous substances.

The Committee, in calling attention to an important decision by manufacturers of linseed cake, reminded the Council that for many years past the Society had endeavoured to impress upon its members the necessity of buying linseed cake under the simple guarantee of its being "pure and in good condition." The Council had repeatedly pointed out that guarantees such as "95 per cent. pure," "made of linseed of 95 per cent. purity," etc., afforded no security whatever to the purchaser, as they left out of account what the other 5 per cent. might be, and did not prevent the subsequent admixture of other ingredients.

Difficulties arising from this state of matters had been felt, not only by direct purchasers of linseed cake for use on their own farms, but by the numerous merchants and vendors of cake, not themselves manufacturers, throughout the country. This had resulted in a communication recently addressed to the British Oil and Cake Mills, Ltd. (an organisation comprising and controlling about one half of the principal firms of cake manufacturers in different parts of the country), which set out the difficulties under which merchants laboured, and asked whether the "95 per cent. purity" standard might not be done away with, and one of "pure" substituted for it.

From the correspondence it would appear that in some quarters it was by no means uncommon to find that after seed had been purchased on the "95 per cent. pure" basis, rape or other seed was mixed with it before the cake was made, and that, if seed bought on the "95 per cent." basis proved to be of 98 per cent. or 99 per cent. purity, it was not infrequently the custom with certain crushers to mix rape, etc., with it in order to bring it down to the "95 per cent." standard. Hence, those whose business it was to distribute cake were placed in a very uncertain position. The difficulty, they maintained, would be removed if the "95 per cent." standard were given up, and a standard of "pure" substituted for it.

The British Oil and Cake Mills, Ltd., had now decided that, so far as the branches under their control were concerned, they would give up the use of the "95 per cent." guarantee, and conform to the recommendations given by the Royal Agricultural Society of England, which were to the effect that linseed cake should be sold as "pure and in good condition."

The following were the requirements which a linseed cake should satisfy in order to be fairly termed a pure one, as mentioned in the Annual Report for 1887 of the Society's Consulting Chemist (Journal, Vol. for 1888, p. 301):—

1. That it be made from sound seed of not less than 95 per cent. purity, subsequently well screened.
2. That it contain no ingredients of a poisonous or deleterious nature.
3. That it be entirely free from admixture of any kind.
4. That it contain not more than 2 per cent of sand.
5. That it be sold in good merchantable condition.

The Committee regarded it as satisfactory that the Society's recommendations with regard to guarantee of purity would in future be accepted by the trade, for it had been pointed out over and over again that such a description as "95 per cent. pure" afforded no real security to the purchaser, and in no way served to discriminate between the honest and the "doubtful" manufacturer.

If, however, the manufacturers would agree to sell under the name "Linseed Cake," such cake only as could be reasonably guaranteed "pure and in good condition," a great point would be gained alike for the purchaser and the honest manufacturer; and, moreover, experience of several years past had shown clearly that the requirements of the Royal Agricultural Society of England could be readily complied with.

The consulting chemist had presented a report on various cases of adulteration, which the Committee recommended for publication with the proceedings.

Botanical and zoological.

Mr. Wheeler (Chairman) presented reports by the Society's Consulting Botanist (Mr. W. Carruthers, F.R.S.) and by the Zoologist (Mr. Cecil Warburton).

Testing Farm Seeds.

The committee had given careful consideration to a letter from the Highland and Agricultural Society of Scotland, as to the testing of farm seeds, and were of opinion that it would be desirable for a conference of representatives of both societies to be held with the view of ascertaining whether it would be possible for the two societies to agree upon a common line of action with reference to this matter, and upon uniform methods of testing the seeds and reporting the results.

The committee recommended that a letter of thanks be addressed to the United States Department of Agriculture for their courtesy in forwarding samples of American clover seed for the purpose of the society's proposed experiments at Woburn on the comparative value of English and American clover seed. They also recommended the purchase of a set of Professor Percival's specimens of the varieties of the chief European cereals.

SWINE FEVER.—The recent returns indicate a considerable decline in the prevalence of this disease. The total outbreaks reported during the last four weeks were 109, as against 286 in the same period of last year.

FOOT-AND-MOUTH DISEASE.—It is greatly to be regretted that this disease has again appeared, an outbreak having been discovered in the county of Kent, near Canterbury, in the last week in March. The animals first attacked were sheep, but since then the only two cattle on the farm have also contracted the disease. So far as is known, the source of the infection has not been traced.

RESEARCH LABORATORY.—During the month of March fifty-four morbid specimens were forwarded to the Royal Veterinary College for examination. These included the usual variety of diseased conditions, and one very rare case, viz., of tuberculosis in a sheep. Reports which have reached the laboratory show that in some parts of Wales rather serious losses from the disease caused by the Oestrus ovis have recently occurred amongst sheep.

Copies were laid upon the table of the annual report for 1901 of the Principal of the Royal Veterinary College, which had been printed and circulated in accordance with the directions given at the last meeting of the Council.

Stock Prizes and Judges' Selection Committees.

Mr. Sanday (chairman), in presenting reports from these committees, stated that the necessary instructions had been given for the completion of judges of live stock, poultry, and produce for the Carlisle meeting. A list of the gentlemen appointed will be found in another column.

Implement.

Mr. Sanday reported the receipt of 53 entries of "new implements" for the Carlisle meeting, and stated that the Allotment Committee had met on Easter Monday, the 31st March, and had allotted space in the showyard as follows, the number of separate stands being 338:—

Ordinary shedding	6,319 feet
Machinery	2,079 ,,
Special shedding	2,304 ,,
Total	10,702 ,,

General Carlisle.

The Earl of Derby (chairman) reported progress in the settlement of details connected with the programme for the society's meeting, to be held at Carlisle from July 5th to 11th next. The local committee had kindly undertaken to expedite the construction of the bridge across the River Caldew.

Showyard Works.

Sir Jacob Wilson (chairman) reported that a considerable portion of the implement shedding had been erected, the framework of the dairy was being constructed, and the pavilions were in a forward state. The local committee had laid the water main into the show-yard, and the sleeper roads were in progress. The committee recommended that Messrs. Harrison and Son, of Carlisle, be appointed auctioneers for the sale of timber after the Carlisle meeting, and that the sales be held on July 31st, August 1st, 14th, 15th, 28th, and 29th, 1902.

Selection.

Sir John Thorold (chairman) reported that a preliminary impression of the design for the society's new medal had been submitted, and that directions had been given for a number of the medals to be struck in silver. Copies of the new design for the diploma of honorary membership of the society being now ready, the committee recommended that the society's seal be affixed to the diplomas of the five new honorary members who were elected in 1901.

On the motion of Sir John Thorold, seconded by Sir Nigel Kingscote, it was then formally resolved that the society's seal be affixed to the diplomas of honorary membership of Prof. B. Bang, Mr. A. C. Cope, Prof. Cossar Ewart, Prof. McFadyean, and Dr. D. E. Salmon.

Education.

Lord Moreton (chairman) reported that sixty-nine entries has been received for the forthcoming examination for the National Diploma in Agriculture, to be held by the National Agricultural Examination Board at the Yorkshire College, Leeds, from May 5th to 8th, 1902. Fifty-two entries had been made for Part I. of the Examination, and seventeen for Part II., the latter having previously passed Part I.

Dairy.

The Earl of Derby reported the committee's arangements for the dairy at the Carlisle meeting, including the supply of cream and ice for the butter-making competitions, and for the trial (if necessary) of new dairy implements entered for the Society's silver medals.

Site Committee.

Mr. Crutchley (chairman) said that although the Site Committee had no formal report to make on that occasion, he might mention that good progress was being made with the work of fencing, draining, and levelling the Society's new permanent showyard in the Metropolis, and that with the co-operation of the railway and other authorities there was every reason to hope that the show of 1903 would be held on the new site at the usual time for holding the show, viz., the week after Ascot.

Presentation of Reports of Committes.

Mr. Stanyforth, pursuant to notice, moved, "That in future the minutes of the several committees be read by the secretary to the Council." He ventured to make this motion because he thought it would be of benefit, not only to the

chairmen of the several committees, but also to the general body of the Council. It was the universal practice in all other assemblies for the secretary to read the minutes, and he did not know why an agricultural community should adopt any other course. He would not for one moment desire to suggest that if the reports were read in future by the secretary, the chairmen of the committees themselves should be absent. What he suggested was that the chairmen should still sign and move their reports, and that they should add any explanations which were thought necessary, as usual. If his motion were adopted, he believed it would prove to be conducive to the better carrying out of the work of the Society.

Mr. Victor Cavendish, M.P., having formally seconded the motion,

Sir Nigel Kingscote expressed himself as in favour of Mr. Stanyforth's proposition, but was of opinion that it was very important that the interest of the chairmen in the work of their committees should be strictly safeguarded, and that the chairmen should themselves move the adoption of the various reports.

Sir Jacob Wilson thought that a great deal might be said both for and against the proposal, but he felt strongly that it would be a convenience to the chairman of committees, and of benefit to the Council, if the reports were read by their secretary. He fully agreed, however, with Sir Nigel Kingscote that the chairmen of committees should not give up any of their other functions in connection with the presentation of reports.

H.R.H. the President then put the motion, and it was carried unanimously.

Miscellaneous.

The secretary said he had received a letter from the Hungarian Agricultural Commissioner in this country, giving particulars of an excursion which was being organised under the auspices of the Hungarian Ministry of Agriculture to visit the great horse-breeding establishments at Mezoheyges, Kisber, and Babolna, and other breeding studs and herds, during the second half of May next. Full particulars of this excursion might be obtained from Herr Endre György, 22, Laurence Pountney Lane, E.C.

Date of Next Meeting.

The Council adjourned until Wednesday, May 7th, 1902, at 12 noon.

Royal Counties.

A council meetin gof the Royal Counties' Agricultural Society was held at the Town Hall, Basingstoke, on the 4th inst, Mr. J. Herbert Benyon, president, in the chair. The minutes of the last meeting having been confirmed and signed, the letters of apology for non-attendance were announced.

The list of judges who had accepted office in connection with the Reading Show was finally completed with the exception of those in the horse shoeing, butter-making, jumping, and sheep-shearing competitions, which were left for the stewards in those departments for selection.

Stewards were appointed for the various departments of the show, and Mr. Albert Wheatley, of Reading, was appointed hon. veterinary surgeon.

THE HUNTER GELDING, "HOLLYMOUNT," shown above, was bred by Mr. Carby, Hollymount, Wenford, and is by Bottler, out of a daughter of Fitz Henry. At the Hunter Show last month "Hollymount" was exhibited by Mr. A. J. Brown, Marr Grange, Doncaster, and won first prize in the class for three-year-old geldings. It was also placed reserve for the Society's Challenge Cup for the best animal under three years old.

Retiring Members of the Council.

The following list was prepared of the members of Council who retire by rotation, and are eligible for re-election, showing the number of attendances at Council and committee meetings of each of such members during the past two years, in accordance with Bye-law No. 23:—

Attendances at Meetings of Council and Commitcees from April, 1900, to March, 1902, inclusive.	Council Meetings, Total No., 17.	Committees. No. of Mtgs.	Attendances.
Blake, George	6	—	—
Brougham and Vaux, Lord	9	58	27
Cavendish, Victor C. W., M.P.	11	25	6
Cecil, Lord Arthur	8	42	14
Curtis-Hayward, Lieut.-Col.	16	50	40
Foster, S. P.	10	26	15
Frankish, William	13	130	80
Granby, Marquis of	8	—	—
Grenville, R. Neville	6	52	13
Hornsby, James	14	32	15
Howard, John Howard	11	24	12
(Elected June 20th, 1900.)			
Lovett, Captain W. S. B.	13	78	54
Marshall, Henry D.	13	26	13
Muntz, P. A., M.P.	9	—	—
Ransome, J. E.	16	60	31
Rogers, Charles Coltman	7	58	23
Ryland, H. P.	14	74	59
Sanday, G. H.	15	103	80
Scoby, William	2	4	2
(Elected June 5th, 1901.)			
Smith, Henry	11	26	13
Stratton, Richard	9	18	3
Sutton, Martin J.	11	46	32
Warren, R. A.	9	16	7
Wheeler, E. V. V.	12	104	63
Williams, J. C.	8	32	11

The recommendations of the stewards of the yard as to the acceptance of the various tenders were approved, and also as to the arrangement of the classes in the butter-making, horse-shoeing, sheep-shearing, and poultry trussing sections.

Miss Elsie Harris was appointed dairy demonstrator, and it was announced that a member of the staff of the Reading College would undertake the demonstrations in milk testing.

It was unanimously decided that harness horses, hacks, and ponies exhibited at Reading and also entered for the Richmond show should be allowed to leave the Reading show yard after 5 p.m. on Thursday, June 12, thus enabling them to compete at Richmond on the following day.

The secretary announced that H.R.H. the Prince of Wales had graciously intimated his intention of visiting the show on June 13, and that His Royal Highness would be received at Reading by the Mayor and Corporation, presented with an address, and then proceed to the show yard. H.R.H. Prince Christian of Schleswig-Holstein had also promised to visit the show. A reception committee was appointed.

The prices of admission and hours of opening and closing the Reading show were fixed subject to final arrangement by the chairman, vice-chairman, and secretary.

The secretary read a letter from the Town Clerk of Southampton conveying an invitation from the Town Council of that borough to the Royal Counties' Society to hold its 1903 meeting at Southampton, subject to the approval of the inhabitants of that town at a meeting to be held on Monday, April 7th.

The Mayor of Southampton, who was present at the meeting, assured the society of a very hearty welcome should they visit that borough in 1903.

Fifty-seven new members were then elected.

A vote of thanks to the chairman concluded the meeting, after which the Mayor of Basingstoke, Lieut.-Colonel J. May, entertained the president and council and a number of others to luncheon at the Town Hall.

The Central Chamber.

A Council meeting of the Central and Associated Chambers of Agriculture was held on Tuesday at the Society of Arts, Adelphi, London, Sir Edward Strachey, Bart., M.P., presiding over a large attendance.

The Blackpool and District Dairy Farmers' Association was admitted as a new Chamber, and Mr. E. Beckett Faber, M.P., was elected a member.

Resolutions were received from the Yorkshire Union, the Darlington, Staffordshire, and Berks and Oxon Chambers, advocating discriminating Revenue duties on foreign imports, and from the Lancashire Farmers' Association with regard to strengthening the law in respect to sheep-worrying dogs. The West Riding Chamber forwarded its annual report.

The Beer Bill.

The report of the Beer Materials Committee was presented to the meeting. It stated that:—

> Your Committee approves generally the Beer Bill introduced by Mr. Tomlinson.
>
> The Committee regard 15 per cent. of barley malt substitutes as the maximum proportion that should in any case be legalised.
>
> They also consider that more distinct provisions should be inserted in the Bill, to prohibit the use of all such deleterious substances as sulphuric acid, salicylic acid, sulphites and bisulphites of lime, and formalin.
>
> The Committee further consider that beer should be brought under the provisions of the Food and Drugs Acts, as recommended by the minority report of the Beer Materials Committee.
>
> CLARE SEWELL READ.

Mr. Bowen-Jones, in bringing forward the report, said there was no doubt the new Bill was a departure, both in principle and methods, from the Bill introduced last year. The Committee were of opinion, considering the fate of that Bill, that a change of front was necessary. There was no doubt a very high ideal was aimed at in last year's Bill, and that was to obtain beer of the highest degree of purity, and absolutely free from ingredients other than barley, malt, hops, yeast, and water. In order to have any chance of obtaining a Bill on these lines it was found necessary to provide for a second quality of beer, to enable them to meet the interests of those who required a cheaper beverage, and also to prevent opposition from the trade. The whole question was complicated by the introduction of these two qualities of beer, and it being found impracticable to pass a Bill through the Legislature on those lines, the present Bill, which was of the simplest character, was brought forward. Although the ideal aimed at in last year's Bill was abandoned, still they hoped by the present Bill to secure a fair standard of purity. Brewers would be allowed to use up to 15 per cent. of sugar materials. This provision would not affect the Burton brewers, who had brewed beer nearly up to the standard it was desired to establish last year.

Mr. Latham (Oxford) seconded the motion.

The Hon. James Lowther said no mention was made of the grievances of the barley grower, who suffered from foreign competition and the use of barley substitutes.

Mr. S. Kidner thought some further explanation was necessary as to why the Committee advocated the abandonment of the standard agreed to last year.

Mr. Bowen-Jones pointed out that the brewing of the beer would be carried on under the supervision of the Inland Revenue Authorities, who would take care that the materials were innocuous and good. Replying to Mr. Kidner's observation, he observed that unless they approved of the Bill, which was simpler than last year, they would get nothing at all. The Bill would prevent the unlimited use of barley malt substitutes, and whereas as much as 66 per cent. had been used, it was now proposed that no more than 15 per cent. should be allowed. The provisions of the Bill also limited the use of the free mash tun.

Cost of National Education.

Mr. St. John Ackers moved: "That in the opinion of the Council the cost of National Education should be borne by the Imperial Exchequer, and not out of the Local Rates." He said National Education was a National obligation, and as such the cost should be met out of national and not local funds. That proposition had been confirmed over and over again by that Chamber. They did not object to Voluntary Schools as such receiving money from the rates, but they objected to any school, voluntary, board, or any other, receiving money from the rates for a national ob-

ject. At the present moment the rateable value of this country was something like 180 million pounds, whereas the non-rateable value was about 500 millions. These figures widened the injustice of the Government's proposal, and it was the duty of the Chamber, while they passed no opinion on the Bill, to raise a strong protest against the cost of National Education being placed on only a fraction of the property of this country (hear, hear). This was one matter on which they could inform the Government agriculturists were quite united.

Mr. Herman Biddell said he desired the addition to the resolution of a rider, to the effect that all members of the House of Commons who were members of that Chamber should strenuously oppose the addition to the local rates which would undoubtedly follow the passing of the Education Bill now before Parliament.

Mr. Biddell said it appeared that County Councils were empowered to spend a sum not exceeding 2d. in the £ on the present assessment, while they might even spend more if they obtained the consent of the Local Government Board. Having been an Alderman of the East Suffolk County Council since that useful body was instituted, he could describe it as a most able machine for spending the ratepayers' money (laughter) Did they ever know a County Council that did not take advantage of spending, or did they ever hear of the Local Government Board refusing money to be spent by anybody when it was taken out of the ratepayers' pockets? If education was to raise the status of the nation, then let the nation pay for it (hear, hear). He pointed out there was no one to represent the ratepayer or protect him from additional burdens, but if they attempted to touch the National Exchequer, there was a man on the watch who took care they did not draw money from that quarter (laughter and applause).

Mr. Biddell, drawing attention to the fact that a solemn declaration was once made in Parliament that the education rate should never exceed 3d., asked what had become of that solemn declaration ? (laughter). He thought most of them were fully aware of what those solemn declarations were worth (hear hear). What with the present school rates, School Board rates, and the prospect of an additional 2d. there was every prospect of there having some heavy burdens to bear. Mr. Biddell demarking that years ago the clergy were relieved of a certain portion of their rates, said both Lord Salisbury and the late Earl of Kimberley stated the money for this relief would come from the National Exchequer. It had not, however, but out of a sum already allocated to the relief of the poor rates. It was curious that no stand had been made against this. This time he felt they should raise strong opposition, and not only ought they to request all members of Parliament associated with the Chamber of Agriculture to join in this protest, but all members of Parliament interested in Agriculture. Mr. Biddell afterwards stated that agricultural land had been relieved of a certain portion of the rates, but said he would guarantee that no one could turn to their rate receipts and find that there was a decrease in their rates, for the reason that any relief they obtained had been swallowed up by the additional burdens put upon them by the County Council and Boards of Guardians.

Mr. Latham seconded the adoption of the rider, and Mr. Sandford (Sussex), instancing the necessity for adopting this course, said it often happened that children boarded out from various populous unions were sent into the country districts, the ratepayers in which had to bear the cost of the education of these children. That was not right nor fair.

The motion was carried, with the addition of the rider proposed by Mr. Herman Biddell.

Breeding of Remount Horses.

Colonel Cotton-Jodrell (Cheshire) moved:—"That it is desirable that remount officers should visit various districts of the country periodically for the purpose of purchasing horses from the resident owners, and that further information should be given throughout the country when any remount officer is about to visit a district for such a purpose." They wished the War Office and the owners of horses to be brought into closer touch, and also to assist in the developing of the breeding of horses suitable for remount purposes. Some 218,000 horses were bought for South Africa, and only 60,000 were bought in the United Kingdom. Evidence showed that the best horses came from this country for use in South Africa, and it was a service to the State, as well as to the farmer, to develop the trade. They wished to get rid of the middleman, and bring the tenant farmer into communication with the agent of the War Office.

Mr. Davies (Birkenhead) seconded the motion.

Professor Long moved, as an amendment, the addition, "and in order to promote these objects it is also desirable that the Minister for War should be asked to receive a deputation." He said that he had been a breeder of horses, and he found that when he dealt with the dealers he was successful, but he always failed when he dealt direct with the remount officers. He did not believe that the remount officers were up to their work, and that there was some strong reason for their getting horses from abroad.

Mr. Beecroft (Cheshire) seconded the amendment.

Mr. Middleton (Cleveland) said that it would not pay farmers to breed remount animals. The class at present used were misfit animals, unsuitable for anything else.

Mr. Williams (Monmouth) agreed that it would be a mistake to urge farmers to breed army horses when they could breed a better paying class. It was notorious that out of 14,000 horses registered in this country only 6,000 were taken, and yet much worse animals were bought abroad. Until the War Office made arrangements to take the horses younger he could not see how the farmer would be paid for his trouble.

Mr. Herman Biddell said as a breeder of horses with fifty years' experience he had never yet been able to hit upon a plan of breeding horses for a price the War Office would give. The remount officer visiting a district required a farmer to bring him horses five years old without a blemish, and for these he would pay the sum of £34. It was impossible to breed such a horse for that money, and unless the Government were prepared to give a better price it was not likely the farmer would be disposed to breed horses of the character required for that amount. He suggested that the Government should give a sum of money for the purpose of providing the best animals calculated to breed the cavalry horse. Having urged the point that the Government did not give enough money for a good English-bred horse, Mr. Biddell said the English horse was found to be the best animal for the purposes of war. But if the Government required the English farmer to breed them they must give more than £34. He thought the subject was of a too technical character to be discussed there (hear, hear).

The amendment was lost, but Colonel Cotton-Jodrell's motion was adopted.

Railway Rates.

Mr. Oscar Bowen moved, "That, in the opinion of the Chamber, the Board of Agriculture should insist upon equal facilities and rates for carriage of agricultural produce being provided for the home producer as are now given to the foreigner." He urged that the farmer in this country was handicapped by the bounty offered the foreign producer in the shape of cheaper rates.

Mr. Muntz seconded the resolution, which was carried.

Next Meeting.

The Council adjourned until the 6th of May.

Scottish Chamber.

A meeting of the directors of the Scottish Chamber of Agriculture was held at Edinburgh on Wednesday. Mr. Thomas Elder, Stevenson Mains, presided, and reported that his committee, to whom had been remitted back the question of creameries in Scotland, had called on one or two gentlemen who they thought would be of assistance, and after discussing the matter it was thought the best way would be to give all affiliated societies an opportunity of discussing the question at the autumn conference of the Chamber.

Mr. Spier, Newton, said he thought the Chairman's Committee had come to a pretty wise finding. He did not think it devolved on them to initiate any creameries; all that could probably be expected of them was to scatter information as to the advantages of the system. He had in a business connection come in contact with four or five hundred creameries in Ireland which were conducted on the co-operative system, and he thought that if the secretary communicated with the Irish Organisation Society in Dublin, who had started these creameries, they would give him all the necessary information as to the cost of buildings, machinery, etc. While the progress of these creameries was for some years slow, they had lately been going up by leaps and bounds, and the consequence was that in a country like Ireland, where the large number of farmers were small ones, they were in the way of retailing their milk practically on an equality with the man having 50 or 150 cows, so far as getting a certain sum in produce out of each of them. He had not the least doubt that co-operative creameries alone were doing more for the peace of Ireland than all the other organisations put together. In Scotland it would be a little more difficult, because the tenant-farmers' tenure of the land was not so permanent as in Ireland, and it would be necessary for the principal landlords to take at least the major share in providing the permanent buildings.

Replying to some discussion, Mr. Spier said these Irish creameries were under no Government survey other than as ordinary factories. Taking the price of milk at 4½d. a gallon or 1d. a gallon for skim milk, it was more than thousands of farmers got who would during the next two or three months be sending milk to Glasgow, and who would not get more than 6d. or 6½d., and would have to pay 1d. per gallon for delivery.

Mr. John Drysdale, Port of Menteith, thought, unless they had a demand in certain districts for the creation of creameries, the discussion was futile. It was agreed to have a discussion on the subject at the autumn conference.

Mr. Spier drew attention to two butter prosecutions in Airdrie and Kilmarnock, where, on analysis, the butter was found to be up to the requisite standard, and no expenses were allowed the respondent. He thought it was a distinct hardship that a man should be thrown into a great deal of expense through the carelessness or blundering of Crown officials. He had communicated with the Board of Agriculture, who had replied to the effect that such cases were of very rare occurrence; but the Board would be glad if he would during the next few months call their attention to the reports of any cases of the nature described which came under his notice. It was agreed to take note of any future cases, and advise Mr. Hanbury.

A communication was read from the Butter Association regarding the interim report of the Butter Regulations Committee permitting on declaration watered butter. A resolution was, after discussion, adopted condemnatory of the report.

Suffolk Horse.

A meeting of the Council of the Suffolk Horse Society was held at Ipswich on the 5th inst., Mr. Herman Biddell, vice-president, in the chair.

The first business on the agenda being the election of a president, Mr. E. A. Cook said he had much satisfaction in proposing the re-election of Sir Cuthbert Quilter, Bart., M.P., who had done so much for the Society and the Suffolk horse in the past.

Mr. Robt. Edgar seconded the motion, which was carried unanimously the Chairman remarking that they would desire, he was sure, to couple with the resolution an expression of thanks to Sir Cuthbert Quilter for the valuable services he had rendered to the Society.

On the proposition of Mr. F. C. Starkie, seconded by Mr. James Toller, Mr. Herman Biddell was unanimously reappointed vice-president.

The Council then considered the recommendation of the general meeting as to raising members' subscriptions. The Chairman observed that when the matter was discussed there was no doubt a general feeling in favour of a £1 subscription instead of 10s. This was, perhaps, a proposal which was outside the Council, to whom was entrusted the mangement of the affairs of the Society. When it was proposed to double members' subscriptions, he thought steps should be taken to elicit the opinion of the members themselves, though he had little doubt that the majority of them would consent to the addition, especially having regard to the fact that the Council would thus be enabled to accord more generous support to the local agricultural societies, whose exhibitions were valuable as bringing the Suffolk breed of horses more prominently before the public.

On the motion of Mr. Robt. Edgar, seconded by Mr. Horace Wolton, it was resolved that steps should be taken to ascertain the views of the members on the subject, the further consideration of the question being accordingly adjourned to the next meeting of the Council.

In the course of the discussion on the above subject, Mr. A. T. Pratt raised the question of the advisability of increasing some of the entry fees as one legitimate source of adding to the income of the Society. He would not go into details, but he thought it might probably be done in the case of stallions and yearlings.

The Secretary, on being appealed to for his opinion on the subject, said this was a very effective means of adding to the funds of the Society, and if breeders did not object to the suggested increase he apprehended that other members would not do so.

The Chairman pointed out that this was not a matter on the agenda for that day, but it could be brought forward at the next meeting, and the Secretary would perhaps furnish them with particulars as to the heads—if any, under which there might with advantage be an increase.

The Sale Committee presented a report, in which they recommended that a public sale of Suffolks should be held as usual at Ipswich under the auspices of the Society, and it was agreed to.

Reference having been made to the usual exhibition of Suffolks at the forthcoming exhibition of the Royal Horse Society at Richmond, Mr. F. C. Starkie said he should much like to see a challenge cup offered in connection with the Suffolk classes at the great horse show in question. He doubted whether Suffolk breeders fully realised the extent of the interest taken in the Suffolks at the Richmond Show, and he thought that every inducement should be offered to secure as many entries as possible. He should therefore like to see a challenge cup provided. He himself should be pleased to give 10 guineas towards a cup of the kind, and he doubted not that there would be others who would readily subscribe towards such an object. In answer to a question, Mr. Starkie said he should like to see a cup of the value of 50 guineas, accompanied by a gold medal for the winner.

On the motion of Mr. W. Everitt, seconded by Mr. Jas. Toller, it was resolved to accept Mr. Starkie's generous offer with thanks, and to request the Secretary to apply to other gentlemen to add to the fund, Mr. Fred Smith having expressed the opinion that a cup of the kind would be appreciated, and add to the interest of the Suffolk classes at the Richmond Show. Subsequently Mr. Smith announced that he had received £5 from Mr. E. A. Cook, who was heartily thanked for his liberal contribution.

Hackney Horse.

Meetings of the Council and Committees of this society were held on Wednesday, at 12, Hanover Square, London, W., Sir Walter Gilbey, Bart., occupying the chair, when 14 new members were elected.

Sir Walter Gilbey, Bart., was, in accordance with the Articles of Association, formally elected President for the ensuing year, and Sir Gilbert Greenall, Bart., was similarly elected as President-elect for the same period.

The seat rendered vacant by the election of Sir Gilbert Greenall was filled by the nomination of Mr. G. M. Gale, Atwick, Hull.

The circular letter issued by the Devon County Council asking the co-operation of the society in urging the introduction of legislation empowering county councils to prohibit the use for hire within their districts of stallions suffering from hereditary disease was discussed, and it was agreed that a reply should be forwarded that the Council were entirely in sympathy with that object, and by means of veterinary examination of all horses at its London show, its gold medal winners at country shows, etc., were endeavouring to promote it to the best of their ability, but they were of opinion that the suggested remedy for the evil by legislation was not at present practicable.

Measurement of Harness Horses.

As arranged at the general meeting of members at the show, the Council received a deputation representative of exhibitors of harness horses, who desired to submit suggestions that the society should officially measure and record the exact height of horses at the London show, and at various centres in the country, subsequently issuing a printed register of such information which should be accepted by affiliated societies.

Mr. William Foster, of Mel Valley, attended to submit the views of exhibitors before the Council, which may be summarised as follows:—

(1) That all horses sent for exhibition at the next March Show be carefully measured by a qualified veterinary surgeon specially appointed to do this; that a register be kept of all the heights thus recorded.

That the horses' feet and shoes shall, in the opinion of the appointed veterinary surgeon, be fairly trimmed and shod with a shoe half an inch thick. If the horses' hoofs and shoes are not considered to come within this rule the horse will not be measured, and shall be sent back and brought properly shod.

(2) That all affiliated societies be asked to take the Hackney Society's certificate of height—for that season—and if the horse or pony is five years old, or over, that such certificate shall represent its height henceforth, without any re-measurement.

(3) The question of measuring horses in different parts of the country and giving certificates must, to a large extent, be left to the judgment of the Hackney Society, but we think the following would work well:—The Veterinary Professor to the Hackney Society, for the time being, would suggest the names of veterinary surgeons in different parts of the country in whom he could place confidence, and the society could select and appoint them to do this, and send a copy of the certificate to the society's secretary, to be added to the register. Where possible, it might be best to appoint the veterinary surgeon of the affiliated society.

(4) A small charge to cover the expenses of this certificate might be made.

A register of the heights of all horses measured at the March Show, and all other certificates sent in by the end of April, could be issued on May 1st.

The Council endorsed Mr. Foster's contention that improvement was necessary in the systematic measurement of horses, especially those exhibited in harness, and agreed to hold a special meeting of the Show Committee to thoroughly consider the practical working of the suggestions. Meanwhile the secretary was desired to inquire of all affiliated societies whether, in the event of the Hackney Society formulating a scheme for the more accurate measurement of horses under identical circumstances, and the subsequent issue of a formal certificate, they would, in the event of a protest or other unusual circumstances, be disposed to accept and acknowledge the height given on the certificate as the exact height of the animal during the period for which the certificate was valid.

It was resolved to affix the official seal of the Society to the agreement arrived at with the Agricultural Hall Company for the hire of the hall for a period of three years.

The Editing Committee received proofs of the photographs of prize-winning horses at the last show, and transacted other business of a routine nature. To supply the vacancies on the committee due to the retirement of members in rotation, the names of Mr. Arthur Fewson, Mr. J. K. Ford, and Mr. Alfred Rowell were added to the committee. The exclusive right to the following prefixes were granted to the applicants:—Hawsker: Robert Middleton, Russell Hall, Stainsacre, Whitby, York. Cheriton: Frank Leigh, F.R.C.VS., Cheriton, Westbury-on-Trym.

The report of the Show Committee dealt in a large measure with the results of the last London show, which were considered to be satisfactory, notwithstanding the heavy fog, which considerably affected the attendance of the general public on the third day. The names of Mr. R. G. Heaton, Mr. Evan Jones, Mr. Tom Mitchell, and Mr. C. W. Wilson were added to the committee to supply vacancies.

The chairman of the Finance Committee (Mr. Hickling) reported that the balance in the bank on the current account was £2,333 14s. 10d., and cheques for payment of prizes and various accounts arising out of the show amounting to £2,266 6s. 1d. were passed for payment. Three members of the Council having retired, the Council added the names of Mr. W. S. Forster, Major Mead, and Mr. Forrester Addie.

The Council filled two vacancies on the Council Selection Committee by nominating Mr. Evan Jones and Mr. G. M. Gale to act thereon, whilst the name of Mr. W. Stewart Foster was added to the Judges Selection Committee.

The period of three years for which Mr. Crompton was elected as steward of the London show having expired, Mr. A. L. Goodson, of Knutsford, was elected to take his place and to be ex-officio a member of the Council during his term of office. Mr. T. A. Jackson, of Bridlington, was elected as first reserve.

Mr. Frederick Wrench, who was unavoidably prevented from attending the meeting, forwarded a most interesting letter relative to the steps which the society should take to attract a larger portion of the profitable trade for carriage horses, concerning which correspondence has recently appeared in the agricultural press. Whilst admitting the great advance made in the development of the show Hackney of to-day, the letter advocated the further introduction of thoroughbred blood of the right type on the side of the mares. Mr. Wrench presented the outlines of a scheme providing for the admission to the Stud Book by examination for a limited period of mares 15h. 2in. and upwards, bay or brown, with good all-round action, of ascertained breeding for at least two generations, and either the produce of a thoroughbred sire or from a dam sired by a thoroughbred. All such mares to be passed by two of six judges to be nominated by the society, and that the examinations shall be made in public at certain selected shows at which prizes shall be given to encourage the stamp of mare required.

The Council fully discussed Mr. Wrench's scheme, but came to no determination on the matter, and it was pointed out that the present conditions admit mares to the Stud Book which are by a thoroughbred sire or out of a thoroughbred dam, in addition to those mares which have one thoroughbred cross on the dam's side.

It was resolved not to hold a Council meeting at the Royal Show at Carlisle, and the Council adjourned until November, meetings of the various committees being held in the meantime.

Shire Horse

Lord Llangattock (president) occupied the chair at a meeting of the Council of the Shire Horse Society, held at the Society's house, 12, Hanover Square, London, W., on Tuesday, at which seventy-one candidates were elected members of the Society.

After the election of members, Sir Walter Gilbey informed the Council that his Majesty the King had been graciously pleased to permit the Society to use the Royal Crown, in place of the plume of feathers which had been previously used.

Mr. R. W. Hudson presented the report of the Finance Committee, showing a balance of £1,593 0s. 3d. in the current account at the bankers; arrears of subscription, £44 2s.; accounts for payment, £823 10s. 7d. This report having been received and adopted, Mr. C. W. Tindall was elected a member of the committee, while the Council referred to them the suggestion made by Mr. John Williams at the annual general meeting of members as to increasing the income from the Society's investments.

Captain Heaton reported that applications had been received for twenty-three prefixes and two affixes, which they had approved:—

Prefix.	Applicant.
Bagborough	J. H. White.
Baston	John Thurlby.
Belpatrick (and affix)	Arthur E. Moore.
Catterall	John Hutchence.
Curf	R. R. Childs.
Hemington	S. Crawley.
Horninghold	T. Hardcastle.
Irby	W. H. Smith.
Johnson (and affix)	W. Moat.
Lilleshall	Duke of Sutherland.
Locks	John. G. Chilvers.
Penmark	E. Williams.
Pomfret	Ernest C. Watson.
Reynald	Sir Walter Corbet, Bt.
Sharpcliffe	Arthur S. Boucher.
Sibthorpe	A. Stretton.
Talybont	H. Yorath.
Tardebigge	Hugh W. Dixon.
Tilton	Allan Holm.
Wainfleet	C. W. Tindall.
Wansdyke	R. Cook.
Wesson	J. F. Hollingworth.
Yew Tree	James Montgomery.

This report having been adopted, Mr. John Rowell and Mr. J. W. Kenworthy were added to the committee.

Sir Walter Gilbey (chairman of the Horse Show Committee) presented the approximate financial statement of the recent show, indicating a cost of £905 8s. 9d., as compared with £276 and £331 in 1900 and 1901 respectively. Sir Walter pointed out that this increased cost was due to two causes:—(1) The very large increase in prizes granted by the Council to the 1902 show, and (2) the heavy cost arising from the additional accommodation, and fittings required for their enormous entry of 860 horses. The statement was considered by the Horse Show Committee to be most satisfactory.

The attention of the committee had been drawn to the misuse of attendants' tickets, and they propose to deal with this matter at a future meeting, with a view to stopping this abuse. They had, up to that day, received applications for the following gold and silver medals from associated shows, viz., nineteen gold offered at sixteen shows, seventy-six silver at seventy shows.

The committee further proposed to apply the respective grants of £50 for the London Cart horse Parade and of £75 for provincial parades, as follows:—By offering in Regent's Park on Whit Monday: 25 medals or premiums of £1 for single horses, 10 medals or premiums of £1 for pairs of horses, 5 medals and premiums of £1 for teams of horses; by distributing similar awards at sixteen provincial parades.

This report having been adopted, Mr. J. P. Cross and Mr. F. W. Griffin were added to the committee.

Mr. Hebor G. Martin, of Littleport, Ely, was appointed a Steward of the London Show for the next three years, this appointment carrying with it a seat on the Council and Horse Show Committee.

A letter was read from Mr. R. S. Reynolds, suggesting action on the part of the Society to secure the exhibition of representative Shire horses at the Winnipeg and Toronto Shows during the coming summer, and a letter was also submitted from Mr. J. H. Truman suggesting the offer of a cup or medal at the Horse Show at Chicago.

These letters were considered together by the Council, and fully discussed. It was decided that it was not possible for the Society to act upon the lines put forward by Mr. Reynolds, but that if the secretary was satisfied that classes were provided at Winnipeg, Toronto, and Chicago for Shire horses, he should be authorised to offer at each show two gold medals, one for the best Shire stallion, and the second for the best Shire mare, registered in the Shire Horse Society's Stud Book, exhibited at same.

The Council decided that they would not this year hold their meeting in the Royal Show-yard at Carlisle, but that it should take place in the Society's House, at 12, Hanover Square, on Tuesday, June 3rd, at 12 noon.

Hereford Herd Book.

There was a meeting of the Council of this Society at the Secretary's offices on Wednesday, Mr. S. Robinson presiding. The report of the finance, editing, and general purposes committee, also the report of the special committee for drawing up the rules and regulations of the autumn show and sale, were received and adopted. The autumn sale is to be held on the first day of October fair, and to consist of three classes, viz., cow calved before 1900, in-calf heifer calved in 1900, and heifer calf of 1901. Mr. C. T. Pulley (Lower Eaton) was elected a life member.

After the Council meeting, the annual general gathering took place. The annual report of the Council for 1901 was presented and read by Mr. Britten. In the course of this it was stated that the revenue account shows a surplus of income over expenditure on the year's working of £825 7s. 10d. It is satisfactory to note that this is the first account submitted since the formation of the Society in which the cash assets represent a sum which exceeds the amount received from the whole of the life members as their life composition fees. The surplus, however, includes the sum of £285 8s. 5d. received from the liquidator of the Hereford Cattle Breeders' Association, also £199 10s. paid as composition fees by life members. The subscriptions from annual members have increased by £122 17s., which is chiefly due to the union of the two societies.

Notwithstanding the closing of the South American ports to live stock during the greater part of 1901, the number of Herefords exported was in excess of that in the previous year, 314 exportation certificates having been issued as compared with 239 in 1900; these represent 264 cattle shipped to the United States, 36 to South America, 3 to Australia, 2 to New Zealand, 1 to Canada, 3 to South Africa, and 3 to France. The year 1901 marked a new era in the matter of the tuberculin tests, as applied to cattle shipped abroad, the Governments of the United States and of Canada having decided to have cattle pur-

chased for their respective countries tested on this side by their own officials. The Department of Agriculture at Washington sent their expert, Dr. T. A. Geddes, over for that purpose, and in reply to a communication the Council addressed to Dr. D. E. Salmon, the chief of the Bureau of Animal Industry at Washington, he wrote that the Hereford cattle tested by Dr. Geddes in 1901 are amongst the breeds making the best record, the certificates received showing that only three and one-third per cent. of the Hereford cattle tested failed to pass. The Council think it most important that this comparative freedom from tuberculosis in Hereford cattle should be as widely known as possible; they have, therefore, appointed a sub-committee to deal with the question.

Yorkshire Union.

A general meeting of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture will be held at the Agricultural Club House, Pavement, York, on Thursday next, at 2.30 p.m., the agenda for which is as follows:—

1. General business.
2. Communications.
3. Reports of Committees (if any).
4. The reply of the Chancellor of the Exchequer to the resolution of the Union on duties on foreign imports.
5. The proposals of the Budget affecting agriculture (if any).
6. The interim report of the Butter Regulations Committee.
7. Contracts of hiring between master and servant.
8. Sheep scab and the dipping of sheep.

COMING SHOWS.

Royal Dublin.

Below we give a copy of the official programme of arrangements for the Royal Dublin Society's Spring show at Ball's Bridge, Dublin, which opens to-morrow (Tuesday), and extends until Friday. His Excellency the Lord Lieutenant, their Royal Highnesses the Duke and Duchess of Connaught, and Her Excellency the Countess Cadogan have intimated their intention of visiting the show. As to the prices of admission, they are as follows:—First day, from 10 a.m. till 2 p.m., 3s.; after 2 o'clock, 2s. 6d. Second day, 2s. 6d. Third day, 2s. Fourth day, 1s.

Programme.

TUESDAY.

9 a.m.—Judges and Stewards breakfast in the Judges' and Stewards' Room.
10 a.m.—Show opens.
„ Adjudications commence as follows:—
Shorthorns, in Rings 3 and 4.
Herefords, in Ring 2.
Aberdeen-Angus, in Ring 1.
Red Polled, in Ring 2.
Ayrshires, Dairy Cattle, and Extra Stock, in Ring 2.
Kerries and Dexters, in Ring 5.
Jerseys, in Ring 5.
Agricultural Horses and Hackneys, in Jumping Enclosure.
Swine, in the Paddock Hall.
Dairy Produce, Butter, etc., and Hives and Bee Appliances, in Room off the Galleries of the Central Hall.
6 p.m.—The Show Yard closes for the day.

WEDNESDAY.

9 a.m.—Show Yard opens.
10 a.m.—Adjudication of Harness Horses (Classes 78 to 87), in Jumping Enclosure.
„ —Dog Show opens—Adjudication commences.
11 a.m. and 3.30 p.m.—Parade of Hackney Stallions in Ring 4.
12 noon and 4 p.m.—Parade of Agricultural Stallions, in Ring 4.
„ —Meeting of the Committee of Agriculture for the consideration of such objections as may have been lodged, and other business.
2 p.m.—Adjudication of Polo Ponies (Classes 88 and 89), in the Jumping Enclosure.
2.30 p.m.—Parade of Prize Cattle in the Rings.
Demonstrations in Potato Spraying in the Veterinary Paddock during the day.
6 p.m.—The Show Yard closes for the day.

THURSDAY.

9 a.m.—Show Yard opens.
10 a.m.—Adjudication of the Draught Horses and Vehicles, in the Jumping Enclosure.
10 a.m. to 12 noon.—Polo Ponies may exercise in Ring 1.
11 a.m.—Parade of Hackney Stallions, in Ring 4.
„ —Meeting of the Committee of Agriculture.
12 noon.—Parade of Agricultural Stallions, in Ring 4.
1 p.m.—The entire Jumping Enclosure will be cleared, to prepare for the Grand Parade and Jumping and Bending Competitions.
2 p.m.—Parade of Prize Draught Horses and Vehicles.
Grand Parade of Prize Cattle, Horses, and Polo Ponies.
Jumping and Bending Competitions.
4 p.m.—Parade of Harness Horses, in the Jumping Enclosure.
Demonstrations in Potato Spraying during the day.
6 p.m.—The Show Yard closes for the day.

FRIDAY.

9 a.m.—Show Yard opens.
1 p.m.—The Butter Show closes.
Dog Show closes.
2.30 p.m.—Parade of Harness Horses, in the Jumping Enclosure.
Demonstrations in Potato Spraying during the day.
4 p.m.—Show closes.

The Butter Standard.

The report recently issued by a Departmental Committee regarding a proposed standard for butter, which the agricultural public is up in arms against, quite as much concerns those living in towns at it does those living in the country. But the consumer may not be aware of the evidence on which this precious report is alleged to be based. We say "alleged," because it is certainly not based upon a proper regard for the evidence given before the Committee. The agricultural public have been waiting for this evidence, and as it has just made its appearance, although the report itself has been out for some weeks, a reference to the whole subject is both opportune and very desirable.

The case stands as follows:—In the summer of last year Mr. Hanbury, for the British Board of Agriculture, and Mr. Plunkett, for the Irish Board of Agriculture, appointed a committee to inquire as to what regulations should be made under the Sale of Food and Drugs Act, 1899, for determining what efficiency (if any) of the normal constituents of butter, or what addition of extraneous matter or proportion of water in butter, should raise a presumption until the contrary is proved that the butter is not genuine. In due course the Committee reported as follows:—(1) "That there should be adopted a limit of 16 per cent. for the proportion of water in butter;" and they added (2) "We make this recommendation on the assumption that butter containing a larger percentage of water than 16 per cent. will escape the operation of this limit, provided that a sufficient disclosure is made to the purchaser."

It is difficult to conceive a report of more serious omen to farmers, if we except that of about a twelvemonth ago relating to the standard for milk, and which report Mr. Hanbury had the courage to overthrow—much to his credit—and with fairness both to the evidence on which it was based, and to the various interests involved. We say, without fear of contradiction by any reasonable man in this country, that if the recommendation now before Mr. Hanbury for his consideration is adopted by him he will cause widespread disappointment, will lose much of his reputation among agriculturists, and will legalise a rank fraud upon all classes of His Majesty's subjects. These are strong assertions, but they are not a whit too strong.

Let us look into the matter. The best and by far the largest number of our dairying authorities, as well as the best and widest scientific evidence in this country, are agreed that butter ought not to contain and does not contain more than 10 to 15 per cent., or at most 16 per cent., of moisture. It is asserted, and was asserted before the Committee, that 16 per cent. is quite an outside figure. We agree in this view of the matter. Imported butter also contains less than the outside limit of moisture in question It so happens, however, that lately there has sprung up a trade in what is called milk-blended butter, which consists, not of butter pure and simple, but of a certain proportion of milk and a certain proportion of butter. In other words, the artisan, when he buys his pound of milk-blended butter, buys some 14 ounces of natural butter (containing the usual quantity of moisture), plus two ounces of water. It is proposed to legalise this fraud if it is labelled all right. Now, this butter is being sold in large quantities every week in all parts of the country, especially since the report in question was issued, and the announcements which accompany its sale are so skilfully worded as to make it actually appear that milk-blended butter is better than the genuine article, whereas, intrinsically, it is much inferior.

The case is really very serious, and we shall all await with anxiety what the decision of Mr. Hanbury may be. It is a comfort to us to be able to say that the Royal Agricultural Society has passed a resolution in very plain terms condemnatory of the report, while the next largest agricultural society has just followed suit—namely, the Bath and West of England Society. The British Dairy Farmers' Society is also against it; and the chambers of agriculture everywhere are taking similar action. It is to be hoped that townspeople—who are seldom nowadays to be found in any great sympathy with their agricultural friends—will support them in their crusade against the insidious form of fraud to which we have referred; and which is all the more to be deplored because it is a fraud actually (of all people in the world!) supported, or suggested, by a Departmental Committee. It is useless to suppose that any label will protect a purchaser from fraud; whilst the very idea of a label is tantamount is admitting that the article is in itself fraudulent. Why, therefore, seek to legalise it?

Now, will Mr. Hanbury pay no heed to the last part of the recommendation we have quoted, and so earn the gratitude still further of the agricultural community and of the public at large; or will he give way to a Committee which really in this matter represents nobody, except what we cannot help calling the fraudulent interest to which we have called attention, and the makers of an indifferent class of butter coming from Ireland? The best of the Irish butter comes well within the limit of 16 per cent., as Mr. Hanbury and Mr. Plunkett must by this time be well aware, while the heavily-salted Irish firkin butter in its best form does not exceed it. Before the report was issued, the purveyors of milk-blended butter were being prosecuted in numerous directions, but this has now stopped; and, of course, it is difficult to see how a local authority could secure a conviction while the defendants, among other arguments, could produce such an unfortunate report as that to which we have referred. It need only further be said that if this report is adopted by Mr. Hanbury, it is quite impossible for butter-making farmers to stand against the competition to which they will be subjected. The competition against margarine will be as nothing to it.—"Pall Mall Gazette."

Lancaster Cheese Fair.

At this fair, held on Tuesday, there was a large attendance, and the demand exceeded the supply, a quick clearance being effected. The pitch comprised 20 dairies, or 483 cheese, against 20 dairies and 540 cheese at the corresponding fair last year. For extra prime cheese there was quick demand. Prices:—Prime Septembers, 82s.; Octobers and Novembers, 70s. to 75s.; spring cheese, 65s. to 70s.; spring cheese of medium quality, 55s. to 60s. per cwt.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending April 8, 1902:—

NOTE.—The figures for the current Year are approximate only.

Dearer Meat.—At a meeting of the Leeds Butchers' Association on Friday, it was resolved that meat should be a penny to three halfpence per pound dearer.

LITERARY NOTICES.

"The Provincial Veterinary Quarterly" is the title of a new quarterly journal of animal medicine, therapeutics, toxicology, and clinique. It is edited by Mr. John Howard, M.R.C.V.S., L.H.A.S.S., etc., and it is issued, it is stated, in the interests of provincial veterinary surgeons, also on behalf of those "young students who are spending their precious time and money on a difficult profession, which, when attained, practically (through Government indifference) refuses them the bread so easily obtained by the common artisan." The first number contains numerous interesting articles for the veterinary profession, the majority of which were written by the editor; whilst the meetings of various veterinary societies are annotated and reviewed in brief. One of the editorial articles is headed "The Tuberculosis Bogey and its Exorcism," and in it are set forth some very striking facts. An interesting extract from it appears on another page of this issue, under the heading of "A Veterinary Surgeon on Tuberculosis." The dates of publication of this promising quarterly are fixed as follows:—March 31, June 30, September 30, and December 31, whilst the price is 5s. per annum, or a single copy 1s. 3d. by post.

The title of Mr. H. Clement's Brochure on Weather Prediction recalls strongly to mind the old books on astrology. Mr. Clement claims to lay before the public a discovery by which any intelligent person may calculate the daily height of the barometer and actually predict the weather for any part of the world for years in advance by the phases of the moon. Mr. Clement's system, which is somewhat complex, is set out fully in the pamphlet under notice. The price of this pamphlet is four shillings, but one is inclined to think the price too moderate when the greatness of the discovery is taken into consideration. The publishers are Simpkins, Marshall, and Co., London.

The issue of the "Journal of the Board of Agriculture" for March, in addition to the usual reports and papers, contains articles on "The Crops of 1901"; "The Seeding of Grain," by Mr. J. Speir; "The Cultivation of Maize for Fodder." Among others, Mr. J. Nisbet also continues his article on English Coppices and Copsewoods.

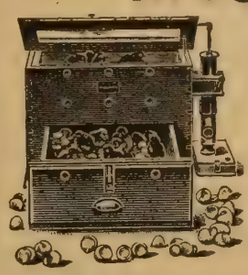
Messrs. Blackie and Son contemplate a re-issue of Kerner's "Natural History of Plants," a work which in its English form is identified with the name of Professor F. W. Oliver. The new edition, which will be issued at a considerably reduced price, will be substantially a reprint of the original English edition, with a few necessary alterations and corrections.

The Lydney and District Farmers' Club have issued their eighth annual report, which is conveniently bound in with a report of the Show, the rules of the Club, and a number of Board of Agriculture leaflets and other useful pamphlets issued by various public bodies.

A report has now been issued of the useful investigations and experiments on the Black Currant Gall Mite which have been carried out at the South-Eastern Agricultural College, Wye, Kent. The report, which is from the pen of Mr. E. J. Lewis, F.E.S., F.L.S., runs to 26 pages, and contains several illustrations.

Evicted Farms in Ireland.—A Parliamentary return has been published showing "how farms from which tenants were evicted on certain dates since the 1st day of May, 1879, were occupied (1) at the time of the inquiry of the Evicted Tenants' Commission, and (2) on the 1st day of February, 1902." The estates specified are seventeen in number and include the Clanricarde, the Ponsonby, Lansdowne, Masereen, and Olphert estates. The important fact disclosed is that out of a total number of 1,448 evicted farms referred to in the return only eighteen were "lying derelict" on the 1st of February last. On the Clanricarde estate, where the total number of evicted farms was 252, sixteen are still lying derelict, and the other two derelicts are on the estate of Mrs. H. Lewis. One-half of the evicted farms on the Clanricarde estate have been let to new tenants, and ninety-six have been re-let to old tenants. On the Olphert estate, out of a total of 326 farms, 305 have been re-let to old tenants. Out of the total of 1,448 farms enumerated in the return 675 have been re-let to old tenants, while 339 have been let to new tenants, and 323 have been purchased by old tenants.

CHICKENS ALL THE YEAR ROUND
BY USING
Hearson's Patent
CHAMPION INCUBATORS.
Manufacturers by Appoint ent to
H.M. THE KING



The CHAMPION INCUBATOR has now been before the world over 20 years, and has achieved a reputation which eclipses all competitors.

W. TAMLIN SOLE MANUFACTURER RICHMOND, SURREY
The Largest Manufacturer of Incubators in the World.

Poultry Management on a Farm.

Considerable attention has recently been directed to the desirability and possibility of the extension of poultry-keeping as an adjunct to the ordinary operations of the farm. The Board have received at various times reports and circulars issued by the National Poultry Organisation Society, which was established in 1899, and has now assumed considerable importance, with a membership of over 2,000, and with 27 branches and centres, and 18 collecting depots. Started with the main object of developing the commercial side of the poultry industry by systematising the collection and distribution of eggs, the Society, without itself engaging in trade, appears already to have made some progress in stimulating the local organisation of producers, and in advocating improved methods of poultry management.

In this connection the Board have received a copy of a small book entitled "Poultry Management on a Farm," in which Mr. Walter Palmer, M.P., gives a detailed account of the system of poultry-keeping adopted on two of his farms at Winkfield, Berkshire, comprising altogether about 220 acres. The soil throughout is a fairly stiff clay, and the land is mostly in grass, but with arable fields conveniently near the homestead. As new buildings have been erected for the cattle and horses, the old wooden buildings (more than 200 years old) have been utilised for the various purposes connected with poultry.

"Poultry, like cattle," says Mr. Palmer, "must be more or less selected in accordance with soil," and consequently he experimented with about twenty varieties before he was satisfied which was best suited to his circumstances. Eventually he selected for table birds Indian Game crossed with Buff Orpington, and, for general purposes and egg-production, Brown Leghorn crossed with Buff Orpington. Each of these breeds has consequently to be maintained pure for stock, and in order to meet demands for sittings of eggs a certain number of pure-bred Plymouth Rocks, Faverolles, Minorcas, Golden Wyandottes, and Anconas are also kept.

The question of labour is obviously important, and Mr. Palmer refers to the difficulty experienced in finding capable men—a difficulty which he thinks will be partly overcome by the efforts of County Councils to teach poultry management. In his case the poultryman is assisted by another man, who devotes the whole of his time to feeding and to general work, and a boy also assists on Sundays and after school hours. The plucking is done by the poultryman's wife. The maximum number of fowls is reached in July, after which, until November, the stock is diminished as table birds are killed. In July, 1901, the total number was 2,700, the attendance on which, with the making of houses, coops, and appliances, fully occupied the present staff.

After a description of the houses and appliances used, the general arrangement of the poultry is detailed. Hatching commences at the end of October, so as to provide spring chickens for March and April. Incubators and foster-mothers are used during the winter, but in the spring and summer hens are preferred. Hens are sold off in August and September at two-and-a-half years old, and realise about 1s. 6d. each. Chickens hatched in the autumn and early spring are placed in the chicken-rearing shed, and when two to three months old are removed to some warm house in a dry, sheltered spot facing south, to which is attached a covered run. When young chickens are thus moved a foster-mother is placed inside the house; but for older chickens a lantern suspended in the house provides any additional warmth that may be necessary. In March the chickens, when ratched, are placed direct in the fields, in either foster-mother's or coops. When two to three months old they are taken from the coops and placed in lots of about twenty in movable houses on the pastures, where for the first few days a wire run is attached to each house. Two or three acres of meadow are reserved each year for the foster-mothers and coops. They must be kept near the farm-buildings, so that someone is continually at hand to keep away the rooks, which are apparently a dreaded foe. Rats and weasels also, however, give the most trouble, and have to be kept down by continual ferreting. Foxes, although the farm is situated in a hunting country, are more easily managed, and not a dozen birds have been taken by them in four years. All fowls are securely locked up at night, and the light from the foster-mothers in the fields partly serves to frighten away foxes. The best device, however, is that of running a wire across the fields, along which a good watch-dog can slide his chain, and thus give the appearance of freedom. The portable houses occupy during the spring and summer about 35 acres. Each one is shifted a few yards in position every week, partly to prevent any tainting of the ground around it, and partly to prevent killing the grass underneath it. In the winter-time it is more convenient to collect the houses somewhat nearer together, in proximity to the homestead, which lessens the labour and enables the birds to shelter under the ricks; moreover, during this time of the year the birds derive little benefit from being scattered. Cattle and horses graze on the land with the poultry. After harvest, for a month or two, most of the fowls are placed on the stubbles.

(To be continued.)

IN PARLIAMENT.

HOUSE OF COMMONS.

Rating of Machinery Bill.

On Wednesday the Bill for exempting tenants' machinery from rating came on for consideration, the second reading being moved in a maiden speech by Mr. E. Chapman. The practice of rating such machinery varies widely in different parts of the country, and the object of the Bill was to define the law with the view of securing uniformity of practice by providing that, in estimating the gross rental value, the rating authority should exclude any increased value arising from machines, tools, or appliances which are not fixed, or are only so fixed that they can be removed from their places without necessitating the removal of any part of the hereditament. The system of rating which the Bill seeks to legalise prevails in the textile districts of Lancashire and the West Riding of Yorkshire, but is not followed in Northumberland and many other places.

Sir J. Joicey moved the rejection of the Bill.

Mr. Long said that the Government were not prepared to take any action on this occasion different from that they had adopted on previous discussions on this measure. It had always been left to the House to decide the question, and he did not propose to advise the House what that decision should be. It was natural to suppose that if the Bill were passed, and relief were granted to those who now paid rates on the machinery, the money which they paid would have to be found by somebody else. It was not alleged that the machinery now rated did not form an important part of the premises in which it was placed. The direction to the assessment committees was that they should make a fair assessment, and the committees took the property as they found it. If the House chose to adopt the Bill, it must do so realising that a large amount of rates now produced would cease to be received; that the money would have to be found, and that it would not be found out of the Imperial Exchequer. The question would have to be dealt with on the general principles of taxation. Appeals had been made to the Government to take up that question, but he would remind the House that they had enough legislation before them for this session. The Government would deal with the matter of taxation as a whole, and he regarded with some apprehension proposals to deal with local taxation in a somewhat novel way. He was afraid that the hopes of certain hon. members with regard to the lessening of litigation if the Bill were passed would not be realised. If there was a national question involved it was of a limited character, and, in his opinion, it was essentially a local question, which should be dealt with by local authorities, and that the Government should not be asked to take it up. It was in the power of the districts to elect their own assessment committees, and if they were dissatisfied with the decisions of the committees they could turn them out at the next election. He admitted that there was a great deal to be said in favour of and against the Bill. If the House were in favour of the Bill, the Government would accept the decision, but they could hold out no hope of assistance to pass it this session.

Sir J. Joicey's amendment was defeated by 182 to 143, and the second reading was carried by 170 to 135.

Supply of Army Horses.

Mr. Mansfield asked the Secretary for War, on Friday, if he could say what horses had been purchased during March, and from what countries they had been drawn.

Lord Stanley: During March 1,245 horses were purchased in Great Britain, and 183 in Ireland. It is not possible to state the exact number of horses purchased abroad, as the accounts for March are not yet to hand, but 6,546 were shipped from Fiume, 3,565 from the United States of America, and 731 from Canada.

Locusts and Grasshoppers.

An interesting paper on locusts and grasshoppers was read by the Rev. Dr. Walker, at the Victoria Institute, on Monday afternoon. Locusts and grasshoppers, he said, belonged to the great order known as Orthoptera, from the fact that the wings were of one uniform width, without angles, sinuosities, or scalloped edging. They were the only members of the order referred to in Holy Writ, and the passages in which they were mentioned were probably far more numerous than all those wherein the other orders of insects are alluded to. The great green grasshopper was our largest native species, and locusts were but occasional visitors in very hot summers. Putting aside structural differences, the discrepancy in size might be instanced as a criterion between these two groups. It was probable that the largest grasshopper only equals the smallest locust in size.

That several species of locusts and grasshoppers were known to the Jews was evident from the various names used in the Hebrew and Greek versions. It was impossible to identify the majority of these. Probably the immature stages of these insects received distinct names; and three of these are translated in Joel i., 4, as "palmerworm," "cankerworm," and caterpillar. Reference was made to the ravages caused by the incursions of locusts, not only in Palestine and the adjoining countries, but in other parts of the world, and a description of the general habits and appearance of the locusts was quoted, with approval, from the late J. G. Wood's "Bible Animals."

Dr. Walker believed that two species of locusts mentioned in the Bible might be identified. One was the locust of the plague of Egypt, the species known to entomologists as Acridium peregrina, still exceedingly common in the East; the other was "the bald locust," mentioned in Leviticus (xi., 22), which was, in all probability, Truxalis nasuta, specimens of which he had taken in countries bordering the Mediterranean. These, with some others, were used as food by the Israelites. Herodotus mentioned that certain Libyan tribes ate locusts, and some modern travellers, including Dr. Livingstone, had compared their flavour to that of shrimps.

Death of a Well-known Sheep Breeder.—Mr. George S. Fisher, of Broughton Lodge, Kettering, one of the most successful sheep breeders in the Midlands, died suddenly on Monday evening from pneumonia, brought on by a severe cold contracted about three weeks ago. The deceased, who was 40 years of age, was born in Cheshire, being the second son of Mr. G. F. Fisher, who recently passed away at a ripe old age at Broughton Lodge. Early in life the deceased emigrated to New Zealand, and took up the profession of sheep farming. Returning to England 13 years ago, Mr. Fisher took up his residence at Pytchley, but three years later he removed to a large farm at Great Addington, where his successful breeding of stock quickly brought him to the forefront amongst the best exhibitors of the fen districts. After a residence of eight years at Addington, Mr. Fisher moved to the large farm known as Broughton Lodge, near Kettering, where he continued his successful experiments in sheep and Shire horse breeding. In addition to personally managing his own extensive business, Mr. Fisher had devoted a good deal of time to public work. He represented the parish of Great Addington on the Thrapston Board of Guardians and the Rural Council, and was prominently identified with the Northants Agricultural Society, the Thrapston Fat Stock Society, and the Thrapston Shire Horse Society. He was one of the promoters of the newly-formed Kettering and District Shire Horse Society and a steward and member of the committee of the Kettering Fat Stock Society.

THE BEST SHEEP DIP IN THE WORLD.

BUSH'S Best Brand
NICOTINE SHEEP DIP

The most powerful Insecticide known to Science.
GUARANTEED TO CURE SCAB.
Cheap, Convenient, Efficient.

"CUNDALL'S" PATENT OIL ENGINE.

THE Most Perfect Power for Threshing, Grinding, Chopping, Pulping, &c.

Portable or Stationary.

Contractors to His Majesty's Government.

THE CHEAPEST POWER FOR AGRICULTURISTS.

WHAT USERS THINK AND SAY:—
"I cannot speak too highly of your Oil Engines, and consider them far the best Engines for Farmers' use."
"You will be pleased to hear that the Oil Engine you supplied me with last May is giving every satisfaction, both as regards work done and cost of running, which latter bears no comparison to the cost of the steam engine which it replaced."
"I do think this is the cheapest and far the best Oil Engine in the market. I fixed on the 'Cundall' not only as the steadiest running Engine, but also in having more control over it in altering speed and power."
"The 20 B.H.P. Oil Engine we bought from you about a year ago is working satisfactorily. We were fortunate in our decision in selecting your Engine."

CATTLE FOR WINTERING. —J. A. will be glad to receive orders for the purchase of Cattle, which, owing to the shortness of straw in Scotland, can now be bought cheaply. A good profit should be the result either for feeding or wintering.

CATTLE AND SHEEP FOR WINTERING. E. GOODWIN PREECE, Live Stock Agent and Exporter, Shrewsbury, will be glad to receive orders for the PURCHASE of CATTLE and SHEEP, which, owing to the shortness of winter keep in the West of England, can now be bought very cheaply. A good profit is assured either for feeding or wintering.

Several lots of Shropshire and Clun ewes, Shropshire, Oxford and Lincoln rams, and cattle of various classes on sale, which can be seen by appointment.

Address, Portland House, Shrewsbury.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.

ROYAL AGRICULTURAL SOCIETY'S SHOW, CARLISLE.

JULY 5th, 7th, 8th, 9th, 10th, and 11th, 1902.

The London and North Western Company's route will afford the most expeditious service for the transit of Passengers, Goods, and Live Stock Traffic to and from the Royal Agricultural Show at Carlisle.

Any information as regards the through rates for railway conveyance and cartage, &c., to and from Carlisle Station and Showyard may be obtained from Mr. FRANK REE, Chief Goods Manager, Euston Station, London, or Mr. L. D. PRICE, District Traffic Superintendent, Lancaster.

The Company will have an office on the Show Ground, and representatives to give information as to Passenger, Live Stock, and Goods Train Arrangements, to Exhibitors and the general public.

Special Goods and Live Stock Trains will be arranged for the speedy and safe transit of Exhibits to and from the Show; and Exhibitors at the Bath and West of England Show at Plymouth, and the Royal Counties' Show at Reading, forwarding Exhibits from those places to the Royal Agricultural Show at Carlisle will find the London and North Western Company's services the best and most expeditious.

The London and North Western Company's Express Dining and Sleeping Car Train Services to Carlisle, which is on their Main Line, provide the shortest and most direct route from London, the Eastern Counties (*via* Cambridge, Peterboro' and Rugby), the Midland Counties, the West of England, Liverpool, Manchester, and all parts for Passengers intending to visit the Royal Agricultural Show.

Care should be taken to clearly consign all exhibits for the Show, "Per London and North Western Railway."

FRED. HARRISON,
General Manager.

Euston Station, London, N.W.,
March, 1902.

THE BUDGET.—REGISTRATION DUTY ON CORN.

"The price of wheat is regulated by factors infinitely more potent than that of a threepenny duty on the hundredweight." This observation, made by the Chancellor of the Exchequer in his epoch-making Budget speech, was something more than a casual remark. It was a challenge, and until it has been answered the opponents of the registration duty must be regarded as out of court. The daily press takes, one is more sorry than surprised to see, a purely party view of the matter, whereas party has, in reality, nothing whatever to do with it. The effect of the threepence per hundredweight duty in 1846 was regarded as so slight that such undoubted Free Traders as Gladstone, Bright, and Cobden, not to mention Sir Robert Peel himself, made no objection to it. Sir Robert's own words, in 1846, in retaining the registration only were, "It will not in any way affect the price of bread." In 1869, when Robert Lowe removed the registration duty, he did so in conjunction with a reduction of a penny in the income tax. Sir Michael Hicks-Beach has put it on again in conjunction with a rise of a penny in the income tax. The latter falls wholly on the well-to-do, and even if we were to concede that the threepence per hundredweight will fall on the poor, what, let us ask, is the situation so far as logical taxation is concerned? Let us take the case of a respectable working-man earning thirty shillings a week and eating a quartern loaf daily. The duty now imposed would cost him 3s. 10d. a year. But income tax on earnings of £78, at the present rate of 1s. 3d. would be £4 17s. 6d. a year. Sir Michael Hicks-Beach, then, in his new Budget, has favoured the poor man against the rich to the extent of £4 13s. 8d. net.

This is a view which has been neglected in Parliament, but it cannot be ignored in financial circles. If the poorer classes did not pay their quota in the form of indirect taxation, the present merciful but quite illogical exemption of the poorer citizens from income tax would have to be abandoned, and each Englishman would have to "pay up" for national expenses in proportion to what he earned.

The "friends of the working-man," therefore, woul dbe well-advised to let sleeping dogs lie; the more so, too, as there is no evidence that the registration duty will fall on the English consumer at all. In 1869 the duty was taken off, but wheat did not fall threepence per hundredweight. Why, then, should it now rise threepence per hundredweight? The consumer who wants to make quite sure that he is not mulcted of the threepence has only to insist on an English loaf. If pro-Boers do not wish to contribute to a "war tax," let them buy English flour of the miller. We shall be delighted at this encouragement of home industries and preference for home produce. The rise in prices now quoted is, of course, a market move, pure and simple. A very few weeks will probably suffice to restore quotations to their legitimate level.

Who will pay the threepence? Probably the American, who is too keen a man to lose control of the English corn trade over a matter of less than a month's warehouse charges. Will bread go up? At first an attempt may be made to get a halfpenny per loaf more money, but as the duty equals only a penny on eight quartern loaves, the bakers asking this handsome extra profit for themselves will probably find themselves stranded.

Wheat at 30s. per quarter is equivalent to 4¼d. for the quartern loaf, allowing for millers' and bakers' profits, but not for credit or delivery. The latter item meaning carts and horses, men's and boys' labour, costs a halfpenny on the quartern loaf, and it is probable that four millions sterling are yearly wasted by consumers too lazy to fetch their own bread. The baker is not here to blame. He does not care to have to deliver, for probably he loses more customers over uncivil men and forgetful boys who deliver the bread than he does over either quality or price in the bread itself. Reckoning, however, a halfpenny for delivery and a farthing for credit, the ordinary householder ought to be able to get his bread at fivepence the four-pound loaf when ever wheat is averaging no more than 30s. Let him keep an eye on the weekly averages, and decline to pay more than the fivepence whilst wheat is at the present average prices; and most particularly let him see, if it rises for a few weeks above 30s., that when wheat comes down bread comes down too. It is

simple fairness to add that a margin must be allowed for price changes at headquarters to filter down. Thus, if wheat rose to 32s. on May 1st, and bread was put up the resultant farthing till the 15th, it would obviously be unreasonable to expect the loaf to be reduced in price before June 15th, even if on June 1st wheat went back to the lower side of 30s.

The re-imposition of the registration duty is, in our opinion a wise and statesmanlike measure, raising a substantial sum with a minimum of friction, and, in the exemption of home produce, establishing a sound and patriotic principle. With respect to the slight preference shown to the raw material over the manufactured, we wish it had been not slight. The unprosperous state of our home mills, and the drifting away of skilled hands into other forms of mechanical employment are serious matters, for which both political parties are to be censured. A registration duty on wheat might well have been coupled with a substantial duty on wheat imported in the form of flour—a form which makes offals scarce and dear to stock-breeders, besides robbing a great and useful industry of its fair manufacturing profit.

THE FERTILISERS AND FEEDING-STUFFS ACT, 1893.

The Board of Agriculture have just issued a leaflet dealing with the purchase of artificial manures. It gives much useful information on the relative values of nitrogen, phosphates, and potash. We do not, however, propose to digest the decimals and vulgar fractions with which it abounds, and by the application of which the practical farmer will be able to estimate the approximate merits of the manure he selects for the particular object he has in view. Our thoughts are diverted into another channel, and we venture to supplement the information given with a reminder of the provisions of the Fertilizers Act, a measure which seems to be so conscientiously observed that a breach of its provisions is hardly ever brought to the notice of the Courts.

The Royal Commissioners on Agriculture who reported in 1882, whilst acknowledging that the Royal and Highland Societies and other local societies had done much to protect their members from the adulteration or falsification of artificial manures, feeding-stuffs, and seeds, recommended that protection should be given to farmers by including the analysis of such articles in the duties of county analysts. A decade later the Act was put into the Statute Book to carry this recommendation into effect.

Every person who sells a fertiliser (in greater quantity than half a hundredweight) is required to give to the purchaser an invoice stating the name of the article and whether it is artificially compounded or not, and what is, at least, the percentage of nitrogen, soluble and insoluble phosphates, and potash, if any, contained in the article, and this invoice has effecf as a warranty of the statements contained therein. There is a corresponding provision for a descriptive invoice to be given on the sale of artificial feeding-stuffs. Penalties of £20 for a first offence, and £50 for a second (in addition to any civil liability), are imposed for failure to give the notice required, or for giving a false invoice, or for selling deleterious ingredients in cattle food, or worthless ingredients not disclosed at the time of sale.

The machinery for working the Act consists of a chief agricultural analyst appointed by the Board of Agriculture, and district analysts appointed by the County Councils and County Boroughs. Every purchaser of a fertilizer or feeding-stuff is entitled, on payment of the authorised fee within ten days after delivery of the article, to have it analysed by the district analyst. Samples for analysis have to be taken to the buyer in accordance with the regulations of the Board of Agriculture, but on payment of a further fee the samples may be taken by the analyst or his deputy. Prosecutions may be instituted by the person aggrieved, by the County or Borough Council, or by any association authorised in that behalf by the Board of Agriculture. Elaborate regulations have been issued by the Board for the taking of samples, but we have not space to detail them. A copy may be obtained from the Board, post free, on application.

It will be noticed that the payment of a prescribed fee is a condition precedent to the right to an analysis by the district analyst. Obviously, the amount of such fee is an important factor, affecing the success of the Act. We believe the scales of fees authorised by the County Councils are generally moderate in amount. There is, however, a lack of uniformity amongst them, and sometimes the fee varies considerably with the article to be analysed. A distinction is also drawn between a single determination and a full analysis.

But analysts, like doctors, sometimes disagree. A remarkable instance of this came to our notice the other day. Some pigs which had been fed on fine sharps were attacked by illness, and died after exhibiting symptoms strongly resembling swine fever. The sharps were analysed by the district analyst, who pronounced them unadulterated. Another sample of the same sharps was analysed by an independent analyst, who declared that they were slightly impregnated with castor beans—a deadly poison. It was not suggested that the castor beans had been intentionally introduced—as a matter of fact, they are too expensive to offer any temptation as adulterants—but it was supposed that a few stray beans on the floor of the mill had got amongst the sweepings, and so been ground with the sharps. The incident, at any rate, lends colour to the possibility, recently suggested by Mr. Hanbury, that there is not only an actual swine fever proper, which is propagated only by the microbe and which does not spring up spontaneously, but also a disease simulating swine fever, which does spring up spontaneously, largely owing to the manner in which the animals are fed. What if half the so-called fever is really only the effect of poisonous ingredients lurking unsuspected in the feeding-stuffs employed?

Let it be remembered that it is an offence against the Act to sell deleterious ingredients in feeding-stuffs, and that knowledge on the part of the seller is immaterial; and let the farmers avail themselves more largely of the advantages of the Act. Perhaps one reason why we hear so seldom of analyses under the Act is the competition of the local agricultural clubs, which in many districts—especially in the North of England—procure analyses for their members free of charge.

Howden Horse Fair.—At this fair, held on Tuesday, there was a very small attendance and only a limited number of horses were on offer. For cart horses there was a good demand at £40 to £65. The top price for the lighter class was £20 to £30 each.

Mr. John Lamb, of Fern Bank, Penrith, died on Monday afternoon, at the age of 62, after less than a week's illness. Thirty years ago he owned the Shorthorn herd at Burrell Green, Great Salkeld, one of the best collectnons of cattle in the north of England. His successes at the Royal and other important exhibitions were very numerous, and at the time when high prices were paid for the best class of stock he was among the most successful. His most noteworthy Royal winner was a grand young bull, Bold Ignoramus, which he sold for 500 guineas to Sir Tatton Sykes. Mr. Lamb's only son is a captain in the Manchester Regiment, now at the front.

By a Man of Mark Lane.

The receipts on account of Revenue from April 1, 1902, when there was a balance of £8,566,947, to April 12, 1902, were £7,831,960, against £6,543,325 in the corresponding period of the preceding financial year, which began with a balance of £5,596,918. The net expenditure was £13,038,848, against £13,416,838 to the same date in the previous year. The Treasury balances on April 12, 1902, amounted to £3,799,394, and at the same date in 1901 to £3,711,905.

Sir Cuthbert Quilter, M.P., who visited Egypt recently for the benefit of his health, and returned on Tuesday to prepare for the debate on Pure Beer Bill No. 3, claims to have established beyond dispute that ale, as mentioned by Herodotus, was brewed in Egypt 2,000 years ago. At Luxor, Sir Cuthbert came upon a monolith with a bas-relief indicating a tankard, and he found inscriptions establishing the existence of beer in the early days of Egyptian civilisation.

Mr. F. B. Smith, Professor of Agriculture and Vice-principal of the South-Eastern Agricultural College, Wye, Kent, has been appointed by the Colonial Office as agricultural adviser to Lord Milner. He will sail in the "Saxon" on the 26th of this month.

Irish Ploughshares for China.—It is stated that a large order is at present being fulfilled by an Irish firm of ironfounders, which is supplying no fewer than 15,000 plaughshares for use in China. Already about 3,000 of these are on the way to their destination, having been shipped from Dublin by way of Liverpool. It is the first order of the kind ever placed in Ireland.

Ayr Spring Hiring Fair.—This fair took place at Ayr on Tuesday, was very largely attended by servants, and there was a great demand for them. Cotmen got from 19s. to 21s. a week, with benefits, 20s. being the more regular wage; single ploughmen, from £16 to £17 in the half-year; byre men, milkers, £16; dairymaids, £12 to £14; and kitchen and byre girls, £10 to £11.

By a Lobbyist.

One purpose of the Radicals in regard to the new Budget has been made luminously apparent: it is to represent the registration duty on corn and flour as an infliction designed purely in favour of the rural and landlord interest. It is to be represented, not merely as a Protectionist infliction, but as a Protectionist infliction of the worst character Not merely is a tax being put on the imported food-stuffs, but the Radicals point out that there are exemptions from the list of to-be-taxed articles which could only have been designed for the special behoof of the agriculturists. For instance, the list of grains to be subjected to the duty does not include linseed or cotton-seed—an evidence that the Government intends, as far as possible, to relieve agricultural feeding-stuffs from the impost. "Why," the Radicals are asking, "should this differentiation be permitted? Surely the farmers should be the last to be allowed to escape a national tax which can only tend to operate in their favour?" It cannot be said that the revenue yielded by linseed or cotton-seed is unimportant. Last year the imports of cotton-seed amounted to £2,600,000, and of linseed to £1,100,000. Yes, this is Protection—so the Radicals declaim—of the most unblushing, flagrant, and bare-faced character.

I am doubtful myself that the Budget will confer any serious direct benefit upon agriculturists. The tax is too small to permit of this. Even if the price of bread be immediately raised, we shall soon find that the matter will re-adjust itself. Public competition will be a grave factor in equalising and minimising the effect of the impost. The importance of the Budget—and I am in this repeating the opinion of some of the saner and clearer-eyed of the agrarian Members—lies in the fact that it gives a nemphasis to the encouraging and friendly attitude of the Government towards the interest. It is a continuation, in a word, of what the Radicals contemptuously dub "the policy of doles." It is, in fact, an extension of the principle embodied in the Rating Act. I am not going to copy Sir Michael Hicks-Beach and assert that the Budget is not out of harmony with the policy of Gladstone and Peel. It was an ill-advised assertion, which has little of sympathy with that manly outspokenness which we always associate with Sir Michael Hicks-Beach. Gladstone at least always regarded the registration duty which it is intended to re-impose as Protectionist in character, and Mr. Lowe regarded its abolition as, in a measure, the completion of the policy of Free Trade. The value of the present policy is that it is antagonistic to the economic purpose of Gladstone towards agriculture. If it were otherwise, it would be hardly worthy a cordial greeting.

This financial policy, or, rather, the character which its opponents will give it, will have at least one painful effect: it will inevitably tend to widen the antagonistic sentiment which is dividing the rural and the urban communities. But, for the matter of that, I believe that this would be the inevitable result of any specific measure in favour of the farmers. Any protective measure in favour of the urbanites—such, for instance, as an imperative eight-hours day—is represented not merely as justifiable and wise, but as consecrated by the first instincts of our humanity. To do aught in the same direction for agriculture is held to be a sacrilegious attack upon its own heaven-sent privilege of going unhindered to ruin. Still, this antagonistic sentiment is deeply regrettable, and that not because it has had any immediate ill-effect, but because it may engender a spirit of retaliatory attack. "This sentiment," said a Conservative M.P. to me on Thursday night, "is not really due to the legislation which has been recently adopted for the special behoof of agriculture. It is, I agree with you, due to the character given it by its opponents." The mere fact is that the bitterness bred of the Cobden and Bright agitations has never died out. It has been for years non-apparent, but never non-existent, and it is always susceptible of a blooming revival. Those agitations were agitations against landlordism in favour of urban industrialism, and at this moment the Budget appears to be to the Cobdenites an organised attempt on the part of organised Toryism to revive the economic conditions against which industrialism warred half-a-century ago.

In a sense, the Budget comes at an inopportune moment. Why, readers who believe in the Protectionist principle—the men who follow the lead of Mr. Chaplin, Mr. James Lowther, and Sir Howard Vincent—will declare that it can never be inopportune to do the right thing. In politics, however, it is the Opportunist who succeeds. The resolve to revive an impost on food-stuffs—which, I repeat, is of too small a character to have any serious effect upon prices, and certainly upon the price which the farmer will get for his cereals—has synchronised with an educational reform which the Radicals represent as another endowment for the benefit of the parsons. The Radicals denounce both purposes; and their skilled organisers actually gloat—I can use no other description than this—over the value of the old heroic cry of "Down with the Corn Laws and Church rates!" The whole policy of the Government will, in fact, be held to be retrogressive, and to be intended to return to those economic conditions whose first fruits were a starved and miserable people. I can understand men laughing at my assertions. I am, however, speaking with knowledge. In a few weeks every township in the country will resound with the asserftion that the sacred right of a cheapened food is in danger, and that the public funds are to be pillaged in the interest of one religious sect. The union of the two cries is a valuable electoral asset. It will lend to the denunciation of landlordism a certain sacrosanct character. It will inspire militant Nonconformity with the belief that in warring against the principle of the Budget it is performing a religious duty.

It may thus be that the economic departure which Sir Michael Hicks-Beach has initiated will not realise its promise. I have hailed it as a portent; butit may be that it will only remain a portent. I say this, not so much with the object of moderating the transports with which it has been received, as with the object of preventing a subsequent disappointment. "Much depends on the extent of the influence of what I may describe as Brightism among those who have hitherto acted with us." This remark by a Conservative politician of calm observation indicates one of the more serious elements in the situation. The significance of the Liberal spit in 1886 was due to the fact that the seceding section was led by Mr. Bright. In many senses Mr. Bright was a Conservative. I believe that had he lived he would have been proud to be entirely out of harmony with the present trend of industrial legislation; but upon this question of untaxed cereals and open ports he never swerved or faltered; nay, in his retrospect of the fight he fought he conveyed to you the idea that, in his belief, he was during the combat supernaturally inspired. Has the influence of Brightism among the Unionists receded? The Radicals, of course, will fight this new policy to a man. How many adherents will they secure from among the Liberal Unionists? Upon the answer to this depends, in a grave sense, the real value of the new policy which the Chancellor of the Exchequer has adopted. In its present initial stage that policy cannot accomplish much for the farmers.

I received, on Friday night, a piquant illustration of the manner in which the representatives of the towns will utilise the Budget. I found the antagonists of the Pure Beer Bill canvassing for support for their opposition on the ground that the Bill is simply another result of the Protectionist spirit which has been revived in the interest of the farmers. I heard one M.P., who is, I believe, himself a teetotaller, call upon two or three of his fellows to resist "this outrageous attempt" to put still another tax on the beer-drinking working-man for the benefit of agriculturists. Of course, I do not attribute the very strenuous antagonism which the Bill has provoked to this fact alone; I can only quote it as an example of the fertility of the Anti-Protectionists. Will this strenuous antagonism be sufficient to secure the defeat of the Bill on Wednesday? Well, judging by the result of the division last year, I should say it will not. But of what will success avail? We shall probably hear little more of the Bill; and even if it should prfoceed through all its stages—a most unlikely result—it will not much matter: the Bill is an innocuous production.

THE DAIRY.

Chester Cheese Fair.

The April Cheese Fair at Chester was held on Wednesday, when there was a pitch of about 32 tons. Buyers were in good attendance from all the principal centres of the trade. The market opened with a good inquiry for fine lots, and especially matured coloured, which sold at from 65s. to 70s. per cwt.; medium made 58s. to 63s. A good clearance was effected. The pitch and prices were about the same as at the corresponding fair last year.

Tax on Margarine in America.

Some weeks ago we reported that there was a Bill before the American Senate which, if passed, would have a revolutionary effect upon the sale of butter on the other side of the Atlantic, and an indirect effect here. This Bill has now been passed by the Senate, and it imposes 5d. per lb. on coloured margarine, and on adulterated butter, as well as ½d. per lb. on uncoloured margarine, and on process butter. As alterations have been made by the Senate, the Bill will go back to the House of representatives for confirmation. It is considered that the tax of 5d. per lb. will annihilate the coloured margarine trade, and it looks as if the American consumer will have to eat butter instead of margarine which must enhance the price of butter at home and restrict the export accordingly.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending April 15, 1902:—

THE BUDGET.

Registration Duty on Corn and Flour.

OPINIONS AND CRITICISMS.

The Chancellor of the Exchequer, having recovered from his recent illness, was able to make his Budget statement on Monday. The earlier passages of Sir Michael Hicks-Beach's statement were devoted to a review of the financial year of 1901. He said that the ebb in our commercial and industrial activity which had begun in 1900, although not augmented, had not yet ceased, but that, although the year showed nothing to elate us, it showed nothing to depress us. While a falling-off was shown in some items, there had been nothing to show any considerable drop in the consuming power of the people. The receipts from tobacco, spirits, and beer exhibited a diminution, but so far as the first two were concerned that arose from the forestalling of duty in the previous year. As against the fall in beer, there was a countervailing increase in the consumption of tea and cocoa. The total Exchequer issue last year, as compared with his estimate, had been £195,522,000. Deducting from this the Exchequer revenue, a deficit appeared of £52,524,000, and as £56,553,000 had been provided for out of Consols loans, a balance to the good of the Exchequer was left of £4,029,000. After remarking upon the erroneous and alarmist forecasts which had been heard from Radical quarters, the right hon. gentleman placed at £69,830,000 the special military and civil expenditure incurred during the year for the South African war. The total expenditure provided by the State in the year was £212,783,000. His estimate of receipts from the Customs had been exceeded by £993,000, sugar producing £6,390,000, as compared with his estimate of £5,100,000, and the export duty on coal producing, similarly, a slight increase over his anticipation. Even if the results of the current year should exhibit no increase in the export of coal, or actually a decrease, he should not regard that fact, observed the right hon. gentleman, amid cheers, as a proof that the export coal duty ought to be repealed. An explanation of his reasons for not considering wine and tobacco as promising objects for taxation this year was followed by a reference to the yield from the income-tax, and to the cost of the war.

Cost of the War.

A rough estimate of the cost of the wars in South Africa and China during the three years ending on March 31st last placed it at £165,034,000, but we had, as assets coming near, the repayments from the wealth of the Transvaal, and our share in the Chinese indemnity, the latter figure being in our own case £6,000,000. The total expenditure for the year he estimated at £174,609,000. On the present basis of taxation the revenue should amount to £147,785,000; so that a deficit was left of £26,824,000. But an addition must be made of from sixteen to seventeen millions in respect of the war expenditure to be incurred this year. He could not be influenced by mere hopes as to the outcome of the present peace conferences. Those who were most anxious for peace knew that nothing was more likely to conduce to that end than a firm and determined attitude on the part of the House of Commons and of the country. There would be likewise grants to both sides in the war, for the sake of restocking and resettling farms. Altogether he had a deficit of 45½ millions, but he reduced this to 41 millions by suspending the Sinking Fund.

New Taxes.

Coming to the new taxation proposals, Sir M. Hicks-Beach announced as the first of them a penny on the income-tax. This would yield £2,000,000 this year and half a million more next year; but he promised it should be viewed as the first item for reduction after the war. The stamp duty on bills at sight would be raised from a penny to twopence; and this would yield half a million. "Our old favourites," said the right hon. gentleman, "beer, spirits, and wine, are even less promising for increased taxation than they were a year ago." Tobacco was even in a worse position, whilst sugar could not be disturbed at the present juncture. Sir Michael pointed out that his primary object was to look for revenue, and his ideal of a tax was that which would yield most revenue with least inconvenience to the people. "Some people," he said, "have thought that they have discovered such a tax in what used to be called the old registration duty on corn and flour. (Hear, hear.) I should like to say something to the Committee on the history of that tax."

History of the Registration Duty on Corn.

"When Sir R. Peel in 1846 proposed the gradual abolition of the protective duties on corn, which according to the tariff of 1842 might have amounted to as much as £1 a quarter, he deliberately retained the duty of 1s. a quarter on corn and 4½d. a cwt. on flour and meal. That tax was remodelled in 1864, and went on for no less than 23 years, paying a part of the cost of the Crimean War, until Mr. Lowe, not quite knowing what to do with his surplus—I wish I was in that position—(hear, hear, and laughter)—abolished it in the year 1869. At the least it even then amounted to £900,000 a year. Why did Mr. Lowe abolish that tax? He gave two reasons. The first was that he believed, though it was a very small duty, it had the effect of preventing this country from becoming the commercial *entrepôt* for the corn trade of the world, and that being abolished, this country, being situated between America on the one side and the corn-growing countries of the East of Europe on the other, would become such a commercial *entrepôt* for the corn trade and a great benefit to our merchants. That was a very plausible reason, but Mr. Lowe's expectations had been entirely disappointed. Out of the enormous imports of corn, flour, and meal into this country year by year the most trifling proportion is ever re-exported. But Mr. Lowe gave a more important reason for abolishing the tax. He said this was a tax on one-third only of our total consumption of corn and flour. At that time only one-third of that consumption was imported from abroad, while at the present time two-thirds is imported from abroad. (Hear, hear.) He said that if to levy a tax on one-third of the total consumption of an article is wrong it is wrong in two ways: in the first place it raises the price of all the articles consumed—that which is produced in this country as well as that which is imported from abroad. It therefore takes more out of the pocket of the consumer than it yields to the Exchequer, and acts as protection to the home producer at the cost of the public at large. That, I think, is a fair statement of Mr. Lowe's argument. It was a beautiful theory, but it was only a theory—(hear, hear)—and it had never occurred to anybody before Mr. Lowe."

Price of Food was not Affected.

"When Sir Robert Peel alluded in 1846 to this registration duty, as it was then called, he evidently felt that its effect on the price of the article was absolutely nothing. (Hear, hear.) When he announced that after three years from that date, 1846, protective duties on corn and flour would entirely terminate, and foreign corn would be permitted to be imported duty free, almost with the very next breath he interpreted 'duty free' to mean that it would be subject only to what he called the nominal duty of a shilling; and in later years, when Budget after Budget saw more and more articles removed from our tariff, these articles still remained in it through times which may be called the heyday of Free Trade doctrine, without anyone ever objecting to the duty on the ground of its being protective. (Hear, hear.) And this was not because the attention of Parliament was never called to it. In the year 1864 Mr. Gladstone deliberately remodelled the duty. It had been a shilling a quarter on all corn; he altered it to threepence per cwt. instead, with the result of increasing the duty on some kinds of corn and decreasing it on others. He even proposed to include in the duty certain grain which had previously been free from it. Did anyone then suggest it was Protection? No (Ministerial cheers.)

Was there ever a greater Free Trader than Mr. Gladstone in 1864? Never! And yet what did he say of the tax? He did not desire it to be a permanent tax, but even while he was in that very year reducing the duties on tea and sugar he said with regard to this tax that it was a tax which produced considerable revenue, and which it would not be convenient then to part with. Now I come to the present day. I heard a cheer from the hon. member for Poplar (Mr. Buxton). He has given some study to financial questions, and I think his words may be listened to, at any rate, with deference on the Opposition side of the House. He has written a book on this subject, in which he refers to the abolition of this duty by Mr. Lowe. He states the opinion—which, no doubt, he still holds—that the registration duty on corn and flour violated in theory the principles of Free Trade, but he goes on to show that he did not violate them in practice, for he says: 'There was something to be said against the permanent relinquishment of a branch of revenue, profitable in itself, collected with very little trouble, expense, or hindrance to trade, and practically not affecting the price of food—(Ministerial cheers)—and it is pretty certain that if the duty were now in existence it would be retained; but the period was one of a somewhat reckless relinquishment of indirect taxation.' I agree with the words of the hon. member; it was a reckless act to relinquish this duty, and it was proved to be so by the result, for—as I think I can proceed to show—the abolition of the duty, as he states, practically did not at all affect the price of food, not even of the corn like wheat, barley, and oats, so largely produced in this country.

"Now I refer to the wheat prices of 1869. The duty was abolished on June 1st, 1869. The monthly average price for January that year was 51s. 7d.; from that time it fell until in the last week of May it came down to 45s. 2d., that being also the last week of the duty. On June 1st the duty was abolished. The price of wheat remained the same for the first week. It then rose steadily till August, when it amounted to 52s. 1d., and it was not until the following December that the price of wheat was again as low as it was in the previous May with the duty on. Now, what does that prove? Why, of course, it proves that

the Price of Wheat is Regulated by Factors

infinitely more potent than that of a threepenny duty; it is regulated by questions of demand and supply, by the question of a plentiful or bad harvest, by the question of cost of transport, and the effect of the threepenny duty per cwt. on the price of wheat could be nothing more at the most than that of the dock dues which are charged at the port when a vessel lands her cargo—nothing nearly so much as the protection now given to foreign wheat by the difference between the freights for that wheat and the freights on our railways. (Ministerial cheers.) But did the duty check the imports of corn into this country? Did its repeal increase imports? From 1849, when protective duties were abolished, until 1859 there was not much change in our total imports of corn. In 1862 they rose to 74,000,000 cwt., double what they were in 1859. Then they fell; then they rose again to 80,000,000 cwt. in 1869, which was the year of the repeal of the duty; but in the following year, when anybody would have supposed, if the duty had anything to do with the matter, that they would have largely risen, they fell again to 74,000,000 cwt., 6,000,000 cwt. less than in 1869.

"Was there any effect on the price of flour from the repeal of the duty? I find that the price of flour in the Mark Lane returns for the eleven weeks before the repeal of the duty was 39s., precisely the same as it was for the thirteen weeks after the repeal. Did it make any difference in the price of bread? All who have studied these subjects know that the price of bread does not vary with small changes in the price of corn. (Hear, hear.) The retail price of bread, like the retail price of all articles, is established by averages over a wide range of quantities and qualities and over a considerable period of time. I have no doubt that our bakers are extremely ready to seize any excuse for increasing the price of bread, and I am afraid that the bakers and dealers together have made proportionately very much more profit out of the low prices of foodstuffs in this country than ever has come to the retail consumer. (Cheers.) But 3d. a cwt. on corn would amount to a very small fraction of a farthing on a 2lb. loaf, and there is sufficient competition among bakers to make it quite certain that if anybody attempted to raise the price of bread on such a ground as that he would very soon find it was to his advantage to return to his former price. The records of the price of bread in 1869 are very imperfect, but I find this, that the fall of wheat between January and May in that year was, as I have said, 6s. 7d. per quarter, and the fall in the price of the quartern loaf in the east of London was rather less than a halfpenny; but when the duty was abolished of course it had no perceptible effect whatever on the price of bread in that year. I think the committee will not be astonished if after all the arguments I have placed before them, I say that in my judgment the repeal of this duty by Mr. Lowe in 1869 was a great mistake." (Ministerial cheers.)

The New Tax on Corn and Grain.

"At a time when it is essential, in my judgment, for the country to increase the yield of indirect taxation it is a time also when that tax ought to be reimposed. (Ministerial cheers.) The duty

will be leviable as before at the time of importation, when passing the customs entry, on the documentary evidence of weight, unless the grain should be at once entered for re-exportation, in which case bonds will be taken for duty until it is re-exported. With this exception no bonding or drawback will be allowed—it was not allowed before—as the duty is so low. The duty will be threepence per cwt. on all corn and grain." (Ministerial cheers.)

Sir H. Vincent: "Well done." (Laughter.)

The Chancellor of the Exchequer: "The question is, assuming that to be the duty on corn and grain, what should be the correlative duty on flour and meal. In the years to which I have referred that correlative duty was 4½d. per cwt., or 50 per cent. more. It was based, of course, on the calculation of the average quantity of corn which it took to make a certain amount of flour. But since that time the circumstances of the milling industry have undergone a considerable change. In those days the amount of flour produced from 100 cwt. of wheat was calculated to be 80 cwt. It was produced by grinding with millstones—a process which is now practically extinct, at any rate, in the countries from which our flour comes. The flour is now ground by roller mills, with the result that 100 cwt. of wheat would only yield 72 cwt. instead of 80 cwt. of flour. But that flour would be of much finer quality, because it would not include the offal formerly included in our old flour. Therefore, in order to equalise the duty as between flour and corn, we must put th eduty on flour somewhat higher than it was before, and I pro-flour and corn, we must put the duty on flour and meal. The total yield of these duties in the current year I estimate at £2,650,000, making a total estimated receipt from new taxation of £5,150,000."

With a deficit still confronting him of £35,500,000, he proposed to borrow £32,000,000 and to find the rest by a draft on the Exchequer balances. A continuance of war expenditure throughout the year might render it necessary for him to be invested with temporary borrowing powers, and if that were so, he would propose that it should be by Treasury bills, or by some short loan to the extent of 10 or 12 millions.

'Taxing the Food of the People" an Absurd Cry.

In conclusion, the Chancellor of the Exchequer said: "It is not an agreeable task to me to feel that this year again I am to some extent undoing the good work which my predecessors have done, and which I, in more prosperous times, imitated, in the reduction of the National Debt. It is even more unpleasant to be obliged to ask a limited class of the community, those who pay Income-tax, to bear an additional burden, and to restore to our tariff an article of universal consumption which has been free from taxation for a generation. But I remember something which Mr. Gladstone said when, in the early days of the Crimean War, after a series of Budgets in which article after article had been freed from taxation, he had to propose new taxation for war expenditure. I remember then that he warned the Committee whom he was addressing, that in the vista of expenditure which was opening before them, it was impossible to say how long a permanent continuance of exemption from taxation could be accorded to the articles which he had himself freed from it, among which the Committee will remember corn and flour were not included. Sir, the position to-night, to my mind, is much the same as it was in Mr. Gladstone's mind at that time. The crux of the situation is the necessity for increased indirect taxation (Ministerial cheers).

"I have to propose an increase. I know very well that the very name of a duty on corn may arouse prejudices, strong and deep, born in the days when such a duty meant a duty intended to make corn dear, and sometimes, at any rate, too successful in its object. That, Sir, is not the duty I propose to-night (Ministerial cheers). I know that attempts may be made to fan those prejudices into flame by a renewal of the cry which has always seemed to me to be somewhat absurd (Ministerial cheers), considering that some kinds of wholesome food have always been taxed on our tariff, and I cannot myself see why it is more wrong to tax an article that is consumed by a man as food than to tax the means by which he purchases that article. I remember that this cry was attempted to be raised last year when I proposed a duty on sugar; but I remember also that the good sense of the people at large rejected it, and I believe that they will reject it again (cheers), because I am convinced that they know and feel that, with the high wages of the present day, and with bread so cheap that even in comparatively poor households, I fear, it is sometimes wasted, the tax I am proposing could at the very worst be but a very trifling contribution on their part to the cost of a war of which the great bulk of them approves (cheers), and to the ever-increasing charge of the Navy, one of whose primary duties it is to protect the food supply of the country (cheers). Of this I am quite certain, that by no other indirect tax could, by any possibility, so much money be found for the Exchequer with so little effect upon the price of the article on which it is imposed, with so little injury to any manufacturing industry, or with less general disturbance to the trade and commerce of the country. I beg to move the resolutions." (Cheers.)

The chairman (Mr. Jeffreys) then put the resolution imposing a duty on corn and flour.

The Discussion.

Sir W. Harcourt said that the duties on imported corn and flour would meet with the most decided hostility on that side of the House. (Opposition cheers.) Sugar is a comfort, but corn is a thing of the first necessity. Therefore, the tax upon corn falls upon the very poorest of the poor. What is the argument upon which the right hon. gentleman relies? The argument is this—that it is so small a tax that it will not affect the consumption of that commodity. That is an old fallacy of the old Protectionists. I think it is the most formidable proposal of taxation that has been made for many a long year, and by far the most objectionable. If I had to select one tax which was the worst which could have been chosen, I should say it was a tax upon corn (hear, hear). The right hon. gentleman says it is a prejudice to say it is a tax upon the food of the people. It is a tax on the food of the people, and you cannot alter that. It is a tax upon the very commodity which is the most extreme necessity of the poorest of the poor; and it is a tax which of all taxes ought to be avoided. Everybody will feel that this means a great deal more than is implied.

Mr. Chaplin said that the Chancellor of the Exchequer had pretty well exhausted already all ordinary sources for obtaining great additions to Revenue, and was obliged to try others, and he was going to try a revival of the old shilling duty upon grain. As a tax he (Mr. Chaplin) defied anyone to prove that it would injure any human being, and he had always regarded its repeal as an act of financial unwisdom if not of great financial folly. The burden of that duty would be infinitesimal; the price of bread to the workers of this country would not be raised even by a fraction of a farthing; no other tax could be named that would produce an equal amount of Revenue, and no argument could be used against it except on the ground of sentiment, and sentiment in the present financial position of the country was too expensive a luxury. Further, as a protective measure, the effect of the tax would be nil, while, on the other hand, the amount of Revenue produced would be considerable. Where could another tax be found to produce an equivalent Revenue with so many recommendations in its favour? His right hon. friend had taken a wise and courageous course in proposing such a tax, which was supported by reason and justice, and by experience and expediency. He ventured to say that the tax would meet with a far wider and a far more general acceptance and approval in the country than, perhaps, hon. gentlemen opposite anticipated. He believed that multitudes of people would thank God that, in connection with the financial policy of this country, a little common sense had at last been brought to bear. (Hear, hear.)

Mr. Buxton said the Chancellor of the Exchequer had pointedly referred to him, but he declined to admit that his remarks on the registration duty on corn bore the full meaning the right hon. gentleman had lent them. He condemned the tax as a tax, and said it should have been applied, if levied at all, to the reduction of the debt. To impose a tax was very different, moreover, to continuing it. He regretted that the right hon. gentleman had not raised all that he was seeking by taxation from income tax.

Mr. Lowther said the reimposed duty was no protection, but it broadened the basis of taxation which had been unduly narrowed. On purely revenue grounds the tax on imported corn and flour was a proper one, and had nothing to do with the protection of home industries. It was at the same time unjust that, while the food of the people was now to bear additional taxation, articles of foreign manufacture, which directly competed with the products of our own countrymen, were admitted free of charge.

Mr. Broadhurst warned the Chancellor of the Exchequer that the tax on corn would be fought by the Opposition with all the strength of which they were capable. It was monstrous that for the pleasure of assisting the millionaires in South Africa after the war the bread of the widows and orphans in this country should be taxed. (Oh, oh, and laughter.)

Mr. T. G. Bowles thought the addition to the income tax was indefensible, particularly in view of the fact that so many incomes escaped. On the other hand, he knew of no means by which so large a sum could be raised with so little injury to the people as the proposed corn duty.

Sir H. Campbell-Bannerman at this stage suggested that some indication should be given as to how the House would be asked to proceed with the further stages of the Budget. He thought some longer time for considering the general financial scheme of the Government should be given than would be afforded by having the general debate on the Budget the following day. (Hear, hear.)

The Chancellor of the Exchequer expressed his desire to meet the appeal of the leader of the Opposition. He suggested passing the corn duty resolution that evening and taking the loan resolution the following day confining the debate strictly to the subject of the loan. The general discussion on the financial proposals of the Budget could then be taken on Thursday, and another day at a later date given for a full discussion of the corn duty. (Hear, hear.) He wished to know whether this course would be in order.

The Deputy-Chairman said the course proposed would be in order.

Mr. Holland wished that the Chancellor of the Exchequer could have seen his way to make certain proposals for taxation marked to the expenses of the war, which in the event of peace being restored might have been dropped very easily without interfering in any way with the general scheme of the Budget. He condemned both the extra stamp on cheques and the duty on corn.

Mr. Robson looked on the proposed tax on corn not as the dawn of a new day, but as a reversion to a long past night. The convenience of such a tax was its greatest danger, and would constitute the temptation of every other Chancellor of the Exchequer. (Hear, hear.) The tax would not remain at 1s. a quarter, and it would ultimately be extended to manufactured articles. It was unquestionable that it would be paid, not by the foreigner, but by the consumer, and it would fall with the greatest severity on the poor.

Sir H. Vincent approved of the corn tax, and said that hon. members opposite should look at facts as they were to-day, and not as they were thirty or forty years ago.

Mr. Churchill thought the new taxes which the Chancellor of the Exchequer had brought forward would give to the revenue a power of expansion that hitherto it had lacked. The imposition of a one shilling and threepenny income tax was a matter of grave concern, but nevertheless he thought the proposals of the Chancellors as a whole were the best that could have been conceived in the circumstances.

Mr. C. Seely expressed his intention of opposing the tax on corn at every stage, and remarked that the impost would press most heavily on those who were least able to bear it.

The Chancellor of the Exchequer, in replying on the debate, said the main features of the Budget were the proposed new duties on corn and flour. These had been objected to, not on practical grounds, but on theory. The objectors assumed that the old duties increased the prices of corn and flour, but he defied them to prove it. (Hear, hear.) When that could be shown there would be something to be said for the Opposition. Our old friend the thin end of the wedge had been mentioned, because these taxes were approved by the right hon. member for Thanet.

Mr. J. Lowther: I beg pardon. I approved them as a means of raising revenue, but I said they would not be of the slightest use as measures of Protection. (Laughter.)

The Chancellor of the Exchequer said there was thus less reason than ever for comparing the proposed imposts to the thin end of the wedge. (Hear, hear.)

The Committee then divided on the Corn and Flour Resolution, with the following result:—

For the resolution	254
Against	135
Majority for	—119

The announcement of the figures was received with Ministerial cheers.

Questions in Parliament.

Scope of the Duty.

On Tuesday Mr. Lough inquired what goods were included under the heading of "grain, flour, and meal"; whether it included all cereals, such as peas, haricots, lentils, and rice, and also manufactured goods, such as macaroni, semolina, starch, tapioca, sago, and arrowroot.

The Chancellor of the Exchequer: I only received notice of this question when I came into the House. I think that longer notice should be given of a detailed question of this kind. Subject to that, I think I may safely answer "Yes."

Mr. A. S. Wilson asked the Chancellor of the Exchequer whether it was intended to treat the existing grain contracts of bona-fide traders in the same way that he treated similar coal contracts last year.

The Chancellor of the Exchequer: No, Sir, certainly not. The case of the grain contracts is precisely the same as that of the sugar contracts last year, and the persons who have made them have their remedy under the provisions of Section 10 of the Finance Act of last year.

Mr. Kearley asked the Chancellor of the Exchequer if he was quite clear that rice should bear the new grain tax.

The Chancellor of the Exchequer: Yes; rice is grain. (Ministerial cheers.)

On Thursday Mr. Bayley asked if the proposals of the Government to tax all kinds of imported

grain and flour included linseed and cotton seed cakes.

The Chancellor of the Exchequer: No, Sir, these seeds are exempted.

Mr. S. Young inquired whether imported corn used in the United Kingdom for distillation purposes would be exempted from the new customs duties in the same way as molasses were exempted from the sugar duties when used in distillation.

The Chancellor of the Exchequer: No, Sir.

Mr. Warr asked whether locust beans, which were low-priced articles chiefly used in the manufacture of cake for fattening cattle, fell within the terms of the resolution.

The Chancellor of the Exchequer: Yes, Sir.

Mr. C. M'Arthur asked the Chancellor of the Exchequer whether grain used for distillation should pay customs as well as excise duty.

The Chancellor of the Exchequer: It did when the tax formerly existed.

Sir C. Dilke asked why it was proposed to include rice when it was not included before the corn tax was in operation.

The Chancellor of the Exchequer: Because we propose to tax rice, and rice is a grain. It was not included in the schedule before.

On Friday Sir C. Dilke asked the Chancellor of the Exchequer whether his attention had been called to the fact that the duty on rice was repealed together with that on dates, nuts, and many other articles in 1860; and was not a protion of the grain duty amended in form in 1864 and repealed in 1869; and whether on any previous occasion so-called locust beans, being the fruit of the carob tree, had been included as grain in taxation.

The Chancellor of the Exchequer: The duty on rice in grain was abolished in 1860. But rice dust and meal were included in the Budgets of 1860 and 1864 at the rate of 4½d. per cwt. This latter duty was abolished in 1869. Locust beans were until a few years ago included under the heading beans, and as such were taxed under the old Registration Duties of 1860 and 1864.

Mr. C. M'Arthur asked the Chancellor of the Exchequer whether, in the case of wheat which was imported for milling and re-exported as flour, a drawback would be allowed on the export of the flour equal to the duty incurred on the import of the wheat.

The Chancellor of the Exchequer: It is not in contemplation to allow a drawback upon the export of flour milled from imported wheat. It was not allowed when the duty existed before. I do not see how such flour could be distinguished from flour made from wheat which has not paid the duty.

Press Opinions.

Times: On the whole, Sir Michael Hicks-Beach has so far acted on sound principles in the selection of the import of corn and flour as the subject of new, or rather renewed, indirect taxation. The tax will be levied on an article of universal consumption, and at so low a rate that it will neither be practically felt by individuals nor can substantially operate for the protection of British corn-growers against foreign competition.

Standard: By leciding to impose a Custom Duty of threepence per hundredweight on corn and grain, and a correlative duty on flour and meal, Sir Michael has only reverted to a practice which the strongest Free Traders of the most orthodox age never dreamt of regarding as at all inconsistent with their cardinal doctrine. What Mr. Gladstone accepted and elaborated might surely be good enough for Sir-William Harcourt. Yet, apparently with the approval, if not at the prompting of the Front Opposition Bench, that antiquated, but still energetic, advocate of what he assumes to be the undefiled truth of Fiscal hilosophy, declared war against the projected impost. It appears in their estimation an irrelevant trifle that when the Corn Laws were abolished, and the victory of Free Trade may be absolute, the Registration Duty on corn was not touched. . . . We suppose that we are in for the old claptrap about the Big and Little Loaf. It is enough to say that the removal of the duty did not make bread an atom cheaper. It is certainly no objection to the policy of re-imposition that it encourages the farming class, whose present fortunes and whose usefulness as a factor in a wholesomely-ordered community should entitle them to sympathy and respect. But no one can seriously pretend that a tax so trifling can ever be felt by the consumer. Bakers, we know, are quick to clutch at any pretext for raising their charges or adhering to them when too high. But, after all, they compete keenly with one another, and the utmost ingenuity of "trade rings" cannot succeed in making the infinitesimal addition to the cost of a hundredweight of wheat, or a corresponding amount of flour, appreciable in the price of a household loaf. Nor should it be forgotten that it is this welcome and just extension of indirect taxation which makes the payers of Income-tax willing to submit to the latest addition to their burdens.

Daily Telegraph: In face of the urgent necessity which has long been felt for renewing the elasticity of our financial methods for permanent purposes, and providing for the cost of Empire by a revenue system the most equitable in its distribution and easy in its effect, we are convinced that the reimposition of the shilling a quarter upon imported grain will be welcomed by the country at large as a valuable step in the indispensable work of broadening the basis of taxation in order to mitigate its pressure. But, in any event, the attempt to represent Sir Michael Hicks-Beach, as laying wicke dhands upon the sacred ark of Cobdenism will prove as futile as it is inevitable. . . . Mr. Lowe threw away a peculiarly useful aid in the halcyon years when Chancellors of the Exchequer did not know what to do with their surpluses, and thought, like the grasshopper, that the summer would last for ever. The masses had been utterly unconscious of the existence of the tax, and gained absolutely nothing from its abolition as respects the price of bread. With the fall that has occurred in grain values since 1869, the incidence of the restored registration duty, equivalent to less than a farthing upon the quartern loaf, will be imperceptible, and a measure yielding nearly two and a half millions to the Treasury will involve not the slightest possibility of hardship to the democracy, which is as resolute to bear its part both in the cost and in the privileges of the fight for Empire as any class in the community at home or in the Colonies over-sea.

Morning Post: The Chancellor of the Exchequer has been unable to tear himself away from his old love, the income tax, but, on the other hand, in the reimposition of a small corn duty he has shown some leaning at least towards a more equitable and a wiser apportionment of taxation among all classes of the community. . . . Long and often has a duty on corn, such as the Chancellor of the Exchequer proposes, been advocated in these columns, and we have nothing but praise for his boldness in disregarding those prejudices, strong and deep, which his sane proposal may arouse. . . . We welcome the new corn duty not only for itself, but because it does something to put taxation on a broader basis, because it is a step toward the abolition of glaring inequalities, because it makes for a more equitable distribution of the finacial burden among all classes of the community.

Daily Chronicle: The new tax is thoroughly bad. It presses hardest on those least able to bear it, and it is a return to protection. Sir Michael Hicks-Beach sought to rebut the second objection by saying that it was a long time before Mr. Gladstone took off the "registration duty" on corn. But it is one thing to take time before removing the last trace of a protective tax. It is another thing to reimpose such a tax. More significant than the Chancellor's very inconclusive references to the past was the chorus of delight with which his announcement was greeted by the Protectionists in the House of Commons last night. They at any rate believed that the new tax was going to protect the British farmer. . . . . Somebody will have to pay the tax. Who will it be? In the long run there can be no doubt that it will be the consumer. And the run may not be so very long either. Already the trade concerned is beginning to talk of the price of bread being "necessarily" raised a halfpenny per quartern loaf. The "necessity" of a rise on that scale, we may say at once, is only the desire of the dealers to shift the burden on to the consumer, and to secure a little bit extra for themselves on the way. The very smallness of the duty may play into their hands. It is to be 5d. per cwt. on flour. If that, and no more, were to be placed on to bread, it would work out at five-sevenths of a farthing on the quartern loaf. But the trade in all its stages will try, we may be sure, to get the better of those whom it supplies. . . . . We can only hope that competition among merchants and bakers will avail to redress this possible evil, and that any actual increase in the price of bread may be prevented by other factors, as has largely been the case with the sugar tax. But the Government in such a case are entitled to no credit. So far as they and their tax are concerned, they propose, as even a Ministerialist speaker said, "to take from the food of the people and give to the agriculturists and the landlords."

Daily News: It is useless for Sir Michael Hicks-Beach to plead that the tax is only a small one, that it ought never to have been repealed, and that its effects on the price of food will scarcely be noticed. It is not a question of how far this tax raises the price of the loaf to-day. Its tremendous importance lies in the fact that the staff of life, the elemental food of the British people, is once more exposed to the raids of every financier in search of a surplus, of every War Minister in search of glory, of every interest in search of endowment.

Morning Advertiser: We are inclined to welcome, on general grounds, the new departure he has made. He has had the courage to reimpose the registration duty on imported corn, flour, and meal which Mr. Lowe gave up in 1869. It never was regarded or treated as a protective duty. Although it must slightly raise the price of home-grown as well as of the foreign grain on which it is levied, it is so small that it will neither greatly benefit the farmer nor impose any appreciabe burden on the consumer. It is nonsense to speak of it as a tax on the food of the poorest. As a tax on foodstuffs it is negligible. The only person whom it will much affect is the manufacturer, and among manufacturers particularly the brewer, who, first having had the duty on beer raised, and then had a heavy duty put upon a very important ingredient of beer, now by this new duty has the price of his main ingredient raised. He cannot be expected to be very well content with this new burden; for he cannot raise the price of beer to the consumer, and, at a time when the consumption of beer has been decreasing, will for the most part have to pay it out of his own pocket. Apart, however, from this special effect of its incidence, we are, as we have said, inclined to welcome the revival of this almost perfectly harmless tax, which, while scarcely affecting the consumer at all, brings in to the revenue more than a penny on the income tax.

Globe: The Chancellor of the Exchequer reimposes that registration duty of 3d. per cwt. on imported corn and grain and 5d. per cwt. on foreign flour and meal which Mr. Lowe flung away in a moment of mad pedantry thirty-three years ago. It is a step for which we have nothing but praise, and it is one we have long advocated. . . . . As far as one can be certain of anything, it is clear that the price of the loaf cannot be touched by this infinitesimal impost."

Daily Mail: On the whole, a small duty on corn is more desirable than a duty on timber. The threepence a hundredweight on wheat will make no appreciable difference to the price of the loaf, though it will slightly curtail the profits which the middleman and the baker make. To call it a tax on bread as did some of the speakers in the House of Commons is absurd. It will be felt by none. It is perhaps a pity that the duty on imported flour was not placed at a higher figure than fivepence, as the decline in the physique of our population is largely attributed by good authorities to foreign-ground floor, while the loss of the corn offal is a serious matter, preventing our stock-raisers from remuneratively fattening beasts for the cattle market, and so playing into the hands of beef trusts and the like.

Morning Leader: We are to throw our policy of Free Trade to the winds for a beggarly couple of millions and a-half. If ever a nation sold its birthright for a mess of pottage, it is here. But, of course, the landlords, who, with the help of the parsons, control this Government, know what they are about. They are beginning cautiously, and on a small scale. They know very well that it is the first step in the wrong direction which counts. Make that determining step a slight one, and you can the more easily persuade another to take it.

Star: The poor man has already been bled for Tory extravagance in the shape of increased taxes on tea and beer, and a new tax on sugar. But tea, beer, and sugar are comforts; bread is a terrible necessity for the poorest of the poor. There is the abominable character of this tax. If the working men do not rise and say they will not permit Free Trade to be destroyed, in a few years Protection will fill the land with famine, and the innocent will feel the pangs of hunger.

Westminster Gazette: It is scarcely possible that even two millions and a-half can be raised on corn without increasing the price of bread to the poor. And the duty, when once introduced, promises such abundant and easy revenue to a Chancellor, that the temptation to increase it must be a formidable one. We shall need at once a corresponding energy among Liberals whose duty it is, above all else, to defend the food of the poor. The old argument must be re-learnt, and the public taught what protection has meant and must always mean to the mass of the people.

St. James's Gazette: We could wish that Sir Michael had seen his way to impose more than fivepence per hundredweight on flour and meal, so that we could have had our bread stone-ground at home, and have obtained the advantage of the offal. But we recognise his plea that his first duty as Chancellor of the Exchequer is to get money, not to prohibit or restrict importation.

Pall Mall: The impost means an almost infinitesimal fraction of a farthing on the quartern loaf, and even the baker, with all his anxiety to put up the price of bread on the slightest provocation, can hardly have the impudence to raise it on the strength of this small duty. And the most ardent Cobdenite of them all has little ground for objection to the re-imposition of a registration fee which Mr. Gladstone adopted. For our own part we should have regarded with equanimity a more serious attempt on the part of the Chancellor of the Exchequer to make the lower classes pay something of their fair share towards the cost of a war for which they clamoured quite as loudly as anybody else in the country.

The Statist: Surely any new tax, supposing one to be immediately required, ought to be such that it will yield a large revenue in the present,

and will be capable of being increased without much injury to trade in the future. Does the registration duty on corn satisfy either of these two conditions? The Chancellor of the Exchequer tells us that he does not mean the duty to be protective. Obviously, in its present form it is too small to be protective. But putting that aside, if the Chancellor of the Exchequer means that it is not to be protective, he must intend us further to understand that it is not to be augmented in the future. Is it worth while because of a muddled conflict with two petty States to disturb so great a trade as the one we are considering, and to risk adding to the cost of the poor man's food?

Economist: The proposed revival of the corn duties constitutes the corner stone of, and is the great blot upon, his financial scheme. In dealing with that, he was inconclusive and self-contradictory to a degree. He began by declaring that the payers of indirect as well as direct taxes should be made to bear their share of the war burden, and that it was as the best means of touching the pockets of the masses that the new duties were sought to be imposed, but he ended by affirming that the tax is so small that it will not reach the consumer at all, thus effectually stultifying himself. By whom he expected the new duties would really be paid he did not venture to say, though, of course, if the Exchequer is to gain £2,650,000, the money must come out of some peoples' pockets. The very convenient theory that the foreigner will pay, which some of the apologists for Sir Michael Hicks-Beach have put forward, has been promptly negatived by the advances in the prices of wheat and flour that have taken place since the Budget was introduced, and the intermediaries in the trade are certain to take care that the additional burden does not remain on their shoulders, but is passed on, in some form or other, to the ultimate consumers.

Manchester Guardian: The duty of threepence per hundredweight on unground foreign corn and fivepence per hundredweight on flour is precisely such a duty as the Anti-Corn Law League existed to abolish. The fact is thinly disguised by the meaningless name of "Registration Duty," formerly applied to this particular corn duty and revived yesterday by the Chancellor of the Exchequer. It is perfectly easy to "register" the advent of foreign corn without taxing it. "It is no more difficult," Mr. Lowe said when abolishing this sham apparatus for registration, "to register the arrival of corn without levying a duty of one shilling per quarter upon it than it is to roast a pig without burning down a house." The tax is a tax upon raw material, if ever there was one; it is protective, for the article taxed is grown and is not to be taxed in England; it opens the way at once to other protective taxes, for it gives to a particular English industry an advantage to which other other industries will naturally expect equivalents. It is merely a minor objection that it involves complicated and expensively-collected duties on about forty other articles, such as arrowroot ,tapioca, sago, macaroni, and starch, which might be used as vehicles for the smuggling of corn if they were left untaxed. The great objection to the tax is that it gives way, for a very poor mess of pottage, our English policy of Free Trade. Henceforward, if the tax be imposed, the question will be not whether we shall have protective duties on foreign corn, but how large the duties shall be—threepence per hundredweight, or sixpence, or one shilling, or any other sum that the agricultural interest now befriended in high places may consider sufficient.

Manchester Courier: The cry has already been raised that the Budget is an attack upon the sacred Ark of Free-Trade, and it may be expected to resound from all the platforms of the Opposition during the next few weeks. Like other similar cries, it may be left to exhaust itself on the ears of an indifferent people. By no other means could the Chancellor of the Exchequer have hoped to raise the money required by the Government at this period, beyond the amount available from sources already tapped, with such an imperceptible amount of inconvenience to the entire body of the community.

Western Daily Press (Bristol): It is far from certain that it will really cause any addition to the cost of bread, but it does interpose an artificial barrier, although a small one, between the grower of wheat and the consumer, and it is hailed with delight by those persons who are avowed Protectionists. To be sure in its present form it is so small an impost that it is not really Protectionist, but the thin end of the wedge has been inserted, and if this principle is accepted, some future Chancellor of the Exchequer will be ready to double and treble the rate. It may be true that if the registration duty had never been withdrawn no one would think of remitting it now, but Sir Michael has chosen an unfortunate moment for raising a question of principle upon an issue in which popular sentiment—perhaps we may say popular prejudice—will be strongly against him. The Budget will not strengthen the Government, and, what is more important, it will not benefit the country.

Yorkshire Post: Note must be taken that the corn duty is imposed, not merely on wheat, but, as Sir Michael said, "on all corn and grain." The new duty in this case is 3d. per cwt.; and flour and meal will be charged 5d. per cwt. — the different rate being, as Sir Michael explained—precisely in line, allowing for changed conditions, with the Registration duty which Robert Lowe abolished in 1869. Converting cwts. into qrs., at 62lb. to the bushel—and this is said to be the weight of foreign grain—it may be seen that 3d. per cwt. is equal to about 1s. 0½d. per qr. Looking to flour, the sack of 280lbs. will pay 12½d. If consumers are charged more than 13d. as the result of the duty being imposed, they may know that the difference is going into the pocket of somebody else; for that is all that the Exchequer takes. To allow an extra halfpenny for interest and expenses is not unreasonable. When we get down to the two-pound and four-pound loaf the addition is so small as to be imperceptible. There are far greater variations in the price of wheat and flour without any alteration resulting in the cost of the loaf. That, in our opinion, would be a complete answer to the cry threatened by the Opposition that the food of the masses is being taxed to pay for the war. . . . . According to the Royal Commission on Agriculture, in the years 1893-5, we grew an average of 6,869,000 qrs. of wheat, 9,194,000 qrs. of barley, and 22,072,000 qrs. of oats. Were the prices of these raised by the amount of the duty, this would give British agriculture a bounty of £1,906,750 for every shilling per qr. imposed. That is all, and therefore we cannot look upon this new taxation as even approaching an effective encouragement of agriculture.

Birmingham Daily Post: Sir M. Hicks-Beach is certainly entitled to the credit of adhering to the principles of orthodox finance and resisting the temptations which have assailed him from various quarters to try an excursion into the domain of Protection in search of the revenue he requires; but his proposed corn duty is, neverthless, a reactionary measure, because it is not only a tax upon food, but one that will impose a burden upon consumers out of all proportion to the gain to the Exchequer. In other words, the middleman will share with the Government in the proceeds of the new impost, and his portion will assuredly not be the smaller one.

Liverpool Post: If it is shown that a duty of 3d. a cwt. on corn and 5d. a cwt. on flour can be made to minister substantially to the money needs without any invasion upon our Free Trade practice, that will be a success of statesmanship. But Liberals in Parliament, and enlightened economists throughout the country, may not be convinced that either of these results will be achieved. The corn change remains to be made in Parliament, and will probably be made. All the same, its results may be looked forward to by many with serious apprehensions lest it should rather prove to be our old friend, or enemy, the "thin end of the wedge." Popular opinion at the present moment is so languid that it is difficult to imagine a serious agitation arising on such a point, and it must be admitted that Sir Michael Hicks-Beach, in a very terse and able argument, went far to prove that the abolition of the registration duty on corn and flour by Mr. Lowe was little more than a gratuitous counsel of perfection; that it never have been affected; and that the tax may be reimposed without any perceptible economic result and with a perfectly harmless addition to the money resources of the Government.

Liverpool Courier: In regard to the reimposition, many words are wasted over a very small step towards the scientific. We may go much further without encroaching on the doctrine of revenue needs, and if at the same time discrimination be exercised between raw material and manufactured products, much-needed impulse will be given to home production, which is the source of all wealth. Having regard to the approaching conference in this country of Colonial Premiers, and other events arranged or in contemplation, we should say that this may prove a good Imperial and Coronation Budget.

Glasgow Herald: This fee of 1s. per quarter yielded £900,000 in 1869, when Mr. Robert Lowe repealed it. Sir Michael Hicks-Beach reimposes the old duty, but in the form of threepence per cwt. on grain and fivepence per cwt. on flour. In the old days the equivalent in flour was about fourpence, but improved systems of milling have made the difference greater than it was in 1869 These imposts will produce £2,650,000 in the current year, according to the Chancellor's estimates, but in the meantime there are no data to show how much of that will actually fall upon bread, and how much upon other grains. In any case it will have little appreciable effect on the price of the quartern loaf, and whatever effect it may have will fall upon the whole community in equitable proportions. There is, therefore, every reason to approve of an impost which is not protective, because it is too small to affect the price of wheat and grain in this country. This proposal is the one redeeming feature of the Chancellor's new programme.

Scotsman: If we are asked to approve of the new corn duty because the taxes on sugar and coal have yielded a good return, and have as yet done no perceptible injury, we must demur to the argument. The historical argument in favour of the new tax is stronger, and might be accepted as convincing if it could be coupled with a guarantee that the tax will be continued as a simple registration duty, and never increased. The most orthodox Free-traders generally admit that the abolition of the duty by Mr. Lowe was a mistake. . . . . A tax which produces ecstasies of delight in Sir Howard Vincent and Mr. James Lowther cannot but be received with some suspicion by Free-traders. To the former it is the thin end of the wedge of Protection, and therefore to Free traders it is a touching of the unclean thing. As it stands, it may be both profitable and practically harmless; but it will be a great encouragement and a lever of agitation to the Protectionists. There will be a continual clamour for its increase, and we cannot be sure that we shall always have a Government strong enough and wise enough to resist the pressure.

President of the Birmingham Millers' Association's Opinions.

Mr. Frank Ludlow, president of the Birmingham Millers' Association has stated that the duties on corn and flour will, probably, not lead to any immediate rise in the price of bread. Mr. Ludlow is of the opinion that the miller will benefit by twopence a sack—the difference between the duty on wheat and flour—whilst the farmer will benefit a shilling a quarter.

Agricultural Societies and the Tax.

At the annual meeting of the Holderness Agricultural Club, held on Tuesday, one of the vice-presidents (Mr. W. M. Stickney) said that perhaps no agricultural club in the country had taken a more prominent part than the Holderness Club in bringing practical suggestion upon the subject of taxation under the notice of Government, and they might congratulate themselves that their advocacy of a duty on imported cereals and flour had had some effect. The duty, it was true, was very small; but all the same, the principle had been adopted. By imposing indirect taxation they had enlarged the area upon which Imperial taxation was raised; and a most gratifying feature of the previous night's proceedings in Parliament was the Government majority of 119. He would have been a bold man indeed, who, a few years ago, predicted that such a proposal on the part of a Government would have been carried by such a majority.

At a meeting of the Totnes Union Chamber of Agriculture, held on Tuesday, the Chairman, commenting on the Budget, said it would not be of the slightest practical benefit to agriculturists. The duty on corn was not sufficient to increase the price, and the consumer would not suffer in the least degree. He thought foreigners should pay a small registration duty for the privilege of using our markets. For politicians to make capital out of it and say agriculturists were benefited was a gross misrepresentation.

National Association of Bakers Protest Against the Duty.

At the annual conference of the National Association of Bakers, held at Hastings on Wednesday, a resolution was passed declaring that English millers should not charge the new duty on flour from contracts made previously to the introduction of the Budget as they had threatened to do. It was further resolved to send a protest to the Chancellor of the Exchequer against the duty on flour.

Price of Flour Raised.

At a meeting of the London Flour Millers' Association, held on Wednesday, it was resolved:—"That a notice, signed by the members of the Association, be sent to the trade notifying a duty at the rate of 1s. per sack will be charged upon all unfulfilled contracts made previously to the 15th April, 1902, and also 5s. per ton upon all offals."

A largely-attended meeting of millers of the North-Western Association was held at the Liverpool Corn Exchange on Tuesday, when it was decided to advance the price of flour one shilling per sack.

Views of the President of the Corn Trade Association.

Speaking in a private capacity as a member of the Corn Exchange, and in no way officially representing the views of his fellow members, Mr. Wood, president of the Corn Trade Association, mentioned some interesting points in connection with the proposed new duties, in the course of an interview with a "Daily Chronicle" representative.

"The proposal to tax corn," he said, "without taxing manufactured articles like bacon, lard, etc., will be a protection to the American breeder and feeder of pigs, as against the English consumer. In Chicago, for instance, a man opens his book and tells you that such and such is the price of corn, or maize, as they call it, and that price, whatever it is, means the price for pork. These prices always move up and down on the Chicago Exchange in ratio. So many cents. on the price

of maize means so many cents. on pork. To admit what we call 'hog products' free would be to handicap very seriously our pig-breeders at home. That is one criticism that suggests itself at once."

"How about your own trade, Mr. Wood, the corn factors?"

"In our trade," was the reply, "we have very many open contracts, and it seems to me, in the absence of any protective clause, a very serious loss will fall on the trade in the various exchanges in Liverpool perhaps, more than in London. In all cases, however, we have heavy commitments ahead, and the price is cut very closely indeed. If the duty falls on us we have absolutely no chance of recovering ourselves. The new duty will, I think, affect the price of bread very little. It amounts roughly to about 10d. per sack of flour of 280lb. You get about ninety four-pound loaves out of a sack of flour, which would only give about one-ninth of a penny per 4lb. loaf. To return, however, to the injustice to the pig-feeder at home, that is a question that will largely affect Irishmen, and the Irish members will probably have something to say about it. What we object to is not so much levying a tax on corn as admitting bacon free. A great deal of maize from America goes to Ireland, and a great deal of barley from Russia and Roumania to the West of England for the purpose of feeding pigs."

"So that you advocate a duty on imported bacon, and other 'hog products,' as a protection to the feeder of pigs at home?"

"That is my personal view."

"How will the duty affect home-grown corn?"

"It will certainly benefit home-grown corn. The growth of wheat during the past thirty years has been reduced by more than one-half. In the fifties we had an acreage of about four millions; now we have considerably under two millions. If you levy a duty on imported wheat the foreigner must, in order to compete with the English farmer, base his prices so much below the English price. Every shilling by which you handicap the foreigner would enable the English farmer to put more land under wheat. Under favourable circumstances we might have an acreage of four millions again. A decrease in the value of wheat puts so much land out of cultivation, so far as wheat is concerned, and gradually the land goes out to permanent pasturage. It is a slow operation to break up the pasturage and make it arable, but as every stage downward in the price of wheat puts so much land out of cultivation, so every rise in value would help the process of bringing the land back from pasturage."

Effect of the Tax on the Price of Bread.—Views of a Well-known Baker.

A representative of the "Westminster Gazette" has had an interview with Mr. William Hill, managing director of W. Hill and Son, Limited, the well-known bakers and confectioners, in order to get a competent opinion as to whether the corn tax would raise the price of bread. Mr. Hill did not think the poorer classes need worry themselves in the slightest, for the price of bread to them would remain the same. As regards better-classed customers, the new tax would probably mean a rise of a farthing per quartern, which would scarcely be felt by anybody.

"All Governments," continued Mr. Hill, "are frightened at the idea of an import duty on wheat and flour, and yet they are really frightened at a shadow. If the farmer could get 35s. for his wheat he would make the modest profit of 5s. per quarter. The price of wheat now is, roughly, 30s. per quarter; with a duty of 4s. per quarter on all foreign wheat and flour, the English farmer could live, the landlord and the labourer could live, and one hundred industries, now dying of inanition, would flourish and thrive. I know nothing more deplorable than to see a village decaying as one which I have been living in for the last three years in Bedfordshire is doing. All the young men have left, all the village trades are dying or dead, there is no one left in the village but old people of both sexes. The remedy for this would be an import duty of 4s. per quarter (double the tax now levied) on the foreign wheat and flour imported into England.

"As to the effect such a tax will have on the British public, I find the average consumption for the families I supply is eight quarterns of bread per week. A duty of 4s. per quarter would mean an increase of one half-penny per quartern in the price of bread; this, of course, at eight quarterns per week is 4d. per week, or 16s. to 17s. per annum per family, averaging five persons; and this increased payment will bring in a great measure prosperity back to England. It is well known that the chief cause of British agricultural distress is the extremely low price of produce, notably wheat. English wheat has peculiar and unequalled qualities. It is the sweetest in the world, and produces the finest flavoured bread in the world—bread both sweet and moist. Unfortunately, it is too weak to use alone. But with the addition of 50 to 60 per cent. of stronger wheats it makes a bread impossible to surpass. If heads of families would insist upon their bread containing a definite proportion of English wheats, the demand would be stimulated, and prices enhanced to such a degree as to enable the farmer to gain a living, and this at a very trifling charge upon the consumer's purse.

"I cannot conceive," said Mr. Hill finally, "how intelligent people should have such a mania about Free Trade. They know the States, France, Germany, or our own Colonies will not have it at any price; they cannot suppose all these people are fools. I find the Americans or the Germans anything but fools in business. Surely they can see how it would pay us to keep some of the millions we spend annually on imported wheat and flour in this country. If it is kept at home it must circulate through the country from hand to hand; whereas if sent abroad it is absolutely lost to the country."

Feeding Stuffs Importers' Views of the Tax.

A meeting of the principal London and Liverpool importers of grain, feeding stuffs, meal, and milling offals, was held in London on Wednesday, in reference to the new duty on flour and grain, and to consider the fact that wheat offals, other grain offals, and feeding meals were assessed at the same rate as flour, namely, fivepence per hundredweight. The following resolutions were adopted—

"That wheat offals should be admitted free of duty; that feeding meals and offals, other than wheat offals, should be admitted at the same rate as grain, namely, 3d. per cwt. We cannot help thinking that in classifying flour and meal whether it was the intention merely to tax at the higher rate the finished and manufactured article, and not the offal which remains; this intention is borne out by the fact that the duty on flour at 5d. is so proportioned to the duty on wheat as to cover the whole cost of duty to the miller, so that 26 per cent., which is represented by offal, is, as explained by the Chancellor of the Exchequer, practically admitted duty free. The effect of the duty falling upon these offals and feed meals, as well as upon grain, would entail a very much increased cost, to the farmer and stock-keeper, for all these imported foodstuffs which he buys very largely for the production of meat and dairy produce, although these latter articles are at the same time admitted from abroad free of duty.

"Stock-keeping being at the present time of far more importance to the farming industry than grain-growing, the loss entailed by the extra cost of food stuffs would be far greater to the farmer than any possible compensation he might derive from the enhanced price of the grain which he produces. We may point out that the 3d. per cwt. on wheat at an average price of 30s. per quarter equals 3¾ per cent., on flour at an average price of 22s. per 280lb. equals 4¾ per cent., whereas on offals and feeding meals at an average price of, say, £4 10s. per ton, the duty of 5d. per cwt. equals over 9 per cent. We have ascertained that the imports of these articles amounted in 1900 to upwards of 9,000,000 cwts., but we are convinced that if subjected to the proposed duty of 5d. per cwt. the volume of these imports will be very materially decreased, and the anticipation of the Chancellor of the Exchequer as to the amount of the revenue to be raised will not be realised.

"We desire to draw your serious attention to the fact that Ireland being purely a stock raising country, and having so few flour mills, is almost dependent upon the supply of imported offals and feeding meals, and consequently the cost of meat and dairy produce will be very considerably enhanced by the proposed duty of fivepence per cwt. on these articles. We would further call your attention to the fact that continental countries, while taxing wheat and flour to a very high greater extent than the duty imposed in this country, yet admit offals and feeding meals free of all duty. If the proposed duty on these articles be maintained, the certain consequence must be that large quantities of offals and feeding meals at present imported into this country will be diverted to the Continent, which will, we consider, give a very decided and unfair advantage to the foreign producer of meat and dairy produce.

"In conclusion, we beg to submit the following figures, which will show the importance of stock-raising over that of grain growing:—

	1872.		1900.
Grass area	12,574,570	...	16,729,035
Grain area	9,573,551	...	7,335,408
Cattle	5,624,994	...	6,805,170

Liverpool Corn Trade Association's Protest.

At a general meeting of the Liverpool Corn Trade Association yesterday the following resolution was adopted by a substantial majority:—"That this meeting strongly protests against the imposition of duty upon grain and flour, as being injurious to the best interests of the country, and a serious disturbance of an important trade, and that the chairman be authorised to send a copy of this resolution to the Prime Minister, the Chancellor of the Exchequer, the members of Parliament for the city, and the Corn Trade Associations throughout the kingdom."

National Association of Millers' Resolution.

The Council of the National Association of British and Irish Millers, which is the parent Association of six other miller organisations distributed throughout the United Kingdom, and is responsible for 70 per cent. of the flour output of the country, held a meeting at 64, Mark Lane, on Friday, at which the following resolution was passed:—"That difficulties having arisen as to putting into operation Section 10 of the Finance Act, 1901, resolved—that the Chancellor of the Exchequer be asked to receive a deputation which would be prepared to explain these difficulties and to make suggestions to him for obviating them. Also, to draw his attention to the fact that the export trade in English milled flour and offals will be severely prejudiced by his present Budget proposals." It was also decided that all contracts for flour made prior to April 15th, and which were not completed before that date, will be charged duty on the undelivered portion as and when delivered, by adding an amount for same as a separate item on the invoice, which would be calculated at the rate of 5d. per 112lb.

Opinion in Canada.

According to a telegram from Montreal on Tuesday, regret is expressed at the Canadian Board of Trade, and particularly among the section advocating preferential trade, that Sir Michael Hicks-Beach has not given some concessions to the Colonies in making his fiscal changes. Grain dealers say that the new duty will injure the Canadian export trade much more than that of the United States, since Great Britain is the only country to which Canada can export her surplus crop of wheat, while the United States has a great market of its own, besides the trade with Germany. The grain trade is divided in opinion as to whether the consumer or the grower will suffer most by the new duties, but all agree that Canada is liable to suffer considerably. The Canadian Manufacturers' Association to-day adopted a resolution expressing great disappointment at the action of the British Government in not giving preference to the Colonies in the new duties on breadstuffs, and hoping that representations would be made to the Dominion Government on the subject.

In the Dominion House of Commons on Tuesday Sir Wilfrid Laurier, the Premier, said, "England's new policy is Protection; but not a large measure of Protection, and I do not complain, but rather rejoice in it, for now the field is clear for arranging in June, a system of larger trade between all parts of the British Empire, which will meet the views of the great majority of the people of Canada."

A meeting of the members of the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture was held at York, on Thursday, for the purpose of discussing the Budget proposals. Mr. John Allen (Pocklington) presided, and, in calling upon Mr. Liversidge to move a resolution, said that the new tax on grain and flour would be a great advantage to the revenue, and the farmers would get some benefit. He hoped the proposals would be carried, as they formed the thin end of the wedge, and they hoped that they would soon have duties on other things as well. He personally believed in reciprocity and fair trade, free trade being a one-sided policy.

Mr. Henry Liversidge, jun., moved: "That the proposed duty on flour and corn has given great satisfaction to the Yorkshire Union of Agricultural Clubs and Chambers of Agriculture." He said he had never proposed a resolution which gave him greater pleasure. They admired the Government for having had the pluck and the common-sense to go against what was supposed to be a popular sentiment. It marked a departure from a principle, which they welcomed, and he had not the slightest doubt that ultimately all classes in the country would benefit from it. They regretted that the tax was not heavier, but they were thankful for small mercies, and they hoped to see the principle extended.

Mr. John Newton said he remembered one argument which Mr. Lowe advanced at the time the registration duty was taken off, and to which the Chancellor of the Exchequer had not referred so far as he could see, and that was that it was an expensive tax to collect, and that the cost of collection was out of proportion to the revenue gained. That might have been true in 1869, but even then it produced a substantial sum, and it certainly was not true now. While the fee would help the finances of the country, he questioned if it would do the farmers any good, because it was more than probable that the small additional amount which the corn-growing farmer would be able to obtain for his corn would be exceeded by the higher price he would have to pay for feeding stuffs. He was of opinion that the threatened attempt of the Americans to add the duty to the price of corn would be frustrated by the fact that we received supplies from other countries.

The resolution was carried, and copies ordered to be sent to the Government and the local Members of Parliament.

Dorset (West).

We have just experienced a most welcome day's rain. The farmers' hopes were getting again blighted, and another short crop of hay stared us in the face. We now hope to be put on better terms, not that we are at all sanguine of more than an ordinary start in growth, if anything better, than the last three years. The hay ricks on well-stocked farms are practically diminished so much that a scarcity between this and May 14th is likely to prevail in many instances, and happy are they who have well-watered meadows to graze their dairy cattle in, or the pockets would have to be searched deeply into.

None of the dairy farmers are likely to save any old hay, and those fortunate enough to have any are likely to get a good price for it. In many places straw is closely fed up and getting scarce. Although this county has been favoured as regards deep snow, yet it has been a very consuming winter by cattle and sheep.

Cereals of all kinds are looking fairly well, and the promise is quite as good as of late years. Cattle of all kinds of good quality are selling well, but mutton is not so, whilst horn lambs make about 9d. a lb. on an average. Calves and pigs are the greatest friends the dairy farmer has, and those who look well after breeding good animals get well paid at present prices.

The Budget.

A nice Budget for the clamour of Radicals—the system of payment which has so much helped all traders, and so ably assisted many small traders to do their business in good form, is to be knocked on the head by the extra penny stamp duty. If I think rightly, the Post Office people will find a great diminution in the number of letters, and the penny post stamp will be saved as well as the cheque stamp. A tax on cycles, which run down everybody, would have helped the war tax to some extent at 2s. 6d. each, and assisted us in getting out of debt. Whilst the paltry sum gained by an additional penny on cheques will be lost through the disuse of postage stamps, bicycles and motors have already checked the breeding of useful trap horses, to the bitter cost of the country. A half-penny tax on all railway and pleasure tickets would have assisted the revenue to some purpose.—E. S. (April 17th).

Gloucestershire.

The genial sunshine after the rain on the 15th, 1·20in., has set all things on the go, and the prospects of fair crops all round are far before last year's. The tilth of spring sown crops has been very good, which is a great factor in future success, telling its tale, not only next harvest, but in the hay crops of probably two or three years to come. This will be a fine year for all small seeds to germinate. The meat harvest of the Cotswolds is just being cashed. Beef sells, as everywhere, at good and improving prices, but mutton, the chief product, most disappointingly, especially so when Gloucestershire was probably the only county in England with a fair root crop, and so might expect a good return, which, indeed, has been most disappointing. In some cases the return per head looked fair, but that was only where the sheep had done exceptionally well. I saw a teg last week, weighing 110lbs., and not over fat either; they usually weigh well this year, and so take some selling. The duty on corn may be a step in the right direction, but a three-fold tax on the manufactured article and corn free would have been far better for all.—April 17th, 1902.

Lincolnshire (North).

When the lambing time is over, we naturally look round, and tot up the result. In the immediate neighbourhood I fear there have been more losses of ewes, and, I think, a less result in lambs. Many of the latter also suffered when out from the strong winds, which blocked their eyes up, and gave them a generally unthrifty appearance. Luckily, Nature, with a view to repairing all this, has sent a splendid rain, and this morning I was astonished to see the shoot the seeds have made. You can sit and watch them grow, and the warmth is so genial, that those seedy lambs will soon gallop and gambol, an outward sign of progress and thrift. The spring sheep fairs have been very low, and well they may, with wool so cheap. Beef is a little better, and they prophesy a scarcity, which I hope is true.

Spring corn has been sown in a splendid bed; even the strong low lands here are as easily worked as the sands; the disintegrating frosts worked for us while we slept. Potatoes, too, are nearly all planted; I think a larger area, not perhaps because they have paid, for they are so cheap, but other things are so certainly unremunerative, and the tuber might turn up trumps; it does sometimes, and wheat never does. The great usefulness of our wurzels at this season is a reminded to get the seed and put it in as soon as possible. The early-sown are the largest, although a few have run to seed.—North Lindsey (April 17th).

Munster.

We have had a long spell of wet weather, which has left tillage operations in a backward condition. Just within the last week oats have been got in, quite three weeks late. Only now is the main crop of potatoes being sown, and if the summer does not come dry and warm we have but a poor chance. March was none of the old-style ones, and "A bushel of Marsh dust is worth a king's ransom," could not apply this year.

The lambing season is now over with a very small return of lambs; the scarcity of couples being quite apparent this year. The soft, open March was very lucky for stock-owners, as, owing to the shortness of keep, many farmers would have to dispose of their cattle at ruinous prices. As it is, all cattle are selling well, with the exception of springing cows and dry cows for fattening purposes. The latter ought to pay this year, as they can be bought for £2 a head less money than last season.

Fruit trees are looking well, and apples, if spared by frosts, promise a plentiful crop, as they are full of buds.

With the advent of dry, warm weather, with southerly breezes, we may expect a good season for grass, as the large amount of moisture in the ground requires but sun to force a heavy growth.—P. F. (April 14th.)

Somerset (Cheddar).

Previous to Tuesday of this week, when a deal of rain fell, the weather had been dry for a considerable time, east winds, with frost at night, having prevailed, checking all vegetation considerably. Very little grass in many instances yet to be seen on the pastures, and the cattle in many instances roaming about on them find but little to browse on; but having consumed all the hay, the stacks having been small at the beginning of winter, their owners in such instances have been obliged to buy hay for some time past at five pounds per ton, I hear, which cannot well be afforded in these depressed times.

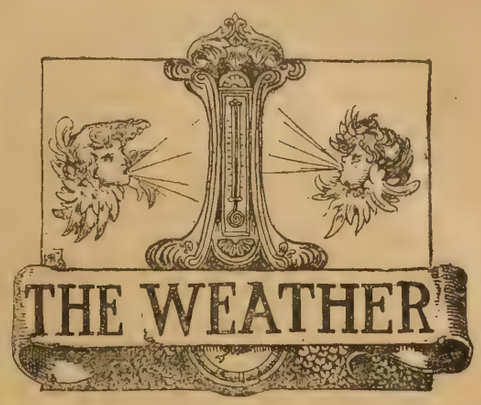
I hear in some instances at the Down calving dairy herds of several calves dying from diarrhœa when but a few days old, which I think must be due to their dams partaking of some food, thereby affecting the milk, which disagrees with the digestive organs of their offspring. The lambing season was a favourable one, twins being numerous, and are now generally doing well.

Price of Poultry.

I read your correspondent's interesting articles on poultry, and I notice he wrote last week of the prohibitive prices of fowls to many, before the time that steam power both on land and sea influenced the great quantities of poultry that are now being imported from all parts to this kingdom, but I presume he was alluding to the prohibitive prices that occur in large towns, as I have heard ol dfolks say that back in those days in the country districts good, plump fowls were regularly sold at from a shilling to eighteen pence each, at which price they can now be bought at any season in this and many other country districts, but at such a price they must return but little profit to those who rear them.—A. L. O. (April 18th).

Foreign Prospects.

FRANCE.—The condition of the cereal crops continues to give full satisfaction, both autumn and spring sown cereals present a fine appearance.



HOLLAND.—Wet weather is unfavourable to the conclusion of sowings, but no harm has happened to autumn cereals.

GERMANY.—Our Berlin corerspondent says crop prospects remain favourable and autumn sown fields have a luxuriant and healthy appearance; weather very mild and wet.

RUSSIA.—Higher temperature and rainfall above the normal in North-West, Central, and South-Western governments, also in black soil districts, proving beneficial to autumn crops, although in some instances interfering with the completion of spring sowings.

HUNGARY. — There is steady improvement in the appearance of autumn sown crops, and spring sowings have come up well.

UNITED STATES.—The cool weather is retarding wheat growth, and, to some extent, it is regarded as prejudicial, but the general position continues fairly good. Moisture is deficient, and the weather unfavourable for oats, but the condition is fair. The ground is breaking well for maize. From California we learn that the crop outlook remains fairly satisfactory, although no rain fell during the last fortnight; the total to date is 1 inches, compared with 18¾ inches same time last season.—*Dornbusch.*

MONDAY (April 14th).—The weather was still generally fine over England, and in many places there was a fair amount of bright sunshine. In Scotland and Ireland the weather was mostly cloudy. Rain was measured in the Morning in the Northern and Western portions of the Kingdom, as the result of the fall in the preceding twenty-four hours. A cyclonic disturbance was passing to the Northward along our North-West coasts, and under its influence a moderate South-West gale was blowing on our extreme North-West coasts, while the wind was Southerly over nearly the entire country. There was a slight frost over the inland parts of England on Sunday night, but the temperature was again fairly high during the day.

TUESDAY (April 15th).—The weather was, for the most part, fine in our islands, but the conditions were far from settled, and rain fell in the morning at a few of the southern stations. Mist or fog was prevalent on our English coasts, and there was generally a good deal of cloud. The winds were very variable in direction, and they were mostly light. There was no frost during Monday night, and the mid-day temperatures were in fair agreement with the average, the sheltered thermometer registering sixty degrees in the South of England. The day was dull in London, and the air was close, the thermometer in the afternoon rising to sixty-one degrees.

WEDNESDAY (April 16th).—Fine weather prevailed over the British Islands, but there was still a good deal of mist or fog over the eastern portion of the Kingdom. Rain had fallen in many places since Tuesday morning, and the amounts measured in the midland, southern, and eastern districts were rather large. The winds were generally westerly, and they were everywhere light. The temperature during the day was for the most part above the average, except in the west, where readings had decreased. In the south of England the mid-day temperatures rose to 60 degrees. The day was fine in London, and the shade temperature registered 59 degrees.

THURSDAY (April 17th).—The weather was generally fine over our Islands, but mist or fog was very prevalent over the Eastern portion of the Kingdom, and slight rain fell at a few places in the west. The winds were exceedingly light, and they were for the most part from a westerly direction. Wednesday night was mostly warm, although there was a slight ground frost at places inland. The mid-day temperatures were high in the south of England, where the readings exceeded 60 degrees, but in the northern districts the thermometer rose little above 50 degrees.

FRIDAY (April 18th).—Fine weather prevailed over the British Islands, but the conditions had become less settled than of late over the western portion of the kingdom. A cyclonic disturbance was approaching our west coasts from the Atlantic, and under its influence the wind had become southerly, and had freshened considerably in Ireland. Slight rain was measured in the morning, as the result of the fall in the preceding 24 hours, at a few of the northern and western stations, but elsewhere the weather had remained dry. Thursday night was rather cold in the midland and eastern portions of England, but the temperatures during the day were generally in fair agreement with the average.

SATURDAY AND SUNDAY (April 19th and 20th).—Fine weather prevailed in many parts of our Islands during these two days, although rain fell in places. Saturday was generally very fine in England, and the thermometer touched a higher reading than on any previous day this year. Cyclonic disturbances continued to arrive on our coasts from the Atlantic, and as they approach us they occasion an increasing Southerly wind and rain.

CORN MARKETS.

LONDON.

Mark Lane, Monday.—Malt: The trade remains quiet. Barley advanced 6d per qr. Wheat made 6d to 1s per qr. more money. Oats improved 6d per qr. Maize about 6d per qr. dearer. Flour advanced 6d. per sack on the week.—NIXON, GOWER, AND Co.

Mark Lane, Wednesday.—English wheat continues in almost exhausted supply, being again firmer Foreign advanced 1s to 1s 6d (inclusive of 1s duty). No. 1 Northern, Duluth inspection, new, quoted at 32s 3d ex granary, and 31s 9d ex ship, to arrive. The spot market is extremely bare at present. No. 1 hard Manitoba, 32s 6d landed. Hard Kansas winters, none on offer. American brands of flour 1s to 2s dearer, and patents remain exceptionally scarce Mayblossom, 25s 3d nominally asked, and Gold Medal 25s, with 24s 9d named for Pillsbury best and Golden Lily. Second patents in small supply, and wanted. Of baker's grades, Iron Duke 20s ex store. Gilt Edge, 19s 9d; Cascadias, 23s 6d ex store. English advanced 1s. London Millers' Association advanced the price of Town households to 24s 6d, and whites 27s 6d. Top price Town-made quoted at 28s 6d net; No. 1 household 22 6d cash at the mill door. Grinding barley fully 1s firmer. Odessa 20s 6d ex quay, Danubian 19s ex ship, to come up, and 20s ex quay. Malting nominal. Oats command 6d more money, and sellers are less disposed to entertain buyers' views. Common Libau 19s 6d to 20s 3Slb, ex quay. Danubian 19s 6d ex quay 38lb; 40lb Libau, &c, bold, 22s. Good Konigsberg 21 6d ex quay, 40lb, fine and choice ruling at 22s to 23s in same position. Maize, 1s to 1s 6d dearer since last Monday. Odessa 21s ex ship, and 22s ex quay; Danubian 23s 6d ex quay. Mixed American nominal, being still out of supply. Beans and peas generally raised 1s to 1s 3d. Egyptian splits, held for 24s, and Mazagans 23s ex mill, 320lb. White Canadian peas unquotable.

Mark Lane, Friday.—The attendance was fairly good on the London Corn Exchange to-day, and quotations remain at much the same legitimate level as those recorded at last Wednesday's meeting, and matters are gradually becoming within proper equanimity since Budget proposals. Farmers of English wheat are so busy on the land that the supply becomes more and more backward. What little is secured in the country commands enhanced rates. Whites range up to 33s., and reds at 31s. and 32s. per qr. delivered. Locally, good reds, 32s 3d to 32s 6d. Foreign sorts again rather firmer, and generally 1s 6d higher since Friday last. No. 1 Northern Duluth inspection, quoted at 32s to 32s 3d landed, and 31s 9d ex ship to arrive No. 1 hard Manitoba, 33s 6d landed. Hard Kansas Winters, 32s ex ship to arrive, and none on offer ex granary American brands of flour 1s 6d to 2s firmer since Friday last, with fine patents remaining exceptionally scarce. Mayblossom quoted at 25s; Pillsbury best, etc., 24s 6d. Of bakers', Iron Duke, about 20s ex store; and Gilt Edge, 19s 6d. Grinding barley fully 1s firmer since last Monday, and only in moderate supply on spot, with none named ex ship. Odessa, 20s 6d ex quay; Danubian in same position, 20s and 19s ex ship, to come up. Oats rather against sellers to-day, but 6d better on the week. Common Libau, 19s 6d ex quay, 38lb.; 40lb. bold, 22s; and good to fine Konigsberg, 22s to 23s ex quay, 40lb. Danubian, 19s 6d. ex quay, 38lb. Mixed American maize remains out of the market, being nominal at 28s ex granary. Round corn further advanced slightly, being 1s to 1s 6d dearer since Monday last. The market for beans and peas denotes nothing fresh, being firm at the last advance established.

COUNTRY.

Banbury, Thursday.—Wheat, 27s to 28s per qr.; barley, 27s to 30s per qr.; beans, 34s to 35s per qr; oats (black), 19s to 21s per qr; peas, 32s per qr. Trade very restricted on account of the duty, neither seller or buyer being anxious to do business. Prices better to the extent of 1s to 2s per qr.

Birmingham, Thursday.—The Budget proposals were the subject of much discussion on 'Change to-day, and the immediate result was the increase of prices to the extent of the new duty charge, representing about 1s. per qr. all round. This had the effect of checking business, and of generally unsettling the work of the day. Very little English wheat was offered, farmers preferring to hold back pending a more settled feeling and the settling down of prices. Beyond the extra duty charge on imported goods no special upward movement in price is anticipated. It is, indeed, the general feeling that the ultimate effect will be quite infinitesimal. English wheats offered in very limited quantities at prices ranging up to 11s 3d per bag. In foreign sorts soft reds were 5s 9d, and No. 2 Manitobas (May-June) 6s per cental (Liverpool). Plate maize was 4s. 8d per cental, and 21s 6d to 22s per qr. (at Sharpness), white round made 21s 6d to 22s (at Sharpness). Grinding barley changed hands at 19s 6d to 20s 6d (Sharpness and Liverpool). English black oats were very scarce, and values were reported to be from 22s to 22s 6d, while whites were from 23s to 24s per qr (Birmingham). English beans at 3d per bag dearer made 14s to 14s 3d for new sorts, and 15s 6d to 15s 9d for old.

Brighton, Thursday.—New white wheat, 31s 6d to 32s 6d; new red ditto, 31s to 32s; barley, 29s to 32s; grinding ditto, 21s to 22s; English oats, 22s to 25s; beans, 34s to 35s. Wheat in short supply, and 2s per quarter more asked. Oats 1s dearer; barley 1s., and maize 1s 3d dearer, owing to the new corn duty. Small attendance.

Bristol, Thursday.—Since our last report there has been a general disorganisation of trade due to the Budget. English wheat was very scarce on our to-day's market, and made 1s more money. Foreign very firm, with an advance of 1s 6d. Grinding barley about 1s 6d dearer. Maize also 1s 3d to 1s 6d dearer. Oats 1s advance. The general firmness and advance of wheats, together with the added duties, has caused a rise of about 1s 6d per sack on flour, and there has been considerable inquiry from bakers, resulting in a good business passing during the week.—GRACE BROTHERS.

Bury, Wednesday.—Wheat—There was but little offering, and holders were very strong in their demands. 30s to 31s per 504lb was demanded and made, but millers were reluctant to buy anything more than their immediate requirements. Oats remained scarce, and were 6d to 1s dearer on the week. Beans and peas were firm. Other feeding corns were, as a rule, 1s per qr dearer. Maize made 24s per qr delivered. Lentils fully last week's prices, and millet 6d per qr more money. Milling offals were all rather dearer in sympathy with the import duty of 8s 4d per ton imposed on foreign germs and meals. Linseed cakes were firm at £8 10s to £9, and cotton cakes were 2s 6d per ton dearer.

Cambridge, Saturday.—During the week trade has been irregular; farmers have asked extravagant prices, consequently not many samples have changed hands. At this market to-day there was a little more wheat on offer. Sellers began by asking too high prices, and eventually a small business passed at 1s more money. Wheat —Red, 30s to 31s; white up to 32s per 504lb. A sample or two of oats showing, but prices too high for business.

Canterbury, Saturday.—Wheat has again advanced over 1s per quarter, and selected descriptions are quoted up to 34s. Oats steady.

Carlisle, Saturday.—Small supply of oats in our market to-day; good demand at late rates, 22s 6d to 23s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—Owing to the corn duty imposed by the Budget, the values of all grain have advanced. Wheat was 2d and oats 2d to 3d per bushel higher. Quotations:—Wheat, white and red, 4s 7d to 4s 8d per 75lb; malting barley, 4s 2d to 4s 4d per 60lb; grinding barley, 3s 6d to 3s 8d per 64lb; beans, 5s 8d to 5s 10d per 80lb. Oats, new 3s 2d to 3s 4d; old, 3s 4d to 3s 6d per 46lb. Indian corn, 13s to 14s per 240lb.

Chichester, Wednesday.—There was a large attendance, and a fair amount of business was transacted. Wheat, which has recently been advancing in price, was in rather small supply, and, consequent on the Budget proposals, quotations, though somewhat irregular, underwent a sharp rise. The closing figures were 2s to 3s per qr higher than last week. Flour moved up in sympathy, and in oats and maize there was an advance of fully 9d per qr.

Colchester, Saturday.—Wheat—Very little offering; fully 2s per qr dearer. Feeding corns 1s per qr advance.—FRANCIS AND Co.

Devizes, Thursday.—We had a very small supply again, and this, coupled with the Budget influence, caused a further rise of 6d per sack in the price of wheat, the best now realising 16s. The price of flour has been put up to 25s 6d, a rise of 1s 6d. Feeding stuffs are 1s per qr. dearer. Best wheat, 15s 6d to 16s; secondary, 13s 6d to 15s; best malting barley, 29s to 34s; secondary, 25s to 28s; grinding barley, 20s to 24s; oats, 21s to 24s; beans, 16s to 20s; fine flour, 23s 6d to 24s 6d; extra fine, 25s to 30s; best bread, 9d.

Glasgow, Wednesday.—The trade during the week has been dull, and, owing to the anticipations of the Budget, there has only been a limited business doing. Prices up tilll yesterday remained nominally unaltered, but sellers have since advanced their prices equal to the amount of the new tax, but with hardly any business resulting. There was a good attendance at our market to-day. Prices are all advanced in accordance with the new tax. Wheat and flour are quiet. Round maize firm. Mixed corn quiet. Grinding beans and Canadian pease firm, and scarce on spot. Home and foreign oats: Quiet trade, with 6d to 9d per 264lb advance on the former. Barley quiet. Bran and thirds unchanged. Oatmeal 6d to 1s per sack dearer. —GIBSON AND CLARK.

Leeds, Tuesday.—The Budget has rather upset the trade. Holders of wheat are insisting upon 6d to 9d per qr advance, in addition to the duty imposed, which seems to stagger buyers, and business in all articles is limited in consequence, but the tendency of values is certainly upward.—DUNNS AND Co.

Leeds, Friday.—There is still a very limited demand for both English and foreign wheat, which fully maintains yesterday's advanced prices, English reaching 32s and best foreign a trifle over. Oats, beans, peas, maize, flour, and all other feeding stuffs firmly held at the general advance, which followed the Budget statement.

Leicester, Saturday.—Good attendance. Small supplies of home-grown wheats. Trade brisker at higher rates, sales being at 28s to 32s per 36 stones.

Lincoln, Friday.—Small supply of English, for which 2s advance was asked, and scarcely any business was transacted. Foreign wheats were also up. More money was asked for oats, beans, peas, and maize, but trade was next to blank.

Liverpool, Friday.—The market has had a good attendance, and holders of Manitobas and white wheat have experienced a fair trade, but generally the tone is quiet, but firm prices being unchanged to a full ½d advance. Flour on spot is firm, but buyers hesitate at the advance of 6d to 1s asked for foreign sorts. There is a moderate business doing in local milled, and the Liverpool Millers' Association have again advanced the minimum price of bakers 6d per sack. Maize: Maize is quiet but steady at ½d advance over Tuesday. European is generally ½d lower with a slow trade. Plate unchanged with a quiet consumptive trade. Barley: Malting is quiet at unchanged prices, although there is a better inquiry for California. Feeding is very slow but firm at quotations. Beans rule firm at unchanged prices and are getting into very small compass. Peas are firm with a moderate inquiry at Tuesday's full prices. Oats are firmly held, with a better demand for English at late rates. Foreign sorts are firm, but there are larger arrivals of Canadians. Oatmeal firm, but quiet at quotations. Oilcake very steadily held with a fairly good inquiry at Tuesday's prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Market to-day well attended, and the price of wheat nominally 1s per qr. up, which is about four times less than the advance sought by some sanguine natures. The budget levies on grain, meal, &c., provided us little mental confusion, so that business suspended for "further enquiries." A very small number of transactions the feature of the day.

Manchester, Thursday.—Market still unsettled, and a small business done in English wheat at 1s to 1s 6d per qr. higher than last week. Foreign about 2½d per cental dearer. Maize 3d to 4d per cental higher, with a quiet consumptive trade. Beans, peas, oats and other grain at about last week's prices, plus the duty. Flour slow and 1s per sack dearer.

Newcastle-on-Tyne, Saturday.—At our to-day's market a better demand prevailed for wheat of all descriptions, holders making 1s 6d per 504lb over last week's prices. This advance includes the duty. Maize also firm, and favouring sellers. Scotch oats advanced 1s per 336lb; foreign 3d dearer, exclusive of the duty. Beans and peas firm. A slow demand for barley.—JOSEPH POLLARD AND Co.

Newport, Wednesday.—Wheat strong, and the markets show a full 6d per qr advance in addition to the new tax. Maize, oats, barley, etc., all firmly held at an advance. Flour, 24s per sack. Meal and mill offals 5s per ton dearer. Business unsettled, with a firm undertone.

Northampton, Saturday.—Not a large market. Red wheat was from 29s to 32s; farm produce had an upward tendency. Flour, 22s to 23s; fine 26s; white wheat, 32s to 33s; red, 29s to 31s. Grinding barley, 23s to 26s; oats, 22s to23s; old, 27s; beans, 33s to 40s; flour, 22s to 23s; fine, 27s.

Norwich, Saturday.—There is no particular alteration in the wheat trade to-day, which remains firm at late rates. Fine and bright weather has prevailed during the past week, with keen easterly winds. Wheat (red), 29s to 30s per qr, weight 63lb per bushel imperial.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat small supply, holders asking 2s advance, which checks trade, but little passing. Grinding barley steady at slightly enhanced prices. Oats and beans—But few offering, and 1s advance established.—ROBT. HUBBLE.

Peterborough, Saturday.—At to-day's market, our first after the Budget statement, there has been rather more wheat offering than last week, and it made 1s to 1s 6d more money. Oats were 6d to 1s dearer. No barley showing.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a good attendance at our market here to-day. Maize 9d to 1s dearer; barley 1s dearer; oats 1s 6d dearer; wheat 1s to 1s 3d dearer.—ORLANDO DAVIS AND Co.

Ripon, Thursday.—A poor attendance, and light show of samples. Owing to the new duty everything shows an advance of 1s. Feeding stuffs dearer. Wheat English (new), 29s 6d to 30s 6d; ditto foreign, 29s 6d to 33s 6d; barley, grinding, 23s 6d to 24s 6d; ditto malting, 27s to 32s; oats (new), 23s to 25s; round maize, 23s 6d to 25s 6d per qr; beans, 1s per stone.

Reading, Saturday.—The wheat supply here to-day proved smaller than usual, and, influenced by the new duty, business lacked animation, only a few sales taking place. In these cases there was an advance from 1s 6d to 2s per quarter on recent rates for wheat, while barley, oats, beans, and peas were 1s per quarter dearer on the week.

Sheffield, Tuesday.—To-day's market was fairly attended, but the effect of the Chancellor's statement was apparent in the volume of trade passing. Quotations were, of course, higher: 1s per qr on wheat, barley, maize, and peas, and 9d on oats. Wheat, white, 30s 6d to 31s; ditto, red, 30s 6d to 31s per 504lb; oats, new white, 22s to 24s; ditto, new black, 20s to 21s per 336lb; barley, grinding, 22s to 23s; ditto, malting, 28s to 32s per 448lb; peas, grinding, 32s to 34s; ditto, blue, 53s to 80s per 504lb; beans, Egyptian, 35s 6d to 36s per 504lb; ditto, English new, 37s to 37s 6d per 532lb; Indian corn, small, 23s to 24s; ditto, American mixed, 27s 6d to 28s per 480lb.

Spalding, Tuesday.—Small supply of corn. Wheat, 29s to 30s; oats, 23s to 24s. There was much discussion about the proposed new corn duty, the general opinion being favourable.

Stamford, Saturday.—Very little wheat showing. Prices about 30s. per qr. No barley. Oats from 22s to 26s; beans, 34s to 36s, and maize 34s per qr.

Stockton, Wednesday.—There were very few samples of farmers' wheat showing, for which 2s advance was asked. Owing to the new duties the trade in foreign wheat was in a state of suspense, buyers preferring to await developments. Spot wheat was held for 1s 6d advance on the week, but for grain to arrive a rather less increase in price had to be taken. Maize, oats, and all kinds of feeding stuffs were held for 1s advance per qr, owing to the new duty.

Sunderland, Saturday.—Little grain offering and prices irregular on account of the new import duty. Arrivals coastwise: Wheat, 2,219qrs; barley, 561qrs; foreign nil.—E. AND F. RICHARDSON.

Wakefield, Friday.—In the small business passing in wheat to-day 1s to 2s per qr advance is obtained, but we have only a small attendance and few buyers. Malting barley a small show, but a dragging trade. All feeding stuffs fully 1s per qr dearer.—MICHAEL SANDERSON AND SON, LIMITED.

Wakefield, Friday.—The trade is gradually getting accustomed to altered conditions, millers being compelled to replenish stocks and to concede 1s 9d to 2s advance over the rates of this day week for all descriptions of foreign wheat; English has advanced 1s per qr. Feeding stuffs have improved to the extent of the duty, but scarcely beyond this.—DUNNS AND Co.

Wisbech, Saturday.—At market to-day farmers offered wheat sparingly; sales were made at 30s to 31s. Oats, 24s to 25s. Other articles also dearer to buy.—JAMES FLETCHER.

Wolverhampton, Wednesday.—Good attendance, and quotations very firm. Wheat (new), 12s 6d to 13s per 216lb; oats (old), 16s to 17s; ditto (new), 15s to 14s per 216lb; beans (old), 16s to 17s; ditto (new), 14s 6d per 196lb; barley, 32s to 33s per 448lb; new maize, 26s to 27s per 480lb; ditto (old), 28s 6d to 29s 6d per 480lb.

Worcester, Saturday.—Owing to the newly-imposed duties the market was in an unsettled state, and business was quite of a retail character. For English wheat 1s 6d to 2s per quarter advance was asked, which buyers refuse to pay, but grain generally was 1s per quarter dearer on the week. Wheat: Whites, 29s to 31s; red, 28s to 29s per quarter.

Worksop, Wednesday.—A small attendance of farmers and factors. The duty on corn seems to have unsettled the trade, but was looked upon very favourably by farmers. All wheat and feeding stuffs were 1s per qr dearer, and flour was up about ½d per stone only. White wheat, 29s to 30s; red ditto, 28s to 29s; grinding barley, 26s to 27s; white oats, 22s 6d to 24s; black ditto, 21s to 23s; round maize, 24s 6d to 26s per qr.

York, Saturday.—The supply of wheat was only small, and trade was slow, holders asking 1s per quarter advance in consequence of the registration duty. Oats were scarce, and this fact, combined with the tax proposals, led to an advance of 6d to 1s per quarter.

FOREIGN.

Paris, Wednesday.—The mid-week markets preserve their same monotonous features, engendered particularly by the penury of trade which for most articles continues to drag along in a deplorable manner, without any hope for a change in the situation and a speedy return of activity. Transactions in native wheat were still difficult in the provinces as well as in the metropolis; in the last provincial markets, which were sparingly supplied by reason of agricultural work keeping farmers afield, prices remained generally supported; in some localities higher rates have even made some progress. A slight improvement on the week. Choice red wheat being quoted 38s 3d to 38s 9d, and white 38s 9d to 39s 2d per 480lb. The flour market opened firm at 10c to 25c improvement, but closed unchanged at the following prices:—April 27s 5d to 27s 8d, May 27s 8d to 27s 11d, May-June 27s 11d to 28s 2d, May-Aug. 28s 2d to 28s 5d, July-Aug. 28s 5d to 28s 8d, and Sept-Dec. 26s 10½d to 27s 1½d per 280lb. There is no change to note in the situation of rye, prices having undergone but little fluctuation for several months. Here trade has been languid with a weaker tendency. Good-conditioned lots are held at 25s 3d to 26s 8d per 480lb. Oats: not much change. Offers are on a very ordinary scale, but as the demand was trifling stuff on the spot was rather difficult to place. Here prices showed no quotable change on the week. Grey Beauce 25s 3d, white 23s 2d to 23s 6d, red 24s 11d, black from the Central provinces 25s 6d, small Picardy 24s 4d. Foreign oats have submitted to a slight depreciation in rates. American is worth 24s 1d to 24s 4d, white Libau 23s 6d to 23s 9d, black 24s 1d to 24s 4d, and Swedish 25s 3d to 25s 6d per 320lb. There is not much animation in the barley trade, but prices remain unaltered. Beauce asks 24s 8d to 25s. Here the following rates were quoted:—Malting 17f 50c to 17f 75c (25s 4d to 25s 9d), grinding 17f to 17f 25c (24s 8d to 25s), and feeding 15f to 15f 50c per 100 kilos (21s 9d to 22s 6d per 400lb). Buckwheat is firm at 28s 7d per 480lb—*Dornbusch.*
